MINUTES OF EVIDENCE

TAKEN BEFORE THE

DEPARTMENTAL COMMITTEE

ON

HOUSE LETTING IN SCOTLAND.

FIRST DAY.

MONDAY, 26TH NOVEMBER 1906.

At the Burgh Court Hall, Glasgow.

Present:

SHERIFF CHARLES J. GUTHRIE, K.C., *Chairman.*

SIR JOHN STIRLING-MAXWELL, Bart.
MR THOMAS BINNIE.
MR EDWARD COX.
MR JOSEPH DOBBIE, S.S.C.
MR GEORGE B. ESSLEMONT.
MR JOHN T. HOWDEN.

MR STAIR AGNEW GILLON, *Secretary.*

26 Nov. 1906.

(*Chairman.*) In opening the proceedings of this Departmental Committee, it will be well just to indicate two things: first, the scope of our inquiry; and, second, the procedure that we propose to adopt. We are appointed to inquire into the letting of the smaller class of dwelling-houses in Scottish burghs, and in doing so we shall, of course, have to look at three points:—

(1) What is the present system of letting the smaller dwellings in Scottish burghs.

(2) What are the grievances which it is alleged flow from the present system.

(3) What are the legislative remedies, if any, which should be recommended to remove these grievances.

We have resolved to meet to-day in Glasgow at the start of the inquiry, because it has been evident from the deputations who appeared before Sir George Trevelyan, Lord Dunedin, and Captain Sinclair, and also from what has appeared otherwise, that the main complaint has been from Glasgow and the West of Scotland. We had proposed to lead certain evidence to-day, but we found that many of the witnesses whom we had expected to see could not possibly have their evidence ready by to-day. The result is that we shall meet again in Glasgow on Monday, 10th December. Further procedure will depend upon circumstances. Possibly we may have to lead evidence elsewhere—possibly in Edinburgh, Aberdeen, and Dundee—but all that will depend on what happens in connection with the evidence that is led in Glasgow. I may just add that while the commission to us is as I have above stated, we quite anticipate that there may be questions which are not perhaps directly remitted to us for inquiry, but which arise out of our inquiry—such questions as the rating question, procedure in ejections, the law of hypothic, and others, which we shall not exclude from the evidence laid before us, although to some extent they may be rather side issues than directly involved. We propose to-day to begin by hearing evidence from Mr William Crawford Menzies, the manager of the City Improvements Department of the Glasgow Corporation. Of course it will be understood that we are not here to inquire into the merits of any bill or bills that have been already before Parliament or are before Parliament now. And we should like it to be known, because in the evidence that has been already forwarded to us for consideration, some of the witnesses seem to imagine that what we are here to do is to criticise Mr Cross's bill. It will be kept in view that we have the whole matter before us, and it will also be kept in view that this whole question has been the subject of a series of bills—nine in number—beginning in 1890, and going on in 1894, 1895, 1897, 1898, 1900, 1904, 1905, and 1906, not by any means all in the same terms, but proposing different legislative remedies for the same alleged grievance. It will therefore be understood that the whole matter is before us.

26 Nov.

Mr W. Crawford Menzies.

MR WILLIAM CRAWFORD MENZIES, called and examined.

1. (*Chairman.*) You are the manager of the City Improvements Department of the Corporation of Glasgow, and you are in charge of their houses and shop property?—Yes.

2. You have held that office for fourteen years?—Yes.

3. Were you in the employment of the Corporation before that?—No. My father was a builder in Glasgow, and I was brought up in connection with the property interest in Glasgow since I was a boy.

4. You are prepared to-day to speak to the work of the Corporation in letting their property?—Yes.

5. And, so far as you know it, on the general practice prevailing among house agents in Glasgow?—Yes.

6. Would you just kindly tell us the description and

number of the houses under your charge?—Yes. Belonging to the Corporation under my charge are the following: 665 one-apartment houses, 1401 two-apartment houses, 360 three-apartment houses, and 22 four-apartment houses—a total of 2448 houses.

7. In what parts of the town are they situated?—A considerable number are situated in the central district, around the Cross of Glasgow. We have also houses in the Townhead district, to the north; we have a number in Stobcross Street and the adjacent streets towards the western district, and we have a number in the Calton district—that is to the east. We have a few on the outlying eastern border of the city. We have also a few on the south side. So they are pretty well distributed.

8. For how many years have the Corporation held property of this description?—They commenced to hold property immediately after the passing of the Improvements Act of 1866, but that was old property. They retained a considerable holding of that old property, although some of it had been demolished, up till a few years ago. Since 1888 they have demolished practically the whole of the old property that had been returned, and it now consists of new buildings.

9. So the 2448 houses, we may take it, are, practically speaking, new property?—Yes, except about 200 or 250 houses.

10. Could you tell us the variation of rents in each class?—Yes.

11. Take your 665 one-apartment houses, and give us the minimum and the maximum?—If I take the one-apartment houses, the lowest net rent that we have—that is, exclusive of any rates—is £4, 10s., and the highest is £8, 15s.

12. Then the two-apartment houses?—They range from £7 to £14, 3s.

13. The three-apartment houses?—We have them from £12, 9s. to £22.

14. The four-apartment houses?—From £18 to £32.

15. In which of these cases are there bath-rooms in addition to the apartments you have mentioned?—In houses with three apartments—a few, not very many—there are bath-rooms, and in the four-apartment houses.

16. Are there none in the two-apartment houses?—There might be one or two, or half a dozen, but it is so trifling that I do not mention it.

17. How many of the 2448 houses are let by year, from Whitsunday term to Whitsunday term?—671.

18. That leaves 1777 not let by the year?—Yes.

19. How are these let? What is the term? Monthly?—Monthly tenure.

20. You do not have quarterly or half-yearly tenure?—No.

21. You have told us that there were 671 let by the year. Can you tell me which description of your four classes that applies to? Are there any one-apartment houses let by the year?—Yes, there are.

22. How many?—91.

23. Out of 671 there are 91 one-apartment houses let by the year?—Yes.

24. Out of the 1401 two-apartment houses, how many are let by the year?—352.

25. Out of the 360 three-apartment houses, how many are let by the year?—206.

26. And out of the 22 four-apartment houses, how many are let by the year?—22.

27. The whole of them?—Yes. I shall put these particulars in tabular form for your reference.

28. When you are letting houses, do you use a missive?—We use a missive for a new tenant taking the house for the first year.

29. In connection only with the yearly lets, or also with the monthly lets?—With the monthly lets also.

30. In all cases?—Yes.

31. In the case of renewals, do you use a missive?—No. I speak now of the yearly houses. About the 24th or 25th January we send out a circular to all these yearly tenants.

32. Do you have a copy of that circular?—I do not have one with me, but I can send one in. I send out this circular about 24th or 25th January, advising tenants that the letting term for the ensuing year is 2nd February, the Candlemas term, and asking them to call at my office, and hand over the arles for the following year if they are to remain as tenants. When this is done the transaction is noted in the "Arles Book" and the entry signed by two clerks as witnesses. If by the 2nd February they have not called and arled their houses for the succeeding year, then two of my clerks take this book, the "Arles Book," and ask them to re-take in the same way. By the end of the first week in February our list is practically complete.

33. By the end of the first week in February your list for the Whitsunday term is made up?—Yes.

34. Would you tell me, apart from the length of tenure, what are your periods of payment of rents?—The rents of the monthly houses are paid monthly, and the rents of the yearly houses are paid quarterly.

35. In every case?—Yes.

36. Have you any forehand rents?—The monthly rents are all forehanded.

37. And the yearly rents?—No, none.

38. Have you any system of asking cautioners for the rent?—It is not usual. It may be done in the case of a tenant that is a stranger to Glasgow, but if they have a good record from the previous factor, we do not ask any cautioner.

39. Do you insist in each case, whether monthly or yearly, on the house being furnished?—Yes, we do.

40. And from time to time have you had occasion to exercise the landlord's hypothec?—Yes, occasionally.

41. Does your practice differ from that of others factoring property, or is it similar?—In regard to 1487 of the houses it is different.

42. Which are those?—In 1487 of these houses, monthly houses, we collect the whole of the tenants' rates along with the monthly payments of rent.

43. What is the highest rent in any of these 1487 houses?—The highest rent in any of these is £18.

44. And the lowest is how much?—£4, 10s.

45. Have there always been a certain number of cases where you have collected the rates along with the rents in your experience, or is it a new experience?—It is really a new experience.

46. When was it inaugurated?—About eleven or twelve years ago.

47. What led to it?—I expect it was the feeling that led to the appointment of the Committee. There was a disposition to say that letting covered too long a period from January, and it was an experiment gradually extended.

48. Has it proved successful in your view?—Fairly successful.

49. What do you mean by "fairly successful"?—I might say that the new property began to be built about the year 1888, and four or five years after that we initiated this system of collecting the tenants' rates along with the monthly rents. To enable me to do this, I had to compound with the rate collectors; I had to send out lists to the water rate collector, the police rate collector, and the poor and school rate collector, and that involved a considerable deal of work. At first, when there were only two or three hundred tenants under that tenure, it was very easily done, but I found as it was growing to over a thousand that it involved a very considerable amount of clerical work on my staff. And, therefore, of late, for the last five or six years probably, we have not extended the system except in the special case of houses which are built under Section 12 of the 1897 Improvements Act, which gave power to erect houses for the poorest classes in Glasgow. In these houses we restrict the tenants to those who are in receipt of small wages. We do not extend it beyond that class now.

50. Do you propose to extend it?—If we were building more for that class, but not for houses occupied by other classes.

51. The rates that you refer to which are collected along with the rents are the burgh rates and the parish council rates?—That is so.

52. Of course there are no imperial taxes paid by that class at all?—No.

53. Neither inhabited house duty, which only applies to houses above £20, nor income tax, which only applies to incomes above £160?—That is so, there are no imperial taxes.

54. May I take it that there are three sets of taxes that have to be paid, taking them generally—first, imperial taxes, consisting of inhabited house duty and income tax; second, burgh rates, consisting of burgh general assessment and the general improvements rate; and then, third, the parish council rates, consisting of school rate, poor rate, registration rate, and special parish rate?—Yes, and I would add to that the water rate, which is collected in Glasgow by a separate collector.

55. Is that not a burgh rate?—It is not included with the usual police assessment. There is also a stair lighting charge, which we recognise as separate too; it is charged in a different way.

56. These are all collected in the 1487 houses, so far as they apply to those particular houses?—Yes.

57. Is your practice in regard to sending out a notice in the end of January similar to that of other factors?—Yes, it is practically similar. The only difference is that I think we are a little later than the other factors in Glasgow.

58. Was there not a resolution some years ago to adopt 15th March as the period for concluding contracts?—My information is that there was a resolution of that kind carried out in Edinburgh, but I never heard of it in Glasgow.

Mr W. Crawford Menzies. 26 Nov. 1906.

59. Do you find in the case of your yearly lets any difficulty in letting the houses because of the yearly tenure?—There is no difficulty when our lists are complete at the proper time, but there is a difficulty when a house becomes vacant through any cause between the terms.

60. Do you not find at the ordinary term people saying that they would rather take the house monthly than yearly?—The only reply I can give to that is this, that we have had people who were living under the monthly tenure, where we collected the rates and rents each month, and when they went to another property, where we let by the year, we have found them sometimes saying that they would rather have it monthly. These are the only cases.

61. Have you, on the other hand, found cases of people who had a monthly tenure saying that they would rather have it by the year?—I have had one or two isolated cases where the tenants almost felt as if they were descending to a lower class of house and tenure when they were asked to pay monthly. But that was merely at the first—usually it passed away.

62. Is there any distinction, in your experience, between the state of repair and the general amenity in a monthly house from that in a yearly house?—Practically we have none.

63. You keep up the one as well as the other?—Yes.

64. And that includes sanitary arrangements also?—Yes.

65. Do you consider that there is any difference between your monthly lets and your yearly lets so far as the rate of rent is concerned. Suppose you let your monthly lets yearly and suppose you let your yearly lets monthly, would that involve any change in the rent?—No, except—and I must always make this exception—except in regard to the houses which have been built under Section 12, which are let at a lower rate than the market rate and are restricted to a special class.

66. Would there not be a saving of expense to you in the way of factoring if all your lets were yearly?—I do not think there would be any saving as far as our Department is concerned, because we have care-takers staying in each of these districts, and they would not be fully occupied with a quarterly collection.

67. In the case of an ordinary factor, it would reduce the amount of work for his clerks by changing from monthly to yearly?—Yes, in regard to collecting.

68. Would it be a substantial difference?—Yes.

69. Do you not find that you sometimes have your monthly houses vacant for a number of months as compared with those that you have let by the year?—The loss through the vacant monthly houses is so small that it is very inconsiderable. We very seldom lose a month's rent, although we have a number of changes.

70. In your case you let them so cheap that that is so?—That may be so in regard to those provided for the poorest classes under that special section that I have referred to, but not with the ordinary ones that we have.

71. Have you ever found, in the case of your yearly lets, a difficulty of this sort—an undesirable tenant who is objected to by the neighbours, but whom you cannot turn out so long as he pays his rent?—Yes, we have found that difficulty occasionally.

72. To any great extent?—No, not to any great extent.

73. Could you give us any idea in which class of cases you find the greatest proportion of arrears, monthly or yearly?—Our arrears are so inconsiderable over the whole that they would not amount to one-half per cent. of our rental. I might say that we are careful in letting, so we do not have very many tenants that fall into arrear or difficulties.

74. In Glasgow, are the pay-days on the Clyde weekly or fortnightly?—I rather think that they are weekly now, but I could not say for certain.

75. Has the tendency been to make the letting date still earlier than it used to be?—Yes, that is so. It used to be 2nd February, and gradually it has been put further back, till now it comes on to the 23rd or 24th January.

76. What is that due to?—It seems to me it is because tenants begin to ask if there are houses to let before they give up their old ones. They go round the factors about the New Year time, and they want to know what houses are to be let for the ensuing year. The result is that the factor, finding inquiries for the next year, presses tenants to give a reply.

77. Have you known any cases in your own experience where, in the case of a yearly let, a tenant has had to remove owing to circumstances and has been liable for both rents? Or will you tell us what you do in the case of subletting?—We have every now and again some tenant saying that he has to remove, and asking us to sublet his house or take it off his hands. We ask him to sign a form of which I will send in a copy, giving us power to sublet the house and stating that he will be liable for the rent till the period has run out. We very often get the houses sublet for the tenant—we have not any great difficulty in that way.

78. What do you charge him?—We charge him practically just the stamp duty.

79. How much is that?—It depends on the rental of the house. The usual rate is 2s. 6d. on £25, and it will be 1s. 6d. on £15.

80. Will you tell me the largest amount of rent that you recollect that a tenant removing had to pay for a house which he no longer continued to occupy?—I cannot charge my mind with the particular cases, but I know I have never charged more than one quarter.

81. You have had cases where you have had to charge one quarter?—Very seldom, but I have had cases.

82. Do you find that practically an enormous proportion of the removals from your houses and the entries to your houses are at Whitsunday?—With the yearly lets that is so. But with the monthly lets I think we have more people changing their houses between the terms.

83. Do you say more people?—Yes. It has been hurriedly got up, but I have some figures about it.

84. Perhaps you could tell us afterwards, with regard to the monthly lets, what percentage of the removals are at Whitsunday, and the balance will be for the rest of the year?—I found last year, in regard to the monthly houses, where we collect the rates along with the rents, that we had nearly 300 removals between the terms, as against 200 at the two legal terms, the one at the beginning of the year and the other at the end. Taking Whitsunday 1905, I find that I had 68 removals from that class of house, and during the course of that year we had over 290. Then at Whitsunday of this year we had 138. I suppose that is owing to dull trade and fluctuations in business being worse this year.

85. In the case of sub-letting, is it an absolute right in the tenant, or must the new tenant after the present one be subject to your approval?—He must be subject to our approval.

86. In the case of removals at Whitsunday, do you find any complaints from tenants about the great expense caused through the large wages for those removing and the cost of hiring being excessive at that crowded period?—We find no complaint. I think the custom is so well established that people look upon it just as a law of nature.

87. Is it the fact that the charges are higher for removal, both the hiring and the actual wages, than for removing between terms?—I could not condescend on that.

88. Or could you say whether the charges for painting and papering, for instance, and other work done in connection with the Whitsunday term, are higher than at other periods of the year?—So far as we are concerned, our painter work is fixed by contract over the year, so it is no higher, but there is a good deal of inconvenience at the Whitsunday term, when there is so great a demand.

89. How does it show itself?—If a new tenant comes in at Whitsunday, instead of getting his repairs done within a week or ten days, it may be a month before he gets them finished.

90. Do you find any difficulty, from the sanitary point of view, in getting houses cleaned, owing to the great majority of removals being at the Whitsunday term?—No.

91. You have not experienced that?—No.

92. In the case of a tenant being in arrear and necessity arising for ejecting him, do you find any difficulty from the procedure?—I find it rather slow sometimes.

93. You are speaking of monthly tenants?—Yes.

94. Do you go to the Burgh Court or the Sheriff Court?—The Burgh Court usually.

95. I think your rents are paid forehand?—Yes.

96. If a tenant does not pay his rent at the beginning of a month, what happens? How long do you allow him to run on?—It depends entirely on circumstances. We sometimes allow him to run the month.

97. Suppose it runs a month and then you resolve to eject him?—We give him ten days' notice, and if he does not remove at the end of the period we have to take him to the Burgh Court and await the procedure, and it may take other ten days.

98. Does it take, roughly, about three weeks?—Yes.

99. So, in that case, subject to your right of hypothec, you might lose a month and three weeks' rent?—Yes.

100. And of course there is the cost of the proceedings?—Yes.

101. How much would that be?—About 8s., I think, before we get the ejectment, but perhaps some other witness will give the exact figures. I know it is somewhere under 10s.

102. Have you many tenants who obtain relief from the burgh rates?—We have thirty or forty that obtain relief from the poor rates.

103. In what class of houses are they?—They are mostly in the single-apartment houses, particularly in those reserved for the poorest classes.

Mr W. Crawford Menzies.
26 Nov. 1906.

104. Does that number depend on such circumstances as trade and so on?—No, these are really people in receipt of relief.

105. How many of the forty will be in receipt of relief?—The whole of them.

106. In the case of the monthly tenants whose rates are collected along with their rents, are any of them included in the forty?—There might be one or two, but I don't think so.

107. Suppose there were, would there be an application there, and, if so, at whose instance?—Yes, the tenant would apply to us, and we would represent the case to the poor rate authorities.

108. And if it was successful, what would be done?—We would give them a relief to the extent of the poor rate.

109. Without deduction for any expense you had been put to?—Yes, without deduction.

110. Mr Esslemont suggests to me, what about the burgh rates?—Some years ago I made application for these same people who were on the poor roll, and I was informed by the police treasurer that there was no statutory provision by which they could be relieved from the police rates, but I think we do get a relief in some indirect way.

111. I notice under Section 343 of the Burgh Police Act of 1892 the enactment is, "The Commissioners may, on the ground or inability of any person liable to the burgh general assessment under this Act, remit, in whole or part, payment of the said assessment by such person" &c.—Is that a general Act?

112. Yes.—Does it apply to Glasgow?

113. I see you are not under that?—It is since that date that I applied to the treasurer and could not get relief, but there is some relief given now in an indirect way.

114. (*Mr Esslemont.*) In how many cases?—Very few. If there is a right of relief, we will have the whole forty that we apply for relief from the poor rates for, but I don't think we have anything like that number that get relief from the police rates. I could not be certain of that—it is a matter that the rates collector could tell better about. I know when I made inquiry there was no statutory provision at the time, but there was something said about leaving them over and just putting them in with uncollected arrears.

115. (*Chairman.*) Who is the best person to tell us about that?—The police treasurer.

116. (*Mr Binnie.*) But you are collecting the rates from the tenants along with your rents?—Yes.

117. When you get relief of the poor rate, you deduct that from the amount that you charge your tenant with?—Yes.

118. Is there any case in which you have deducted an amount in respect of the relief that you have got for police or burgh rates?—I better not commit myself. I think there was a case or two where we did get relief from the burgh rates and gave the remission to the tenant, but it was not a regular thing.

119. (*Chairman.*) I don't know whether you can tell us this or not—under your local Acts in Glasgow is the provision the same as under the general Act, that in rents under £4 the owner pays the whole rates?—That is the case in Glasgow.

120. It is the same limit?—Yes, under £4 the owner pays the rates.

121. In the case where you collect the rates, what is the percentage of allowance to you?—The only percentage we get for collecting rates is in the case of rents under £10, and we get from the burgh authorites only 7½ per cent.

122. Do you think that is enough?—It is enough for us.

123. Do you mean that you would be in a different position from other factors when you say that it is enough for you?—I think we may be in a somewhat more favourable position, because our properties are new, and they were in great demand for a while, and we could get fairly good tenants always.

124. Looking to your class of tenants in the cases where you do not collect the rates, are the rates fairly well paid?—Yes.

125. Have you any notion how many of your people have been disfranchised in a year for non-payment of rates?—I don't know, but there would be very few.

126. In regard to empty houses, can you give us any notion of how many of your 2448 houses might be empty at any period of the year?—I can tell you how many are empty now—there are just about 40, and they are all two-room and kitchen houses, with one or two exceptions.

127. What are the exceptions?—We have 1 single-apartment and perhaps 2 two-apartment houses, and all the rest are three-apartment houses.

128. Is that a normal amount, or is it exceptional?—It is very exceptional for us.

129. What is your average number?—Less than half.

130. In your districts is the population increasing, or is it in some cases decreasing?—In some cases it is decreasing.

Mr W. Crawford Menzies.
26 Nov. 1906.

131. Are you in the Calton at all?—Yes.

132. Is the population decreasing there?—Yes.

133. And are you in the Townhead?—Yes.

134. Is the population decreasing there?—Yes, I think so.

135. Are you in Blackfriars?—Yes, we have some property there.

136. Is the population decreasing there?—I could not say: I am not aware of it.

137. Are you in the Cowcaddens?—We have none there.

138. Or Woodside?—No.

139. Or Mile-end or Springburn?—No.

140. Or Langside?—No.

141. Have you property in any district where the population is increasing, and, if so, which?—We have some property that is really on the verge of the City, just on the margin. There is no doubt that the population is increasing out there.

142. The most of your properties are in the districts where the population is decreasing?—Or stationary.

143. And you would therefore not have the difficulties that might arise in some cases where the population was increasing—difficulties in getting houses, for instance?—I don't think there is any difficulty in any district in Glasgow just now.

144. But it does not apply to your districts?—No.

145. Suppose a man in Glasgow shifts his employment and he is still in Glasgow or in the surrounding district, does he necessarily want to change his house?—Not necessarily.

146. Why not?—It may be that he has a family, and the house he has may be more suitable for his family than a house in the district to which he has transferred his employment.

147. Do you mean even in the case of his getting permanent employment elsewhere?—Yes.

148. How does he get over the difficulty?—By travelling himself and keeping his residence in the place suitable for his family.

149. Have the means for such a man getting to his work very much increased in recent years?—Yes, the facilities are very much better.

150. Then suppose a man gets temporary employment elsewhere, what do you find in a case of that kind?—He does not seek to move for some time.

151. (*Mr Binnie.*) Do you find that frequent removals increase the outlay for repairs?—Yes, there is no doubt about that.

152. For the gentlemen who are not acquainted with Glasgow, perhaps you would explain about the workmen's trains that go to the like of Clydebank. Do you know about them?—I know that there are morning and evening trains, and they give weekly tickets at a very cheap rate.

153. Do you know what that rate is?—No.

154. (*Mr Dobbie.*) How do you collect the rates? Do you spread the amount over twelve months?—Yes.

155. The whole of the rates?—We simply take the total amount of the rates, add it to the yearly rent, and divide the whole by twelve, and collect each month.

156. Do you compound with the authorities and get any abatement in respect of doing this?—The only abatement that we get is the 7½ per cent. on the police rates alone, which we only get on houses under £10.

157. Then about the poor rate—you said that there were about forty people that were on the poor roll and got relief. Could you tell us how many of the other tenants would get exemption, if any: would there be any apart from the forty out of your monthly lets?—Get exemption in what way?

158. Get off paying poor rates on the ground of poverty?—In our system we cannot distinguish in the collection—we have to collect from everybody. They come and say, "We get relief from the rates," and then we make an appeal to the poor law authority, and allow it back to the tenant.

159. Does that mean that, under the system of monthly letting which you have here in the case of 1777 houses, there are none of the tenants who are already on the poor roll disqualified for failure to pay poor rates?—They would be disqualified when we got the rates recovered.

160. But none of the others besides the forty?—So far as I know there are none of them.

161. That is one of the results of this system, that only forty already on the poor roll are disqualified in respect of failure to pay their poor rates?—I never heard the question raised, but I believe that is so.

162. Out of some 2400?—Yes, but of course we do not collect the rates from all these.

163. Then you mentioned that there was, I think rents rightly, a sentiment against tenants paying their quite monthly rather than quarterly. Is that the only objection you have heard taken?—It was such a slight sentiment that I do not put any weight on it.

Mr W. Crawford Menzies. 26 Nov. 1906.

164. If the custom was universal, I suppose the sentiment would die out?—I think so.

165. Do you find any more trouble in enforcing hypothec in the case of monthly lets as against your yearly lets?—With the smallest class of house we simply think it is not worth while going to the expense of attaching the hypothec for all we would recover, and if people go away at the end of the month we simply wipe it off as a bad debt.

166. Could you tell us whether you lose more through bad tenants, defaulting tenants as a rule, who are taking their houses monthly, as against tenants who take them by the year?—What we lose through bad debts is so infinitesimal that I hardly ever think of it, either monthly or yearly.

167. Of course you are rather popular landlords?—That is for other people to say.

168. I mean in view of your method in regard to repairs?—I believe our property will compare with any other property.

169. (*Mr Howden.*) Do you experience any difficulties in getting the properties finished in time for the new tenants?—That is a common experience when they are being prepared for the term letting.

170. The rush is so great at that time that it is sometimes very inconvenient?—It is sometimes difficult to get tradesmen to do work at that time, when they are being pressed to do repairs.

171. Do you ever experience it in connection with new property?—It is difficult to get them to finish new property when they are so busy with repairs at other properties.

172. (*Sir J. Stirling-Maxwell.*) About the £20 limit that is proposed in Mr Cross's bill, does that draw a reasonable distinction?—In what respect?

173. I mean between houses above £20 and below.—That distinction is drawn by the imperial authorities. House duty is charged on houses with a rental of £20 and above, while none is charged on houses with a rental below that.

174. Some of the houses you have been talking about to-day are over £20: I see some of the three-room houses go up to £22.—Is that in regard to the provisions of Mr Cross's bill?

175. I won't discuss his bill. I am talking about the £20 limit. Would that include the class of houses you have been talking about?—It would practically include all the smaller class houses.

176. (*Chairman.*) Is there any distinction between the class of tenant, in regard to his employment or habits or anything else, in a £20 house and in a £25, say, house?—I don't think so.

177. Or £30? When you come to £30 houses do you rather come to men like foremen?—Yes, I think you are getting away beyond the working class altogether. I think £20 would be the limit for the working class.

178. (*Mr Howden.*) Even when their families get up in years, and there are two or three of them working?—It might occasionally be within their means, but as a rule it is beyond them.

Mr J. M'Fie.

Mr JOHN M'FIE, called and examined.

179. (*Chairman.*) You are a partner of the firm of John M'Fie & Son, factors, Glasgow?—Yes.

180. How long have you been in business?—Since 1875.

181. Even since then have you been factoring houses of different numbers of apartments in Glasgow?—Yes.

182. In what district or districts?—From Cathcart and Partick to Parkhead and Springburn, the whole of Glasgow.

183. Are you factoring houses both in districts with an increasing population and in districts with a decreasing population?—I am not in the decreasing lot.

184. That is Calton and Townhead?—There is not much decrease in Springburn.

185. No, I think Springburn is increasing. Will you tell me how many houses you have charge of at present?—5555.

186. Will you kindly divide them?—There are 850 one-apartment houses, 2450 two-apartment houses, 800 three-apartment houses: a total of 4100 houses. The difference between that and the 555 is shops.

187. Will you tell us about the rents?—The rents of the one-apartment houses are from £3, 10s. to £8, 15s.; the rents of the two-apartment houses are from £6 to £13, 10s., and of those that have a bath-room with hot water from £13 to £15, 15s. The rents of the three-apartment houses are from £8, 8s. to £17, 10s., and with bath-room and hot water from £15 to £21, 10s.

188. So you vary from £3, 10s. up to £21, 10s.?—Yes, but of course we have far larger houses than that.

189. But I am talking of the one to three-apartment houses. I think that is accurate?—Yes.

190. Your two periods of letting are yearly and monthly?—Yes.

191. You have no half-yearly or quarterly?—No.

192. Take the one-apartment houses: what percentage of these are let monthly?—75 per cent. are let monthly.

193. The remainder being let yearly?—Yes.

194. Then the two-apartment houses: about 10 per cent. are let monthly?—Yes.

195. And the remaining 90 per cent. are let yearly?—Yes.

196. The three-apartment houses: about 1 per cent. are let monthly, and the remaining 99 per cent. are let yearly?—Yes.

197. What are the terms of payment for the monthly houses?—Monthly: it is supposed to be in advance.

198. They are all forehand rents?—Yes.

199. In the yearly lets, how often are the rent paid?—Quarterly.

200. Are any of them forehand?—Not very many, unless by desire of the tenant.

201. Do you let both in the case of the monthly and the yearly houses by missive?—Very few missives. The single-apartment houses are let monthly.

202. In the case of the monthly lets, suppose a man comes in for the first time, does he sign a missive of lease?—Not if he pays a monthly rent; but we require to know something about him.

203. In the case of yearly lets, is there a missive in every case, both when you have a new tenant and when an old tenant retakes his house?—There is a circular sent to the tenant.

204. You produce a copy of the circular that is sent?—Yes. (Hands in.)

205. I notice that in the circular sent out for reletting, the date is blank January?—Yes.

206. At what period in January is it sent out?—About the 18th, and it is asked to be returned on the 25th.

207. It is to be returned not later than blank January. You say that that is the 25th?—Yes.

208. When do you make up your list for letting in the case of houses that are not to be retaken? Suppose that a tenant does not send this circular back, what do you do?—We call on him and let him know that he must come with his missive or we let the house.

209. Up to what time do you give him a chance of taking his house?—His time is up on the 25th.

210. How many days' grace do you generally give him?—We call on him and send a post-card.

211. May I take it that the list is made up by Candlemas, 2nd February, the list is made up?—That is considered to be the time.

212. In the cases where you don't use missives, what do you do?—They come to the office, or two of our clerks go round and accept the arle, a penny or a halfpenny. That is how we do in that case.

213. Suppose a tenant wants to remove in the middle of a term, what takes place?—He comes to the office and makes an application. He has to write to us, and he pays 5 per cent. as a rule if he is a capable man, but if the bread-winner is dead, or anything of that kind, we put up the ticket for nothing, except the board.

Mr J. M'Fie. 26 Nov. 1906.

214. Suppose he presents to you a competent tenant to take his place, what do you charge in that case?—We charge the same as in the case of a death.

215. It is a nominal sum?—Yes.

216. Have you had many cases where a man wanted to sublet and it could not be done, and he had to pay rent for the rest of the time?—No.

217. Could you give us a notion in how many cases it will happen that a man has to continue to pay rent for a house that he does not occupy?—No, I could not give anything to verify what is said. It is a rare thing.

218. In what circumstances do you find the cases happen? It may happen owing to death, or it may happen owing to complete loss of employment, or to change of employment. Those are the three causes?—Yes.

219. Do you find that there are cases where the tenant says he would rather have a monthly let than go on with his yearly let?—That is a rare occurrence, but we are quite willing to agree with him if he wants a monthly let. If he is a man that we know, we are quite willing to take his monthly rent, but not to relieve him of his house.

220. But I am putting this: suppose a man has had a house on a yearly let, and at the end of the year he says, "I want to retake the house, but on a monthly let." Have you had cases of that kind?—Very rarely. It would not be according to the system if I was doing that way.

221. If a man did that, what would you say to him?—If he was a man that I knew well and he was competent to do what he said monthly, then I would agree with him.

222. You would give him a monthly let?—Yes.

223. Would that only be in the case of an exceptionally good tenant?—Yes.

224. Suppose a new man comes to you and proposes to take a house by the month that had previously been let by the year—what would you say then?—I would be apt to say no.

225. Why?—I may not know the man; I may not know the sort of people; and perhaps I do not want a monthly tenant in that property.

226. If he gave you a forehand rent, would you object then?—No, I am quite sure then.

227. (*Mr Howden.*) That is for a monthly tenancy?—It is all the same if I get twelve months' rent.

228. (*Chairman.*) I am afraid you do not see the point. Suppose a man says, "I want a monthly let; I am only to 'be bound for a month, and I am to pay you forehand so 'long as I remain here"—would you agree to that?—No.

229. Why not?—Because I did not know the man. If I knew the man, it would be a different story.

230. In your view, is it to the interest of the landlord to have a man bound for a year?—Yes, I think so, although I could modify that system.

231. You would modify it?—I could modify it to make it something like the Edinburgh system.

232. Will you tell us about that?—I don't know much about it.

233. Is your system of sending out the missive that you have told us about just similar to what other factors do in Glasgow?—Yes.

234. In Edinburgh there is a difference. The house is retaken there from about the end of March?—So I understand.

235. Do you see any reason why that should not prevail in Glasgow?—No, none in the world.

236. How far would you go? Would you go to the end of March?—Yes.

237. That gives you sufficient time before the 28th May?—Yes.

238. Do you think that there is a grievance in the present system which would be remedied by that difference?—I don't think there would be much remedy all the same, but if a bargain-maker wanted it he might have it, although I don't think he would gain much.

239. Has it been proposed to have that system in Glasgow?—Yes.

240. When was it proposed? I do not recollect, but it has been talked of for a while.

241. But it was not carried out?—No. It was proposed by Sir James Bain that the taxes should be included in the rent.

242. Do you find that the great mass of your removals are at Whitsunday?—Yes.

243. Can you give us any idea of the percentage at the Whitsunday term as compared with the other times of the year?—We have about 400 tenants removing at Whitsunday.

244. And what will be the total removals during the year?—It is difficult to answer that.

245. Would it be 90 per cent. that would remove at Whitsunday?—No, not at all: about 400 out of the 5000.

246. But they don't all remove?—That is the proportion, 400 out of 5000.

Mr J. M'Fie. 26 Nov. 1906.

247. (*Mr Binnie.*) But of the actual removals, how many are there at Whitsunday?—400.

248. And how many are there during the rest of the year? That is what the Chairman asks?—I cannot answer that without looking up the books.

249. (*Chairman.*) Could you find that out conveniently?—I could try.

250. Give us the total removals in the year and the number at Whitsunday. Do you find that the tenants have a difficulty, owing to so many removals at Whitsunday, in getting their removals conducted?—I don't think there is much trouble about that.

251. In your experience, are the rates of hiring and the cost of the work higher at Whitsunday than at other times of the year?—I believe it would be—I have heard that.

252. How much higher? I have heard it suggested two or three times the amount?—That is an exaggeration.

253. But it is materially higher?—Yes, from what I have heard.

254. Does that apply also to the cost of such things as papering and painting?—No, there is no difference there. We get our papering done for the same rate all the year round. Of course, it takes a longer time before it is done.

255. Does it result in this, that there are a good many tradesmen who are over-pressed at the Whitsunday term and are out of employment at other times of the year?—The painters just have to have men at that particular time.

256. But that is the effect, that there is over-pressure of work at that particular time?—Yes, there is pressure, but not what they cannot overcome.

257. In regard to the payment of your monthly rents forehand, is that a common practice in Glasgow?—It begins with forehand, but it ends with the opposite.

258. In all cases does it begin forehand?—Yes.

259. That is the practice?—Yes, the general practice.

260. I suppose that by far the greatest proportion of such property in Glasgow is factored by gentlemen similar to you?—Yes, pretty much. A good many factor their properties themselves.

261. Would there be 75 per cent. of it factored by regular professional factors?—Yes, I think about that.

262. Do you find a larger proportion of arrears in the monthly lets or in the yearly lets?—In the monthly lets certainly.

263. And in the cases where you have to eject the tenants, do you find a larger proportion in the monthly lets than in the yearly lets?—Yes. The small one-room and kitchen houses are on a par with single-apartment houses.

264. Do you find any difficulty in the ejectment procedure owing to its being prolonged?—We have just to bear it.

265. In regard to the rates, do you in any case collect the rates along with the rents?—Yes.

266. In what cases do you do so?—Five cases in Kinning Park, one in Govan Street, and one in South Wellington Street.

267. What class of houses are these?—One-room and kitchen.

268. Why do you collect the rates there and not in other cases?—It is done at the will of the proprietor.

269. Do you yourselves make your arrangements with the rating authorities?—Yes; they give us 7½ per cent.

270. Is that sufficient to cover your cost?—We have to be satisfied with it.

271. You would prefer 10 per cent.?—I suppose so. We have never asked that, at any rate.

272. Do you find that it makes any difficulty in the way of friction between you and the tenants when you are collecting the rates as well as the rents?—Not a bit.

273. Then there would be no practical difficulty in your collecting all the rates?—Not a bit, but it would mean a good deal of work to us.

274. (*Mr Howden.*) But the 7½ per cent. would cover that?—If we had 7½ per cent. on it all, it would do very well.

275. (*Chairman.*) Are these collected with monthly rents?—Yes.

276. To what rates does that apply?—All the city rates, the poor rate and the burgh rates. There are not many of them with the parish council—that is not the district for the parish council.

277. They have the school rate to pay?—Yes.

278. And the poor rate?—Yes.

279. And in addition the burgh rates?—Yes, and in that case we have the property taxed.

280. Do you get your 7½ per cent. both from the parish council authorities and from the burgh authorities?—No, we get it from the burgh authorities.

281. What do the parish council authorities allow you?—About the same, I think.

282. Have you any notion—I don't know that you will—how many of your 4100 tenants in the one- to three-

apartment houses may be disfranchised in the year for not paying their rates?—I have no idea.

283. Have you many moonlight flittings?—A good many, but as few as we can have.

284. Can you tell us how many you will have in the course of a year with your 4100 tenants? Will you have a dozen?—Yes, but I am notable to say exactly how many we will have.

285. They will be chiefly from the one-apartment houses?—And from the one-room and kitchen too.

286. Is it from the monthly or the yearly houses that you find the moonlight flittings chiefly?—From both kinds.

287. Mostly from the yearly?—There will be a little from both kinds.

288. Do you find that you have to enforce your right of hypothec?—Occasionally, but not very often.

289. Is that in the case of the yearly lets?—Yes. We can only do that where we have value for it.

290. What do you do in the case of the monthly lets where the rent has not been paid forehand?—We must enforce our hypothec there.

291. Suppose you had yearly lets and no right of hypothec, what would that result in? You would want either forehand rents or a cautioner?—A good cautioner would be as good.

292. Have you cautioners in many cases?—No.

293. Can you tell me how many empty houses you may have at any particular time of the year out of your 4100?—Last year before Whitsunday we had 300, and this year we have 200. We are getting better.

294. Between terms, how many may you have?—We do not change very much. We are always filling them up.

295. Do you find complaints from yearly tenants that when they want to change their house they are saddled with a whole year?—They don't care.

296. You find that they object?—No, not if they want to remove.

297. Have you found cases where a man changes his employment, but does not necessarily change his house?—Yes.

298. What kind of cases?—Masons and joiners.

299. How far do you find them travel? Suppose they have a house in the town here and a man gets employment outside Glasgow, do you find that they travel several miles?—Yes.

300. For instance, have you men who are working at Clydebank?—Sometimes, but we don't very well know where they are working, unless we get the information at first when we are letting the house.

301. (*Mr Binnie.*) You told us that last year you had 300 empty houses and this year you had 200?—Yes, at Whitsunday.

302. Five or six years ago, how many would you have?—Perhaps none.

303. (*Mr Esslemont.*) Out of these 4100 houses of one, two, and three apartments, how many tenants would be paying the rates as well as the rents to you?—None at all. It was only in these three properties I mentioned.

304. So it was a comparatively small number?—Yes.

305. (*Mr Dobbie.*) Do you find more arrears in the smaller rented houses, in the one-room houses for example?—We try to keep him out of arrears because he is not a same man to be in arrears. We have no hypothec here as a rule.

306. Do you find any difference in the amount of loss between the two classes of lets, the 75 per cent. let by the month and the 25 per cent. let by the year?—Yes, but we have just to look better after them.

307. But my point is this—you think that there is more risk of loss in the case of the 25 per cent. let by the year, or is there less, as compared with the 75 per cent. let by the month?—In a case like that, if I was going to invest, I would prefer the small houses rather than the other ones. Even though you have them half let during the course of the year, you always get half of the rent.

308. (*Mr Howden.*) You told us that you charged 5 per cent. for subletting. That is one shilling in the pound of rental?—It might be in a £10 house.

309. It would work on a £10 house the same as on any other one?—Yes.

310. Does that include the putting out of a board?—Yes.

311. And all the expense of letting?—Yes.

312. Do you know cases where the letting has been charged in addition to this shilling in the pound?—I do not know of any. In fact, we only took 2½ per cent., but we found that it would not do.

Mr J. M'Fie. 26 Nov. 1906.

313. We have been told that all the expense in subletting a £25 house was the stamp?—Yes, but if they take it by arles there is no stamp.

314. If the stamp is done away with altogether, then there will be less expense in subletting that house?—Yes.

315. Why do factors charge 5 per cent. on the subletting of a house if a suitable tenant is guaranteed to them? They charge 5 per cent. for subletting a house even when they get a suitable tenant?—That may be the case, but I cannot tell.

316. Is it not the case in your own particular business?—No.

317. Then you don't do that?—Not to my knowledge.

318. (*Chairman.*) What do you charge in that case that Mr Howden puts? A man comes forward and gives you a suitable successor, what do you charge then?—It would depend on the agreement that the man might make.

319. But can you tell us?—I do not think that we would charge 5 per cent. in that case.

320. (*Mr Howden.*) Suppose he does not get a suitable tenant accepted by you, and you charge him this factorage fee, you hold him responsible for the rent?—Yes, we hold him responsible for the house. That is the most important.

321. In addition to the factorage fee?—Yes, whatever that may be. It may be modified.

322. You have told us that tenants do not remove near their work when they secure work away from where they live. Is not what determines them the fact that they have their twelve months' let over them and they are responsible for it?—That may be so.

323. In a case where these people have to travel night and morning, that would entail a considerable amount of travelling expense?—Yes, but perhaps they had an object in doing that.

324. You think that there would be an object in doing it?—Yes, he would have an object in working away from his house.

325. In any case he is more or less tied to his house?—Yes, I quite understand.

326. What would you put the travelling expense at if a man had to travel to Clydebank?—I don't know what the expense is.

327. Would about two shillings a week be a fair thing?—It might be.

328. (*Sir J. Stirling-Maxwell.*) You have told us that there are 75 per cent. of the single-apartment houses let by the month. Can you tell me what the tendency is? Is it to let more by the month or more by the year in the case of the small houses?—Some of these are £8, 15s. houses.

329. Yes, but what is the tendency with the smallest class of house—is the tendency to let more by the month or by the year?—We don't have many of them at all; besides, they don't likely remove very often.

330. (*Chairman.*) But you are not catching the question. What is the tendency—not tenancy? Is the tendency you find to let more by the month?—Yes.

331. Do you expect from monthly lets a higher proportionate rent than from yearly lets?—Monthly lets are a varied lot. There are two or three different kinds of monthly tenants.

332. Looking to the extra expense of factorage and the extra expense of repairs, do you expect to get a bigger proportionate rent from the monthly lets than from the yearly lets?—Yes. Houses go at a higher rent when they are put into single houses.

333. Is that because they cost more?—Yes, and there is greater risk.

334. Risk of what?—Loss.

335. From arrears?—Yes.

336. You have risk of loss from arrears, and have you extra expense in the way of repairs?—There is no doubt that when people are grouped in a small room with children, they are apt to kick about their things.

337. That would apply whether they were monthly or yearly?—Yes, of course.

338. Do you find, when people take a house for a year, they will keep it in better repair than monthly tenants?—They are more likely to do so.

339. And are the factorage expenses less in the case of yearly lets with quarterly collections than in the case of monthly lets?—They are pretty much the same. They are mixed in the one property.

340. And the man is there anyway?—Yes.

Mr W. J. Wood & Mr W. Cochran.

26 Nov. 1906.

Mr William J. Wood and Mr William Cochran, called and examined.

Mr W. J. Wood & Mr W. Cochran.

26 Nov. 1906.

(*Chairman.*) We propose to ask Mr William Cochran, Chairman of the Glasgow Parish Council, to appear along with Mr W. J. Wood, Collector of Assessments for the Burgh of Glasgow. I have got from Mr Wood a note of his *precis*, so I propose to ask him questions from that. We thought it convenient, Mr Cochran, if you had anything to add as Mr Wood goes along, you might do so, and then at the end we will ask you if you have anything to say in addition to what he has said.

341. (*To Mr Wood.*) How long have you been collector?—21 years.

342. You have been in the service of the Council for over 35 years?—Yes.

343. Is the parish of Glasgow the largest parish in Scotland?—Yes.

344. Indeed in the United Kingdom?—Yes.

345. What is the area?—24 square miles.

346. And the population for 1905–06 was what?—663,729 in the burgh and 26,745 in the landward portion, being a total of 690,474. The parishes of Edinburgh, Govan, and Glasgow are united for common interests, and they have had this matter before them. They occupy the position that I am going to take up here to-day, but if it is wished that they should give more evidence afterwards, they will do so.

347. What is the gross rental in the parish?—In the burgh it is £4,163,125 for 1905–06, and in the landward it is £138,175, being a total of £4,301,300.

348. Now take the assessable rental?—In the burgh it is £3,240,241, and in the landward it is £101,219, being a total of £3,341,460.

349. This is all for the parish of Glasgow?—Yes.

350. Will you tell me the number of ratepayers on the roll?—In the burgh there are 152,853, and in the landward part of the parish 7726, being a total of 160,579.

351. What do you mean by the landward?—The portions of the parish outwith the burgh of Glasgow.

352. What burgh, the ancient burgh?—The Municipal Burgh as at the present time.

353. Since the recent additions?—Yes.

354. Roughly, what does the burgh of Glasgow exclude? Does it exclude Govan?—Yes.

355. And Partick?—Yes.

356. And what more?—To the eastward, Shettleston; northward, Lambhill and Possilpark—portions of these—and Millerston and Tollcross. I should explain that, of course, the parish of Glasgow does not take in the whole of the burgh of Glasgow; it only takes in that portion of the burgh of Glasgow that is north of the Clyde and east of the Kelvin.

357. Your two chief parish rates are the school rate and the poor rate?—Yes.

358. The other two, the special and registration rates, are a mere bagatelle?—Yes, and they only apply to the landward part of the parish. The Town Council collect the burgh portion of the registration rates, and the special parish rate by Act of Parliament applies only to the landward area.

359. The two of these rates together are just about £250?—Yes.

360. Taking the poor rate, what was the amount assessed?—For the year 1905–06 the amount assessed was £295,121, while the amount collected was £280,097. I exclude the shillings.

361. Then take the school rate?—The amount assessed was £211,339, and the amount collected was £198,787.

362. Take the two small rates?—The amount assessed for the registration rate was £253, and the amount collected was £238. For the special parish rate it was £9. In 1905-06 there was no special parish rate assessed, and that £9 was simply a grant.

363. So the total amount assessed for the year 1905–06 was £506,714, and the amount collected was £479,133?—That is so.

364. I understand the Glasgow Parish Council have directed their attention not to the merits of any proposals that have been made to deal with the question before us, but they have directed their attention to the results in the way of difficulties that would arise in collecting the rates if at least some of these proposed measures were passed?—Yes.

365. For instance, a measure was proposed in 1890 which was backed up by Mr Proven, Mr Baird, Mr Robertson, and Mr Caldwell, which proposed merely to reduce the number of days before the Whitsunday and Martinmas terms during which agreements for letting should be possible. What you are now going to say has no reference to a proposal of that sort?—No.

366. I think you have directed attention to what would be the effect of certain proposals made by later Bills, and, in particular, by Mr Cross's Bill, which has been introduced in successive Parliaments?—Yes.

367. And, of course, what you are now going to say will apply to any such proposal, whatever Bill it was in?—Yes; any proposal that proposed the same thing.

368. You have taken Mr Cross's Bill for convenience, and you refer to certain sections?—Yes.

369. I notice you refer to section 3, and you are proceeding on the footing of the proposed measure applying only to burghs as defined in section 3 and applying only in burghs to dwelling-houses at a rental of not more than £20 a year in any case?—Yes, that is the provision of section 3.

370. Did you, at the request of the Parish Council, prepare a return showing for the year 1902–1903 the amount of poor rate levied and paid by tenants divided into nineteen classes according to the rental?—Yes.

371. You deal in that list with houses much above £20?—Yes, the whole subjects on the roll.

372. Now, limit yourself to dwelling-houses at £20 and under. Out of that list which you so prepared will you tell us how many there were?—There were 125,401 for that year.

373. Dwelling-houses of £20 and under?—Yes, the number of dwelling-houses at £20 and under was 125,401 out of a total entry on the roll of 153,201.

374. What percentage did that give?—81·9 per cent.

375. Do these include houses with shops, or are they only dwelling-houses alone?—Where it has been a house and a shop it will include the shop.

376. As a separate item?—No. Very often an entry appears on the roll as a house, but when you come to visit it you find it is a house, and perhaps the front part of it is used as a shop. It includes that.

377. Only in the case where one rent covers both?—Yes.

378. That is 1902–1903?—Yes.

379. You have no return up to date?—No. We have no occasion for making up this return yearly, but occasionally it is asked for, and the last time it was asked for was 1902–1903. It is a very elaborate return. I have no doubt that the percentage remains about the same.

380. What is the total amount required for poor rate?—£78,265,—that is poor rate alone. That was the return asked for; I do not have the other rate.

381. What is the proportion of that levied on £20 and under?—£24,363.

382. I do not understand that. I thought you told us that you levied for poor rate £295,101 in 1905–1906?—Yes, but this applies only to that class.

383. No. You told us the total amount for poor rate for 1902–1903 was only £78,265. How can that be if the total amount for poor rate this year is £295,101?—You are dealing with different years. There have been considerable extensions since that, and perhaps there is some other item in it.

384. There must be?—There has been an increase since that. I will look it out, and correct it if it is wrong.

385. (*Mr Binnie.*) Are you sure about the figure you have given us for houses of £20 and under, namely, £24,363?—Yes. The percentage is right. If there is a mistake in the one then there would be a mistake in the other. That is evidenced, because we asked the same information from the parishes of Govan and Edinburgh; Edinburgh gave its percentage as 79, Govan gave it as 73, while our percentage is 81. That is the percentage of the number. The percentage of the amount is 30 in the case of Edinburgh, 30 in the case of Govan, and 31 in our case.

386. (*Chairman.*) Would you tell us how you proceed with your Parish Council rates in dealing with occupiers?—In what way?

387. Take people who are rented at £4 and under?—In the burgh the tenants of houses of £4 and under are rated direct.

388. That is to say, the owner has to pay?—No, the tenant is rated direct for houses of £4 and under for poor and school rates.

(*Mr Cochran.*) But not the burgh rates.

389. (*Chairman.*) That is so. (*To Mr Wood.*) For Parish Council rates in the burgh the occupier is rated direct, and has to pay the rates direct?—Yes.

390. You distinguish the burgh from the landward?—Yes.

391. How does it stand in the landward?—The proprietor is charged the tenants' rates for houses of £4 and under.

392. Which he pays with his own rates?—Yes; he is separately assessed for them, and he pays them under a separate notice.

Mr W. J. Wood & Mr W. Cochran.

3 Nov. 1906.

No. 1.

TOTAL POOR RATE ASSESSMENT LEVIED.

Mr W. J. Wood & Mr W. Cochran.

26 Nov. 1906.

Year.	Rate per £.			Assessment Levied.		
	Owner.	Tenant.	Total.	Owner.	Tenant.	Total.

No. 2.

STATEMENT giving for 1904-05 the Total Number Assessed and the Total Amount Assessed (both Owner and Tenant), also showing the Number and Amount exempt for Unlet Property (Occupiers' Proportion), Statutory, &c. Exemptions and Irrecoverables, with the Percentage that each is to the Total.

Details.	Number.	Per cent. of Total Number Assessed.	Amount.	Per cent. of Total Amount Assessed.
			£ *s.* *d.*	
Unlet (occupiers' proportion) . . .	10,139	5·784	9,846 9 0	2·361
Statutory exemptions	946	0·539	4,814 11 7	1·154
Paupers	3,314	1·890	1,271 7 5	0·304
Inability	12,248	6·976	3,807 8 11	0·912
Irrecoverables	12,710	7·251	5,058 16 8	1·213
Totals . .	39,357	22·440	24,798 13 7	5·944
Paid . .	135,914	77·560	392,205 18 8	94 056
Total entries on roll and total assessment .	175,271	100·000	417,004 12 3	100·000

Note.—The total number of Receipts involved in the £5058, 16s. 8d. irrecoverable was 15,063. Of these, 12,710 were wholly irrecoverable, and 2353 partially irrecoverable. The *amount* of these 2353 Receipts, so far as irrecoverable, is included in the £5058, 16s. 8d., but the *number* of them is not included in the 12,710, because they are already included in the 135,914 paid for the portion so paid.

393. With regard to rents above £4, what do you do in the burgh?—They are assessed direct.

394. And also in the landward?—Yes.

395. Do you find any difficulty resulting from the landlord having to pay in the landward the rates for tenants of houses of £4 and under?—No.

396. You have never had complaints of any difficulty arising?—No.

397. From the practical point of view, whatever the rights and wrongs may be, do you think there would be any difficulty in the landlord collecting the occupiers' rates in houses of £4 up to £20?—No.

398. There would be no practical difficulty?—No. I am speaking subject to points that are coming up afterwards, allowances and all that, and the effect upon other things.

399. But I am talking of practical difficulties?—There would be no practical difficulty.

400. Take the rents below £4: you have there, of course, no arrears?—In the landward?.

401. Yes, in the landward?—No.

402. On the other hand, I suppose you have arrears in the burgh?—Yes.

403. And both in the landward and in the burgh you have arrears in the case of houses above £4?—Yes.

404. In the case of a tenant who enters at Whitsunday on a yearly let or on a monthly let, and only remains part of the year, is he bound to you by statute to pay the whole rent?—Yes. Of course, I should explain that he does not appear on the roll as a monthly tenant; there is no distinction made on the valuation roll which is sent to me by the assessor, and which is my authority for assessing. He is simply entered as a tenant, and I must assume that he is presumably the tenant for the year,—at least, I don't ask myself the question.

405. And you have a legal right to make him pay whether he remains to the end of the year or not?—Yes; and he has a right to go against the subsequent tenant for that tenant's proportion.

406. Suppose a yearly tenant had to break the tenancy, or suppose he leaves at the end of a month, you have no right to sue the person who comes in the middle of the term?—No.

407. If you make the first man pay as you say, he has a right to go against the subsequent tenant?—Yes.

408. Suppose the first man leaves the country, what, in point of fact, do you do?—Of course, if there is no subsequent tenant, then the whole is lost. If there is a subsequent tenant, what I do is this, I ask him where he comes from. In many a case he comes from another house in the parish, for which he has not paid as the original tenant, and then I charge him the whole year's rates, because, between his two houses, he has occupied a house in the parish for the year, and he was liable to me for the full year's rates for the house from which he came.

409. But you only charge him one set of rates?—One year's rates.

410. Suppose he has occupied before a house of a different rent from the new one?—Then, of course, I have to come and go with him a little, and I have to say, "Your 'first house was £10, and you have now come into a £12 or 'a £15 house; you ought to pay me a little more than the 'whole of your first house's rates."

411. But the case is not a possible one of his being at the commencement of a tenancy in one part, leaving that, and being liable there for the whole rate, going to another house and being made to pay the rates of his second house also?—I think not; I don't know of any case of that kind.

412. If he was coming from another town it might happen?—Yes. If he was a new tenant, he would say that he came from Greenock, and I would say, "I want you 'to pay a proportion," and he might say, "I won't pay 'anything," and I could not enforce it.

413. Then the case could not arise of his being liable to pay the whole rates at Greenock, and also to pay in Glasgow as an incoming tenant between terms?—No.

414. Why not?—It might arise in this way, if he came from Greenock in the way you indicate, he might pay to me, of his own free will, the proportion for the time; but if he did not do so, I have no power to force it.

415. You are talking not merely of your practice, but

of your legal power?—Yes. My summary warrant is not different from my roll,—I must follow my roll, and in my warrant the name of the original tenant appears, and consequently I have no warrant against the subsequent tenant.

416. (*Mr Howden.*) Do you find much difficulty in collecting rates under these circumstances?—No. There will be a few isolated cases and individuals who take up an extreme position, but it very seldom happens.

417. (*Chairman.*) Suppose that the law was so altered that all tenancies were monthly tenancies, would that, in your view, make any difficulty in connection with the collection of parish council rates?—Yes, I would say that it would very seriously jeopardise the collection of my rates.

418. That would be on the assumption that it would lead to more frequent removals?—Yes.

419. If the monthly tenants remained on just as long as the yearly tenants, it would not?—No.

420. But if it led to their more frequently removing, it would?—Yes; but that, I understand, is the basis of the Bill. The Bill is based on the assumption that there are a large number of people who wish to shift their houses more frequently than at present and cannot do so. That assumption is either correct or it is incorrect. If it is correct, then there will be more shifting; if it is incorrect, it takes away to some extent the reason for the Bill.

421. Suppose, instead of more removals, the removals were spread over the year, would the difficulty arise?—It would arise in a modified form, because, there being more frequent removals, unless I knew that "A" was the same tenant as was in a former house, and he admitted that, I would have no right to recover against him. If A remains in one house all the year, he is on the roll, and I have power to recover the rates; but if he had power to go to other houses in the course of the year, I might have him in one or other of two houses, but I would not know that he was the same individual, and he might say, "I am a new tenant here," and then I would be powerless.

422. You are collecting rates at the present moment from a very large number of monthly tenants?—Yes; I don't know that it is a very large number.

423. Can you give us what proportion of your total ratepayers are monthly tenants?—No, because the roll does not show that.

424. For the reason you mentioned?—Yes; I can only tell this, there are certain proprietors who, for reasons best known to themselves—it may be that they have let their houses monthly, or it may be for convenience or for some other reason—come to me and say, "We want to pay our tenants' rates." Of course, I never refuse money; and when they come and say that they want to pay their tenants' rates, I take the rates from them. For instance, the City Improvements Department of the Corporation does that, and the Glasgow Workmen's Dwellings Company does it to a considerable extent. Some of the North British Railway Company's houses are in that position, and it is also done by the Cowlairs Co-operative Society, the Kyrle Society, and others. I have made a rough estimate of the number of tenants whose rates are paid through the proprietors, and I make it out to be 1780, and I estimate the amount of the tenants' rates so involved at about £1000. These are all within the burgh. I am confining myself to the burgh, because the theory only applies to the burgh.

425. (*Mr Esslemont.*) To the parish?—No, to the burgh portion of the parish.

426. Not to the whole of the burgh?—No; it is so much of the burgh as is within our parish.

427. And it is not the whole of the parish either?—No.

428. (*Chairman.*) You could not give us, or get for us, the proportion of your 153,000 total entries on the roll who are monthly tenants?—No, I do not have the information.

429. Who would have it. I know it is somewhere, because I have seen it in the papers?—I don't know. The only proportion I could give would be that out of the 153,000 ratepayers in the burgh, there are about 1780 whose rates are paid to me by the proprietor.

430. Assume that there are many thousands of ratepayers who are monthly tenants from whom you are now getting payment of rates, would there be any greater difficulty, so far as you are concerned, in the balance who are at present yearly tenants becoming monthly tenants, so far as the rates are concerned?—So far as the collection of them?

431. Yes?—No, I would say not. If the landlord was taken bound to pay them there would be no difficulty in collecting them.

432. At the present moment there are thousands of monthly tenants who are paying their rates to you. Do you find any special difficulty or any special amount of arrears in their cases as against those who are yearly tenants?—When you come down to the monthly tenants you come down to a class of tenants who, whether they take their house by the year or by the month, are more likely to be in arrear.

433. Can you say, from your own experience, whether the amount of arrears in the case of monthly tenants is materially larger in proportion than in the case of yearly tenants;—No; but I can say that the class of tenants represented by those is larger, because the lower I go down the greater is the percentage of irrecoverable rates.

434. Suppose the yearly tenants, who are, of course, the better class, were to become monthly tenants, do you see any reason why the arrears in that case should on that account become greater?—I see no particular reason.

435. If the proposed alteration in the law involved more frequent removal, is it your view that would not be met either by more frequent collection of rates or by making the owner liable?—It would not be met in either of those ways. Of course, there could not be a more frequent collection of rates under the present law, because you would need a new survey to get at these new tenants,—I mean to say, that the assessor would require to give me the new tenants, or I would have to go myself to find them. He makes up the roll just now in this way, by sending surveyors all over the area that he is dealing with, and he takes information as to who is the tenant, and the owner, and what is the rent, and all that, and from that he makes up his roll, having checked it first of all with the factors' returns of their tenants. Having checked that, he makes up his valuation roll. After the Appeal Courts have taken place, the roll is certified, and he sends me a copy. Now that roll contains the tenants at the time it is made up, namely, 15th May. If there was to be a collection from another set of tenants, I would need to get that other set of tenants' names.

436. Does that not arise with monthly tenants who remove? You have to get the names of the intermediate tenants?—No; we hold the first tenant liable.

437. Take the case that we were speaking of, a tenant having left?—If he has left I would go to the house; and if I find some other tenant in, I try to find where he has come from. If he comes from another house in the parish, he appears as at 15th May, and I try to make him pay the whole rate; but if he comes from another place, I try to get him to pay a proportion.

438. (*Mr Esslemont.*) You don't follow the man that is on the roll?—I try to do so when I can, but in most cases I cannot get him.

439. (*Chairman.*) The change, if it was made, would merely multiply the number of such cases?—Yes.

440. If the owner was made liable primarily, that would remove that difficulty?—Yes.

441. (*Mr Cox.*) Is the rating from 15th May to 15th May?—Yes.

442. I thought it was from 28th May?—That is the removal term. The valuation roll is made up from 15th May to 15th May.

443. You said that the assessor sent round his men to find out who was still there?—He does not begin till June or the end of May, and all the removals are past then.

444. (*Chairman.*) Are there certain cases at present where arrangements are made with the rating authority under which the owner collects above £4?—That was what I was referring to just now when I gave the 1780 tenants representing rates to the extent of £1000.

445. Can you tell to what amount of rent any of these go?—I would say they are pretty much under £20.

446. But some go near it?—Yes, some of the City Improvement ones go near it.

447. Do you find any difficulty under this arrangement?—No.

448. What allowance do you give in these cases?—To the owners?

449. Yes?—We give no allowance.

450. You give no allowance for collecting the parish rates?—No.

451. We had evidence this morning about 7½ per cent. being allowed?—I think that was for collecting the police rates, if I heard the evidence aright.

452. You have never made any allowance?—No.

453. Are you entitled by law to make an allowance?—There is no provision as to that.

454. Suppose there was a provision, have you any view as to what would be a reasonable allowance?—I have not considered it.

455. That would be a matter of detail?—Yes.

456. Suppose such an allowance were thought reasonable, what items would enter into it in order to ascertain the fair amount?—It is difficult to say. You would have to take into account the trouble that the factor would have in collecting the rates and paying them over. That would be item number one. Item number two would be the risk of arrears, because he would have to pay for every house the full year's rates, and, of course, he would lose by losing tenants.

Mr W. J. Wood & Mr W. Cochran. 26 Nov. 1906.

457. These would be the two elements?—Yes, and then there would be his trouble and the work with the tenant as well as with me. He would have to work it out with the tenant, and then he would have to come to me and pay the money.

458. (*Mr Dobbie.*) Would it save the rating authority anything?—Yes, because I don't think we would lose so much as we do just now by irrecoverables.

459. (*Mr Binnie.*) What do you lose?—About 1½ to 2 per cent. on the total assessment.

460. But under £20?—I have not worked it out for the individual classes of rents.

461. (*Chairman.*) Take the other suggestion by Mr Dobbie with regard to the expense that would be saved to you. You would have less collecting?—Yes, there would be a good deal less collecting.

462. You cannot put a figure on it?—No, not just now.

463. Have you any experience of the English method?—No.

464. Or any knowledge of it?—Only second-hand.

465. What do you understand generally to be the English practice?—I don't know that I am in a position to tell you even in a general way. I understand roughly there is a very large number of houses let by the week, and month, and quarter. In these houses the rates are paid in the rent, but I understand the practice varies in different cities—at least so I am told. I have been trying to get a little information in view of this Inquiry; I understand that the practice varies in different cities, and I am also told that the percentage allowed to the landlord varies in different places. Then I understand that there is some arrangement—I do not quite follow it from the letter I have got—by which people who may be presumably unable to pay their rates, if they have to pay them direct then they have some way of getting off by applying to Justices of the Peace. I am not clear as to whether these rates are charged against the landlord.

466. (*Mr Dobbie.*) Could you find out the proportion of irrecoverables under £20?—It would be very difficult. I notice in the old return for houses of £10 and under, there was in respect of unlets, statutory exemptions, and irrecoverables—these include more than you wish to know—25,000 out of a total of 82,000 houses of £10 and under. These 25,000 under that category represented rates to the extent of £3285. Between £20 and £10 there were 2873 under that category, representing rates amounting to £833. That, however, includes the unlet houses and all the statutory exemptions. I could not very well tell you the proportion that you ask for.

467. Suppose the owner had to pay under arrangement, you would, as you said, have practically no arrears? Take last year; what would have been the effect last year, if that arrangement had been in vogue, on the question of disfranchisement? How many people who were disfranchised last year would not have been disfranchised if their rates had been paid by the owners?—Last year's total of persons disfranchised.

468. On account of?—On account of the items I will indicate, amounted to 19,669, in so much of the burgh of Glasgow as is within our parish.

469. Were they disfranchised for non-payment of poor rates?—2898 were disfranchised because they were in receipt of parochial relief; and, of course, all in receipt of parochial relief are exempt from the poor rates. 2270 were exempted by the Parish Council from payment of their rates on account of inability to pay, and then there were 14,501 who failed to pay, making up the total of 19,669. That includes all classes, £20 and upwards, and £20 and under.

470. Can you make any suggestion as to the proportion of the 14,501 whose rents were £20 and under?—No, I am sorry that I cannot, but a much larger proportion would be below the £20.

471. Three-fourths?—Yes, there would be that any way. Of course, there are a great many larger houses where the tenant runs off and you get no address.

472 (*Mr Esslemont.*) Can you tell me what proportion of the 14,501 would ultimately pay, although they had not been able to pay within the prescribed date?—Very very few. They are practically all in by the 20th June, all that I can get. They fail to pay because I fail to recover.

473. (*Chairman.*) Would it be safe to say that at all events 10,000 effective voters would have been added to the list?—Yes, and considerably more than that if you take the paupers and those exempted. There are 2898 paupers, and there are 2270 exempted from the rates by the Parish Council, and then there are 14,501 from whom I have failed to recover the rates. Out of the total of 19,669 I expect you would find that it would apply to 14,000 or 15,000 of them.

474. Suppose you put out of sight the paupers, then that would be the proportion. You are talking about the burgh portion of the parish of Glasgow?—Yes.

475. Would it roughly be a somewhat similar proportion in the burgh outside the parish of Glasgow?—That belongs to another collector, the collector of Govan, and I don't know, but I should think so. I don't see any reason why the proportion should not be very much the same. You mean Govan?

476. Yes?—I think it would be very much the same proportion.

477. Is there anything in that calculation, so far as you know, that is special to Glasgow, or would you suppose, without any exact knowledge, that it would apply to Edinburgh and Greenock and other places?—I don't think so, except taking into account the different complexions of the cities. Roughly, it will be about the same.

478. So far as in section 9 of the Bill there is an exemption of imperial taxes, that does not enter into it because these consist of inhabited house-duty—which is not payable on houses under £20—and income tax, which is not payable on incomes of under £160,—we may put them aside?—That is so.

479. I read to you section 7. Are there a large number of dwelling-houses that have small shops attached to them?—Yes.

480. Could you give any idea of the number?—Within the burgh portion of our parish I calculate that between 1400 and 1500 entries refer to houses with shops attached to them at £20 and under. There will be about 500 at £10 and under.

481. Assuming—about which we say nothing—that there is a grievance here, do you see any reason to suppose that the grievance, if it exists, would not apply equally to these houses with shops as to houses without shops?—I do not quite follow.

482. Assume that there is a grievance in the present position of matters in relation to dwelling-houses?—If there is a grievance in the one case there will be a grievance in the other. The difficulty here would be that these houses and shops of £20 are apparently exempted by the Bill, and yet they belong to the very class that I would think the Bill was meant to apply to, because the shop is probably just the front window of the house used as a shop.

483. You notice in the Schedule to the Bill there is an allowance to the landlord in respect of rents over £4, varying as the rent increases, but no allowance in respect of rents under £4. What do you say to that?—I would say that the Bill would require some amendment to meet that. No doubt the reason of that is this: in the burghs the police rates are charged direct to the landlords in houses below £4, but they have probably overlooked the fact that the parish rates are charged direct to the tenants of these houses, and therefore they have not provided for the landlords getting any percentage of these rates supposing the Bill came into force.

484. There is no provision made for the preservation of the right of relief in the case of poverty or inability. What is your experience of that?—I have mentioned that last year we gave relief to 2270 tenants.

485. Who sits upon that?—The Parish Council.

486. A committee?—Yes.

487. How often do they sit?—As often as is necessary. It is very often remitted to me to go over the applicants and weed them out and to put them into classes.

488. Up to what rents have you known remission made?—I have known it given up to £35, and £40 in some cases.

489. Total remission?—Partial. These are houses that ladies take for lodgers, and they are most difficult cases to decide. The keeping of lodgers is often a very precarious business. The house has to be kept up and kept well furnished, but there are not many in number in that class.

490. (*Chairman to Mr Cochran.*) Have you anything to say in regard to what Mr Wood has said?—I would like to emphasise the fact with reference to the question as to collecting the rates at a different time of the year. That has been before the Parish Council on several occasions, and we have decided that it would not at all be the correct thing to do, that we could not afford to do it. It would cost far too much money to collect the rates more than once a year. The machinery is hard enough worked to collect the rates once a year.

491. Would it mean an increase of your staff?—I don't know that it would mean that, but it would be so impracticable that it would be very difficult to work. As Mr Wood pointed out, you would require to get the assessor to make another survey, and, if you collected the rates four times a year, then you would want four surveys. The Parish Council have considered this matter. Then I can give some information about the English working which I have ascertained.

492. We shall be glad to hear it?—I wrote a letter to Mr J. W. Cleland, M.P., and he sent me the following information, which is not his own information, but is in-

Mr W. J. Wood & Mr W. Cochran.

26 Nov. 1906.

formation from an expert :—"With regard to Mr Cochran's 'first question, workmen's houses in London are, as a rule, 'let by the week at a rent which includes rates and taxes. 'The rent of houses which are let otherwise than by the week 'or month does not, as a rule, include rates and taxes; the 'chief exceptions to this rule are 'flats' and similar suites 'of rooms in block buildings. These are usually let at in-'clusive rents.

"With regard to the second question, a man who has 'received poor-relief during the registration year is dis-'qualified from being entered on the register, and is there-'fore disfranchised, quite apart from the question of 'payment of poor rates.

"The chief statutes dealing with these questions are 'the Poor Rate Assessment and Collection Act, 1869, the 'Representation of the People Act, 1867, and the Parlia-'mentary and Municipal Registration Act, 1878."

493. (*Mr Esslemont to Mr Cochran.*) What is the method of collecting in Glasgow? It is by demand note, is it not?—Yes.

494. Do you have a staff going about collecting?—No, but when there is a warrant granted the officer goes round with it.

495. But up to that point you just work by demand note?—Mr Wood will be better able to speak to that.

(*Mr Wood.*) We get our valuation roll about 1st October, and we then set to work and make up our assessment roll. The collection then commences by people coming to the office and paying on the demand note. In December we send out a second or final notice, and then about the middle or end of January we take out warrants for those that are then unpaid, and we employ a staff of forty or fifty outdoor collectors. The parish is divided up into districts, and these collectors work off the arrears as best they can. In regard to the matter of cost, perhaps I may be allowed to say, in supplement to Mr Cochran, that I consider that if you collected the rates twice a year instead of once, you would practically double the cost of collection, because you would require to have new demand notes.

496. (*Chairman.*) And you would have to add to the staff?—Yes.

497. And to the office accommodation?—No, but you would have to add to the staff and the books. You would require a double staff.

498. (*Mr Esslemont.*) What is the staff doing during the rest of the year? During the period of collection they are very busy?—We begin at the beginning of October to collect money. We are very busy inside taking in the money. By January we have our warrants, and then we begin our outside work, and that lasts till our next collection begins. We have a great many difficult cases to deal with.

499. It seemed to me that, as you required payment by a specific date, and you were working with a certain staff, it should not be necessary to add to that staff if you made the collection twice in the year?—You would have two sets of notices to send out. We don't have a bigger staff than we require at present.

500. You send out these notices within a prescribed period once a year. Now, why should not the same staff do the same work twice a year?—We work our office largely by temporary hands, and the staff is dismissed when the work is done.

501. (*Chairman.*) It would increase your temporary staff?—Yes.

502. And not the permanent staff?—Not so very much. It would increase their work, and it might be better to have the whole staff of a permanent character.

(*Mr Cochran.*) It is right to explain that the warrant is not got till the end of January, and it is not put into force till that time. They have all that time to pay.

(*Mr Wood.*) With regard to the second paragraph about franchise, that is all the information you wish, because under the present Act those people are returned as defaulters; if the owners pay rates themselves, then they would not be so returned, because the rates would be entered as paid, and I could not return them. Now, the question is whether it is contemplated by this Bill in that way to qualify that section of the Franchise Act.

503. (*Mr Howden to Mr Wood.*) Has it never come to your knowledge that your rates come on the working classes at the worst time of the year?—If there is a hardship of that kind then we take the rate in two or three payments.

504. But it is not a general complaint that it comes at absolutely the worst time of the year?—I would not say that it is a general complaint. I have heard the complaint made, but not very frequently. It is not general in my experience.

505. You are of opinion that the arrears would not be less?—They might be a little less, but not very much.

506. The only objection you can take to this matter is with regard to the roll. If you got the roll four times a year from the assessor you could easily collect the rates?—No, I would not grant that. I would require power from Parliament to charge new tenants with the rates.

Mr W. J. Wood & Mr W. Cochran.

26 Nov. 1906.

507. You would need power to charge new tenants even although there was a new roll made up?—Yes, because the present law is for one roll and one collection. That is under the Valuation Act of 1854. Of course, I would not need that new law if you charged the rates to the landlord; but in that case, as I say, you are nullifying the provisions of section 92 of the Franchise Act.

508. We have got a memorandum signed by the Chairman of the Glasgow Parish Council, the Chairman of the Govan Parish Council, and the Chairman of the Edinburgh Parish Council, and the respective Clerks to these Boards. Is this the opinion of the Glasgow Parish Council?—Yes.

509. Has it been under the consideration of the Parish Council of Glasgow, or simply under the consideration of a committee?—It has been under the consideration of a committee, and subsequently under the consideration of each of the parishes interested.

510. So this is the opinion of the Glasgow Parish Council?—Yes, on the points to which I have restricted my evidence.

511. They have given no opinion on the merits of the Bill?—No.

(*Mr Cochran.*) They did not go into that question.

512. (*Sir J. Stirling-Maxwell to Mr Wood.*) Does the amount of arrears vary much from year to year?—No, not very much.

513. They will increase with bad trade?—Yes. If you get periods of exceptional depression, then your irrecoverables will go up; but, taking one year with another, the percentage of one year is remarkably near to that of the preceding year.

514. (*Chairman.*) Roughly, what does it come to?—It runs from 1½ to 2 per cent. on the total amount assessed.

515. (*Mr Binnie.*) The figures you gave us were that your total assessment was £506,714, of which you recovered £479,133?—Yes.

516. That is more than 5 per cent. unrecovered?—Yes. There are two items that I mentioned before to be taken into account, the statutory exemptions and the unlet property. The £506,714 is the gross assessment in the roll, and the £479,133 is the money I have got out of it. The balance is not only the irrecoverables, but the unlet property and the statutory exemptions.

517. In the statement you are going to give us, will you distinguish those so that we can see exactly what is really lost?—Yes. I will send in a statement showing the percentage of each for this year.

518. What is the cost of collecting the assessment?—I would need to get that for you. I will send it in.

519. (*Mr Binnie to Mr Cochran.*) I was going to ask you whether, when you were communicating with your friend about the English practice and ascertaining about the houses where the landlords paid the taxes, did you ascertain what allowance was given to them when they compounded for the rates?—No, I did not ascertain that; but I see from the Acts of Parliament that provision is made for an allowance. I did not ask whether that was put in practice or not.

520. (*Mr Esslemont to Mr Wood.*) You stated that you took payments to account for rates?—Yes, in some cases.

521. Can you tell me whether that is a general practice?—I suppose it is.

522. You don't think it is general for the collector to refuse to accept payment to account?—No. We try to get the full payment; but if we can only get something, then we take it.

523. I have heard cases where they have refused to accept payment to account?—I have refused myself, because I thought it was a refusal not based on inability.

524. A refusal based on declinature?—Yes, but I am speaking of cases where I felt it was a hardship to ask the whole at one time, and in these cases we have accepted in two or three payments.

525. (*Mr Esslemont to Mr Cochran.*) I should like to refer to the Memorandum prepared on behalf of the Glasgow, Edinburgh, and Govan Parish Councils, and I read the concluding paragraph on the second page. (*Reads.*) Is that the deliberate decision of the Glasgow Parish Council on that?—That is the decision of the Adjustment Committee.

526. But this is a Memorandum submitted on behalf of the Glasgow, Edinburgh, and Govan Parish Councils?—Yes; but it was prepared by the Adjustment Committee. Instructions were given by each of the Parish Councils to prepare this Memorandum.

527. But what are the views of your Parish Council on this point?—I cannot tell.

528. Has it never been discussed?—No, this Bill has never been discussed.

529. I am not talking of the Bill; I am talking about the recommendation made by this Committee on behalf

Mr W. J. Wood & Mr W. Cochran. 26 Nov. 1906

of these Parish Councils. It is a most important thing?—Yes. This Memorandum was never before the Glasgow Parish Council.

530. Then, why should it be submitted on behalf of the Parish Council?—You told Mr Howden that it had been.

531. (*Chairman.*) Was it before the whole Parish Council?—No; this Memorandum was not before the whole Parish Council. The Memorandum was prepared by the Chairman because they had authority from the Parish Councils to make such a Memorandum, but the Parish Council never saw the details of it.

532. (*Mr Esslemont.*) You are a signatory to that Memorandum?—Yes.

533. In making that suggestion, have you any reason to believe that you were supporting a policy which was agreeable to the members of your Council?—Yes, I had reason to believe it.

534. You think that if it was submitted to your Council it would be carried practically unanimously?—It would be carried, but I cannot say that it would be carried unanimously.

535. It has a most important bearing on the whole question?—Yes.

536. And we should have the views of the Parish Council?—We could only get that if it was brought before the Parish Council. We had instructions to prepare this Memorandum, but the Memorandum itself has never been before the Parish Council.

537. You discuss the Bill in the earlier part of the Memorandum, but this is a conclusion at which you have arrived in which you recommend that all rates and taxes should be included in the rent?—That is the view of the Adjustment Committee. That is all I can say.

538. It has never been formally endorsed by the Parish Council?—No.

539. (*Mr Howden.*) Then this is not the opinion of the Parish Council?—We were authorised to sign it, but it was never submitted to the Parish Council after it was signed.

540. (*Chairman.*) You were authorised to prepare the Memorandum, but it was never actually submitted to the Parish Council?—That is so.

541. (*Mr Dobbie to Mr Wood.*) Article 4 recommends that all rates and taxes should be included in the rent. Supposing there was a change made in the law in favour of monthly tenancies, and no change was made in regard to the rates and taxes, so that they were not included in the rent, how would they be collected, and from whom? You would make up the roll as at present, as at 15th May?—Yes, the assessor would make it up. He sends it to me, and I have only that to go upon. I would find a much larger number of people had left their houses when I went to get the rates, and I would lose their rates.

542. If the law was not changed with regard to collecting the rates with the rent, then the monthly tenant would require to be in the house at the date of making up the assessment roll?—Yes.

543. And he would be charged with the whole year's rates?—Yes.

544. I would like you to help me in regard to the question of compounding the rates, assuming that the landlord paid them. I do not quite follow the figures in regard to the extent to which at present the rates are paid by landlords. Am I right in thinking that you told us that 1780 tenants had their rates paid through their landlords?—Yes.

Mr W. J. Wood & Mr W. Cochran. 26 Nov. 1906.

545. I was under the impression earlier in the day that one witness told us that he himself factored 1487 houses and paid rates for these; and that, with the exception of forty, all the rates were paid, and he himself therefore paid directly to you rates for occupiers in 1447 houses?—I noticed his figures, and I wondered whether they did not include some in the parish of Govan on the other side of the river. I can only speak for my own figures.

546. To enable us to arrive at the cost to the local authority in estimating what might be allowed to the landlord, I think it is most important, and you might give us the figures that Mr Binnie has asked for. I think I am right in saying that there were 14,501 ratepayers whose rates were irrecoverable?—Yes.

547. You said that the bulk of these people were people in houses under £20?—Yes.

548. Take it at about 12,500. Then I see there are 125,000 houses under £20?—Yes.

549. You will notice that that means that, taking houses under £20, exactly 10 per cent. of the rates of these ratepayers are irrecoverable?—Yes. There were a number, however, who had paid part of their poor rates, and these consequently somewhat overlapped.

550. That is where they pay instalments?—They might not pay all their instalments.

551. Do you think that we might take it that the effect of the landlord paying the rates of houses under £20 might effect a saving of 10 per cent. to the collector?—10 per cent. of rates, you mean?

552. Yes?—I don't know that you would be very far out of it, but I have not looked at it from that point of view.

553. 7½ per cent. and 10 per cent. have been suggested under certain data. We want to get the data to see if these are reasonable. It seems to me on your figures that 10 per cent. might reasonably be taken?—Yes, I think so. Then I think you wanted information about the cost of collection. The cost of my department for the year 1904-1905 was £2851, and before that it was £2300. Roughly, it may be taken to run about £3000. That works out to a percentage of about 1 per cent. of the total collected.

554. (*Mr Binnie.*) Would that be doubled, do you think, if you had to collect half-yearly, and would it be quadrupled if you had to collect quarterly?—Not quite, but very nearly. My work would require to be done a second time or a third time.

555. If you collected four times a year, do you think it would be four times as much?—Yes. I think you will find that the cost of collection of rates in England is very much higher than it is here in consequence of that. Of course, I am only speaking from hearsay now.

556. (*Chairman.*) If Parish Councils attach importance to the English practice—and one can quite see that information about a method which has been worked out in England is much better than opinions as to how it would work—we would want to have evidence about that, and we would be glad to have your assistance and the assistance of anyone else to direct us as to how we could best get reliable evidence on the English practice?—I can ascertain from some unions what is the total that they collect, and what is the total cost of collecting, and I would thus get a percentage which might be compared with our percentage.

557. We will consider whether we could get some witness from England. It might be best to get it first-hand?—Yes. You would be much better to get an official, and to examine him.

Mr A. Fyfe and Mr E. Thompson.

Mr Archibald Fyfe and Mr Ernest Thompson, called and examined.

Mr A. Fyfe and Mr E. Thompson.

558. (*Chairman to Mr Fyfe.*) You are the Secretary of the Paisley Tenants Protection Association, and Mr Thompson is a member of the Executive of that Association?—Yes.

559. How long have you been Secretary of the Paisley Tenants Protection Association?—Since the month of June of this year, but I have been in the Executive of the Association since its inception five years ago.

560. What led to that Association being formed?—The Landlords' Association in Paisley at one of their meetings had under consideration a proposal to make the tenants of Paisley send their missives in on 11th November, when they were paying the half year's rent. That came to the ears of the tenants in Paisley, and it consequently caused a correspondence to take rise in the local newspapers. The correspondence got so strong that there was a public meeting called by the Trades Council of Paisley, and there was a committee appointed, of which I was a member. Since then I have continued to be in the Executive of the Paisley Association.

561. How many members are there in your Association?—The total number of members of our Association is small; it is only 622. The obstacle both in Glasgow and Paisley against our getting the number that we should get is the membership fee: were membership gratis, 90 per cent. of tenants in Paisley would join. We get them from all classes. In Paisley, I think we have 16 members of the Paisley Town Council as members of our Association; we have one or two ministers, we have some landlords, who are in favour of shorter lets, and we have members down to the lowest working class. Not only that, but our Society is cosmopolitan; it will admit anyone so long as he or she is a householder.

562. As to the practice in regard to the house-letting in Paisley, are you going to speak about Paisley itself?—Speaking on behalf of Paisley, I not only speak on behalf of Paisley, but also on behalf of 75 per cent. of the electors in Scotland. In 1904 we had a very large meeting, and there were certain delegates who could not come but who sent telegrams.

563. But, taking your own views, you are going to speak specially of Paisley?—Yes.

Mr A. Fyfe and Mr E. Thompson.

26 Nov. 1906.

564. In the present position of matters, what are the respects in which you think that there is a grievance in connection with house-letting?—There are many grievances; not only one, but many.

565. What, in your view, is the most substantial grievance?—The principal one is that, although we are paid weekly and fortnightly wages, we have to sign for an article four months before we take possession of it; we are bound down to sixteen months, while we can be dismissed from our work on a week's notice,—some can be dismissed on the spot.

566. You observe that these are two quite separate things. You say that one grievance is that they have to sign four months before entry?—That is one grievance.

567. And the other grievance is that the lets are too long?—Yes.

568. The latter grievance would equally remain, although they had not to sign four months before?—Sir, whether you sign or not, according to that deceptive tacit relocation you are the tenant for the ensuing year.

569. But suppose you only contracted a fortnight before the entry, your grievance as to the let being too long would equally remain?—Yes.

570. And, therefore, they are quite separate things?—Yes, certainly.

571. Take the question of the long let first of all; is it your view that the letting for a year should be put an end to?—Yes, that is my candid opinion, and I am positively certain on the point.

572. What would you substitute? You have the periods of a year, a quarter, a month, and a week. What would you substitute?—Monthly and quarterly.

573. Suppose you had monthly and quarterly?—Yes; but although I say that, I wish to be a little more explicit. The working classes wish monthly lets. At the Trades Union Congress they unanimously agreed to monthly lets; but we have come and gone a little with those who want to make themselves a little better than the working men, and they say that they prefer quarterly lets. So we have given in a little, and we have gone the length of monthly and quarterly. We wish also to be in harmony with Mr Cross' Bill, according to which the periodic payment of rent is to be the *legal let*.

574. We are inquiring primarily about the smaller class of dwelling-house, say £20 and under. You say monthly and quarterly lets?—Yes.

575. Coming to the yearly lets; in what kind of case is there any detrimental result at present?—There are several cases that have come under our notice where they have had to pay the rental of two houses, having left one house in order to follow their employment.

576. If a man remained in his house from year to year there would be no drawback?—No, unless the paying of his rates and taxes in one payment in the year, which is a hardship. We have petitioned through our various Societies for Paisley for quarterly collection, but have been told that that would be illegal; we must first get the law for house-letting changed to meet that.

577. If he wished to change in the middle of the term, it is then that the difficulty would arise?—Yes.

578. May I say that there are three causes for the necessity for changing—death, loss of employment, and change of employment?—Yes.

579. These are three possible causes?—Yes, and also a cheaper rent, a better house with more accommodation, a shorter road to work, defects about a house after getting into it, etc. etc. etc.

580. Have you found instances of these three causes in your own experience?—Yes.

581. Take a case of death. What may happen there?—I was speaking to a reverend gentleman in Paisley two years ago. There was a deputation waiting on him, and after we had finished our business we got on to the house-letting question, and he said, "I have one of my members 'just now in my congregation who, while her husband was 'living, lived comfortably in a two-room and kitchen 'house. He died in July, and, as a wise woman, she wanted 'to break up her two-room and kitchen house, and to take 'a smaller house, so that she could live to her income. The 'landlord said, 'You can take a smaller house, if you choose, 'but I will hold you responsible for the rent and taxes of 'this house.'" She could not get it sub-let, and had to complete the year.

582. That comes to nothing, unless you follow it up by this, that the house was not sub-let. If the house was sub-let there would not be any loss. Have you any cases where the sub-let did not take place, and there was resulting hardship, or where such a rent was charged for a sub-let?—I can give another case that we had. Four years ago we had a case in Paisley where a missive was sent to be signed. The husband died before the signing of the missive. The widow did not want to sign for the house, and she said, "Give me time to see about the getting of a smaller house." The landlord gave her eight days' grace. After the eight days she could not get a cheaper house to meet her income, and the landlord said, "If you don't sign I will let your house to someone else," and so under pressure she signed the missive. She stayed in the house for a little while after 28th May, and then a house to her mind turned up, and she took it because the rent suited her. When it came to the November term she could not pay the quarter's rent for the first house, and the landlord pressed her. She said, "I have got no money; I cannot pay you"; and consequently he was going to take her to Court, but two of her friends came and asked if our Association could not do anything to assist her. I got the whole details from them. Her case was taken to the Court in January to make her pay up that quarter's rent; but we got some information, and we appointed two of our Committee to raise a counter-action against the landlord. When the case was called in Court, the landlord stood up and said, "My lord, the case is dropped."

583. But was that a case where she had two houses on her hand?—Yes.

584. Why did she not try to get the one sub-let?—That gives rise to another case, if you will allow me to explain.

585. But just answer that question first. Why did she not try to get the first house taken off her hand by the landlord?—She could not get it taken off her hand when there are so many houses lying empty in Paisley, and all the other tenants in Paisley bound down for a year according to the present law.

586. I am afraid that mere single instances don't come to much. If you could give us information showing that there is a considerable number of cases occurring where people are unable to sub-let, and have to pay, we should like to have them. I would ask you to furnish us with details, if you can, because that is what we want to get at. Isolated cases of hardship will occur in every system. What we want to know is, whether there is any material number of these cases, and we want your assistance in connection with that?—There are several cases of that kind.

587. Could you give us a note—not now but afterwards—of actual cases that have occurred where a person has had to leave, has tried to get the house sub-let, and has failed?—I can give a case in point.

588. But that is a single case; the most heavenly system will have a single case. Perhaps you will give us a list in black and white. It would be quite private?—I can give a case in connection with a sub-let. This was one of the members of our Association who signed for her house in January. As time went on a death took place, and she took another house in a more cheerful street at a rent which was thirty shillings a year cheaper. She took this house, knowing that she was legally responsible for the two houses; and she said, "But that does not matter 'to me; I am not going to stay in the house. Here is a 'cheaper house in a more cheerful street," and she signed for the second house. The landlord said, "You must not 'remove from this house; you have signed for this house, 'and you must stay in it." She even went to the landlord's agent, and was willing to deposit the whole year's rent in the bank, and even to conform to the agreements in the missive, but the landlord defied her to remove. She did remove however.

589. She applied to the landlord to get the house sub-let?—She got a sub-tenant, who quite pleased the landlord, but here was the knotty point: the sub-tenant was willing to take the house at the same rent; but for some reason or other, which I do not know, the rent was to be increased 10s. a year, and consequently the sub-tenant would not take the house.

590. These are instances. If you can afterwards give us any list or detailed note, it would be very instructive?—Is that necessary? Do you doubt my statement?

591. Not a bit. Everybody admits that there are cases; but the whole question is whether or not they are substantial in number, and that is what we want to get at in this inquiry?—They are so substantial in number that the people are crying out very loudly against the system.

592. You must do the best you can to help us. Do you know that in the case of one house-factor in Glasgow, of which we have had information, he has in his missive a condition that, in the event of a person leaving, owing to change of employment, he is to be entitled to do so on one month's notice?—No.

593. In your view nothing would remedy the difficulty except short lets?—That is so.

594. Just take the case I was putting to you of that condition of a right to leave on one month's notice?—That is only an isolated case.

595. Yes. If that were made universal, would it not just have the same result as you are suggesting with regard to a quarterly let?—But that would not be legal.

596. You are not following the question. Suppose that

were made the law, suppose the condition which in that case is voluntary just now were made the law, that whatever the length of let was, in the event of a change of employment, one month's notice should be sufficient?—The people want more freedom of action in regard to taking a house, and it should not be only as regards the change of employment. I met a man last week, and he said, "I got an offer of a house 20s. cheaper." Now, that is not a case of following the employment.

597. You want the right to be made absolute?—Yes.

598. Suppose the right were made absolute, that on one month's notice they should be entitled to change, that would remove the difficulty?—Not altogether. I think there should be a graduated scale for giving notice, according to rental and the way of paying rent.

599. In regard to the other difficulty of the long lapse of time from taking a house in January or February to the entry on 28th May, what is the special difficulty that that causes?—People are made to sign for a thing against their will. They have no desire to sign at that time, but under present conditions they can do no better. We have cases in point in Paisley where two of our members, our last secretary and Mr Pollock, whose houses, because they did not sign the missive on a certain day in January, were let next day over their heads.

600. What length of time before 28th May do you suggest would be reasonable to limit the right to?—I would suggest nothing at all. It is the long let we want abolished.

601. I understand that; but apart from the long let, you also think that having to contract four months before entry in any event is not right?—That is so.

602. How long do you think would be reasonable if four months is too long?—I would put it this way, if a man is paying his rent monthly, then there should be ten days' notice before he starts occupancy; if he pays quarterly, 20 days; if half-yearly, 30 days; and if yearly, 40 days. That is quite long enough to give notice.

603. Do you find that in cases where there has been a sub-let the factors charge something?—Most decidedly.

604. What is your experience in regard to that?—It is a great hardship.

605. But what is your experience?—They first see if they can get a quarter's rent, and if they cannot get that then they want a month's rent; if they cannot get that then they want £1; and if they don't get that then they want 10s., that being the lowest.

606. Supposing a tenant brings forward a quite suitable sub-tenant, and there is no break at all, do they charge anything in your experience?—Yes.

607. What do they charge?—5s. to 10s.

608. And in that case you do not see what loss occurs at all to the landlord?—They should not charge anything at all when they are getting a decent sub-tenant, and sustaining no loss.

609. What is your view and the view of your Association as to another matter connected with the Whitsunday term? Do you contemplate that instead of all the removals being at Whitsunday they should be spread over the year?—Yes, that is what we want. We want the removals spread over the whole year instead of being all on one day or in one week as at present.

610. What would be the principal advantage of that? Take first of all as regards the tenants themselves, what would be the principal advantage?—What clause do you refer to?

611. Clause 15, so far as tenants are concerned?—Just now with this yearly rent, take the building trade.

612. But take the tenants themselves first; we will take the tradesmen afterwards?—At present when people have to remove on 28th May with this yearly let, there may be sickness, and they have to sign for the whole year. If there is sickness in the house, and the house is not sub-let, then the tenant must remove, because, although there is sickness in the house., the doctor's authority does not relieve you.

613. But I was referring to clause 15?—It is quite self-evident when there is such an excessive demand on 28th May. Those who hire out vehicles charge three or four times their ordinary price.

614. Now, we want evidence about that?—I had that myself when I removed from Glasgow to Paisley.

615. What we want is evidence from experience. You can speak from experience?—Yes. I went to a contractor, and asked for a lorry in the morning to remove my things from Glasgow to Paisley. He said, "I can do that, but 'you will have to pay the piper. I have more work 'than I am able to do. If you want me in the morning 'of that day, then you will have to pay three or four 'times the ordinary price."

616. Have you known other cases of the same kind?—Yes, it is a general thing.

617. Suppose the tenant wants papering and painting done, or joiner work, has he to pay more than the ordinary price?—If he does not pay more, my experience is that I have had to wait six or eight weeks on the painter.

618. He has to be bribed, in short, to get it done at once?—Yes, we have to pay the piper.

619. Turn now to the tradesmen, and take the joiner and building trades. What effect have the removals on Whitsunday on them? They are over-pressed then, of course?—Yes. New buildings are rushed for the 28th May, and the tradesmen work as long as it is daylight in the months of March and April up to within a day or two before 28th May. They are paid time and a half for overtime, and the thing is rushed. After the work is finished, these various tradesmen, such as joiners, masons, painters, plumbers, plasterers, slaters, bricklayers, and so on, go idle for weeks. I have two nephews who found themselves in that position, and they got so disgusted that they went away last year.

620. If the removals were not all held at the Whitsunday term, then the work would be spread over the year?—Yes, it would spread the work over the whole of the year, and it would be more beneficial both to the employers and to the employees.

621. And the work would be better done?—Yes, and it would cost the employers less, because they would not require to pay time and a half.

622. What effect do you think shorter lets and more frequent removals would have on the amount of rent payable by the tenants? Would it affect the amount of rent one way or the other?—If we had shorter lets we would have freedom; we would have free trade in house-letting; and consequently, when you remove the block that there is in the way of coercing you to sign, the law of supply and demand being in operation, the exorbitant rentals must come down.

623. Would that affect all the rents from £20 downwards, or would it affect the higher rents?—It would apply to rentals £50 downwards.

624. Down to what?—£4.

625. Suppose all lets were monthly or quarterly, would it lead to forehand rents being demanded?—Not necessarily.

626. At the present moment, in the case of monthly lets, they are largely forehand?—No, it is only where the landlord suspects that the tenant is not decent enough, and has not enough to pay his rent with; but if the tenant has a respectable appearance, then he gets the monthly house without paying forehand.

627. Of course, just now he has the furniture to come and go on?—Yes.

628. Suppose the landlord had not the furniture to come and go on, suppose the landlord's hypothec were abolished, then with monthly lets it would mean a forehand rent?—No, the labourer is not paid forehand.

629. You don't know yourself about the English practice?—I know a little about it.

630. In England is it the case that the rents are largely forehand?—No.

631. That is not your experience?—No. I know two gentlemen in Paisley who have lived in England, and they have paid rents as high as £30 a year, and they have never paid forehanded yet.

632. With regard to the views you have been expressing, what bearing do you think the question of rates and the payment of rates has on this matter?—It would mean a complete alteration on the present system. What clause are you referring to?

633. Clause 6. Do I understand you to propose that with monthly and quarterly lets, the rates should be collected monthly and quarterly?—We don't go in for the present system of paying rates and taxes. The assessor in a town or burgh is able to forecast the approximate amount of money he requires for his expenditure.

634. It comes to this, you advocate the collection of rates quarterly or monthly?—I advocate that it should be at the same time as you are paying your rent, whether fortnightly, quarterly, or monthly.

635. To whom?—To the landlord.

636. Who would pay the rates?—The tenant.

637. To the landlord?—Yes.

638. And then the landlord should be responsible to the rating authority?—Not altogether. I would put it this way.

639. But that is so, is it not? If the tenant pays the rate to the landlord then the rating authority would not collect the rate from the tenant at all?—No, it would be from the landlord.

640. Have you yourself known cases which have been spoken to to-day where, in point of fact, by arrangement the rates were collected along with the rents? We have been told that the thing is actually done?—They do it in Paisley up to £4, and they are able to allow a percentage, —what it will cost. For instance, I know of several single apartments in Paisley where the value of the house is not

much more than £2 or £3, and they charge £4, which gives them a profit of 25 to 33 per cent. for collecting.

641. You yourself do not see any difficulty, if the owner at present pays rates up to £4, why the same arrangement should not apply to higher rents?—There would be no difficulty whatever up to £50.

642. Is it your experience that the views that you have been expressing are generally entertained on the part of the working classes?—Yes.

643. On the other hand, have you or have you not found cases where the working man values the security of being in possession of a house for a year as against his employer, with whom he may have a difference?—No difficulty, so long as you conform to the rules and keep yourself decent and respectable.

644 But that is not the point. Are there certain cases where the employer of labour owns his workmen's houses?—Yes.

645. Have you any in Paisley?—There are a number in the colliery districts and so forth.

646. But not in towns?—There are very few.

647. Take the case of an employer who owns his workmen's houses. If a difference arises between him and his men, and the men go on strike, is it not a great advantage for these men as against their employer, to be in a position of secure tenure of their dwelling-houses?—Yes, we want a new law there, so that employers cannot turn their men out when there is a strike on. There should be a clause to meet that.

648. You think that any change you advocate would require to be accompanied with a clause of that kind?—Yes, certainly. It is required for the sake of humanity.

649. Is it not the case that there are working men who think themselves in a better position because they are yearly tenants, and they rather pride themselves as being superior to those who are monthly tenants? That is said to be the case. Is it your experience?—No, that is not the case. It is the yearly tenants that are agitating for the reform, and the most respectable among them.

650. Whatever change was made, I suppose you would still desire to reserve the right of those who are unable to pay through inability to pay to get remission from rates?—Yes.

651. Whatever measure was passed?—Yes.

652. In your experience does that generally work in a satisfactory manner?—Yes, you mean relieving the poor?

653. Yes?—Yes. If a person is really poor, and has no money to pay, then they make application, and they get exemption after their case is inquired into. There is no difficulty.

654. You have been speaking from the point of view of the tenant. In your view, would the effect that you propose inflict any considerable hardship on owners of property?—Certainly not. I think it would be to their advantage.

655. In what way?—Let me give an example. Where I live just now there are modern houses which remain unoccupied on 28th May, and they will remain unoccupied until the next 28th May. Now, if this shorter letting system were introduced, it would be a benefit to the landlord, because these houses would let on the 28th of any month of the year, while at present they must remain till 28th May of next year. It would be a mutual benefit.

656. In that particular case, how would the change that you propose operate?—The proposed change would operate in this way,—men who just now have a long distance to go to their work would, with a shorter let, take these houses nearer their work on the 28th of any month. At present they must walk the long distance to their work until 28th May of next year.

657 Do you think there is anything in this view that working men being paid weekly or fortnightly, they would really be in a better position to pay their rents if the collection is more frequent? Do you think that is a sound view?—Yes, they would like to pay their rent weekly or fortnightly or monthly, and their taxes also, because they can pay smaller sums a great deal more easily than they can pay larger sums.

658. In your experience, how often is payment made in the case of yearly lets?—Once a year.

659. Are there not cases where the payment is half-yearly or quarterly?—Not that I know of.

660. I am talking of rents, not rates?—I thought it was rates you were referring to.

661. In the case of yearly lets, how many times a year is the rent paid?—Monthly, quarterly, and half-yearly.

662. There are no cases of yearly payment?—Yes. I know of two cases where that position has been taken up.

663. About what rent would these be?—About £20. They take up this position,—"I took my house by the 'year, I pay my taxes by the year, and I will only pay my 'rent once a year."

664. In their case Mr Cross's Bill would produce no effect, because if his Bill is that the period of let is to be the same as the period of payment, then the let would be for a whole year?—Yes, they are taking up that position to show the stupidity of the law.

665. Do you think that when a man changes his employment—say in Paisley to a place just outside the town—he necessarily wants to change his house?—Certainly. Such a man would prefer to take a house outside for the sake of his children.

666. Do you have in Paisley many men who live in town, where their children get employment in the town, and who work several miles away, at places such as Clydebank?—There is a good number.

667. These are cases where they do it voluntarily?—No.

668. But in some cases they do it voluntarily?—Yes, in some cases they do it, and in other cases if they would remove, they would do so instead of taking lodgings or paying railway fares.

669. The limit in Mr Cross's Bill is £20 and in previous Bills it was £15. Have you any view about that?—Yes, in the proposed reform there should be no limit of rental. We have members of our Association who occupy three apartments, and they pay £24 to £26, and others again with large families pay £30 to £32, and being members of our Association they have found fault with the limit. Not only that, but in the discussion in the newspapers various persons have found fault also.

670. What would you suggest as a reasonable limit?—I would go the length of £50.

671. You have a note which I do not quite understand. You think that the Bill or any similar Bill might be applied to such seaport resorts as Rothesay, Dunoon, and so on?—Yes. Mr Cross's Bill in regard to seaport towns is of a permissive character, the tenants are in the hands of the town council.

672. You are referring to the clause about its being optional?—Yes.

673. What you refer to is the optional part?—Yes. I would say that if there is any reform to take place it should apply to all towns and to all dwelling-houses.

674. Without putting it into the hands of the Town Council?—Yes. It should be compulsory by statute.

675. If there is to be a limit you say that it should not be less than £50?—That is so.

676. But you think it should not be limited at all?—That is so.

677. (*To Mr Thompson.*) You have heard Mr Fyfe's views. Does anything occur to you?—There are many parts of Mr Fyfe's evidence where I might have broken in. Take, for instance, removals all taking place on 28th May, where dirty people leave a house and other people come into it on the same day. That house may have been tenanted by some person suffering from an infectious disease, and a new family enters that house without any time for cleaning being provided. Their health and life is consequently endangered, which is an important consideration. I should prefer to have been cross-examined in the same manner as Mr Fyfe has been, because I felt inclined to rise up on certain occasions while he was giving his evidence.

678. But if anything occurs to you afterwards, we will be very glad to have a note of it. If any observations occur to you we will be delighted to have them?—There is another thing in regard to rentals being collected with the taxes or rates. I was afraid it might be your opinion that our Association was in favour of that being all in one account, as it were. Our opinion is not that there should be one account, but that there should be two separate accounts, one for the rates and one for the rent.

679. Why do you think that? Is it in order to bring before the people that they are paying rates, and what these rates are?—It is in order that the ratepayer might know, as at present, what he is being assessed for the different departments in detail.

680. You think that if that was done, it would otherwise remove what has been an objection?—Yes. It would let the rate-payer know exactly what he was paying for rates and what for rent. Our suggestion is that these should be paid to the landlord, the landlord would pay the rates over to the town, and the town might pay over the proper proportion to the parochial authorities.

681. In the cases under £4 where the owner pays—when he collects his rent, does he give any statement dividing the rent from the taxes?—I could not say, I think not.

682. Was there anything else that occurred to you at the moment?—I might say that I have paid monthly and I have paid half-yearly without signing any missive at all.

683. Have you had experience of yearly lets?—Yes. I understood on one occasion that I was taking on a yearly let when I signed for a house, but I was not asked for some four or five years to give my signature again to any further missive. I may say just in this respect, that I

Mr A. Fyfe and Mr E. Thompson.

26 Nov. 1906.

desired to remove on a certain occasion, having been there for four or five years. I did not know anything about this tacitory relocation business, and I thought I was free to remove at the half term. I gave notice to my landlord that I desired to remove, and he said that if I did so, I would be responsible for the rent until next May. I asked the advice of the Paisley Association of which I was a member, and they were legally advised that I was responsible although I had signed no missive. Now, that was news to me. I got the house sub-let. Since then I have been paying fortnightly rents.

684. To put it in a word—suppose that those who are yearly tenants just now were to be offered the right to retake their houses either yearly as before, or monthly, what proportion of them do you think would choose monthly?—I think the larger proportion of them would choose the shorter let.

685. Would it be much the larger proportion? Do you think it would be more than half?—Yes. It gives the individual a sense of freedom and liberty which he does not possess in the other case.

686. In regard to those who did not choose, what would be their reason for not choosing monthly lets?—I really cannot place myself in their position.

687. Might there not be a certain number who like an absolute security for a whole year?—There may be some who may be so extremely well situated that they may have that feeling.

688. (*Mr Esslemont to Mr Fyfe.*) You instanced the case of a property in Paisley, I think, which in your opinion would be occupied to-day if a system of monthly tenancies had been in existence, and you argued from that, that that would be an advantage to the proprietors?—Yes.

689. Do you not see that it would be only an advantage to the proprietor whose house is at present standing empty and it would be prejudicial to the other owner from whose house the tenant was going to remove?—Yes, but the other owner would have twelve times in a year to let his empty house, whereas just now he has only once in the year.

690. You cannot state a case like that and lay down the rule that it is an advantage to the proprietor. It only benefits the individual proprietor. The man who loses the tenant suffers prejudice:—Yes, that is taking the thing in an isolated way.

691. I am taking the case that you put forward, that it would be a mutual benefit?—Yes. If we had this freedom of removing once a month, then the landlord who loses a tenant would likely get another tenant on the 28th of July or the 28th of August. You would have the law of free trade in operation.

692. I think it is rather problematical as to whether the other proprietor would find a tenant?—If his houses are reasonable in rent, and there is nothing wrong with them, then they will let.

693. Of course you are aware that, taking proprietors as a whole, they are against any change?—There are a lot of people in this world who are against any change.

694. If they thought it would be to their advantage you would expect them to be in favour of it?—Yes. I have come across several landlords in Paisley—I would say half a dozen—and at the Conference of our Association several of those gentlemen when we were done said that they would welcome quarterly lets to-morrow. They said it would help them to get rid of undesirable tenants.

695. You have stated that you are in favour of rates being collected along with the rent either monthly or quarterly?—Yes, but there should be two distinct receipts. We wish that the tenants should know the rates that they are paying.

696. You are in favour of that?—Yes. It would be in every way the best method of collecting.

697. You speak here in No. 24 of the position of tenants in poverty who would otherwise be intitled to exemption from payment of rates. Do you not think that under this new system of monthly and quarterly lets, those who are deserving of consideration, so far as exemption is concerned, might not so often get it as they do under existing circumstances?—No, I beg to differ. The one application should stand for a year, and not have tenants running every month or every quarter.

698. Of course, the consideration of appeals only comes up once a year?—Yes, and I would say once a year still. There is no use putting tenants to a lot of unnecessary trouble.

699. You would say that if a parish council or a burgh authority had a case of appeal under consideration, if they considered it to be a deserving one, then it should stand good for a year from that date?—Yes.

700. Of course there is the difficulty of removal to another house. Could you not suppose the case of one tenant stepping into the place of another, the former tenant being entitled to exemption for twelve months?—Might not the tenant who was not entitled to exempton get it?—No, because they are two different names.

701. (*Mr Dobbie.*) In the latest Bill we have the limit suggested for Paisley at £16?—Yes.

702. Have your Association considered that?—Yes. We have met and considered that, and we find fault with the limit of rental. We suggest that it should extend to all rentals, but if they want to have any limit, then we say that it should be £50.

703. Have you any views, either individually or as representing your Association, as to whether the landlord's hypothec should be continued or not?—Yes. With regard to the landlord being held responsible for the rates and taxes.

704. No, I mean with regard to the landlord having a preference over the furniture?—That is a matter of detail.

705. You have no opinion on it?—No, it is a matter of detail.

706. Your Association have not discussed it?—They have considered it, and they don't see why the landlord should have a preference over every other creditor.

707. You raised a point about houses owned by employers. At present with the yearly let the workman is independent for the year. Can you tell us that where employers do own houses like that there is no such thing as yearly lets? It is the case that the tenure ends with the period of service?—Yes.

708. And the eviction follows within forty-eight hours?—Yes.

709. Have you any views as to the grievance that is created by that condition of things—whether it should be dealt with or not?—As to the ending with the period of service, that is the agreement. Forty-eight hours is short enough notice, but it might well exist. Of course when you go into the employment you agree to do that, but as regards a strike there should be a clause that no employer is to evict his employees when a strike is on because of the suffering, especially in winter.

710. (*Chairman.*) Suppose the limit was to be £20, do you see any reason why Paisley should be dealt with differently from Glasgow?—No, I see no reason for it.

711. (*To Mr Thompson.*) Mr Cox has suggested that I should ask you on a point that we asked Mr Fyfe about. We know that in one case in Glasgow one of the factors put it into his missive that if there was a change on account of change of employment during the yearly let, the tenant should be entitled to leave on one month's notice. Now in your view would that remove the grievance or would it not?—I do not think it would.

712. It would aleviate it?—Yes.

713. Why do you say it would not remove it? Is it because it would not give an absolute right?—Yes. There are other things which you have already mentioned.

714. But if it is an absolute right it would appear to be a very reasonable stipulation?—Yes.

715. But it is qualified?—Yes.

716. (*Mr Howden and Mr Fyfe.*) Would you give people the advantage of taking better or cheaper houses,—would you apply it to persons wishing that as well as to persons requiring a new house through change of employment?—Yes.

717. Will you state to the Committee how much the weekly travelling expenses are for workmen?—It depends. Going between Paisley and Glasgow the fare will be about 2s. a week. Further, the taking of meals away from home adds from 2s. to 3s. to the weekly budget.

718. You give the case of a widow in Paisley. Is it not the case that that woman could not shift from her house and she had to stay on in it? You instanced the case that a minister told you about with regard to a party in Paisley where the breadwinner died and the widow wanted to shift to a smaller house and she discovered that the landlord would hold her responsible for the rent. Had she not to stay on with the big rent?—Yes, she had to stay till the next 28th May.

719. You also gave us the case of a sub-let in which the landlord, although he approved of the sub-tenant, actually raised the rent with that sub-tenant?—Yes, and that kept the sub-tenant from taking the house.

720. You have said that the £20 limit is not enough?—It is not enough, because working men in Paisley are paying £25 to £30 where they have sons and daughters working. So the £20 limit is not right. There should be no limit to rental, as there is no limit to rental at present in house-letting.

721. You think it is quite reasonable that a working man should have a four-room and kitchen house when his family grow up?—Yes.

722. (*Chairman.*) What will the rent of a four room and kitchen house go up to?—£30 to £32, and even up to £36 in the case of modern houses.

723. (*Mr Esslemont.*) In the case of a workman whose family have grown up and are bringing in money week by week, it is unlikely that they will all be changing their

Mr A. Fyfe and Mr E. Thompson. 26 Nov. 1906.

employment at one time?—That is so. But you have the case where the father has a good income, and he wishes to keep up a big style, and if he was going away then the sons and daughters would want to take a cheaper house.

724. But I think the case was one of a workman whose family were grown up and in employment and they required a larger house and they were able to pay for it. The head of the house has to leave the district in consequence of change of employment, but it is unlikely that the whole family would remove with the father because they would have to stick to their own employment?—It all depends on the circumstances.

725. But as a rule?—No, I have known cases where the whole family have had to remove because the father was removing.

726. (*Mr Howden to Mr Fyfe.*) In connection with the case of employer's houses, there was a Bill introduced by Mr Caldwell to give security in the case of a strike?—Yes.

727. And the houses were let according to the terms of the employment?—Yes, that is so.

728. (*Sir J. Stirling-Maxwell to Mr Fyfe.*) One question about the period of notice for re-letting, I think you suggested that for a monthly let it should be a week?—Ten days.

729. Do you think that ten days is long enough from the point of view of people who want to take houses?—Yes, because that is the law at present, and I think that is quite sufficient. With regard to the question of the sea-port towns, where Mr Cross's Bill makes an exemption——

730. (*Chairman.*) You object to the optional clause?—Yes.

731. What is the peculiarity in sea-port towns?—I have already explained that.

732. You think that if there was any option given, sea-ports in any case should not have the option?—No town should have any option in the matter.

733. That is what I understood. I would like to say, gentlemen, if you could assist us any more as to the number of these cases of hardship, it would be very important. You might consider whether you can do anything more than you have done in the way of giving instances so as to let us estimate the amount.

[Adjourned.]

SECOND DAY.

MONDAY, 10th DECEMBER 1906.

At the Municipal Chambers, Glasgow.

Present:

Sheriff Charles J. Guthrie, K.C., *Chairman.*

Sir John Stirling-Maxwell, Bart.
Mr Thomas Binnie.
Mr Edward Cox.
Mr Joseph Dobbie, S.S.C.
Mr George B. Esslemont.
Mr John T. Howden.

Mr Stair Agnew Gillon, *Secretary.*

Mr A. D. Provand. 10 Dec. 1906.

Mr Andrew Dryburgh Provand, called and examined.

734. (*Chairman.*) You were from 1886 to 1900 Member of Parliament for the Blackfriars Division of Glasgow?—Yes.

735. At that time and ever since you have taken a great interest in the House-Letting question, as we may call it?—Yes.

736. You brought in a Bill in 1890 dealing with the question. Was that the first Bill that was brought in?—I believe so.

737. I observe that that Bill was backed by Mr Baird, Mr Edmund Robertson, Mr Caldwell, and yourself?—Yes.

738. In the Memorandum prefixed to the Bill you say this,—"This Bill is intended to remedy the grievance 'which exists in large towns, more particularly in Glasgow, 'caused by a practice which has grown up of recent years 'of landlords compelling tenants of small houses to enter 'into a letting agreement several months before the term 'day. Workmen in Glasgow and other large towns require 'to move from one part of the town to another in order to 'follow their work, and at present are frequently compelled 'to fix their residence, say, four or five months in advance. 'The law in Scotland requires the landlord to give the 'tenant notice to quit forty-two days before the term day. 'The Bill will not interfere with any voluntary arrange-'ment which may be willingly entered into by both 'parties, but it will prevent either of them enforcing an 'agreement made more than fifty-two days before the term 'day. This leaves both parties ten days in which to agree 'a letting before the 'warning' day is due." Does that Memorandum correctly express what you understood at the time was the grievance complained of?—That was the chief grievance complained of at that time. They also complained of having to take houses for a whole year, but the long dated missive was the chief grievance so far as letters of complaint reached me, and they numbered hundreds. They complained of practically being compelled to sign a missive sometimes in January and sometimes even in December of the previous year for a house that they would not occupy until 28th May.

739. You said that you had received a great many letters. Was the matter also made subject of question at meetings?—We had only one large meeting, in the City Hall, Glasgow, in 1894.

740. In 1890 had the grievance come to your knowledge chiefly through correspondence?—Yes. I may mention that in 1886, the year I was elected, there was a conference held in Glasgow, between the Glasgow Householders Association and representatives of the Landlords and Factors, and then it was an old grievance.

741. What was the grievance that was the subject of discussion then?—The four or five months missive question, as it was called then. The signing of the missive was the prime grievance, and there was also a grievance as regards their inability to obtain shorter lets than twelve months.

742. Your Bill did not propose to touch the latter grievance?—No. The fact is that this Bill was put in after consultation between the four men whose names are on the back; it was not a party Bill at all. As you will notice, Mr Baird was one of the backers of the Bill. It was put in on account of the correspondence received being so contradictory. So many different statements reached me that I suggested a Bill like this being tabled so that we might give every person interested an opportunity of giving their opinion—the *pros* and *cons* in fact of the question.

743. At the same time you say there was also a complaint regarding the long lets?—Yes.

744. What drawbacks was it said that these long lets produced?—The drawbacks were many. The first one mentioned in the Memorandum was as regards workmen: for example, those engaged in building operations, who had to go from one part of the town to another, and were hampered by having a house that they had to take for from fifteen to seventeen months. Another grievance which affected the whole community, but more particularly tenants, was that all the flitting had to be done on one day

in the year, thousands of people being compelled to move on one single day. With all the flitting taking place on one day, they could not get repairs made, and for everything they had done for them they had to pay two prices. They could not manage their removals without great loss, trouble, and dissatisfaction.

745. Did you understand at that time that the feeling on the part of small tenants themselves was unanimous in regard to the purpose of your Bill, shortening the period?—It was not unanimous in this respect that I had communications from a few men who were workmen in steady employment, and they said that they wanted to engage their houses as early as possible: they did not want to wait; but that was because they were fixed, as it were, in one part of the City, and had no intention of ever removing from it, and consequently they would like to take their house by the year.

746. You understood that so far as they were concerned they objected to an agreement for an earlier period being made non-enforcible? They wanted to be in a position to take their houses earlier than your Bill had allowed?—Yes, a few wrote in that sense, but the reason they all gave was that they were in permanent employment in a particular part of the City.

747. What attitude did the landlords take towards your Bill?—Individual landlords and factors wrote that they were quite willing to make changes in favour of tenants, to put forward the warning day, and not to issue missives until sometime in March. Several individual landlords and factors were willing to do that, but the Landlords Association in Glasgow and the Factors Association were hostile. After that—I think it was in 1893, because the agitation was carried on for a long time—I met representatives of the two Associations in London. I thought that we would manage to come to some compromise in regard to it, but I did not succeed. As a body they were hostile, but individually some of them were favourable.

748. Were there any petitions either for or against your Bill?—Yes, I have several.

749. Both ways?—Yes.

750. Do you have copies of these?—No, but I have a list of the petitioners which I will put in.

751. Over what area did you understand the grievance to extend? Your Bill was the first applicable to dwelling houses in Scotland? It was not limited to any area, was it?—No.

752. Over what area did you understand that the grievance extended—was it over the Clyde district only?—Do you mean the complaint?

753. Yes.—It extended all over the west of Scotland, and Edinburgh, Leith, and Dundee. I think I had communications from Perth, and from one or two other towns, and also from Aberdeen, but the grievance was most active in the towns I have named.

754. Chiefly in the Clyde district?—Yes.

755. The next Bill that was introduced was in 1894, I believe, and it was backed by Mr Cross, Sir Thomas Carmichael, Mr Baird, and Mr MacGilligan?—Yes.

756. You did not back any of the subsequent Bills when you were in the House?—No.

757. The Bill of 1894 was a Bill providing that there should be no let up to £15 in burghs for more than one month?—Yes.

758. Do you remember in that same year, 1894, there was a meeting held in the City Hall, Glasgow, on 29th January, at which you were chairman?—Yes.

759. What was that meeting about?—That was a meeting called by Trades Unions here and by myself, so that I could give a report of what I had done in regard to the matter. It was in order to explain to them that I did not think that reform was likely to come through any sort of Letting Bill or Re-Letting Bill, because, while it was easy to set out a clause to do away with the grievance which existed, or largely do away with it, any such Bill would very likely create other difficulties. I came to the conclusion finally that it was better that we should get quit of the law of hypothec to begin with, because it gives unfair control by the landlord over the plenishing of the tenants in houses in towns—indeed, it is confined to houses with not exceeding two acres of ground attached to them.

760. You are talking now of urban hypothec?—Yes, it applies to very few rural houses as compared with urban houses—it is practically confined to urban houses now. Well, I recommended that to the meeting. I explained the difficulties, and they accepted my recommendation and passed a resolution asking me to introduce a Bill to abolish what remained of the law of hypothec, and I did so. I took no further part in putting my name on the back of subsequent Letting Bills that were introduced.

761. You did not again introduce the Bill of 1890 in subsequent sessions?—I don't think we did.

762. You say that you came to think that there would be greater difficulties created by any such measures. What do you mean by that?—It might create difficulties of all kinds. Any Bill of the kind would interfere with the freedom of both parties to a great extent.

763. By "any Bill of the kind" are you referring to a Bill such as you introduced in 1890?—Yes, a Bill of the same nature. Suppose we were to introduce a Bill requiring neither the landlord nor tenant to issue or accept a missive before a certain date, it is true that we would bind the landlord, but in binding one landlord, we might be binding twenty tenants. I thought we had better first get quit of the law of hypothec, which gives the landlord too much control over the tenants.

764. Did you think that while some tenants might suffer by being bound, a good many were being benefited by being secured?—I don't know that they were benefited, but they preferred it.

765. Was not that the view that the minority put before you, that they preferred to be able to secure themselves early in the year?—I divide them into the two classes of contents and non-contents. While the non-contents' case was before me, the contents were satisfied and said nothing, and so I heard from very few of them.

766. There was a substantial number of them, although you did not hear from them?—I really could not say what the number was. They may be numerous, as contents do not complain.

767. In consequence you introduced the Hypothec (Scotland) Bill of 1895, and I notice in the Memorandam prefixed to that Bill you say,—"The law of hypothec in 'Scotland gives landlords far more extended powers than 'the law of distress gives landlords in England, and it has 'always been considered as a grievance. The Hypothec 'Amendment Act was passed in 1867, which limited the 'landlord's power in certain ways, and in 1880 the 'Hypothec Abolition Act was passed, which repealed the 'landlord's right of hypothec for the rent of land exceeding 'two acres in extent and let for pasture and agriculture, 'with the buildings thereon."

768. Of course that was rural hypothec?—Yes.

769. Then you go on, "The law as it now exists, therefore, 'extends only to the contents of buildings and land of 'less than two acres of extent. This landlord's right of 'hypothec places serious limitations on the credit of the 'working classes, and on their control over their own 'property. In the Amending Act of 1867, which limited 'the landlord's power of hypothec in reference to the 'produce of land, there is also an express exemption of ''any household furniture or furnishings, or any agri-''cultural implements.' Agricultural occupiers have 'therefore for many years past been exempted from the 'landlord's right of hypothec over their household effects, 'while other occupiers are still subject to this law, under 'which their furniture, furnishings, and tools are liable to 'sequestration by a landlord immediately after they enter 'on possession of a house as security for rent not then 'accrued, due, or payable.

770. "The object of this Bill is, therefore, to abolish this remaining landlord's right of hypothec." You adhere to that view as setting out the state of the facts in your view?—I understand that this is a correct statement of the legal position we were in at that time.

771. That Bill was backed by yourself, Mr Cochrane, Mr Cameron Corbet, and Captain Sinclair?—Yes.

772. I don't think that the Bill came to a second reading?—No.

773. And it was not introduced by you again after this first time?—I think it was. I tried to get copies from the printers in London, but they told me that it was out of print. I believe it was introduced subsequently, and my opinion is just as strong now as it was then, that the law of hypothec should be abolished.

774. What bearing would abolition of the urban landlord's hypothec have on the question of short lets or long lets in your view: how would it act?—It would bring about short lets.

775. How?—Because the landlord at the present time has the security of the furniture of the tenant. If the law of hypothec were abolished he would have no security. At the present moment, as stated here, the tenant's tools, furniture, and furnishings are liable to sequestration by the landlord the day he enters the house, although there is no rent accrued or due or payable. If the law of hypothec were abolished, then the landlord would have no security at all except what the ordinary landlord has in long lets. He would naturally prefer short lets, a week or a month, and in that way the tenant would have less credit from the landlord. On the other hand, he would have full control over his own property. Of course the effect of abolishing hypothec would be qualified by the supply of houses. In districts where there were many unlet, it would operate sooner than when there were few to let. In the latter, landlords might still be able to maintain long lets.

776. If it had the effect that you anticipate, would you

Mr A. D. Provand. 10 Dec. 1906.

contemplate the system of forehand rents?—They have no hypothec in England, and workmen's houses are all let on weekly tenancies up to 8s. a week, and sometimes as high as 10s. a week. Then they appear to jump from weekly to quarterly lets, and they go up as high as even £25 or £26 a year.

777. Payable forehand?—Yes. I can get a complete set of the rules and regulations of some very large building companies in London, Manchester, and Liverpool.

778. You will give these to us?—Yes, I will hand them in complete. The rent is always payable forehand, or in advance, as they say in the south, but it is not always exacted. In England where they don't exact it, they have the same difficulty in getting rid of an objectionable tenant as they have here. The other day they took a tenant's door and windows off in London to get quit of him. In another case the company stopped up the tenant's chimney to make him go away, and in a third case they turned the hose down the chimney, and said that they would wash the tenant out if he did not leave.

779. Will those statistics show the period of warning?—Yes, they will give you all particulars.

780. Will they also show the system of payment of rates?—Yes. Might I mention how they are paid?

781. Yes.—They compound the rates in England under an Act—I have not the name of it—which is optional to both landlord and tenant, but the option is not often exercised. The landlord in England pays rates on all the small houses. To this there are some exceptions since rates have increased.

782. Under what rents?—They are small houses, what we would call flats or small houses. The landlord pays rates even in the case af expensive flats. I have a flat in London, and I pay £350 a year of rent, and my rates are paid by the landlord; I pay no rates of any kind.

783. You reside permanently in London?—Yes, but I always look on myself as an exile there.

784. Can you tell us whether it is the fact that there are complaints in England about short lets from people who would desire the security of longer lets?—I have never heard of any.

785. Is it the case that in England, say in London, Manchester, and Liverpool, the rates are higher than in the Scottish burghs?—I could not say. London is different from any other city, because the rates are not uniform as in other places—there are 28 burghs in London I will hand in an official statement of what the rates are in these burghs.

786. Does it occur to you that, in addition to the abolition of the law of hypothec, there is any other grievance that requires to be separately treated, a grievance either on the part of the landlords or anybody else?—Yes, I think there are several other things in regards to this question. May I refer to them?

787. Please.—There is first the repeal of hypothec. Then I think that the Removal Terms Act of 1886 should be amended, so as to make notice to quit twenty days for quarterly lets, and thirty days for longer lets, up to twelve months. Under that Act at present, notice must be one-third of the time of letting up to four months, making three days for a week, eleven days for a month, thirty-one days for a quarter and forty-two for four months, and of course it is forty-two for every tenancy up to annual tenancies. I think that if anything is done through Parliament to promote shorter lets, so as to bring about weekly lets or monthly lets and make them universal, the landlord should be able to get quit of an objectionable tenant sooner than he can just now. It is not in the interest of the landlord that I am speaking, but in the interest of the rent-paying good tenant. The number of defaulters is not more than 2 per cent. or one in 50, and sometimes that one is a very objectionable person and he annoys the other 49. He can retain possession of his room or house for any period from three to five weeks, perhaps even longer, although he has paid only one week's rent. That is done in England sometimes, and I think we should take care to avoid it in Scotland in any change that is to take place.

788. Your second point is the alteration of the Removals Act of 1886, and your third point is a more expeditious method of ejecting objectionable and defaulting tenants?—Yes, by amending the Sheriff Act of 1838 to enable landlords to obtain possession sooner on short lets. At the present time anything done under that Act is very costly, and it is very dilatory in regard to small lettings. Of course all unpaid rents are bad debts, and the bad debts are spread over the rents of those tenants who pay their rents. At the present time good tenants pay for bad tenants. I refer to the report of the Glasgow Workmen's Dwellings Company and I find that last year their bad debts amounted to £26, 2s. That, of course, has to be recovered from the good tenants, because the rents are arranged so as to give a dividend of 3½ per cent. on the capital outlay.

789. So if provision is made directly or indirectly bringing about short lets, there ought to be as a counterpart the power of more immediate ejection?—Yes, I think so; some reasonable authority should be given to the landlord. Then there is another change that I suggest, namely, to change the legal warning-out day from 4th April to 28th April for yearly lets. That, I think, would tend to shorten the missive term—the missives would not be issued until the month of March. It would have that tendency. Then my last suggestion is to amend the Law of Distress Amendment Act of 1888, making it to apply to Scotland, to exempt tools, trade implements, and personal effects in use from distraint for rent. We have a precedent in the law of hypothec, because, when it was amended, there was an express exemption of any household furniture or furnishings or any agricultural implements. I would extend that English law to Scotland.

790. When was the English law amended?—It was amended in 1888.

791. And there has been no agitation for that being altered since?—Not that I know of. I shall also hand in a copy of this Act. Let me add one word more in regard to that power of distraint on personal effects in Scotland. It sometimes operates very harshly indeed. If you deprive a man of his tools, you then deprive him of his means of livelihood. If you deprive a woman of her sewing machine, you make her at once a destitute person. Although this does not perhaps come within the scope of the remit to the Committee, still, I think it should be dealt with at the same time, if not in one Bill, then in another Bill.

792. Your view is that, if it is found to work successfully in England, there is no reason why Scotland should be in a different position?—There is no reason whatsoever.

793. You were going to get the figures—we may get them otherwise—showing the number of small houses in Glasgow in 1906. I have them here for 1905, but I notice that you say that you will have the exact figures for this year?—I said that, but I do not have them.

794. Will you give us the figures for 1905 then?—I divide the small houses in Glasgow in 1905 into four classes, as follows:—

Houses at £4 and under, . .	2,133
„ between £4 and £10, . .	88,817
„ „ £10 and £15, . .	32,891
„ „ £15 and £20, . .	19,675
Making a total of . .	143,316

There are 26,148 houses above £20, so that that makes the total number of 169,664 dwelling houses in Glasgow.

795. What do you mean by Glasgow? Do you mean the municipal area?—Yes. Of the whole 169,664 dwelling houses there are 143,316 likely to be affected by any legislation, nearly the whole of them.

796. If, as has been said, the houses at £4 and under are all short lets, and about three-fourths of the houses between £4 and £10 are short lets, these would not be affected as compared with the others?—No. The figures given are an estimate I got. I cannot speak exactly, but they agree with the information I received. I may mention that houses at £4 and under are decreasing; there are only about one-fourth as many houses to-day at that rent as there were not so very many years ago.

797. Where did you find that?—In a return by the City Assessor. I will get the exact figures for previous years. These houses are decreasing and people are living in a better-class house.

798. Mr Binnie suggests to me that the old houses are being pulled down and that would tend to bring that about?—Yes, that is so.

799. Do you know, from your knowledge of England, whether there is a great difference of opinion there in regard to the question of compounding rates?—The question of the compounding householder was a burning political question at one time, but that is a long time ago. I am not aware that there is any agitation in regard to it at the present time. It is optional.

800. Take your own case. Do you have any separation between your rates proper and your rent proper?—No. I pay one sum to the landlord.

801. Then you don't know what rates are paid?—No.

802. That is not a good system. Should not an occupier be in a position to know what rent and rates are being charged?—I think it would be better if the separate figures were given. They might be put on one statement.

803. Do you mean monthly or at the end of the year?—I pay quarterly.

804. And you think the tenant should know quarterly?—Certainly. If he paid weekly it would require more clerking to put in a separate statement of rent and rates. This would also be the case to do it monthly; but when you come to quarterly, it should be done. I may mention that with the landlord in England, as with the £4 house

landlord here, his paying the rates is a speculation. The allowance made him for collecting them from the tenants may or may not leave a profit.

805. You have no interest yourself as proprietor of any houses?—None in the world.

806. You are only a tenant paying too large a rent?—Yes. In England they always allow a special discount for compounding, but there is a tendency to reduce it in London; I know. The secretary of one of the companies wrote me a letter on the subject the other day. Rating Authorities have given as high as 20 per cent. and sometimes even 25 per cent.

807. Have you looked at the terms of the latest Bill on the subject, the one that has been before Parliament, under which the term of let is to be equal to the term of periodic payment?—Yes.

808. Would it be open to the same objection of interfering with the freedom of contract?—Before that, might I make a remark with regard to clause 4?

809. Yes?—If the term of let was for a week, then the notice would be a week. In the present law the notice is only three days.

810. But apart from the notice. Take the question of the term of let being held to be the term fixed for the periodic payment: that is to say, if you pay weekly, it would be a weekly let; if you pay monthly, it would be a monthly let, and the same with quarterly and yearly?—For small lets the law as it stands is better than this. When you come to yearly lets, no one would wait a year for his rent.

811. I suppose it would practically bring yearly lets to an end?—Yes.

812. Because there are no yearly payments?—That is so, and it would make the notice much longer than it is, while the object of the Bill, I should say, was to reduce the period of notice as far as small houses are concerned.

813. I think, to sum up, you recommend five changes?—Yes. I recommend the following five changes:—

(1) The repeal of Hypothec.

(2) Amending "Removal Terms Act of 1886," making notice to quit twenty days for quarterly lets and thirty days for longer lets up to twelve months.

(3) To change the legal warning-out day from 4th April to 28th April for yearly lets.

(4) Amending the Sheriffs Act of 1838 to enable the landlords to obtain possession sooner on short lets.

(5) To amend the Law of Distress Amendment Act 1886, making it apply to Scotland to exempt tools, trade implements, and personal effects in use from distraint.

814. (*Mr. Binnie.*) You spoke of allowing the landlord to get easier possession?—Yes.

815. Have you thought of any way in which that could be done?—No. It would be by an Amendment of Sheriffs Act of 1838.

816. You have told us that in England a man has sometimes to destroy his property to get possession?—They have difficulties in the way of getting quit of an objectionable tenant.

817. Have you thought of any easy way?—No. As far as Scotland is concerned, we would have to amend the Sheriffs Act of 1838, which is the Act under which all proceedings are taken.

818. You have not thought how that could be done?—No, I thought it was a question for lawyers or for draftsmen. I am no longer in the House; if I were there I should no doubt have drafted something of the kind years ago.

819. (*Sir J. Stirling-Maxwell.*) Do you think that the short period in England depends considerably on the fact that the landlord has no right of hypothec? Do you think that is a factor which has determined the length of lets in England?—I think it is largely so. If we had no law of hypothec here applying to urban lets, then I think short lets would become far more general than they are. So far we have some weekly lets here; but we have a very large number of monthly lets. Weekly lets and fortnightly lets would come if there was no law of hypothec. I may mention that some agents have written this to me. One agent candidly wrote to me and said that for those without much plenishing they let for as short a period as possible; he said that these tenants were law proof; there was no use going to law with them at all, as it would not pay the cost of proceedings if they had no plenishing.

820. (*Mr Cox.*) Do you know the effect of the abolition of the law of hypothec as regards agricultural matters?—No, I don't know the effect that has followed.

821. I don't think there has been any shortening of the tenure as regards the letting of farms?—The letting of a house and the letting of a farm are very different. We let on tacks of nineteen years in Scotland, and they would not shorten that, because the power of the landlord to attach the tenant's furniture and agricultural implements and other things had been expressly excepted. It would not affect the length of the lease at all.

822. Formerly, while the law of hypothec was in existence, the farmer had a very long time in which to pay his rents, and the effect of the abolition of the law was to shorten that time?—That may have been, but I would not occupy the time of the Committee in discussing it. I am a strong believer that illegitimate credit—it does not matter to whom—is one of the worst things that can be enjoyed, as some might say, because it leads to debt, losses, insolvencies, and bankruptcies from the highest to the lowest.

823. (*Mr Howden.*) You said in the course of your evidence that it was vexatious on tenants to have to remove all on the one day. I presume you were referring to tenants of small houses?—Yes.

824. Does the same thing not apply to large houses and business premises?—Yes. Of course it is not so distressing to them as it is to a poor man with a wife and three or four children. They have all their furniture to move in the one day, and perhaps it is a wet day, as I have seen in Glasgow many a time.

825. Still, there would be a considerable amount of inconvenience to business people?—Yes, undoubtedly there would be.

826. Would you favour an extension of the principle that you advocate in connection with hypothec up to personal goods of a tenant, say to about £20?—I would not place any money limit on it at all—I would not mention money. I would exempt the landlord's power in regard to whatever was in use by the tenants to earn their living, and also their personal effects. I believe that in the English Act bedding is also excluded. I think that whatever a person employs to earn his livelihood—the workman his tools, and the woman her sewing machine—should be exempt from the landlord.

827. You would clear the house irrespective of the bedding,—you would leave the bedding and personal effects, which mean clothing and tools?—Yes.

828. Would you take away even the tables or chairs or anything of that sort?—The landlord lets his house and he expects to get some rent and he is entitled to be paid.

829. They usually sell these goods when they take them from the tenant; they put them up to auction?—Yes, they have to.

830. And the net return is not nearly the value of goods?—Perhaps not.

831. It would probably take about three or four times what is received by the sale to replace the goods?—Sometimes it might.

832. That means practically that if a tenant, through no fault of his own, happened to fall into arrears, the landlord could compel him to pay almost three or four times his rent?—No, the landlord would get only the proceeds of the furniture, which is usually less than the amount of rent owing. You also say through no fault of his own?

833. Yes.—Are you aware what landlords say is the cause in the case of the largest number of defaulting tenants?

834. I am aware what some of them say.—It has been stated, probably here, and it is in print in letters to the newspapers so far as Scottish landlords are concerned. There is a statement in the *Glasgow Herald* where the writer says that he knows of no cause except drinking that has made tenants unable to pay their rent. I know the secretary of one of the largest letting companies in London, which has an enormous number of small houses. Sitting in my room, just a week ago, he told me, when he was asked that very question, that the principal cause, almost the only cause, of people being unable to pay their weekly rent was either drink or betting.

835. Have you never heard the loss of employment being given as a cause?—Yes, there are other causes, such as illness and loss of employment, but I am giving the statement made by men of experience on the question. I have no personal experience of it at all; I am only stating second-hand what has been said.

836. You would imagine that representatives of the working class will have some experience of their own class?—Yes, undoubtedly.

837. If they assert that in the majority of cases that is not the principal cause of poverty, their opinion would be entitled to as much weight as that of the persons to whom you refer?—No mere tenant could speak of more than his own case or a few cases that may come before his notice.

838. (*Chairman.*) Mr Howden was putting to you the actual case of a man who through no fault of his own was unable to pay his rent. There are undoubtedly such cases?—Yes.

839. The question is not whether they are the majority of cases are not, but take such a case that does exist?—I was asked if I would still allow the landlord to be able to

Mr A. D. Provand. 10 Dec. 1906.

distrain on the tenant's goods beyond what he required to carry on his work, and I would say that if he does not do so, then in a great many cases he won't get any rent at all.

840. (*Mr Dobbie.*) What do you mean by "distrain"? We do not know that word in Scotland.—I beg your pardon for using it. In Scotland we would call it to "poind" or to "attach."

841. Surely. Do you advocate now, as you did then, the abolition of hypothec?—Yes.

842. That is the abolition of the preference to the landlord?—Yes.

843. Coming down to poinding, you are now talking of the ordinary right of an ordinary creditor for rent?—He would have the rights of an ordinary creditor. He has that in England to-day.

844. I do not know whether you are aware of it or not, but in Scotland one cannot poind either working men's tools or wearing apparel?—I was not aware of it. I think I have seen a case with regard to a sewing machine that was taken and sold for rent.

845. On the ground of hypothec?—Yes.

846. If you abolished hypothec under this Bill, your point in regard to distraint would fall?—No. I would do away with the law of hypothec as it is, but then there is poinding for an ordinary debt, and I would leave the law as it is with regard to that, not that I approve or disapprove of it. It is outside the scope of the question that is before this Committee, I think.

847. But if your Bill is carried, that removes the grievance which you think exists under which landlords can attach either tools or wearing apparel?—The Bill abolishing hypothec may have savings in it, as many other Bills have. If it is to interfere with some outside law altogether, then that should be put right.

848. You would be quite content if the landlord's remedies were put on the same footing as those of ordinary creditors?—Yes.

849. So long as he could not attach either wearing apparel or tools?—Yes, anything by which the tenant earns his living.

850. Therefore you would not want to have any restriction on the present law in regard to poinding?—I would not enter into it at all, because it is a very wide subject and quite beyond this question.

851. Your position is that you wish to abolish hypothec?—Yes.

852. In your Bill of 1890 you took the limit of £20. In some other Bills we have had different limits stated. Is it your opinion that a universal limit of £20 would be an appropriate limit all over?—I think so, but of course I have letters from agents saying that workmen hardly ever have a £20 house, and some would limit it to £15. I think it should extend to £20, however, because I believe many workmen have that, and, besides, that the average rent of our working folk is, I think, rising.

853. Would that suggest to you that there might be cases where the limit might exceed £20?—If evidence were given at this inquiry showing that £20 was too low a rate to take to meet the case, it might be that you would go up to £22, 10s., or £25. I have no objection to that at all.

854. In some of the Bills before us a local option clause is introduced. In your Bill of 1890 you have applied it universally to Scotland?—Yes.

855. In your view, as one who has gone into this very thoroughly, do you think any legislation should be permissive in each locality?—I would not like to dogmatise the one way or the other. There might be some places where it might be optional, but I have not thought over that. However, I may mention that I would like to see the legislative changes necessary made as simple as possible. The more complicated the Bill is, the more likely is it to create trouble and dissatisfaction instead of getting quit of trouble.

856. You have told us a lot of interesting matter in regard to the law in England. Can you tell me whether there is any rule in England in regard to exemption of tenants on the ground of poverty? Perhaps you know in Scotland we have a large number who are exempted on the ground of poverty, and we are met with the objection that any compounding which would make the landlord pay those taxes or rates would result in the tenant paying rates which at present he is exempt from. What is the rule in England?—I know that in England there are allowances made. I received a letter about it this morning which I will send in.

857. With reference to the machinery for ejecting undesirable tenants, you advocate a more summary method on the ground of saving money in the way of arrears and getting rid of undesirable tenants?—Yes, in the interests of good tenants. Why, you have not only to get rid of bad tenants in some places, but you have to prevent them coming in. In this report of the Glasgow Workmen's Dwellings Company they mention one district where they have good tenants and they have a number of unlet houses, but they dare not let them because the tenants that would come in would drive away the other tenants.

858. That is one reason why you want short notices of removal?—Shorter than they are just now. In the Removal Terms Act of 1886 they are very short; they are only three days for a week, five days for a fortnight, and eleven days for a month. It is not the short notice so much,—giving notice is one thing and getting possession is another.

859. If short lets were universal, would that not result in a more summary ejection of undesirable tenants and also a saving of arrears to landlords?—They would get the rent in advance in most cases. Some companies in England exact the rents from weekly tenants in advance, but others do not.

860. We are told by some witnesses that one reason for advocating universal short lets is that the landlord would have less arrears and would be more easily able to get rid of undesirable tenants?—I should think that that result would follow.

861. This might result from universal short lets?—Yes.

862. In 1890 you brought in this Bill to shorten the period of notice, and as you say in the preamble to it, your Bill was that notwithstanding any missive it was not to be binding unless within so many days of Whitsunday?—That is so.

863. That is interfering with contracts of course?—The object of the Bill was to get the *pros* and *cons* from every person interested in the question. It was a trial Bill, I might say, because after I got all the particulars I came to the conclusion that it was very unlikely that we could substantially reform the grievance by a mere letting Bill. As long as hypothec was in the hands of the landlords, as long as they had that control over the plenishing of the tenant, a letting Bill would be inoperative to a large extent.

864. Are you in favour of the proposals contained in Mr Cross's recent Bill?—No, Clause 4 makes the law worse for the tenant than it is now.

865. But the general principle of the Bill is to make tenancies continue during the period of payment?—You make it worse for the tenant, and you would have no long tenancies at all. You would not have a yearly tenancy under that clause, because no landlord would wait a year for his rent. Besides that, we have spoken of tenancies for a year, but there are many tenancies in Glasgow for many years, and this clause would mean that you were to pay so many years' rent at one time.

866. (*Chairman.*) It is under £20?—Yes, I had overlooked that there is another clause that limits the rent.

867. (*Mr Dobbie.*) Do you think that if hypothec was abolished and a short period for notice of re-taking instituted, that would meet the present grievances?—It would meet them largely. I do not mean to say that what I recommend would be perfection, but what I recommend I think should be done, and then we would see what takes place in a year or two,—we would see how it works. I think if you induce landlords and tenants somehow to come to some arrangement whereby they can remove all through the year, as they do in England, you would save us this terrible state of things which takes place on 28th May of each year.

868. (*Mr Esslemont.*) You said that when you introduced this Bill in 1890 you had representations from interested parties in Glasgow, Edinburgh, Leith, Dundee, and I think you mentioned Aberdeen?—I think I had one or two letters from Aberdeen.

869. Do you recollect whether those representations from Aberdeen were for or against your Bill?—They were for the Bill.

870. I am not sure if I understand your position in regard to hypothec. Do you wish to have the law of hypothec completely repealed or only partially repealed? I ask that because, as I read your Bill, it provides for the complete repeal, but I gather to-day that you only favour partial repeal?—No. I mention in the statement of which you have a copy that it applies now only to urban lets. That was a mistake—it applies chiefly to urban lets; it still applies to houses in the country, but the number of rural houses to which it applies is very small as compared with the number of those in towns. I would abolish all that remains of the law of hypothec; I would take away the power of the landlord over the plenishing in country places as well as in towns.

871. You would give him no preference over another creditor?—No, none whatever.

872. You wish to amend the Act of 1888 and to excempt tools, trade implements, and personal effects. Would that be in the case of every creditor?—No, I refer to the landlord. I think Mr Dobbie said that if the Hypothec Bill had been passed as it stands it would have affected all creditors. The usual savings might be put into the Bill so that it would only affect the landlord.

Mr A. D. Provand. 10 Dec. 1906.

873. But don't you see that would be placing a disadvantage on the landlord as compared with another creditor? Would that be fair?—Not at all, he has given his house on credit, as a tailor might give a coat on credit.

874. I do not think you follow me?—The landlord has this advantage; he can say, "I want payment for my house in advance."

875. As the law stands at present, the proprietor of the house has the security of the effects as against his rent. You wish to have that removed?—Yes.

876. But you do not wish to place him in any worse position than any ordinary creditor?—No, he can sue for what the tenant owes him.

877. Then, in that case, you would not exempt his tools and trade implements?—Yes.

878. Would you exempt those in the case of an ordinary creditor?—That would be an extension of the law not contemplated at all just now. I said to Mr Dobbie that I had not thought that out, but that would be a very, very wide extension of the law.

(*Mr Dobbie.*) Might I say that my present impression is that the law does not exempt wearing apparel and tools.

879. (*Mr Esslemont.*) But Mr Provand covers trade implements and personal effects. He said he would not allow anything to be attached that was material to the tenant in earning his livelihood. Take the case of a woman who lets her furnished apartments. How would you deal with that? If you take away her furniture, then you take away her means of livelihood, just as if you take away a sewing machine from a dressmaker?—The landlord can sue for the debt the same as any other creditor, but he could not take her furniture.

880. You wish to exempt these things in the case of every creditor?

(*Mr Dobbie.*) I think that is the point.

(*The Witness.*) I did not want to put any money value on.

881. (*Mr Esslemont*). I think you quite agree that if hypothec is abolished the landlord will seek some other form of security, either in the form of a cautioner or by demanding forehanded payment?—Very likely he will.

882. But notwithstanding these possible eventualities, you think it is desirable to have the law done away with?—Yes.

883. Do you think that shorter lets would lead to more frequent removals?—I could not say, but I am sure that they would lead to removals being spread over the whole year instead of all being nearly on the one day.

884. Would that not involve some difficulty in the collection of rates?—Yes.

885. You have no suggestion to make to us as to how that could be best overcome?—The Glasgow authorities settle with landlords as regards houses at rents of £4 and under, and I think Mr Henry, the assessor, in a report made some years ago, said that that might be easily carried up to £10. In England it applies to all rents. Landlords can make arrangements here with municipalities just as they do in the South.

886. As a matter of fact, in Scotland they do as regards houses of the smallest class?—Yes, up to £4 in Glasgow.

887. You seemed to agree that the slumping of rates and rents was rather an objectionable thing, that the occupier in these circumstances was really not aware of what the cost of administration was?—It would give more work to separate them with very short lets, but it would be quite easy with quarterly and yearly lets. I take my house by the year and I pay quarterly. I have nothing but just the quarter's rent on my statement, but it would be quite easy for the landlord to set out the rates which he paid out of that.

888. (*Mr Binnie.*) In reply to Mr Dobbie, I think you said you wished the landlord to be placed on exactly the same footing as an ordinary creditor?—Yes.

889. An ordinary creditor, if a person does not pay when payment is due, can at that very minute cease to give any further credit?—Yes.

890. Would you propose that a landlord should be able to give his tenant no further credit by there and then turning him out of the house?—I am in favour of limiting his credit.

891. But answer this question. Are you in favour of the landlord being allowed to turn a tenant out of the house if he has not paid his rent on the day when it is due, to turn him out there and then?—On that day?

892. Yes?—No.

893. Then you do not place the landlord on the same footing as the ordinary creditor?—It is not quite possible to do so.

894. But is it not a very great difference, that in the one case the ordinary creditor can without notice cease to give credit—that is the position of the ordinary creditor?—Yes, he may do so.

895. And you propose that the landlord should be required to give notice to the tenant, the rent running on in the meantime, and at the end of the notice should be required to take somewhat expensive legal proceedings in order to get quit of the tenant. Is that placing the landlord on the same footing as an ordinary creditor?—No, but the landlord need not place himself on the footing of an ordinary creditor. A tailor supplying a coat can get payment in advance, and a landlord letting a house can also get paid in advance.

896. Can a tailor not get paid for a coat before he delivers it?—Sometimes he does, but sometimes he does not.

897. But take the large warehouses in Argyle Street, of which there are so many?—You mean the shops that sell ready-made goods?

898. Yes.—The customer pays at the time he gets the goods.

899. And the same with the baker?—Yes.

900. And the grocer?—No, there is too much credit given there.

901. Is it very large in proportion to the amount of the business?—My authority on the credit question is the Inspector General of Bankruptcies.

902. And all those who give credit come to him?—Yes, in the end.

903. Their number must therefore be comparatively small?—There is a considerable number.

904. But comparatively it is very small?—Yes. The precise positions of an ordinary creditor and a landlord must always differentiate in some way.

905. Would you propose to give the landlord any advantage for the disadvantage which every person admits he must be put to?—It is all in the rent. When he buys a piece of ground or leases it, and is going to build his house, he calculates all these risks—they are all in his business. It is the very same if he buys the house. I might as well be asked if I would place all merchants on the same footing as myself. I buy goods and do not get paid for twelve months, while another man gets paid within two or three days. It is impossible to put everyone on the same footing, but it is quite possible to prevent any person having undue advantages over his debtor. The law for centuries has been made by landlords, and at one time the debtor was the slave of the creditor. In suggesting that the law of hypothec should be abolished, I am suggesting that there should be taken away what I think is an unreasonable power on the part of the landlord as at the present time.

906. He had an undue advantage?—He has it now.

907. And you propose to put him at an undue disadvantage?—By no means. He can measure his disadvantage in his rent. He knows the risk, and he asks his tenant to pay for it.

908. Whether he calculates it or not, this disadvantage does exist?—All risks exist.

909. But this special disadvantage exists?—There are special disadvantages in every business.

910. (*Chairman.*) Are you giving your evidence on the footing that short lets would increase the rents or would have no effect on the amount of rents?—It would operate in two ways. In the first place, if you have tenants on weekly lets and coming in and out frequently, the repairs, painting, papering, damage to locks and other things, would all have to be put right oftener than if the house was let for a year. On the other hand, if the loss of rent was less, the landlord would have a smaller amount of bad debts to spread over the rents of those who pay.

911. What do you think would be the net result, balancing the one against the other?—I think the average rent might be slightly greater.

912. You referred to Mr Cross's Bill as having the effect of bringing yearly lets to an end?—Yes, within the £20 limit.

913. Do you think it valuable that it should be possible for a man who prefers it to have a yearly let under £20?—I would give as much freedom of contract as I possibly could, always taking care that landlords and tenants are placed so as to be capable of contracting on a fair level.

914. Do you think it right that if a man wants to have security of tenure for a year in a house under £20 he should be able to have it?—Yes, I think so.

Mr T. M. Stewart.

10 Dec. 1906.

Mr Thomas Maclachlan Stewart, called and examined.

Mr T. M. Stewart.

10 Dec. 1906.

915. (*Chairman.*) You are a solicitor in Glasgow and a Bachelor of Laws of the University of Glasgow?—Yes.

916. You have been Law Agent of the Glasgow Landlords Association, Ltd., since the year 1891, and I think you were appointed secretary in the year 1903, in which position you still act?—Yes.

917. You have been authorised to give evidence on behalf of the Association?—Yes, and also Mr McBain.

918. You have known about the movement with regard to the letting of small houses since it was first heard of?—Yes.

919. You have examined the series of Bills that have been introduced into the House of Commons?—Yes.

920. You have heard a good deal of the evidence that has been led before this Committee?—Yes.

921. Will you tell us about the Glasgow Landlords Association. When was it originated?—I think it was originated in 1862, and it was incorporated in 1897.

922. Its objects were generally to watch over the interests of landlords in connection with any questions that might arise affecting heritable property?—Yes. The objects of the Association as stated in the memorandum are as follows:—"To take into consideration all or any matters affecting 'heritable property; to procure the removal of all fiscal 'and other burdens upon such heritable property of an 'oppressive and inequitable character; to originate and 'promote improvements in the law relating to heritable 'property, and to support or oppose alterations thereon, and 'to effect improvements in the administration thereof; to 'advise and assist members of the Association, or others, 'in questions as to owners' rights and liabilities in rela-'tion to heritable property; to aid members, or others, 'pecuniarily, in litigating questions of importance; to 'collect and diffuse useful information on all matters 'affecting heritable property," etc.

923. How many members do you have?—There will be about 400 members.

924. Have you any notion as to the value of the property they will represent?—It must be very extensive, because we have some of the biggest owners in the city as members of our Association.

925. Do your members include persons owning property of all kinds?—Yes, there are a great many small owners,—owners of a single house or a tenement, for instance.

926. Has this question that we are considering been before the Association from time to time?—Yes. I think it first received attention in 1890. There had been at that time an agitation on account of the early issue of missives for renewal of the yearly let.

927. And there was a Bill introduced by Mr Provand?—Yes.

928. What position did the Association take up in regard to that?—They disapproved of any restrictive enactments by Parliament with reference to heritable property. They were quite willing to have the issue of missives deferred if it could be arranged amongst the owners and house factors generally in the city.

929. Was it felt by the Association that whether it should be dealt with legislatively or not, there was a grievance in connection with that?—I think it was generally felt among house owners and factors that the early issue of missives was to some extent a grievance. It is an unfortunate time of the year for people to make up their minds as to whether they are to take their house or not—it is so early.

930. What do you mean by "so early"?—It is in the winter, and it is not a pleasant time in which to search for houses or to select houses.

931. In your experience, has the early date become earlier within recent years?—I think probably it has moved a little earlier. So far as I understand the practice in Glasgow, the factors send out their missives for the tenants to sign about the middle of January, and I think the question as to re-taking remains open until Candlemas, by which time the landlord expects his answer. In former times, I believe the re-taking of houses was considerably before January—it was often as early as November of the previous year.

932. Then the tendency has not been to make it earlier, but rather to make it later?—If you go back very far, then that is so.

933. What is the reason, in your view, for the period being so long before the term of entry?—One of the reasons is the long period required for warning away a tenant.

934. You start with the forty days, which takes you back to 4th April to begin with?—Yes.

935. And if you shorten that, then, naturally, without any alteration, there would be a shortening of the earlier period too?—Yes; in fact our Association has advocated the alteration of the law in that respect.

936. If there was any alteration it would need to begin at that end?—Certainly. We think it is quite unnecessary, because it entails notice of a period amounting to fifty-three days before the actual removal term, 28th May, and that is absolutely unnecessary. I had instructions from the Association this year to draft a bill on this subject, and I hand in a copy. (*Hands in.*)

937. To what extent did it limit the forty days?—That the warning-away notices should be twenty-one days before the removal term.

938. That would be 7th May?—Yes.

939. Instead of 4th April?—Yes.

940. Was there ever a proposal in Glasgow that you know about to do this voluntarily?—Yes, it has been mooted in our Association, and also in the Association of House Factors.

941. So far as you know, has any resolution ever been passed?—I don't think so. There have been conferences between the two Associations, but we were never able to obtain a unanimous consensus of opinion on the subject.

942. Have you ever had conferences with associations from Edinburgh or other towns on the subject?—I don't remember any.

943. In some other towns it is the case that they have voluntarily shortened the period?—Yes, there is a system of that kind in operation; I think the date is 15th March.

944. If a Bill such as you have suggested passed, what would be its effect on the day for taking houses?—I think that factors would not issue their missives probably till about the end of February.

945. Have you considered the question of that being dealt with by legislation?—The matter has been very often discussed in the Association. The arguments advanced against it were that one could not reasonably limit the letting of new property to a certain period, or restrict unlet property, property that was at the time unlet, to such a period; whereas, on the other hand, if you did not do so, you were subjecting the owners of other property to a distinct disadvantage as regards letting facilities.

946. Have you seen the Bill prepared by the Partick Town Council which seems to provide for the contingency of new property?—Yes.

947. Clause 3 says that it shall not be lawful to let, prior to 15th March of any year, "but this shall not prevent an 'owner from letting at any time any new property not 'previously occupied"?—Yes, I was pointing out the disadvantage that such a clause as that would subject the owners of other property to.

948. That clause would protect the interests of the new property, but to the disadvantage of property that was let at present?—Yes, and seeking to be re-let.

949. That is an objection both to Mr Provand's Bill of 1890, and the proposed Partick Bill?—Yes.

950. Is there any other objection that occurs to you?—No, I don't think there is.

951. You have no objection except the general one, interfering with freedom of contract?—Yes. It seems to me to do less injury than any other proposal would involve.

952. You think, if your Bill were passed, it would operate in that direction without any further legislation?—Yes, I think so. I may explain, with regard to the Association being unable to come to an arrangement with regard to arranging the issue of missives,—there are a large number of the owners outside the Association, and there are house factors for such owners, and it was practically impossible to get them all to see eye to eye in regard to the time. Perhaps one house factor or house owner, anxious to have his houses let, would continue to issue the missives as at the present date, and that would be very unfair to those under the voluntary restriction.

953. You have referred to many owners being outside your Association. Do all owners within your Association work by means of factors, or do any large number of them factor their own property?—I think a lot of owners of small properties factor them themselves, but where there are large masses of property, they are almost entirely managed by house factors.

954. Substantially, are the interests of factors and landlords in this question identical?—I think so.

955. Except that of course anything that made more trouble would be to the advantage of the factors?—If they got additional remuneration that would be so.

956. Now we have talked of Mr Provand's Bill of 1890. There was a Bill introduced by Mr Cross, and backed by others, in 1894, which came to this substantially, that there should be no letting up to £15 in burghs for more than one month?—We decidedly objected to that, because it would have deprived the tenant who desired to have a yearly let of the possibility of arranging it. It interfered with the freedom of contract in a most important matter.

Mr T. M. Stewart.
10 Dec. 1906.

957. Did the same objection in principle apply to the subsequent Bill introduced by Mr Cross in 1898, which was to the effect that any tenancy that was under £15 should be terminable at the four terms in the year, May, August, November, and February, by three months' notice?—Yes, I think that was accompanied by some exception in regard to lets arranged for more than a year, so its effect also was to interfere with freedom of contract to take a house by the year.

958. But, apart from the academic principle of non-interference with freedom of contract, can you say whether it is found that there are a substantial number of tenants who value the security that the yearly tenure gives them, even although they may be under the burden, on the other hand, of being bound for a year?—I think there must be a very large class of tenants who value security of tenure. It is the experience of members of our Association, and I think I may also say of members of the Association of House Factors, that the system of yearly lets is highly valued. It must be the case, because in many cases family arrangements depend so much on the security of tenure of houses. For instance, there may be a case where a family has arranged to keep lodgers or boarders or anything of that kind, or where there are sick members of the family, and many other things that one can imagine. Then of course in seaside resorts and country places it is absolutely necessary that the tenants should have secure tenure of their houses, otherwise how could they let for the Easter season or the summer season?

959. Have you ever heard of there being a demand by yearly tenants that the tenure should be changed into a monthly tenure—I mean individual instances—and where they have been refused?—No. I have no practical experience. Mr McBain, who is a witness from the House Factors Association, might be able to speak to that.

960. On the other hand, if a person is secure for a year, he is bound for a year. Have your Association considered the grievance of working men who have to leave for one reason or another, or desire to leave, in the middle of a term?—Our experience, I think, is that it only exists to a very inconsiderable extent—perhaps three or four per cent. of the amount of lets are cases of that kind. In many cases it is no hardship to the man, because he is able by arrangement with his factor or owner to have the premises sub-let.

961. Of course there must be some cases of that kind?—Yes. A man who has taken his house for a year in Glasgow may get work in Barrow-in-Furness. He just goes to the factor and says, "Will you arrange to sub-let the house," and the factor acts as his factor in the matter and charges a small commission.

962. We are anxious to know the extent of such cases, and we have been intimating that all along to both sides, because it is one thing to say that the grievance exists and another thing to prove that it is substantial. We are anxious that both sides should do their best to give, not merely their opinions, but facts as regards it. Does the extent of it depend to some extent on the part of the town that you are dealing with? Take the centre of Glasgow, would you have as much occasion to remove between terms there as, say, at Govan?—I could not answer that question; it is a matter for practical men. Of course another element in the matter is that working men to a large extent prefer to live in the centre of the town on account of its attractions, its facilities for shopping, its amusements, and so on. That was brought out to a large extent by the recent Glasgow Housing Commission. I have conversed with working men travelling to Clydebank, and these were the reasons they gave to me for staying in the town. They can travel between this and Clydebank for 1s. a week.

963. Have you any statistics in regard to the percentage of removals between terms, or shall we get those from Mr McBain?—I think Mr McBain will be able to give them. I have no statistics on the subject.

964. We would like to get all that kind of thing in the way of statistics that we could. We would also like to know of those removals between terms involving sub-lets, what proportion are prior to the date of entry, between that and the day of taking?—Yes, you mean between Candlemas and Whitsunday?

965. Yes, and what balance is between Whitsunday and subsequent to Whitsunday?—I think there will be some evidence submitted by the house factors.

966. They will tell us what happens in the case of sub-lets and the amount of money the original tenant has to pay?—Yes.

967. That brings us to the present Bill before the House originally introduced in 1904, assimilating the period for payment to the period of tenure. What is the view of your Association with regard to that?—They object to it because it extinguishes the yearly let in connection with houses at £20 and under.

968. It does not profess to do so?—No, but it does so by a necessary consequence, because no landlord will let a house with the rent deferred for twelve months, and I take it that no tenant will assume the tenancy of a house with the whole year's rent payable in advance.

969. Is there any case in Glasgow of a tenant under £20 paying yearly?—It must be a very rare case. The rents are usually collected quarterly.

970. While theoretically it would admit of yearly lets, practically it would not?—That is so.

971. Would it also practically exclude half-yearly lets?—Yes, it would practically entail quarterly or monthly lets.

972. Quarterly or under?—Yes.

973. And in your view would that be objectionable to a number of people who wanted to take longer lets?—I think so, undoubtedly.

974. And would those be people of the class most deserving of consideration because they were the most provident working men?—Yes. I think the men who prefer yearly lets are careful men, men who are getting on in their trade and desiring to have fixity of tenure in their houses.

975. Perhaps this is more a question for a practical man, but in the cases of working men with houses under £4, they are either men who are not provident, or men who have had some misfortune of some kind?—Yes, I presume they are of the casual class.

976. But not invariably?—No, but to a large extent they are.

977. There might be illness of course?—Yes, quite.

978. That is your general view of the Bill. Suppose that Bill were passed without any amendment of the law of hypothec, what do you think would be the effect of there being no lets except quarterly, monthly, and weekly—would it involve forehand rents?—If the law of hypothec were done away with?

979. No, if it remained?—It might not involve forehand rents.

980. And if the law of hypothec were abolished?—I think most certainly there would be forehand rents or the adoption of a system of caution for rent; there would be either the one or the other, and probably both.

981. This may be also a question for a practical man, but your Association may have considered it; in your view would the substitution of short lets for long lets probably or certainly involve higher rents?—I think it would.

982. Why?—Because there would be a greater amount of repair required for such premises. Premises are less cared or by a monthly tenant than by a yearly tenant. Then there would also be broken periods when the house was unoccupied, and there would still further be the additional cost of collection of rents. It seems to me also it would probably affect the easy obtaining of loans of money over property. It would deter bond-holders, because they prefer houses where there is assured occupancy for the year and not houses where there is a fluctuating occupancy; they prefer houses where the repairs are likely to be less costly, and also the cost of factorage and other matters less. It might tighten the lending market.

983. Have you found any distinction in the rates between loans over monthly houses and loans over yearly houses?—I don't think they are so popular.

984. But is there any higher percentage in the one case than in the other?—I cannot say that there is.

985. Suppose you are correct—of course it is disputed—that the shorter tenancy would involve higher rents, I suppose you would say that those who are in favour of the shorter tenancy on the footing that there would be no rise in rents, are proceeding on a wrong basis?—I think so.

986. It may be that a working man might be in favour of shorter lets if the effect was not to raise his rent, but he would not be in favour of them if they meant higher rents?—That is so. It is a matter more for a practical man than for a lawyer.

987. But that would be an important element for us to consider, whether it would result in larger rents or not?—Yes. I don't know if you are going to ask me about the question of hypothec or not.

988. Yes, I will take it now. What do you say about it?—I have already said that if the law of hypothec be abolished, then the owner would either have forehand rents or he would have a system of caution. Mr Provand referred to the law of England, and he said quite properly that there waa no law of hypothec in England, but I thought he meant to infer that there was no law of sequestration for rent in England. He talked of destraint as if it was a remedy which conveyed no preference to the landlord. Now that is distinctly not the case. The landlord in England has the same preference, with some exceptions, for his rent as the landlord has in Scotland.

989. What is the view of your Association with regard to the proposal to abolish urban hypothec?—It depends to a

Mr T. M. Stewart.
10 Dec. 1906.

large extent on what is done in regard to an amendment of the law of ejection. With the present law of ejection we could not afford to lose the law of hypothec.

990. Do you mean with the slowness of the present procedure?—Yes, the dilatory nature of the system.

991. If you had an improvement in that way, would the landlord suffer in the end, suppose hypothec were abolished and they substituted the payment of rent in advance?—Not with the small class of houses up to £15; I don't know that the landlord would suffer much if he had forehand rents and the system of caution, but under the present law of ejection, if a man has failed to pay a month's rent, then the landlord must serve a removal notice on him which takes effect eleven days before the termination of the present let if it is monthly, and when the end of that period comes the landlord has to apply to the Burgh Court or the Sheriff Summary Court for ejection. Before he can get rid of his tenant another period of a fortnight or three weeks elapses. All that time the tenant has command of the landlord's house without having paid a shilling of rent for the greater part of two months.

992. Suppose the case comes before a magistrate who is not soft-hearted, what is the shortest period in which a man in arrear can be turned out?—The Court sits twice a week, on Tuesday and Friday.

993. But take the shortest time, the very best?—You could get a summons on the Friday and get the tenant in the Court on the Tuesday—that is assuming you had already given the notice to remove—and you might get him out in three days.

994. Suppose he exercised his right, by payment of 6d., of lodging objections, how long would you take to get him out?—When a tenant enters appearance in that way, he generally makes a lot of statements about the condition of the house and perhaps the difficulty he has had in regard to his work and getting money to pay his rent, and the indulgent magistrate might continue for a week.

995. But suppose he does not,—how long does it take to lodge objections?—A tenant just enters his objection a day before the Court, say on the Monday or the Tuesday morning, probably on the Monday, but as a rule you do not get the tenant out for about ten days after the Court.

996. This difficulty is rather due to the indulgence of the magistrates than to the law itself?—Of course that is one point we object to. The magistrates are not lawyers, they are probably men with very charitable and kind hearts, and perhaps they do not consider the whole bearing of the question. They are really punishing the good tenant.

997. What is your suggestion to remedy that?—The other consideration I had in my mind was one that is independent of the procrastinating nature of the proceedings. Under the law as it is at present you must wait till the expiry of the month before getting rid of your tenant. Notice must be given in a monthly let for one-third of the period unless the landlord and tenant have made a special bargain. While it is possible to arrange a special bargain, it is very seldom done, and therefore the normal rule of the law is that the tenant cannot be got rid of till this month has expired. Now we look at it in this way, it is an essential provision, an essential character of the tenancy that the tenant should pay his rent, just as it is that the landlord should provide the premises. If the landlord does not provide the premises, then an action of damages is raised against him; whereas if the tenant does not pay his rent he is in possession of the premises. Now we hold that he is a squatter and technically the landlord has a right to turn him out at his own hand. It is advisable, however, that a warrant should be got from the Court in a regular manner to eject him; but we maintain that if the rent has not been paid, such a warrant should be capable of being got within perhaps five or six days after the failure to pay rent, and in that case the landlord will have command of his premises.

998. Will you have coupled with that except on caution or consignation of the rent?—Yes. I can give statistics as to the number of ejections in the Burgh Court. There are two Courts in Glasgow, the Sheriff Summary Court under the Sheriff Courts Act of 1838, which applies to rents not exceeding £30 in premises let for less than a year. The Burgh Court has a procedure by use and wont, and applies to monthly lets, I think entirely. The Burgh Court is the more popular of the two, probably because it is less expensive. I have ascertained from the Sheriff Clerk the number of ejections in the Sheriff Summary Court, and I find that for the last year for which the returns are available, 1904, there were 2078 as against 9917 in the Burgh Court. Of these 9917, 7736 defenders entered appearance to be heard.

999. Although ejection was granted against them all in the end?—Yes. There were 20,887 services in the Burgh Court. I asked the Town Clerk to favour me with the meaning of these figures, what became of the difference between the 9917 and the 20,887, and he said that a very small proportion, a score or so, would be dismissed. (*Reads Town Clerk's letter.*)

Mr T. M. Stewart.
10 Dec. 1906.

1000. Does that appear to you to show that the most of the defences were simply for the sake of the delay?—Yes, purely to obtain delay. There was no substantial defence in almost any of the cases.

1001. You do not think that the remedy you propose would be unduly severe?—I do not think it would if the tenant were to consign his rent or find proper security for it, or leave the premises,—I think he has a very fair choice of alternatives. As regards the procedure in the Burgh Court, we have frequently had occasion to lodge complaints with regard to the delays in ejecting tenants and continuations which were granted, and some years ago we presented a petition to the Sheriff of Lanarkshire and the Sheriffs-Substitute in regard to a similar complaint that arose in the Sheriff Summary Court.

1002. What power had they to alter any procedure?—We found, for instance, that when an ejection process came into Court the tenant perhaps made statements that the house was insanitary, or he alleged something against the house, and the Sheriff would continue the case for inquiries; he would also make inquiry into the state of arrears of rent, and if he thought that the tenant had been unfortunate he would continue the process. Now we pointed out to the Sheriff that the object of the process was not to obtain recovery of the rent—which is practically abandoned by the mere fact of bringing the process of ejection—but to recover possession of our premises. The prayer of the petition is to put out the tenant, and not to recover the rent, and we hold that the only relevant consideration in such a process is that the landlord has given the proper notice and desires to recover his property.

1003. Did the petition to the Sheriff and the Sheriffs-Substitute produce any effect?—Yes. We had an interview with the Sheriff Clerk after that, and he assured us that the Substitutes would do all in their power to obtain regularity of procedure.

1004. That cannot have come to much, apparently, because you still continue to go to the Burgh Court?—The Burgh Court has attractions in regard to economy. I hand in a copy of our Memorial to the Sheriff and Sheriff-Substitute, and I would refer you to page 5 of that Memorial. (*Hands in and reads from Memorial.*)

1005. Apart from the question of cost in the Sheriff Court, have you anything to say in regard to the administration there being too lax, or are your observations confined to the Burgh Court?—I think the objection applies more to the Burgh Court process, but of course the objection to the process before we can get the tenant into Court is equally applicable to both—that is to say, the state of the law.

1006. What about the cost of these proceedings?—I understand they run from about 7s. to 12s.

1007. In which Court?—In the Burgh Court.

1008. And how much are they in the Sheriff Court?—I think about 15s.

1009. Do you know whether your view in this matter has been supported by any other bodies?—Yes. Two Commissions on the question of the Housing of the Poor have sat in Glasgow, one in 1891, appointed, I think, by the Presbytery of Glasgow, and the other two or three years ago, initiated by the Corporation. Both these Commissions have reported strongly in favour of the simplification and cheapening of the procedure to obtain ejection. They take the view that the delay which occurs is to the prejudice of the good tenant who is paying his way; the loss which the landlord sustains is put on the rent of those who do pay.

1010. If it is said that you can stipulate that if the rent is not paid the tenant shall remove on forty-eight hours' notice, have you found that the Burgh Court has disregarded that stipulation?—Yes. They are not naturally familiar with a missive containing such a clause, and they are very apt to disregard it. Some of the magistrates have taken the view that forehand rent is not due at all, and they won't grant an ejection petition where the rent is forehand.

1011. That would be at the end of the period for which the rent has been paid?—Yes.

1012. So your view is that, whatever alteration is made in regard to the length of lets, it ought to be accompanied as a counterpart with this change in the law of ejection?—Yes, I most decidedly think so. Mr Cross's Bill makes no provision at all for an amendment in the process of the law of ejection. Our Association prepared forms for missives containing a clause to terminate the lease on non-payment of the rent. I think we were told by the Sheriff Clerk that if a missive containing such a clause were used and if the proper clause were put into the ejection petition calling attention to it, ejection would be granted in conformity with it, and we therefore prepared

petitions in that sense, but we do not find that they have been extensively used. They are troublesome to fill up.

1013. Have they been given effect to in the Burgh Court?—Yes, I think they are given effect to sometimes, but not usually.

1014. They are difficult to apply in practice?—Yes, because they are out of the usual routine. Law agents do not practise before the Burgh Court, and probably the point involved has never been explained to the magistrates.

1015. This grievance exists apart altogether from any of the Bills we are considering? It exists with things as they are at present?—Yes.

1016. If these Bills were passed, however, it would extend the area of it?—Yes, it would throw additional pressure on the Burgh Court, and it would lead to some confusion in the getting rid of tenants and the putting in of new tenants.

1017. That is on the assumption that any of these Bills would lead to more frequent removals?—Yes.

1018. If shorter lets did not involve that, you would be no worse off than you are now?—No.

1019. If they merely spread the removals over the year instead of crowding them all into Whitsunday, you would be no worse off?—No.

1020. Do you think that assumption is well founded, that shorter lets would produce as a net result more frequent removals?—I think the adoption of such a system would lead to an unsettled state of mind on the part of tenants, and they would be changing about from street to street, where they thought they could get a more advantageous house.

1021. Apart altogether from loss of employment?—Yes.

1022. They are to a certain extent anchored at the present moment?—Yes.

1023. In your view that would be an element that would weigh, not with the best class of tenants, but rather with the more unsettled?—Yes.

1024. In short, do you think, looking to the best class of working men, there is any substantial grievance at all just now?—I do not think it can be called substantial.

1025. Except in the case where there is loss of employment or illness or change of employment?—Yes.

1026. And you think these cases are comparatively few?—Yes, with the exception of those cases I do not think there is any disadvantage at all.

1027. You do not deny that in such cases there is of course a great drawback?—That is so.

1028. You think it is just an incident of the system?—Yes, it is an incident of the system. There would be other drawbacks under a system of tenure as in England.

1029. We will come to that afterwards. In your view it is very important for us to ascertain whether this grievance applies to a large number or only to a comparatively small number?—Yes.

1030. And that is a question of fact?—Yes, entirely.

1031. Since you have mentioned the drawbacks to the English system, will you tell us what you mean?—The grievance, I understand, which is felt in London and big centres of population, is that the prevalence of short lets enables the landlord to eject his tenants whenever there is an influx of inquirers for houses in a particular district. For instance, in an industrial centre where there is a large immigration a landlord may go round to the tenant and say, "I am offered a shilling more; will you give it to me?" If the tenant says, "No, I won't," then the landlord says, "Then you go out at the end of the week." I know from correspondents in England that this grievance is considered to be a very serious one.

1032. If that be a correct statement that you have been informed of, do you think that it would also apply to Scotland?—I think that in a large centre like Glasgow there would be some danger of abuse of that kind occurring.

1033. But it would be chiefly in London?—Of course we have a large influx of foreign populatiou in our colliery districts and Hamilton and so on.

1034. Jews and Poles?—Yes.

1035. What about the Gorbals?—There is a large Jewish population there.

1036. That is also a question of fact that we ought to get put before us first hand?—Yes. I can only say that in the abstract it seems to me a most dangerous thing to deprive a tenant of such security of tenure as he has under the present system. It would be very serious if a tenant were liable at a month's notice to leave his house, and then no sooner settled in his new house than he has to leave it. He is thus put to the expense of two or three flittings which are proverbially worse than a fire.

1037. If the desire for shorter lets is entertained in the view that that difficulty will not arise, that again would be a false basis?—Yes, I do not think such an assumption should be made.

1038. Have you any other view to suggest to us in regard to the English system, any other drawback? I am merely on the short let. There is in security of tenure. There is no other, is there?—No.

1039. What about this,—would it not be a great advantage to have a change which would spread the removals over the year? What do you say to the present fact, that the enormous proportion of removals are all at one time?—It must not be assumed that all these removals occur on 28th May. Very often they occur within a week either before or after that date. Sometimes by arrangement with the landlord a tenant may be allowed to stay a day or two on, and in some cases he goes out voluntarily a day or two before. No doubt, however, there is inconvenience.

1040. And there is great pressure?—Yes.

1041. And there must be great discomfort resulting?—I think it is chiefly in obtaining men to do the removal work.

1042. And in the higher prices that have to be paid for the removal work?—No, I do not know that higher prices are charged for removal work than the normal prices.

1043. Is there not also this, that there are a number of trades which are over-pressed at that time, with the result that there is want of employment at other parts of the year?—I don't know about that. I know that a painter gets a great deal of contract work to do for his factor that he cannot possibly undertake all at once, and probably it may spread itself out for a couple of months after the term. He is not expected to do the work right away.

1044. If it be the fact that there is very great inconvenience and discomfort and loss arising from that cause, has your Association no suggestion to make that would go to spread removals over the year?—I am afraid not. The Whitsunday Term has become so popular.

1045. Why is that as against the November Term?—I suppose it is because it is spring; it is a more genial time of the year and a better time to remove one's effects.

1046. Is there much removal in the November Term?—No, very little.

1047. So there is practically just the one Term in the year?—Yes, that is what it is, one Term in the year.

1048. What about the pressure in finishing houses at that particular date? Does it not keep many trades very busy up to that time and then they are slack afterwards?—That is with regard to the building of new properties?

1049. Yes?—Of course the aim of the builder is to have his property ready for occupation at Whitsunday.

1050. And they are hurried up for that purpose?—Yes, undoubtedly that must be so.

1051. That has the double effect of making great slackness in the later months and of rather deteriorating the work that is being hurried up?—I think the Dean of Guild looks after the quality of the work. There is no difficulty there.

1052. But the slackness is a fact that has to be faced?—Yes, I think among masons and joiners there is a slacking off after Whitsunday for a few months.

1053. Apart from Clause 4 of the Bill, I see you have an observation to make as to Clause 6?—Yes, we think that Clause 6 is a badly framed clause.

1054. That is the one about the Removals Act of 1886?—Yes.

1055. What is wrong with it?—It makes a new system of warning away for houses in Glasgow, let at rents of £20 and under. The Removal Terms Act prescribes one-third of the period for lets of four months and under, but this clause provides a new warning-away period for premises let under a month—that is, practically a weekly let—and it provides that the notice to terminate such a let must be seven days. Now the Removal Terms Act makes the notice three days, which we think is a reasonable period. The notice under the proposed clause is too long for a weekly let. Then it leaves the law of the Removals Act to apply to houses up to four months, and then it applies the Removals Act to lets beyond that also, so that a removal notice in a let for a year would be actually four months.

1056. Instead of what?—Forty days. In a six months' let the notice required would be two months.

1057. That is a matter of drafting that could easily be adjusted if the main provisions of the Bill were passed?—Yes. The important thing is to have the law of removal uniform, because if it is not uniform it causes great distraction among those who have to work the machinery of the law.

1058. Is it a general principle that you would apply to the whole question, that it is very desirable in burghs to have the system uniform?—I should think so. It is very distracting to have different removal terms in different towns. That must be felt by people who want to buy property in various centres or to lend money on property.

1059. Does that apply to the proposal of the Bill to differentiate between different towns, Edinburgh and Glasgow being £20, and certain other burghs being £15

Mr T. M. Stewart.

10 Dec. 1906.

and under, and other burghs being £10 and under?—I think that would all lead to confusion.

1060. What do you say about Clause 9, which deals with the payment of assessments?—The proprietors object altogether to the principle of farming-out the rates to them. They think it a most dangerous principle to be adopted, and they object to it because it thrusts on them an invidious duty. We think that the assessing body should collect their own rates and not cast on the proprietor the odium of collecting them. Then there is an additional point, namely, that it is apt to disguise from the tenant the fact that he is paying rates at all, and it creates the class of irresponsible voter which exists to such a large extent in England, and which perhaps is responsible for what has recently happened in West Ham and Poplar.

1061. On that point two answers suggest themselves to one who has no opinion on the matter—as I have none—the first being that the system exists at present in regard to houses let at £4 and under, and, second, that we have been told of a number of cases where, by a voluntary arrangement between landlords and rating authorities, the system obtains in rents above £4 without any resulting friction or difficulty. Now, what do you say to these two points, taking first of all the point with regard to houses under £4?—Of course that is only a very trivial thing, because houses under £4 are getting so scarce now. According to the returns for 1905-1906, there are 2045 houses of £4 and under in Glasgow, 92,132 between £4, 1s. and £10, 33,844 between £10, 1s. and £15, 20,808 between £15, 1s. and £20, 21,408 between £20 and £50, and 5041 at £50 and upwards, making a total of 175,278. So, if the proposal of compounding the rates were adopted in regard to all houses under £20, it would involve 148,829 houses out of a total of 175,278, which is about three-fourths of the present ratepayers. It seems to me to be a very drastic and dangerous proposal.

1062. What did you say the number of houses at £4 and under was?—2045.

1063. I see Mr Provand gave us that last year the number was 2133?—Yes, they are declining. That is a well-known fact.

1064. Can you tell us whether, in the case of these houses, the landlord gets a note of the rates in regard to each house?—Yes, it is served upon him.

1065. That is done and he charges accordingly?—Yes, he adds it on to his rent.

1066. But does he get the rate applicable to each house?—No.

1067. Suppose a man has a tenement?—It is calculated on the tenement.

1068. How does he, in point of practice, work it out?—I don't know. I suppose he makes a division amongst the tenants and an estimate of his own trouble and probable loss, and he adds a slump sum to the rent sufficient to cover it.

1069. You do not know whether, when he collects his rent, he makes any separate statement to the tenant?—I am quite sure that he does not do that. The tenant knows nothing about what he is paying, whether it is rate or rent.

1070. Do you know whether, in the case of these voluntary arrangements, the tenant knows what he is paying?—I do not think he does.

1071. Has this position of yours received the support of any authorities, commissions, or otherwise?—As to the compounding of rates?

1072. Yes?—The recent Commission on the Housing of the Poor in Glasgow, in one of their findings, found that the compounding system should be applied to houses at rents not exceeding £6, instead of not exceeding £4. That was the utmost extent to which they went. I shall send in a copy of that Report.

1073. You might also give us the composition of that Housing Committee and tell us to what extent the Corpoartion of Glasgow were represented on it?—Yes.

1074. Was the recent Royal Commission on Local Taxation confined to England and Wales?—No, that Commission extended to Scotland as well, and there is a Special Report for Scotland.

1075. What did they say about it in the Special Report for England and Wales?—They condemned it on principle, but they could not find any way to get rid of it. I find the following on page 51 of the Final Report for England and Wales, 1901:—"The system of compounding has been 'frequently condemned on the ground that those who have 'the right to vote for the election, or become members of 'Local Authorities entrusted with the raising and expendi-'ture of money derived from rates, should pay rates 'directly themselves.

"We entirely concur in this view, and we think that it 'is most desirable that all classes of the community should, 'as far as possible, be made liable to personal payment of 'rates, in order that they may appreciate directly the effect 'of economical or extravagant administration.

Mr T. M. Stewart.

10 Dec. 1906.

"But, however desirable in principle it might be to 'abolish compounding, it is generally agreed that the 'practical difficulties of collecting and enforcing payment 'from the large numbers of the poorest classes in the large 'towns who are weekly tenants and frequently moving 'from one tenement to another, are insuperable. This 'view has been endorsed by officials of Local Authorities 'in large boroughs, and some of them have suggested that 'the limit of rateable value below which compounding is 'allowed should be slightly raised. Witnesses of this 'character have also expressed the opinion that the same 'system of compounding should apply to all rates subject 'to composition, though the adoption of the system should 'remain optional with the Local Authorities.

"We concur in the suggestion, which has been made by 'a number of witnesses, that compounding should be 'allowed in the case of all rates where the rateable value of 'the hereditaments does not exceed £10, in localities other 'than London and Liverpool, in which places we think 'that the limit of rateable value named in the Poor Rate 'Assessment and Collection Act, 1869 (London £20 and 'Liverpool £13) should not be disturbed.

"We think that greater simplicity would result if the 'two systems of composition for rates, namely, those under 'the Poor Rate Assessment and Collection Act, 1869, and 'the Public Health Act, 1875, were made uniform, although 'we think that the option of adopting the system of com-'pounding should be left to the Local Authorities con-'cerned, as at present." That is preceded, I think, by a statement of the law with regard to compounding on page 50.

1076. We can refer to that?—Yes.

1077. In your view, is Clause 9 a necessary part of Mr Cross's scheme, or might the principle which he desires to have confirmed in Clause 4 not be carried out without Clause 9?—My Association think that if the assessing authorities were to collect the rates quarterly themselves, that would lead to a more frequent adoption of quarterly lets. At present the annual collection of assessments lends a bias to the yearly let, because the tenant in the property when the rate becomes due is responsible for the yearly rate.

1078. Would you see any difficulty in that being carried out apart from the extra expense it would throw on the rating authority?—There seems to me to be no difficulty in the abstract. They already collect the gas accounts three or four times in the year without any difficulty.

1079. Who do that?—The Corporation as the gas authority or the gas commissioners.

1080. The Parish Council people only collect once a year?—Yes. The Glasgow rates, with the exception of the gas, are only collected once a year. The gas account is called a rate, and it is collected three or four times in the year.

1081. You heard it suggested last day that it would involve an additional survey. What do you say to that?—I cannot answer that question.

1082. You cannot answer this question as to whether it would involve a change in the Valuation Acts?—It might require some change in the Valuation Acts or the Local Acts.

1083. You heard it also said that the Parish Council people had no power to exact the rate except from the tenant who was there at the beginning of the let?—Yes, whereas of course with regard to the municipal assessments in Glasgow, they have power to rate whoever is found on the premises. I do not know that they would require any change in Glasgow, because they would come down on the tenant in occupation. In regard to the poor or school assessment, some alteration might be required in the existing law.

1084. Do you see any objection to the intermediate suggestion of raising the £4 to £6?—No, I do not think so. Practically the £6 house corresponds to what was a £4 house when the Act was passed.

1085. But your Association are against compounding at any higher rent?—Yes. We proceed here on the question of principle and also in regard to the special provisions of Clause 9. We know of the friction which already exists when a landlord collects the rate. Under the Glasgow Act of 1866 the landlord has to collect the stair-lighting rate of 10s. imposed on the tenant. The rate is collected by the Corporation from the landlord, who collects it from the tenants and gets a rebate of 20 per cent. for guaranteeing and collecting the rate. On two occasions when the Glasgow Corporation has promoted Provisional Orders to obtain a new lighting rate they have denounced the present system, on the ground that the tenant complains of the imposition of the stair light by the landlord, that it is not fairly divided, and things of that kind, and it leads to a great deal of friction. We say we would be very glad if they would collect this themselves from the tenants and save us from the odium, but they have not seen their way to do it.

1086. Do many people not think that that is a part of the policing of the town?—Yes. They have tried to get it put on the general occupiers' rates twice, but they have been defeated. We hold that it is applicable to the user of the house.

1087. You think that the same difficulty would arise with the school rate or the poor rate or anything else?—Yes, there would be a good deal of odium cast on the landlord and it would be made use of at the municipal elections or parish council elections.

1088. Have you heard that any difficulty of that kind has in practice been experienced in England? Have you noticed that there has been any evidence to that effect given before any of the Commission?—With regard to the ground?

1089. No, with regard to landlords finding that it introduces an awkward element between themselves and their tenants. You have not seen that in any of the Commissions' Reports?—No, it is objected to in England on the ground that it leads to irresponsible voting. There is another objection, that the landlord receives too much in some cases; he receives 15 per cent. in many cases for collecting the rate, and he receives an additional 15 per cent. for guaranteeing the rate. These are two things that must be kept in view. If he merely collects the rate, then he requires a commission for his trouble and expense; but if he has to guarantee the rate, then that is quite another thing, and he requires another commission, another rebate. I can give information from the Glasgow Police Accounts for 1905–1906 as to the amount of loss which the Corporation themselves sustained in the case of rates levied on property under £10. In the year 1904–1905 it was 26·01, and in 1905–1906 it was 25·98. It has gone down slightly since last year. About the time of the City of Glasgow Bank failure they lost as much as 45·21. Now that table shows the average of rents under £10, but it does not show the loss of rates between £4 and £7, which will be considerably larger.

1090. What bearing has that on Mr. Cross's schedule?—That schedule of rebates is perfectly preposterous. This would entail a large loss.

1091. An actual loss?—Yes.

1092. Have your Association considered what would be fair percentages to replace those if such a measure were passed?—No, they have not come to any finding upon that point.

1093. You referred to the tenants not knowing what rates they were paying. Do you see any reason why the landlord should not state on his notice for collection the rate and the rent separately?—It would be very difficult for him to do so. There are probably about a dozen rates collected by the Glasgow Corporation of one kind and another, such as police rate, parks and galleries rate, Diseases of Animals Act rate, and dozens of others. Each of those would have to be specified and divided up into twelve parts if you collected monthly, or four parts if you collected quarterly, and it would involve an enormous amount of clerical labour and book-keeping.

1094. It would not merely be labour, but it would be skilled labour?—Yes. The calculation of these fractional parts would be a very difficult process.

1095. (*Mr Esslemont.*) Why not slump the occupier's rate?—If it was merely slumped it would not be so difficult.

1096. I don't think that any ratepayer looks through the amount he has to pay for public health and so on?—If you look at the assessments you will find that each rate is specified separately.

1097. Yes, there is a multiplicity of them, but you don't put it to us that any individual ratepayer calculates all that?—I say that the ratepayer ought to know what he is paying for each thing.

1098. The notices don't bear that on the face of them?—Yes, they do.

1099. That is not the case in every city?—It is the case in Edinburgh, I know.

1100. (*Chairman.*) If it be thought important, as some people think it is, that ratepayers should be in a position to check what the Corporation is doing, then you think that is necessary?—Yes, most emphatically so. I have a specimen of the demand notice issued by the Glasgow Corporation, and it specifies police, sanitary, statute labour, public health, sewage, parks and galleries, municipal buildings, registration of births, registration of voters, valuation of lands, etc. etc., each given separately. I will send in a copy of that demand notice.

1101. As an illustration take libraries?—Yes. That is a very important point.

1102. If the different rates were slumped together, the ratepayer would not know what was being spent on such an object as the libraries, about which there is great difference of opinion?—That is so. The amount is not fixed till August or September, and the landlord would not know from the month of June what the rate was going to be, and he would have to make a guess at it.

1103. What would he do in June, July, and August?—He would have either to put on the same rate as last year, and when he came to know what the actual assessment was, he would have to put on a bigger proportion for the remaining months.

1104. Or he might have to take off a certain amount?—Yes, but as things are going at present he would very seldom have to take anything off.

1105. (*Mr. Howden.*) Is that not assuming that you are still continuing the yearly let?—No.

1106. (*Chairman.*) No, if it is to be monthly, the first payment would be in June, and he would not know the amount of assessment till August?—That is so.

1107. (*Mr. Binnie.*) If there were removals in August, you might have been charging too much to the men who had removed, and you would have no opportunity of rectifying it when they were away,—That is so.

1108. (*Chairman.*) Then there is the other point about the relief of poor tenants. There is nothing said about that in Mr. Cross's Bill?—No. I do not have the figures with regard to the relief of poor tenants, but I know it is carried out with great clemency by the Glasgow Corporation, and a great many people are relieved from payment of rates.

1109. Even in the case of people paying rents above £20?—Yes, special cases, perhaps a widow keeping boarders, or something of that kind, and the apartments not having been occupied, or misfortunes of that kind. That system of course would have to end.

1110. Why? Would what is contained in the clause proposed by the Burgh of Partick not meet your point?—Yes, that is so if the tenant remained in the premises for twelve months, but if he left and went to another landlord, how would that landlord get exemption in his dealings with the Corporation? I don't see that that meets that difficulty.

1111. It would not meet that case?—No.

1112. (*Mr Binnie.*) Would there not be a difficulty in requiring a separate class of entries for each such case in the factor's books?—Yes. There would require to be a system of entries in the factor's books for each of those cases.

1113. (*Chairman.*) There is no such arrangement now?—No.

1114. The factor has nothing to do with it?—No. Of course that clause would not deal with the poor rates.

1115. Does it not? Why not?—It might. Of course it is a personal matter between the tenant and the assessing authority. The Board, in regard to the poor rates, judges in each case what tenant is entitled to or deserves relief.

1116. You don't say that it would affect the chance of the tenant getting relief, if in point of fact it had been actually paid by the landlord to start with?—Not if any machinery could be devised to let the landlord give effect to it; but I don't see how that can be carried out. I made special inquiry about it in England, and I know that it is not carried out there.

1117. Theoretically, is there not a system of the same kind in England?—Not where there is compounding. I made inquiry from a correspondent of mine who has special information on the subject, the Secretary of the Liberty and Property Defence League in London. He says: "There is no exemption of necessitous tenants under 'the compounding system. The rate being levied upon 'the landlord, the particular circumstances of individual 'tenants cannot be taken into account. Whatever arrange-'ments are made for recouping the landlord are between 'him and the tenant alone, and if a tenant is so necessitous 'that he cannot pay the landlord, the latter must lose the 'money exactly in the same way as he has to lose if the 'house is empty. The practice of the assessing authorities 'remitting the rates in the case of poor tenants who pay 'direct, exists here as in Scotland, but it would appear 'to be necessarily excluded by the very nature of the 'compounding system."

1118. There is a practical difficulty in carrying it out?—I suppose so.

1119. Does that apply to England generally, or only to London?—To England generally, wherever the compounding system exists.

1120. Suppose there was compounding, in regard to the allowance to be made, do you think that the Corporation's loss would be greater or less than the loss of a private proprietor?—I think that the Corporation's loss would be less than that of a proprietor, because they can collect in a much more summary process than the landlord can; they can get a warrant for diligence against a whole mass of defaulting tenants in one summons without citing the tenants at all. They simply serve a second demand note, and if the rate is not paid they put the defaulting tenant on the sheet which they submit to the Sheriff.

Mr T. M. Stewart.
10 Dec. 1906.

They get a general warrant and they can enter his house five days afterwards and poind his goods. Their process is preferential to the landlord's hypothec.

1121. But would there not be this to counterbalance it, namely, that the landlord, in collecting the rates monthly, would have fewer arrears than he has just now in the case of long tenancies?—Possibly. There is a considerable demand for quarterly collection.

1122. Apart from the tenure?—Yes. I noticed that, at the recent election, a great many candidates stated that they were in favour of quarterly collection of rates.

1123. On what ground?—To make the payment of the rates easier for the poorer classes. It is easier to pay four small sums than one large sum at one time.

1124. I suppose that is the reason why, in regard to rents, even in the case of an ordinary tenure you may have the collection monthly?—Yes, or quarterly.

1125. Is it the view of your Association that that element of the desirability of having frequent collection can be carried out apart from the length of tenure altogether?—Yes, quarterly collection is carried out in various towns in England and in some parts of London.

1126. Quarterly collection of what?—Rates. We made inquiry some years ago, and we got returns from a considerable number of towns in England and Ireland.

1127. Do you see any reason why it should not be done here?—I do not see any objection to it.

1128. And the advantages would be obvious?—Yes.

1129. What have you to say with regard to Clause 10?—Before leaving Clause 9 there is the question of franchise. The compounding system would enfranchise whatever body of electors are disenfranchised at present through the non-payment of the rates. That would affect the burgh franchise, and if the poor and school rates were also affected it would effect the Parliamentary franchise.

1130. (*Mr. Howden.*) Do you think that undesirable?—I think it undesirable that those who do not pay the rates should have a voice.

1131. But in this case they would pay the rates?—But I object to those that would not pay.

1132. They would be ejected from their houses if they did not pay?—I do not see why they should not be.

1133. They would not be on the roll if they were outside their house?—They might remove to another house, and at the next election they might combine their two qualifications.

1134. (*Chairman.*) If it resulted in rates being got through the landlord without loss to him, then there would be nothing unreasonable in their having the franchise?—If they all paid their rates.

1135. If the result of compounding is, as some say it would be, namely, that rates would be got through the landlord which at present are not got at all, and these were got without loss to him, then there is no reason why they should not have the franchise?—But there would be a large class who would not pay the rate or the rent.

1136. You are assuming that the landlord would have to pay in a number of cases where he would not recover?—Yes.

1137. And you think that in those cases they should not be enfranchised?—That is so. It seemed to appear from Mr Wood's evidence that it would enfranchise 14,000 people in Glasgow.

1138. To the extent to which these people were made to pay rates, it is quite right that they should be enfranchised?—Yes.

1139. If you are wrong in the assumption that they would not pay rates, then there is no grievance?—That is so.

1140. We come now to the optional part of the Bill, Clause 10?—The optional part is, I think, a weakness in the Bill, and, at the same time, it is difficult to see how it could be made compulsory upon all burghs in Scotland. In places such as Bridge of Weir, Kilmalcolm, Dunoon, Rothesay, they must have a yearly let in order to enable them to sub-let their houses for the holiday season. They must have a yearly let, and therefore it would be most inequitable and a great hardship if they should be compelled to have merely quarterly or monthly lets. On the other hand, if you have an optional system you create a great deal of confusion, because one burgh may adopt the Act and another may not, and there would be no reciprocity for exchange of houses between these two burghs if they were contiguous. Then, with regard to houses in landward districts which are thickly populated and are lying round burghs, if the burgh adopted the Act the county portion of the district would not have a responsive system; it would have the old system of yearly let, and if a tenant desired to remove to the country at any other term than the Whitsunday term he might not get a house. Then it is also an objectionable feature that one community might adopt one section of the Act alone and another community might adopt another section. One community might adopt Clause 4 and not Clause 6, dealing with removal.

1141. Or Clause 9?—That is so, the same with Clause 9. It would lead to an inextricable deal of confusion.

1142. It is not at all an unfamiliar thing to have an Act which is optional?—No, the Burgh Act itself is optional in some respects.

1143. Did that introduce great confusion?—There are certain clauses in the Burgh Act which you must adopt if you adopt a portion of it.

1144. But you don't require to adopt them all?—No. But there was a certain chain of clauses that you had to adopt if you adopted any.

1145. And that has not led to any difficulty, say, as regards investing money?—No.

1146. You don't think that there is any analogy between the provisions in the Burgh Act and the provisions in this Bill?—No.

1147. Do you know of any other Acts that are optional?—There are some clauses in the Housing of the Working Classes Act that can be adopted in that way.

1148. Is the Public Health Act optional?—No, I think not, but some clanses are, clauses dealing with water supply and things of that kind.

1149. I think I have asked you about the Partick Bill already?—Yes.

1150. Clause 4 is somewhat like what you propose. "The period of warning away shall be and is hereafter 'reduced from forty days prior to Whitsunday to the period 'of thirty days?"—The Partick Bill seems to apply to the letting of all premises without limit at all. I don't think the period of warning away should be reduced in respect of business premises.

1151. Is it not limited?—No. It extends to the letting of more than dwelling houses.

1152. You would propose to limit it in what way?—I thought it applied to business premises.

1153. No, it is dwelling houses?—I agree with the principle in Clause 4, but I would go further.

1154. You would leave it applicable to dwelling houses of all rents?—Yes.

1155. (*Mr Howden.*) On page 6 of your Precis you say that in the case of parties having to remove between terms, it is usually easy to arrange with the factor to relet the house, and if that is done, the tenant is relieved of further liability for the rent. What do you mean by that?—If a factor gets a suitable tenant in place of the one who wishes to remove, and if he accepts him as such, then the old tenant is practically relieved of further liability.

1156. Is this sub-letting form which I show you correct?—Those forms vary in different offices, but as a matter of practice, while the old tenant is still responsible to the full extent, the cases in which he is actually made so liable are very rare indeed.

1157. He is legally responsible?—Yes, if the landlord pleases.

1158. You referred to the loss of rental in periods of broken lets. Does that refer to rent in the aggregate, or is it only in individual cases?—What I mean is that premises would remain unoccupied for various periods throughout the year.

1159. But the tenants would have to secure house accommodation somewhere else and they would have to pay rent where they went?—It is quite possible, but there might be broken periods to a greater extent in one house.

1160. The tenants could not possibly live without a house in such a city as Glasgow?—I cannot answer that question, but I know tenants often go into lodgings for a time.

1161. Further down in your Precis you say that in course of time the rents of these houses would increase, so that, even assuming your previous statement is correct, it would right itself in the long run?—But I say that this may not come into operation until the existing proprietors have suffered severely. It is quite impossible, when the house market is against the proprietor, to add anything to the rent, but in the course of time the supply of that kind of house would be diminished, fewer people would invest money in it, and the market would turn more in favour of the proprietor; there would be fewer of these houses in existence, and, therefore, the rents would tend to become higher to recoup the owner.

1162. Can you tell us what principle landlords and factors adopt in fixing rents?—I suppose they take what they can get.

1163. Just so; they take what they can get. So they will be taking as much rent out of their property as they possibly can get in the meantime?—I suppose so. It depends on the law of supply and demand, like everything else.

1164. You told us that foreigners coming into the country had a tendency to raise rents, and you instanced the case of the Poles in Lanarkshire, and incidentally the

Jews in Gorbals. Has the influx of Jews in Gorbals raised rents in that locality?—I have no information on that point.

1165. Why did you state it?—Excuse me, I did not. I said there were districts in Glasgow where there was a large immigration from the outside, and where, if there were short lets, the landlord would have an opportunity of raising the rent.

1166. You said by inference that the immigration of these men had a tendency to raise rents?—I do not think so.

1167. I am sorry if I misunderstood you. You said in reply to the Chairman that the Dean of Guild Court inspectors looked very well after slipshod work in the building trade?—I think they do.

1168. What control have they over the furnishing of the house inside, the woodwork for instance?—Do you mean as to the age of the wood?

1169. Or the workmanship?—They have full control over the thickness and dimensions of planks and beams; they have control over the walls and construction of houses generally. I do not know about these technical matters, however.

1170. The stability of the house is the only thing that is taken into consideration by the Dean of Guild?—There is the sanitary equipment.

1171. Otherwise there could be a considerable amount of scamping of work in the finishing of a house?—I do not know. I am sorry to think that any joiner would scamp his work.

1172. If it was a matter of rush he would have to do as he could?—I suppose if a workman is overtaxed he cannot give the same attention to the work, and the landlord must pay for it later on.

1173. Does this rush at the term time not increase the cost of construction of buildings?—I do not know; I hardly think so.

1174. Even in the case of repairs?—No, I do not think so.

1175. It is quite general for men at that season of the year to work overtime?—I am not aware of that at all.

1176. Will you take it from me that it is the case? Painters usually work a great deal of overtime at that time of the year?—And they will be paid for it.

1177. Time and a half?—And that is very good for them.

1178. Who pays for that? It must add to the cost of the construction?—I suppose it falls on the landlord, and he may not be able to get it out of his rent.

1179. You told us there was no increase of the rental. Who pays it then?—If the landlord cannot get it added to his rent then he bears it himself. It depends on the supply and demand whether he can get it on to his rent or not.

1180. You said there was no increase. Now it is evident that there must be an increase if overtime rates are paid on the job?—My idea is that the landlord makes his contracts with his tradesmen and there is no more increase in a contract in one period of the year than in another.

1181. Someone must bear the loss in connection with the overtime?—The master tradesman may take it off his profit for all I know. I cannot answer that question.

1182. (*Mr Dobbie.*) Could you give us your view as to how you think the present law of hypothec would operate in the event of shorter lets becoming universal. Would the present law of hypothec be workable under which the landlord has a preference for the current rent? How would it operate if houses under £20 were as a rule let monthly,—would it be workable at all?—I do not see how it could not be worked.

1183. You think a landlord would be entitled to follow the furniture from one monthly house to another?—He would be entitled to get a warrant. In small houses up to £10 the hypothec is not of much importance.

1184. You heard Mr Provand say that if short lets were common hypothec would practically fall into disuse?—I do not think that would be the case. If it was abolished, I think it would lead to advanced rents with a caution for the rent.

1185. If hypothec was not abolished and short term lets became common, would it not lead to confusion with reference to the competing rights of different landlords who would have an hypothec for three months after each period. What I am puzzling about is this,—would not any change in the law in regard to short lets require to be accompanied by some modifications of the present law of hypothec?—Yes.

1186. To make a practicable Bill?—Yes, that is to say, if monthly lets became universal in regard to houses at rents up to £20.

1187. There would require to be some change in the present law of hypothec in regard to the duration of it?—Possibly there might have to be some restriction in regard to the right of carrying back.

1188. (*Chairman.*) Why?—If a tenant were moving about from one house to another and then on to a third house, it would raise very complicated questions as to the rights between the landlords.

1189. (*Mr Dobbie.*) Yes, that is the point. What period would your Association suggest as suitable notice in the case of six monthly tenancies, or three monthly tenancies, or one monthly tenancy? You object to Mr Cross's proposals. Could you give us any help in suggesting what might be more appropriate periods?—I have stated my views already with regard to yearly lets. With regard to half-yearly lets, which of course are few and far between, I would say probably about one month.

1190. And quarterly?—Perhaps a month or twenty-one days.

1191. And monthly?—A week or ten days.

1192. You have gone very exhaustively into the question of compounding the rates. Speaking with the knowledge that you have, do you think it is practicable to recover rates directly from tenants in the case of universal monthly lets. Take even quarterly collections, which you advocate. Would that put the burden upon the proper shoulders in the case of monthly lets?—I don't anticipate that monthly lets would preponderate; I think quarterly lets would preponderate, and I think it would do fair justice in such a case.

1193. If changes were frequent, there might be cases where the tenant in possession when the roll was made up might be saddled with at least three months' rates?—Yes, there might be such a case.

1194. That would not be so aggravated as in the present system, when he is liable for a year's rates?—He is liable for a year's rates at present.

1195. The ideal system would be to have a monthly collection of rates?—Yes.

1196. Coming back to compounding, you know that the Glasgow Corporation lose 26 per cent. of their rates?—Yes.

1197. Have you any indication as to the proportions of parish and school rates that are lost?—No, I have no information upon that point. I think Mr Wood gave some information about that, or he was to supply it.

1198. Take the Partick Bill; the difficulty is what you have indicated in regard to the exemption clause. How would it operate, seeing that the Corporation gets its rates from the landlords direct? Assuming the change to be made, and that the tenant, where he could show good cause for getting exemption, applied to the Corporation, who already had the money in their pocket or held the landlords responsible for it, the tenant should be entitled to get direct from the pocket of the Corporation the amount which he has paid to the landlord. What is the objection to the tenant applying to the Corporation, pointing out his condition and asking the Corporation to give him re-payment direct of the rates applicable to his dwelling house?—After the assessing period was past?

1199. Yes?—That is not an impossible idea. It might be feasible.

1200. (*Mr Esslemont.*) I think you said that what you describe as the better class of working men prefer yearly tenancies?—Yes.

1201. And I suppose I may take it from you as representing the house proprietors that all your clients prefer to have that better class of men as tenants?—There are members of our Association who have the smaller class of houses and members who have the better class of houses.

1202. But every proprietor who has a good tenant of that kind wants to keep him?—Yes.

1203. How would it prejudice either party if monthly tenancies were substituted for yearly, if you accept the situation that it is desirable in the interest of the proprietor that the tenant should remain because he is a good tenant,—how would it prejudice either party?—Of course if the tenant desired to remove oftener than he does at present, it would make a difference to the landlord.

1204. But you say that the better class don't want to remove; they prefer the yearly tenancy?—Yes.

1205. And that is a desirable class of tenant to have?—Yes.

1206. How could it prejudice either party if monthly tenants were substituted for yearly tenants?—The tenant would not have the security of tenure that he has at present.

1207. What object could the proprietor have in trying to get rid of a good tenant?—He might want to put in a friend of his own. Cases of that kind do occur sometimes. Or he might want to get a bigger rent. It would depend on the state of the property market at the time.

1208. On the other hand, the tenant would have the whip hand of the proprietor, because if the city became rather over-built, he would be in a position to demand a reduction of rent. So you see the benefit would be reciprocal?—That is so, but I think that a working man of that kind would prefer to have his let definitely assured

Mr T. M. Stewart.
10 Dec. 1906.

to him for a year rather than to have the mere probability that he will be entitled to stay on for twelve months.

1209. I am not quarrelling with what you said; I believe it is the case that the class to which you refer prefer the yearly tenancies, but I could not see how you would be prejudiced in the event of such a provision coming into effect. As to the question of frequency of removals, you said you thought that there would be more frequent removals?—Yes.

1210. And additional repairs required?—Yes.

1211. And you came to that conclusion from the experience you have gained in connection with existing monthly tenancies?—That is the experience of members of our Association.

1212. Do you not think that these are caused to some extent by the class of tenants who occupy these monthly houses?—To a large extent it is the case that a tenant of a lower class is not so careful with the property.

1213. And is it not due to another cause, viz. that these weekly and monthly houses are chiefly in the older class of property, which is more or less in a state of decay?—Yes. The monthly lets probably are an inferior class of property.

1214. And they would still require a large amount of repair, even if they had good tenants?—Yes, but a monthly tenant does not take so much care of the house as a yearly tenant.

1215. You would not be justified in coming to the conclusion that if the system became general the cost of repairs would increase in the same ratio?—I would prefer to leave that question to practical men, as I am not sufficiently conversant with it.

1216. What is the Burgh Court?—It is the old Court of our Royal Burgh. It used to have the jurisdiction over small debts.

1217. Who is the presiding magistrate?—There is a Bailie along with the Town Clerk as his assessor.

1218. Not a Justice of Peace?—No, it must be a magistrate.

1219. (*Chairman.*) Has he jurisdiction over the whole modern municipal area?—Yes.

1220. (*Mr Esslemont.*) You said you were in a way fairly treated at the hands of this Court?—The magistrates try to do their best, but they are not trained judges.

1221. They are not lawyers?—No.

1222. Why do you resort to that Court so frequently and not go before the Sheriff, who is a lawyer?—I think it is cheaper.

1223. But if you don't get justice, why do you go there? Am I not right in assuming that this consideration which is shown by the magistrates is also shown by the sheriffs?—Not to so great an extent.

1224. It cannot be to so great an extent, because you don't go to the Sheriff so frequently as you go to the other Court?—I think it is on the score of expense. The Burgh Court is cheaper.

1225. But if you went to the Sheriff Court with the same proportion of cases, you might have as much grievance at the hands of the Sheriff?—Personally I don't think either system ideal.

1226. I think you take the view that the Schedule of Commission proposed by Mr Cross in his Bill is quite inadequate?—Yes.

1227. You were present and heard the evidence of Mr John McFie?—Yes.

1228. Do you remember what he said on that point?—Did he say he collected the rates himself?

1229. Yes, he said that in certain cases he collected the rates, and he was asked what discount he was allowed, and he said 7½ per cent.—I must say that I don't know how he does it.

1230. He was asked if it was adequate, and he said that it was.—I don't know how he does it.

1231. He said there were only five cases in which he collected the rates, Kinning Park, Govan Street, and South Wellington Street, and they were chiefly one-room and kitchen houses.—These are very good districts.

1232. He is allowed 7½ per cent. He was asked if he thought that was sufficient to cover the cost and he said, "We have to be satisfied."—I think a factor who uses the option of collecting the rates does so in a good district where he can make a good bargain in regard to the rates.

1233. He said that if he had 7½ per cent. all round he would do very well.—Taking the Glasgow Corporation figures, I cannot understand how he can work it at 7½ per cent. The returns of the police rate show a loss of 26 per cent.

1234. (*Mr Howden.*) Is that on the total rental or is it irrecoverable?—It is irrecoverable.

1235. They do not pay rates on unlet property. Is that not included in that 26 per cent?—No, it is loss on the amount assessed. The number of occupiers is 88,824; the number paid is 66,486; the number unpaid is 23,338, showing a percentage of unpaid, 25·98.

1236. (*Mr Esslemont.*) You said that in your opinion the system of compounding of rates would cause friction between tenant and proprietor?—Yes, I think it would be a most unfortunate system.

1237. You will recollect that Mr McFie was asked the same question—"272. *Q.* Do you find that it makes any 'difficulty in the way of friction between you and the 'tenants when you are collecting the rates as well as the 'rents? *A.* Not a bit"?—Of course Mr McFie may have had a very fortunate experience, but I know what the result is of such collection of tenants' rates as the landlord does have in Glasgow, and it is not encouraging.

1238. In short, you say that your experience is quite contrary to that of Mr McFie?—Quite.

1239. (*Sir J. Stirling-Maxwell.*) I suppose the allocation of the rates to particular houses, if the landlord had to collect them, would not be so difficult if they were assessed as they are now separately? You said it would be a very intricate thing to find out what the rates were if the rates were assessed on each separate house as they are at present. The question is whether these people should pay them or pay them through the landlord?—If there was a demand served on the landlord and the landlord had to pay—

1240. Served on the landlord for each of his individual houses?—The Bill provides that the landlord shall state the proportions in his receipts.

1241. But I mean to say that the same thing shall be done for him by the rate-collecting authority. The local authority would send him a demand for each separate house.—Yes, if it was worked that way it would be easier.

1242. It would dispose of most of the difficulty?—It would not dispose of the difficulty as to the calculation of next year's assessment. The landlord would be assessing without knowing what the rate was going to be.

1243. I was not asking about that. There is one thing, and that is about the probable number of people who would be enfranchised although they did not pay their rates. You told us that ejections were granted against 9900 people in the Burgh Court and 2078 in the Sheriff Court, making about 12,000 altogether. I suppose none of these people would be more likely to pay their rents if they had to pay rates as well?—No, I think there would be probably much the same result.

1244. And we can calculate from that that about 12,000 people would remain on the roll as electors who had not paid their rates?—Yes.

1245. (*Mr Binnie.*) Would you refer just for a moment to what you said regarding the relief of poor tenants from their assessment? Do you see any way of getting that done unless the tenants remain in the house for a whole year?—No, I cannot see any way by which it could be made to work unless the tenant was in the whole year.

1246. Because they would apply for relief of the whole assessment charged against the house?—Yes.

1247. And if they removed from that house immediately after getting relief, the house would still be relieved, although it was occupied by a tenant quite able to pay the assessment?—Yes.

1248. And then the tenant going into another house would require to pay the poor rate or other assessment for the house to which he had removed?—Yes, that is how it would work.

1249. (*Chairman.*) How does it work now, getting relief for the whole year and then shifting the next month? It is merely extending the area of the difficulty; there is the same difficulty at present?—I think it must be in respect of one house that he has been assessed. He has his notice which he brings with him.

1250. For the previous year?—For the current year,—somewhere in the course of the current year.

1251. Then he shifts?—In that case he might come into a house where the rate had not been paid and he would be liable for it. He would have to get relief for it too.

1252. This would not introduce any new difficulty, but it would extend the area?—Yes.

1253. (*Mr Binnie.*) Then you spoke of removals causing repairs, and you were asked if that was not largely caused by careless tenants. Can a removal, however carefully it is carried out, be carried out without causing some damage to a house?—It cannot fail to do some injury to the house. Injury is always done by the mere removal of the furnishings, carrying things down the stairs and destroying the plaster, and then there are marks of men's hands on the paper.

1254. The Chairman asked you a question which you never answered and that was as to the shortest possible period for an ejectment?—I think if it was on a Friday you might get the ejectment enforced on the following Tuesday. That is the shortest period in which it can be done.

1255. Before you could get that, the tenant would be in arrears with his rent?—Yes, he would probably be two

Mr T. M. Stewart. 10 Dec. 1906.

months in arrear if it was a forehand rent,—he would be in arrear for the previous month and also for the month in course. I am assuming that he fails to pay his forehand rent for the month and you take him into Court and another month has begun to run.

1256. And before you could get him out there would be something like six weeks during which he had occupied the house and paid no rent?—That is so.

1257. Would that be about the minimum?—Yes, I think so.

1258. There would be six weeks' rent lost?—Yes.

1259. And the cost of the removal. You said there were 9917 decrees which would cost from 8s. to 12s. If you take them at 10s., then that gives £4958?—Yes.

1260. Then in the Sheriff Court you said there were 2078 decrees, which at 15s. would be £1558?—Yes.

1261. You said there were 20,887 summonses, although there were only 9917 ejections?—Yes.

1262. So there were about 11,000 summonses that did not go the length of an injection?—Yes.

1263. What would these cost up to that point?—They would cost 1s. 6d. for the summons and 1s. for the service at any rate,—say 2s. 6d.

1264. Would that cover it?—I think you might make it 3s. to be sure.

1265. I just wish to get it from you?—I would put it at 3s.

1266. So that is £1650?—Yes.

1267. So these ejections cost, according to this calculation, £8166 every year to the landlords besides the loss of rent?—Yes.

1268. And the lost of rent is not only on those who are actually put out under decree, but on those who left voluntarily after receiving the summons, a certain number of the £11,000?—Yes.

1269. So probably there were 15,000 tenants left without paying their rents?—Yes.

1270. You think the average of that would be six weeks?—Yes.

1271. What would you put the average rent at?—10s. a month.

1272. That would be 15s., and it would make £11,250?—Yes.

1273. So the landlords in this case lose £11,250 of rent and they have to pay £8166 of expenses under the present cumbrous system of getting quit of bad tenants, being a total loss of £19,416?—Yes, say £20,000. I think that is pretty like what it will be.

Mr T. M. Stewart. 10 Dec. 1906.

1274. And all that must be added to rents and paid by good tenants because of the undue consideration that is shown to bad tenants?—Yes, I am afraid that is so.

1275. (*Chairman.*) We have had evidence about the Glasgow Improvements Department Houses. Does it occur to you that there is any difference in the conditions of these houses from ordinary working men's houses that would make evidence of their experience inapplicable in the ordinary case?—I think their position is entirely special, because they select their tenants so carefully. They cream the tenants, and in the new houses at cheap rents they get the best selection.

1276. That would require to be considered?—Yes. I think Mr. Menzies said in his examination that his experience was somewhat special.

1277. They have caretakers?—Yes, that is another point.

1278. We have had some information, although no evidence, as yet, about the Workmen's Dwellings Company?—They select their tenants also and they have caretakers.

1279. They would be rather comparable to the Corporation Houses?—Yes.

1280. (*Mr. Dobbie.*) In regard to this question as to the loss through non-paying ratepayers, is this 26 per cent. of the total amount of the rate, or is it 26 per cent. of the number of ratepayers?—It is 26 per cent. of the amount assessed; the percentage unpaid is 25·98. 23,338 is the number of unpaid, and 89,424 is the number of occupiers. I am sure it is the amount unpaid.

1281. (*Mr. Esslemont.*) Can you tell us the gross amount assessed on rentals of £10 and under?—Over £4 and under £10, the net sum imposed in 1905–1906 was £69,542, and the amount collected was £51,730.

1282. That is nothing like a shrinkage of 26 per cent.?—Yes, it is; it is over 25 per cent.

1283. (*Mr Dobbie.*) Is that irrecoverable at the date of the closing of the accounts?—They call it outstanding, but it appears in the Police Accounts every year or practically the same amount. Some years ago our Association and the House Factors Association went into the question with regard to the English law of distraint and made a comparison with our law of sequestration. We drew up a statement which was revised by an English solicitor. (*Hands in statement.*)

Mr A. Stewart and Mr J. Marr, jun.

Mr Archibald Stewart and Mr John Marr, Jun., called and examined.

Mr A. Stewart and Mr J. Marr, jun.

1284. (*Chairman to Mr Stewart.*)— You are President of the Partick and Govan House Factors Association?—Yes.

1285. How long have you been President?—Over five years.

1286. How long has your Association existed?—Five years.

1287. (*Chairman to Mr Marr.*)—You are a member of the Partick and Govan House Factors Association?—Yes.

1288. (*To Mr Stewart.*) What led to your Association being formed?—Its object was to protect the landlords' and factors' interest.

1289. What are you yourself?—I am a house factor in Glasgow, Govan, and Partick, with an interest in Clydebank.

1290. Have you yourself got under your administration a number of the houses of the class we are dealing with here at a rental of £20 and under?—Yes, I have 2500 in Govan and Partick under £20.

1291. And in Glasgow?—I have 800, and my son factors seven or eight hundred in Clydebank.

1292. (*To Mr Marr.*)—What is your experience?—I have 1000 houses under £10, and 1000 between £10 and £15.

1293. Where?—All in Govan.

1294. (*To Mr Stewart.*)—Do you have with you any of the missives that you yourself employ?—No, but I can send that in.

1295. (*To Mr Marr.*) You produce the missive that you employ?—Yes, I produce a missive which we employed in 1887, which has a special clause in it.

1296. (*To Mr Stewart.*) Do you speak for your Association?—Yes.

1297. Your Association have considered this question?—Yes, we have had it before us.

1298. When was that?—Recently.

1299. Have you had it before you on previous occasions, or has it only been in connection with Mr Cross's Bill?—In connection with his Bill.

1300. In your view, and judging from your experience, is there any difference between the conditions in Glasgow and the conditions in Govan, Partick, and Clydebank, or may they be looked upon as practically the same?—Practically the same for that class of tenant.

1301. Do you not find that in some parts the shifting population is larger than in others? Take the centre of Glasgow, for instance, as compared with Govan; are they pretty much the same?—Yes, the difference in percentage is very small.

1302. What about the system of having missives as compared with verbal lets? How old is that in your experience?—I think the missives will be, roughly, thirty years old.

1303. How long have you been in business yourself?—Forty-one years in February next.

1304. When you began business were missives known?—No.

1305. What was the system then?—I collected for seven years from the tenants myself, and I went round at Candlemas term. They expected a call then and they expected to be asked about the next year.

1306. It was all done verbally?—Yes, and I put merely yes or no in the collecting book.

1307. That applied to whatever period of tenancy it was?—They were mostly all let by the year at that particular time.

1308. Can you give us any idea what percentage would be let by the year, as compared with shorter lets? Would 90 per cent. be let by the year?—Yes, I would say so at that time.

1309. So the system of shorter lets has gradually come in?—Yes.

1310. Has it gone on progressively,—are there more short lets now as compared with the old days?—In Partick and Govan, we have very few monthly houses. Tenants, when they fail to get relief from poor rates and burgh rates, prefer to risk taking their houses by the year, so very few tenants are now monthly, either in Govan or in Partick.

1311. Tenants of houses under £4 of rent are all mouthly or weekly?—They are all monthly, but there are very few of them.

1312. With regard to rents between £4 and £10, what percentage of them do you think would be monthly?—Not above one-third in Govan and Partick.

1313. Not above 25 per cent.?—No.

1314. Let us see that we are at one. With regard to

rents between £4 and £10, not above 2 per cent. will be monthly ?—That is so.

1315. 75 per cent. will be yearly ?—Yes.

1316. Are you talking apart from the number of rooms altogether ?—They mostly all live in one-room and kitchen houses and houses of single apartments. Within the last ten years perhaps they were all room and kitchen houses from £7 upwards, but of course with the new buildings and all the new sanitary requirements the rents have gone up very considerably.

1317. Take one-room houses ; what is the rent in Govan and Partick ?—For monthly houses it is £6 or £7 a year in the older houses.

1318. Is that for one room ?—Yes.

1319. Then what will the rents go to for one room and kitchen ?—The older houses are under £10. And the

1320. And the newer houses ?—They run up to £15.

1321. For one room and kitchen ?—Yes, and they have a bathroom and hot and cold water.

1322. They have no bathroom in the older houses ?—No, there is generally a closet on the stair landing.

1323. What proportion of the houses let between £10 and £20 are let monthly ?—Hardly any. I don't think I have one.

1324. Are all your houses let either monthly or yearly ?—Yes.

1325. Have you any let quarterly ?—No.

1326. Or half-yearly ?—No.

1327. Or weekly ?—No.

1328. When do you send out your missives ?—I generally have to send them out when I hear that other factors are before me.

1329. What is the earliest you have ever sent a missive out within recent years ?—About 16th January.

1330. Do you not have cases of people, when they take their houses in Govan, wanting to know about houses for the next term ?—They are always calling, and wanting houses in a particular place.

1331. But you have never sent out a missive earlier than about the middle of January ?—No.

1332. What about other people ?—At one time 2nd February was the period for the return of these missives. They were sent out about 28th January, two or three days before we were round, but, when I learned that other factors—more from the city here—had their missives out before me, I had just to set to and send out mine. That would lead up to this grievance that the tenants complain of, that they don't know when they are to be called on to see if they are to stay on or not.

1333. Have you had any consultation at any time with a view to coming to a common agreement among your Partick and Govan factors ?—No. We had a meeting in Glasgow along with the landlords, and I opposed coming to an understanding among ourselves, because I wanted then that we ourselves should get a Bill promoted to shorten the period.

1334. Why did you oppose doing it voluntarily ?—Because I was satisfied then, and I am satisfied now, that it would never work.

1335. Does it not work in Edinburgh ?—It might.

1336. We are told that 15th March is fixed there ?—I cannot speak definitely, but I am told that it is not working properly.

1337. You know that the Partick people have suggested a Bill to amend the system of house letting in Scotland ?—Yes.

1338. What do you say to their proposal that, "It would 'not be lawful prior to 15th March to let any dwelling 'house," etc. ? (*Reads clause.*)—This clause as we have amended it leaves us, we think, with a free hand. We can let for the year from a Whitsunday term to a Whitsunday term, and if we have anything new or unoccupied, we can let it any time for a shorter period or on a longer lease, for thirteen or fourteen months, as the case may be. We look upon this as really relieving us from any difficulty in letting.

1339. With the amendments that you are going to speak to immediately, do you think that would meet the objections to the present system ?—That is my strong opinion.

1340. In your proposal, would you leave the rating and voting systems as at present ?—Yes. It would interfere with hardly anything.

1341. You know that there are and must be cases where men who have taken a house, let us say at Candlemas, lose their employment, let us say in April, and they are bound to the following May. Now, is there not a grievance apart altogether from this yearly system of taking a house ; is there not a grievance of their being tied for the whole sixteen or, as you would propose, fourteen months. What is the view of your Association about that ?—I think we meet that pretty freely, and I think we are pretty unanimous. We believe that, generally speaking, landlords and factors would be quite pleased to have it ; that all yearly tenants under £15 of rent, paying their rents monthly, should, if leaving the district on account of change of work, be relieved of their house, viz. by giving one month's notice of removal, and quarterly paying tenants by giving a three months' notice, provided that they can give a certificate that they have to leave the district and that taxes should only be paid by us for the amount of rent received from such houses. I think that would cover it, and it meets the view of Mr Cross's Bill very closely.

1342. You see there are two differences there from Mr Cross's Bill. In the first place, you propose to make it only applicable to rents of £15 and under, while Mr Cross makes it applicable to rents of £20 and under. In the second place, you introduce the condition that it was only to be if they give a certificate that they have to leave the district, whereas he makes the right absolute. Now, those are the two leading distinctions between his proposal and yours. What do you say first as to the limitation to £15 ?—We think that most working class people are living in houses below £15.

1343. What are the people that live in houses above £15 ?—They might be foremen. In good times riveters were sometimes earning £1 a day, and they might take more expensive houses.

1344. Have you not a great many workmen whose families are wage-earners and who are able to pay more than £15 of rent ?—I have always found that the most of working men, even with pretty large families, were confined at one time to houses below £10, and I would say that there are very few now in houses exceeding £15. Of course there are exceptions.

1345. Would a £6 house now represent a £4 house ten years ago ?—No.

1346. Twenty years ago ?—Twenty to thirty years ago.

1347. What would a £10 house in the old days represent now ?—£12 or £12, 10s.

1348. And proportionately ?—Yes, it would depend on the accommodation.

1349. How many members are there in your Association ?—Between 20 and 30.

1350. What property will they factor among them ?—Nine-tenths of the property of Patrick and Govan is in the hands of factors, and they are mostly in our Association. Of course they don't attend regularly.

1351. With regard to the other and more important question, you propose to limit the right to those who can give a certificate that they have to leave the district. Why do you propose that limitation ?—There are so very few requiring to leave the district. Just now we have a great many empty properties, perhaps over 20,000 houses between Glasgow and the suburbs. These houses are cleaned out and papered and painted. A tenant who is in a house for two years or less, finds another house that is clean and tidy, and as his own house requires cleaning, he prefers just to cross the street and to leave me. Now, we don't like that. We don't want a tenant to be leaving one side of the street in order to get a clean house on the other side of the street, but we want to help, and we are helping new tenants going to Clydebank or Greenock, and we do all we can to ease them of the rent that is left behind.

1352. Suppose a man does not leave the district, but his wages are reduced or he loses his employment altogether ; should he not be in the same position as a man who leaves the district, perhaps to get bigger wages ?—If I had a tenant in that way who has been paying me £10 of rent and he cannot afford it now or he is sick or out of employment, and he wants to get into a smaller house, then I think he should be relieved by giving a month's notice. I would allow that if he could give a proper reason for it. That is the reason we propose a certificate if a man is leaving one shipbuilding yard in Partick and going to another in another place, then he can get a letter from his foreman which would be quite satisfactory to us.

1353. Would you not be willing to introduce the other condition, viz. that through reduction of wages or loss of employment they are unable to pay the rent ?—Yes, I want to meet them.

1354. At the present time, what is your experience with regard to the number of cases of removal between terms ?—I do not have the exact number, but, as near as can be, it is 2 or 3 per cent. I can send in the exact number. In Govan and Partick we have 2486 houses under £10.

1355. How many houses do you have under £20 ?—I can get that. I can give the exact number of these that require to remove, and I will send it in. I am only including cases where they are let yearly—and they are mostly all let yearly with me in Govan and Partick—and where they have to leave and they give me authority to let their houses.

1356. Do you know what amount of rent within the last year has had to be paid by the principal tenant owing to the sub-tenant being uaable to pay. There would be a number of cases of sub-letting last year ?—Yes.

Mr A. Stewart and Mr J. Marr, jun.
10 Dec. 1906

1357. Where the sub-tenant was good for the money, the principal tenant would have to pay nothing?—That is so.

1358. Suppose that the sub-let did not cover the whole period, then the principal tenant would have to pay for the period that was not covered. Or suppose that the sub-tenant proved unable to pay, then the principal tenant would have to pay?—Yes.

1359. Have you the means of finding out to what extent the principal tenant in the result has had to pay for the house he was not occupying as well as for the house he was occupying?—Yes, to within a few pounds. It is in the books in the office, but it will take a little time to get.

1360. Are you yourself one of the biggest factors?—I have a good deal of property to factor.

1361. Could you get it done by any of the other factors?—Mr M'Michael and Mr Madden are here.

(*To Mr M'Michael and Mr Madden.*) We want to find out the extent of the grievance. We know there are some cases where it must happen. We want to know if it extends over a large area and if it amounts to a considerable sum. It would be very important if you would look into the question and find out from your books some statistics such as we are getting from Mr Stewart, viz. the amount of loss to the principal tenant through sub-lets.

1362. (*To Mr Stewart.*) If they are leaving, what do you do?—I do the best I can. I make no charge if they are leaving the district.

1363. And what do you do in other cases?—I have taken authority to let, and I do all I can to let for them.

1364. Do you not make a charge?—Yes.

1365. How much?—5 per cent.

1366. Suppose short lets come in in place of yearly lets, do you think that will have any effect on raising the rents?—It is sure to.

1367. Why?—I have brought with me a circular which was issued in 1894 by the Partick Landlords and Factors Association.

1368. Why was this circular issued?—The Commissioners of Partick sent a circular to us that we were to be charged with the assessments on all short let houses, on all houses not let by the year.

1369. You mean you were to be charged for rates?—Yes, for the burgh rates. So we had a meeting and we agreed to this circular being sent to all our tenants, showing the effect it would have, and for the first year or two we acted on this circular. We thought it a great grievance that widows and other poor people getting off from the rates should be taxed, and I sent my clerk round the tenants and asked if they would risk taking their houses by the year and getting relief, and they all agreed to it.

1370. It is summed up in the fourth last paragraph:—"We would like also to point out that, in the event of all 'houses under £15 being monthly lets, and power given to 'the Commissioners and others to charge Owners all the 'Rates and Assessments, Occupiers will have their Rents 'increased over and above the amount of such Rates and 'Taxes from 5 to 10 per cent. to cover loss. The whole 'thing is in your hands; if you are willing that this new 'idea of the Commissioners should be carried out, do not 'blame the Owners or their Factors, but blame your 'Commissioners and yourselves for the increase of rent." In point of fact, were they raised from 5 to 10 per cent.?—Yes.

1371. And after that you sent round to see what they proposed to do?—Yes, if they would take their houses yearly and get relief, and they all agreed. There is no monthly tenant in Partick that I have but would be willing to take his house by the year.

1372. You limit it to houses under £15. Would it be the same thing if you took houses from £15 to £20?—Yes, but there are very few houses above that where there are many changes.

1373. Suppose that the yearly tenants were to get monthly lets without any increase to their rents, what do you say then?—They would require to get a large percentage off.

1374. No. What I mean is this, if you made the yearly tenants an offer to give them monthly tenancy without any increase of rent, would not a great many of them avail themselves of that offer?—I do not think so, because they look on monthly tenants as a very inferior class.

1375. There is a certain sentiment?—There is a strong sentiment.

1376. Suppose you offer them monthly tenure, but with a substantial increase of rent, what would they say to that?—They would prefer to remain as they are.

1377. That is what they said before?—Yes. They have no great desire in my experience to change, but they feel aggrieved at the missive system.

1378. This was in view of the Commissioners making you rate-collectors?—Yes.

1379. Apart from making you rate-collectors, suppose that element did not enter into it, but suppose a Bill were passed doing away with long lets, would there be an increase of rent even then?—Yes.

1380. But not to this extent?—I would rather think so. It would depend very much on the amount that we would be allowed off for collection of the rates, but whatever the loss would be, it would surely go on the rates, and it would increase the rates as well as the rent.

1381. You know that there has been a considerable agitation in favour of short lets?—I know that that is so, so far as newspapers are concerned, but there has been no great agitation among my tenants, and I have a good many.

1382. I suppose there is that feeling among some of your tenants?—There are odd tenants here and there.

1383. As regards those that have that feeling and desire, do they appreciate your point, namely, that it would involve higher rents, or are they proceeding on the assumption that the rents would not be raised?—I expect that they are proceeding on the assumption that they would still be sitting at the same rent.

1384. I suppose you know that the proposal is that the owner should pay the rates?—I understand that is so.

1385. What do you say to that?—I would be very much against it.

1386. Why?—It would entail a great deal of trouble.

1387. Suppose you got a sufficient allowance, would you be against it then?—Yes, thoroughly.

1388. Suppose you got a fully sufficient allowance, what objection would there be then?—My objection is to have the two to collect—I object because of the difficulty.

1389. But the more work you get the better for you if you are fully paid?—Yes, if I am fully paid.

1390. Assuming that you are fully paid, do you think it would introduce any element of friction between you and the tenants?—It would produce endless confusion between tenants and factors. Of course if the Bill is passed we will have to work it.

1391. It works with houses under £4. Why should it not work with houses above £4?—Under £4 they are the poorest of the poor and we put so much rent on, but there are so very few of those; I do not think I have half a dozen.

1392. Apart from that, you object to the proposed allowance in the Bill as being inadequate?—Yes.

1393. Is it inadequate under each head in your view?—Yes.

1394. Why do you say that? Is that from your practical experience?—I cannot say that as regards practical experience of rates, but we see it published in the papers as regards the Corporation.

1395. Do you think you would require more or less?—I think we would require the whole loss of the Corporation to cover our loss.

1396. You would have to collect the rates?—That is what we object to.

1397. You would need enough to cover the loss of rates not recovered and also the cost of collection?—Yes. We would require to keep a larger staff.

1398. Suppose the Glasgow Corporation loses 26 per cent., you would require that plus the cost of collection?—Yes, we would require 30 per cent. roughly.

1399. Do you find a difficulty in the method of ejecting defaulting tenants?—Yes.

1400. Have you found that all along?—Yes.

1401. What Court do you go to in Govan and Partick?—The Sheriff Court.

1402. You have nothing to do with burgh courts there?—No.

1403. In the Sheriff Court, is it a question of expense or delay that you object to?—Delay. The rule in the Court just now is that the tenant must be a month in arrears and we must claim ejection because he is in arrears.

1404. You have no weekly tenants?—No.

1405. In the case of a weekly tenant, he would be just a week in arrear?—I would expect so. We require to give nine or ten days' notice before we can ask for an ejection. Then it takes four or five or seven days before it is heard in the Court, and then the Sheriff generally allows them time to remove.

1406. The sheriffs seem to be as bad as the burgh magistrates?—I do not know what to think of it just now, because we understood that if we gave a tenant notice at the end of his tenancy we could then apply for an ejection, but the rule is that we must say that they are in arrears.

1407. Why do you not make a condition with your tenant in black and white that if they are in arrears they will go out?—We cannot enforce it.

1408. In point of fact, with amonthly tenant, before you get him out, how much rent do you generally lose?—Not less than two months.

1409. And the law expenses?—Yes.

1410. I see you sum up the views of your Association?—Yes.

1411. Are these your views personally as well as the views of the Association?—Yes.

(1) We think the freedom of contracts between landlord and tenant in Scotland should not be interfered with, but if altered it should be as little as possible.

(2) That yearly lets should not be entered into before the 15th day of March.

(3) That the warning away of tenants be thirty days before the Whitsunday removal term day.

(4) That the poor who at present are being relieved from poor and burgh assessments would thus continue to be so relieved.

(5) That yearly tenants, at £15 and under, paying their rents monthly, should, by giving one month's notice, be relieved of their houses, provided they are leaving the district, and quarterly paying tenants one quarter's notice.

(6) That taxes be only charged on the amount of rent received from such houses.

1412. (*To Mr Marr.*) I think we may now ask you about the points to which you are going to speak in addition to what Mr Stewart has said to us, and I first ask you about the missive that you have handed in. I see it is dated 2nd February 1887. Was that in your father's time?—Yes.

1413. Have you succeeded him?—He is still in the business, but he is unwell and he could not come here to-day.

1414. What is the extent of your business?—We have about three thousand houses altogether.

1415. Where?—Practically all in Govan.

1416. I notice in this missive, which is dated Candlemas, 2nd February 1887, this clause, "In the event of my 'having to leave Govan and its neighbourhood, on account 'of my having had to find employment elsewhere, the 'house is to be taken off my hand at the end of any quarter 'during the currency of this let upon my giving one 'month's previous notice to that effect, and upon my 'paying up all rent then due along with the proportion of 'stair gas and the water rates applicable to my house." Is that substantially what Mr Stewart has proposed on behalf of your Association?—Yes.

1417. What led to that?—I am not sure, but there must have been some agitation in 1887.

1418. Was this the first of it?—Yes. We used it from 1887 to 1891, and then we dropped it because it was practically a dead letter. One of the proprietors objected to it and said he did not see why we should put that clause in when other factors did not have it in.

1419. You never found any drawback from it?—No.

1420. Was it taken advantage of at all?—Practically not at all.

1421. Were there any cases?—There may have been one or two, but very few.

1422. Were there cases where, if the clause had been extended to cover reduction of wages or loss of employment, it would have been taken advantage of?—I do not think there is much in that at all.

1423. Have you found cases of that kind?—No.

1424. Suppose you had a case of that kind?—As a rule we meet the tenant in every way. A tenant comes to us now and tells us that he may have to leave the town on account of his work, and we agree to let him off if he asks us.

1425. Have you had cases of tenants doing that where you have been unable to get a sub-tenant and where the principal tenant has had to pay?—Very, very few. £20 a year will cover that easily.

1426. Do you not find that sometimes there may be an interval during which he has to pay?—Sometimes there is a little of that, but not much. I think £20 to £25 will cover that.

1427. Out of what rent?—Up to £15.

1428. But what will be the total rent payable by the tenant under £20?—We have over 2000 paying up to £15, but I cannot tell the total.

1429. Roughly?—We have 1000 paying about £8. It will come to over £20,000.

1430. And you think there is no loss owing to change?—There is practically no loss.

1431. Do you not think there will be a certain number of tenants who would like to change, but who, being tied at the present time, never come to you at all, and you never hear of them?—There are a few people who, seeing new houses round about, would like to get them, but they do not want to run the risk of two rents, and they do not come to us. There is not much of that.

1432. Do you agree with Mr Stewart that if yearly tenants had the option given to them of monthly lets, it would not be largely taken advantage of?—I am sure it would not. We have only sixty-three monthly tenants in the whole of our district.

1433. Why do you not have more?—Because we charge them 15 per cent. on the rental, on account of us being held liable for the rates. We are liable in all short lets, and, wherever possible, we make them into yearly tenants. We prefer to have nothing to do with rates.

1434. Suppose a tenant says, "I want to be a monthly tenant, and I am quite willing to pay what you ask," what would you charge?—15 per cent. of a rise on his rent.

1435. Have you found cases of that kind, where a person said, "I don't care"?—I do not think so.

1436. What would that be on a £10 rent?—£11, 10s.

1437. Is that the result of calculation?—We have all along charged 3s. in the £.

1438. What are the elements that entitle you to put that on?—The burgh rate was about 10 per cent., and we add on another 5 per cent., making it 15 per cent.

1439. Does there enter any element of additional repairs or anything of that kind?—No.

1440. Is it this way, that out of 15 per cent., 10 is for the rate, and 5 is for the extra rent?—Yes, and loss sustained through empties.

1441. Give us the items making up the 5 per cent.?—It is merely for loss. It does not pay us.

1442. The 5 per cent. is really for loss?—Yes.

1443. Do you not find in Govan, as elsewhere, that at Whitsunday there is great difficulty owing to all the removals being at that time?—There is bound to be a little, but not very much. I have not heard many complaints. A big number flit before that.

1444. Into empty houses?—Yes, and new houses. Still, there are bound to be a great number removing on the term day.

1445. You have very few removals in November?—Practically none.

1446. And between times?—Practically none.

1447. Would it not be an advantage to spread the removals over the year?—If it could be done it would not be a disadvantage.

1448. It would be an advantage to everybody, builders, factors, and everybody else?—I do not think there is so very much advantage in it so far as builders are concerned. They work all the year through.

1449. Do you not find that there is a slack time after Whitsunday?—There is a little, but not very much.

1450. How long would it last?—The builder has no sooner finished his property for May than he begins to think where he is to build for other tenants. He never stops, as a rule.

1451. Do you know that they have strong views on this matter?—I believe that is so.

1452. How do you account for that?—When they build houses for August or November or other terms the houses often stand empty because there are no tenants to fill them—the tenants cannot get away from us or from the other factors.

1453. You have no suggestion to make to bring about a system of spreading the removals over the year?—I would have no objection to quarterly lets if the rates could be arranged.

1454. (*To Mr Stewart.*) Do you agree in that, if the rates could be arranged?—I would prefer to leave the lets as they are just now.

1455. (*To Mr Marr.*) Why can the rates not be arranged?—Because the burgh authorities do not wish to make quarterly collection of rates.

1456. They are wanting to get the owners to collect the rates?—Yes, but why should the owners collect them?

1457. I suppose it is the interest of the burgh authorities to get them to collect the rates?—Yes, most assuredly. It would pay them.

1458. But only if there was an insufficient allowance made to them?—Yes.

1459. If the allowance were sufficient, would it matter to the burgh authorities?—Not much, except as regards saving labour and putting it on to the factors and rent collectors.

1460. (*Mr Howden to Mr Stewart.*) I notice in your circular, you tell us about the percentage of men who desire to remove between terms. You say that the percentage is 2 in houses under £10, and 2½ in houses from £10 to £15?—That is so. That is as near as I could make it up.

1461. That would mean that of the better class of workmen's houses more would desire to move?—They would have occasion to move. You will find that there are more removals with the larger rents than there are in comparison with the smaller rents.

1462. It would be a decided advantage to a man if he could manage to give up his house by simply saying that he wanted away on a certain day, and got away?—No one would suggest that he should get away without notice. I think we have covered that pretty well by allowing a monthly tenant to get away on a month's notice and a quarterly tenant to get away on a quarter's notice.

Mr A. Stewart and Mr J. Marr, jun.

10 Dec. 1906.

Mr A. Stewart and Mr Marr, jun. Dec. 1906.

1463. But that is not the law?—But I want it made the law. I would be quite pleased to have it made the law.

1464. Only in so far as they are shifting to suit their employment?—Yes.

1465. If there was a better house to be got, and if they thought they should remove in the interests of their family, what then?—The line must be drawn somewhere. I would consent in the case of a man in ill-health, living in a dear house and not being able to pay for it: he should be relieved and be allowed to go into a cheaper house; but I do not think I would see my way to agree to a man crossing the street to a new house with all the sanitary improvements, and leaving his dirty house for me to clean. No, I would draw the line somewhere.

1466. How would your principal view your statement? Would the landlord not be inclined to hold you responsible, as factor, for the rent?—Not if it is passed into law.

1467. You say that is your practice in the meantime, that you would not hold them responsible?—I say just now that in the case of a party who through stress of work is going away to England, for instance, I make no charge for any trouble I am at. It is seldom that we charge anything at all for any loss of rent.

1468. (*Chairman.*) But you are entitled to do so?—Yes. I have to take authority from the man before I can let his house at all, and we make the smallest charge we possibly can to deserving tenants.

1469. (*Mr Howden to Mr Marr.*) You say you dropped this clause from your missive after having put in it for five years, from 1887 to 1892, and you say there were very few who took advantage of it?—That is so.

1470. Seeing that you still hold the opinion that that should be in, why did you withdraw it?—I have already explained that; I said that we dropped it because the tenants did not take advantage, and also because one of our proprietors objected and saw no reason why we should put it in when other factors did not have it.

1471. It was because of the landlord putting compulsion on you?—Yes.

1472. Might I suggest to you that at the time you dropped this clause, early in 1892, property was becoming more plentiful in Govan?—I cannot go back so far and talk with confidence about 1892. I have only been for thirteen years in the office.

1473. Previous to that, when Govan was on the boom and houses were scarcer, you would have absolutely no difficulty in re-letting your property?—That is so.

1474. But when there was a plentiful supply of houses it would work the other way, and your houses might stand empty?—Yes.

1475. Had that no bearing on the dropping of the clause?—None whatsoever. It did not cause us to drop it.

1476. But at the present time?—I would put it in certainly. As I said before, any tenant coming to us and wanting three months' option will get it.

1477. (*Mr Dobbie to Mr Marr.*) With reference to this 3s. per pound that was put on to the tenant's rent, can you tell us the local rates payable by tenants?—2s. 2½d. At that time it was 2s. or 1s. 11d.

1478. And you charged 3s.?—Yes.

1479. That was to cover the cost of collection?—No, it was to cover the loss. It does not cover it.

1480. You put the loss at 20 per cent?—No, I put it at 5 per cent. on rent.

1481. (*Mr Binnie.*) 5 per cent. on the rent, but 50 per cent. on the rate?—Yes, that is so.

1482. (*Mr Dobbie.*) So supposing you had compounded with the burgh for the whole of the tenants' rates all over on houses under £20?—I cannot speak to that. We have no monthly lets above £10.

1483. What sum do you think you would require to recoup you for any loss?—I think that if there was 30 per cent. added on, we would not be in pocket. I think we would lose more than we do at present. We have details to show what we lose at present. The rating authorities have more power for collecting their rates than we have. Many a tenant pays his taxes when he does not pay his rent, because the rating authorities have power to make him pay. A man with a wage of £1 a week can be arrested for taxes, but we cannot touch him, and he knows that.

Mr A. Stewart and Mr J. Marr jun. 10 Dec. 1906.

1484. (*Mr Esslemont.*) You don't suggest that there might be a loss of 50 per cent. in the collection of rates?—I know that now we prefer to get a tenant to pay his own rates than to pay us 3s. in the pound.

1485. You don't wish us to assume that, in collecting these rates, for every 10s. you collect, you would lose 10s.?—No, but there is another item: we are liable for loss where a house is empty for five or six months.

1486. Although there was such a wide difference between the view expressed by Mr McFie and by you——?—I don't understand how he does it.

1487. (*To Mr Stewart.*) There is one other question in connection with this circular that was issued in 1894. In the second last paragraph you appeal to your tenants to consider whether under present circumstances they would not be better to be annexed to Glasgow, more particularly those who were paying under £10, and you said that tenants paying these rents in Glasgow were taxed at a greatly reduced rate. Will you kindly explain what the difference is in Glasgow as compared with Govan and Partick as regards rents of £10 and under in as far as the imposition of rates is concerned?—They have a little more than a half to pay in Glasgow. In Govan and Partick there is no differentiation at all.

1488. You mean in Glasgow all the burgh rates and rates of £10 and under are——?—1s. 1½d. when the others are 2s. 3d.,—it is about that.

1489. (*Chairman to Mr Marr.*) You said that you knew cases of people who paid rates and did not pay rents. These won't be cases of provident working men?—They are men who won't pay anything if they can help it. They know that they have got to pay their rates, and they know that we cannot arrest them for their rent.

1490. Suppose the landlord has to pay primarily and recover from the tenant, in those cases he would not recover?—No.

1491. He would not recover either the rates or the rents?—He would recover neither of them.

1492. (*To Mr Stewart.*) Have you ever known cases of that kind?—It is known.

1493. Even above £4 of rent?—Yes, below £10.

[Mr John Marr at a later stage handed in the following statement, giving details in connection with the number of houses, etc. sub-let.]

Only houses situated in Govan at rents of £15 and under per annum are taken into account. The year 1905–1906 was an average year with me, and details are taken from the books for that year. The number of sub-lets was 2·7 per cent.; of those nearly one-half were signed during the period between signing the missive and taking occupancy of the house at May term. Of the total number of sub-lets, viz., 2·7 per cent., only about one-half were on account of change of employment or want of work. The majority of the other half should be put down to tenants merely desiring a change of house in the same district. Houses let monthly at £10 and under per annum only amount to 5·8 per cent., and I have no houses at a higher rent let monthly. All my other houses are let by the year. Last year I had only four tenants who had to pay me for honses which I did not manage to sub-let, and the total amount paid by them amounted to £14, 13s. 6d. I also find that house letting in Govan was not on the boom, as suggested by Mr Howden, at the time when we had the special clause in our missives, but instead of that house letting was very far from satisfactory, and my father thought that the insertion of that clause might assist him in the letting of the houses. As I stated in my evidence, he found that it was not at all taken advantage of.

Mr G. Carson, Mr C. Ross, and Mr R. Davies.

Mr George Carson, Mr Charles Ross, and Mr Richard Davies, called and examined.

Mr G. Carson, Mr C. Ross, and Mr R. Davies.

1494. (*Chairman to Mr Carson.*) You three gentlemen represent Glasgow Trades Council?—Yes.

1495. (*To Mr Ross.*) What is your position in the Glasgow Trades Council?—I am Ex-President of the Glasgow Trades Council. I was President for the last two years up to November.

1496. What is Mr Davies's position?—He is a member of the Trades Council. Mr Carson is the secretary.

1497. (*To Mr Carson.*) How old is Glasgow Trades Council?—Forty-eight years. It was founded in 1856.

1498. It consists of 250 delegates representing 137 trades unions and branches of trades unions?—Yes.

1499. (*To Mr Ross.*) It is called the Glasgow Trades Council; what is its area?—Its area is Glasgow, but branches of any trade applying from Partick or Govan are admitted to our Council. We do not circumscribe them in any way, but there are very few outside the Glasgow area. The Lanarkshire miners are represented on our Council.

1500. The area is Glasgow and district?—Yes.

1501. What occupations are included in the membership?—Every conceivable trade, labourers, and all the various leading trades.

1502. They are employees of one kind or another?—Yes.

1503. There are no masters in the Council?—No.

1504. Is it growing in numbers?—Yes. The membership

Mr G. Carson, Mr C. Ross, and Mr R. Davies.

10 Dec. 1906.

of the 137 unions is about 50,000, fully three-fourths of whom are householders in the city.

1505. What do you say their rents range from and to?—In some cases they are above £20.

1506. Up to what?—I would say as high as £25. Of course the general rule is anything from £12 to £16.

1507. That is about the average?—Yes.

1508. Have you many members going down to the lowest rents,—have you any below £4, for instance?—I would not think so. The casual labourers would be the lowest.

1509. You include foremen as well as workmen?—Yes, in some societies.

1510. There is no exclusion of foremen?—Some societies do exclude foremen, but we have nothing to do with that.

1511. The work of the Council is to deal with all matters pertaining to the interests of its members?—Yes.

1512. Among these matters that you have had to consider, is the question that we have to deal with here?—Yes.

1513. How long ago is it since it came before you first?—It was before my time.

(*Mr Carson.*) I cannot recollect the time when we had not it before us, but in my *précis* I have put it in at twenty-five years. I can tell you that some eighteen years ago we formed a Tenants Defence Association, arising out of a public conference. Mr Swanson, the accountant, was secretary at that time.

1514. (*Chairman to Mr Carson.*) At first, what was the form of the grievance that you considered?—The grievance at first was the long term of lets, being tied up to a house,—precisely the same grievance as there is just now.

1515. The original grievance was not the mere length of time between the taking of the house and the term of entry?—Not quite.

1516. From the first the other question—because they are not exactly the same—the other question of the long lets was always before you?—Yes.

1517. Who brought that forward first of all? Was it from any particular district, or area, or trade?—No, it was just the members of the Council themselves who were instructed to bring it up originally, having found out the hardships that resulted from being tied by that particular time.

1518. By the particular time you mean a year?—Yes.

1519. Apparently there has never been the question of half-yearly lets,—it has always been a year on the one hand or either a quarter or a month on the other hand?—Yes.

1520. Has there been any suggestion of a weekly tenure?—We have talked about that, but there is not a very strong feeling in favour of it.

1521. It is between a year on the one hand and either a month or a quarter on the other hand?—Yes.

1522. (*Chairman to Mr Ross.*) Have you approached any corporations on the matter or taken any action in that way?—Yes. The Glasgow Corporation has been approached by a deputation from the Trades Council, and we have also approached candidates for Parliament. It has always been a standing question in Glasgow.

1523. You have also convened conferences of representatives from trades unions and other organisations interested in the question, and three years ago you convened a public conference on the subject?—Yes.

1524. Is it the fact that on all these occasions, deputations to the Council and conferences, there was considered not merely the question of the long time between the taking and entry, but also the question of long lets?—Yes. It is sixteen or seventeen months. That is the way it is put.

1525. What are the hardships that in your view are involved in the present system?—The present system of house letting is that of yearly tenure, and practically all tenancies terminate on the 28th day of May of each year. Formerly forty days' notice was required on either side to terminate a tenancy. At present tenants receive their missive about the middle of January, and they are required to return the same in eight or ten days, otherwise the tenancy is considered ended. Then in my *précis* I give our reasons for seeking alterations.

1526. In regard to what you have said about the present system,—you say the present system of house letting is that of yearly tenure. Below £4 the present system is weekly or monthly?—Yes.

1527. Between £4 and £9 or £10 it is partly monthly and partly yearly?—Yes, I believe that is so. There is not a big proportion of monthly lets.

1528. But you have some of them?—Yes.

1529. Above £10 it is practically all yearly?—Yes.

1530. Some of those you represent are yearly tenants?—Yes. If I may put it this way, I would say that the best of people live in yearly houses. There is a certain amount of stigma attached to a monthly house at present, and our people are generally above that.

1531. There will be exceptions among some of your labourers? They will be monthly tenants?—Yes.

1532. We now come to the reasons for seeking alterations, and I see that the first reason you suggest is that the termination of nearly all tenancies on the 28th of May causes great inconvenience and much extra expense?—Yes.

1533. That arises for the reasons you go on to give—the demand for vehicles for removal purposes at that time being greatly in excess of the supply, and the price charged being several times what it should and would be under ordinary conditions?—Yes, that is so.

1534. Do you speak there from actual experience?—Yes.

1535. There is such a pressure that the people who do the work are able to charge what they like?—Yes.

1536. You are not blaming them?—No, it is a case of supply and demand.

1537. Then you also say that so many removals taking place all at the same time creates a demand for labour of various kinds, and people have either to wait or pay excessive prices?—Yes, that is so.

1538. We would like to know about that. We have been told that more is not charged for painting and papering and so on and other work, but it may involve waiting?—Yes, and of course that is loss. Take the case of a man who keeps lodgers,—he cannot get into his house and he cannot get the house done up.

1539. If they choose to wait, then they won't have to pay more?—I don't say they pay more, but if they want it done then they have to do it themselves or wait until the factor's tradesmen are prepared to come, and so the people do get the things done themselves, small things.

1540. What do you find in point of practice is the latest time that a tenant has to intimate? If he gets his notice well on in January, when do you find he is bound to return it, otherwise the tenancy is considered at an end?—It is now about the end of January. When I was first a householder it was in February. Now it is anything after 28th January. The date is always named, and it is usually before the end of January.

1541. Suppose a man wants to break his tenancy, does he find that he can do it without loss?—No, he cannot possibly do it without loss. That is the general practice and we can give instances. Take the case of a small house and you have got to leave, perhaps owing to your employment; you go to the factor and state your case to him, and if you have a tenant to suggest he will inquire if he is suitable, and if he is suitable he will give a sub-let; or he may advertise for a sub-let and put up a board which he charges you for. I think the usual charge is 5 per cent. I have paid that myself.

1542. Do you know of cases where, although the factor did his best, as of course he would, he failed to get a sub-tenant?—Yes.

1543. And where the principal had to pay either the whole of the balance or the part that was applicable to the period not sub-let?—Yes, I have known instances where six months' rent has been paid in addition to the quarter's rent already paid.

1544. You don't consider that the failure to find a sub-tenant is due to any slackness on the part of the factor. It is his interest to get it sub-let?—Yes. It is an incident of the system of yearly let.

1545. It is the system that is wrong, and it is not the fault of the men that work it?—That is so.

(*Mr Davies.*) We also think that the power which the law gives the landlord to enforce that puts a very excessive power in his hands. I have a case written down of a man in Rothesay who took his house in the beginning of the year before 28th May. He wanted to get away from this house, but the factor deliberately refused to accept the sub-tenants he found, who were good tenants. The factor refused to sub-let the house himself. The man went to Greenock, and he had to pay the rent of his house in Rothesay for twelve months, and also the rates.

1546. (*Chairman to Mr Davies.*) What was the factor's motive?—I only give it as an instance of what the present state of the law allows the factor to do. The case is written down and signed by the man himself with all the particulars.

1547. Whether that is a common case or not, you instance it as a case that is a possible case owing to the state of the law?—Yes, and there are half a dozen cases or more similar to that.

(*Mr Carson.*) We have a good many more.

1548. (*Chairman to Mr Davies.*) I would not think that it would be common, because it is to the interest of the factor to get a tenant?—The interest to the factor is to get his rent. If he has a tenant whom he knows can be made to pay, then he always sticks to him.

1549. (*Chairman to Mr Ross.*) Suppose a sub-tenant is got, what do you find the factor's charges to be?—5 per cent.

1550. On the full rent?—Yes.

1551. On the unpaid rent? Suppose it was in the middle of the term?—That is a different thing, and I

could not say about that. I am not sure of that point. What I referred to was being sub-let for the whole year.

(*Mr Carson.*) He usually charges for the rent to be paid.

1552. (*Chairman to Mr Ross.*) Do you find practically any difficulty from a rejection of sub-tenants put forward by the principal tenant, or are they generally approved of?—I could not say for that. I know in one particular case I brought forward a tenant and he was refused without any sufficient ground, I thought. At the same time the house was sub-let.

1553. In what circumstances do you find that a man wants to leave his house after he has taken it. Of course there is change of employment, but that does not exhaust the reasons for wanting to change?—No.

1554. Suppose a man loses his employment, or his wages are reduced, or he becomes ill and wants to take another house—there are all these things as well?—Yes, and something might happen to his family.

1555. Have you found this, that the necessity to change arises not only after entry, but between taking the house at Candlemas and the period of entry?—That is so.

1556. Have you found many of these cases?—Yes. The spring of the year is very often a changing time.

1557. Is there any reason for that?—Some particular trades change more in the spring than they do at other seasons of the year.

1558. What kind of trades?—Painters and tailors and so on, and of course the building trades are always changing: their men are never long at any particular job, unless it is a big building like the one in which we are at present.

1559. Do you find that sometimes a factor may insist on the remaining portion of the rent being deposited in bank?—Yes.

1560. Or he insists on caution being found?—Yes.

1561. I think you said that you could give us instances. Can you give us a list without going into particular cases?—Yes.

(*Mr Carson.*) Yes, and some very bad cases they are.

(*Chairman.*) Of course these names won't be published.

1562. (*Sir J. Stirling-Maxwell to Mr Carson.*) Are all these cases occurring this year?—No, some of them are last year.

1563. They are all quite recent? Yes. Of course, we could give plenty of them, but we think a few typical cases is quite sufficient.

1564. (*Chairman to Mr Carson.*) That is rather questionable. Would this be possible, that out of your membership, or out of any section of it, you could ascertain how much last year was actually lost by principal tenants moving, and the rent not being paid in full by sub-tenants?—It would be difficult to get it, but we might manage it.

1565. We are told by factors that, although it is perfectly true that there are such cases, there are very few, and we are told that the total amount lost in their experience owing to that cause during the year is so and so—trifling amounts. Now, we would like you to face that evidence, and it would be very important if you could give us any details from your point of view. The trouble about typical cases is to know whether they are typical of a large number or a small number. You will consider it?—We will, but it is very difficult. All the work we do is a matter of love, and it is very difficult for us to spend money on it, but we think we could get a great many cases. We cannot say that the percentage is so very great, but still we could get quite a number.

(*Mr Ross.*) Of course that is not our chief point in the objection.

(*Mr Carson.*) No, not at all.

(*Mr Ross.*) One of the chief points is that a lot of people have to refuse suitable employment through being tied to a house. The loss, therefore, cannot be stated in cases.

1566. (*Chairman to Mr Ross.*) You say there are so many who never go to the factor at all, because they won't take the risks?—That is so.

(*Mr Carson.*) They rather put up with inconvenience to the end of the term and then they remove.

1567. (*Chairman to Mr Carson.*) You cannot of course give statistics as to that?—No.

1568. (*Chairman to Mr Ross.*) It is said that, suppose a man does shift his employment, it does not necessarily involve shifting his house, because, owing to the increased train and tramway facilities, he can travel to and from his work. What do you say to that?—It is quite true that within Glasgow and suburbs people do avail themselves of these facilities and they do not shift. Even to some of the places round about Glasgow the railway gives workmen's trains. I would give one case that I know of, the case of a blacksmith who is a brother-in-law of my own; he was down with appendicitis and was thrown out of work. When he got better he got suitable work in Milngavie. His house was up at Alexandra Park, and he got a train to Milngavie for 1s. a week. The coming out from a hot shop at night and getting into a cold train would soon have killed him, and he had to give up his house and get another house where he was working, and he paid a full six months' rent.

1569. I suppose it is true that there are a number of men who, whatever changes were made in the tenure, would continue to travel?—Yes.

1570. Their families may find employment better in the city and the men travel for instance to Clydebank?—Yes.

1571. But there are a large number of others who would prefer to change their houses?—Yes.

(*Mr Carson.*) And there is a further number who may remove from the east to the west, probably two or three miles. Now they may have families who work in the town. They would desire to change to the west to suit their employment, and it would equally suit their families to travel from that point. There are hundreds of people in that position.

1572. (*Chairman to Mr Ross.*) On that point we have had evidence in regard to a proposed Bill by the Partick Town Council, and also by the Partick and Govan Factors Association, which would amount to this, that in the case of yearly tenants under £15 of rent paying their rents monthly, if they leave the district on account of change of work they should be relieved of their houses by giving one month's notice of removal, and in the case of quarterly lets giving three months' notice. That is a clause which has been proposed to us to meet the case of men changing on account of their employment. In your view, would that be sufficient, or do you want to have an absolute right?—We want to have an absolute right. We do not consider that sufficient.

1573. Would that clause not meet the greater number of the better class of men? Take your own members; when they change they do so generally when they are changing their employment?—Not always; there are the families to be considered as well. Probably a man might shift for his family's sake, independent of his own sake; something might turn up to suit them. A very important thing is this, that you have a family for instance living in the east end, and you have a boy leaving school and getting into some big work in the west; now the father, for the health of his boy, might want to take his house away to the west, because it is not good for boys to be carrying food,—it is best for them to come home for their food. Now the father would shift his house for them.

1574. And that clause would not cover such a case?—No.

1575. Before we come to the next point, will you tell me this? You have spoken about their being bound by the yearly tenure. Is there any other view in the minds of some of your members that, while they are bound on the one hand, they are clear on the other of a lengthened period during which they cannot be disturbed?—Yes.

1576. What do you say to that view?—I say that is the ideal system of letting. The tenant ought to have fixity of tenure and he ought to be able to terminate at a month's notice.

1577. He would have the option, but the landlord would not?—I say that the landlord has no right so long as the tenant pays his rent and keeps his house in good order.

1578. The ideal system would be to have yearly tenure with a right to give notice at one month?—Yes.

1579. Would you make a distinction between the case where he paid monthly and the case where he paid quarterly,—in the one case to terminate monthly and in the other case to terminate quarterly?—I think a month is long enough, whatever way he may pay.

1580. Why should not the landlord have an equal option? Why should it all be on the one side?—Because he has not the expense of flitting.

1581. Would that not involve this hardship, that the landlord, on letting for a year, might do a good deal for the house, that he would not do with a monthly tenure, and, then, owing to some perfectly proper cause, the tenant might throw it up in a month after entry, and leave the landlord to have to do more for a new tenant?—If the house is in good order one tenant coming in would not do much harm to it.

(*Mr Carson.*) As a matter of fact, the landlord won't do it under these circumstances. That is our experience.

1582. (*Chairman to Mr Carson.*) But if he gets a year, is he not more willing to do the repairs and other things than he would be in the case of a monthly let?—I have not found that. I quite admit that there are many good landlords, while there are others that are not so good. I went into a house myself, where a room had been painted perhaps two or three months before the term day, and, of course, the landlord quite properly refused to do it over again. I could not find any fault with him, although, at the same time, my wife desired that the room should be re-papered. There are some landlords who are very fair.

Mr G. Carson, Mr C. Ross, and Mr R. Davies.

10 Dec. 1906.

1583. But you do find, I suppose, that there are a considerable number of your members who value security?—We cannot say that. They are willing to take the risk of the insecurity that has been suggested in order to have the freedom of giving notice to leave their house, say, at a month.

1584. I quite understand that there are those who take that view, but are there not others who are more impressed with the other view?—(*Mr Ross.*) The only way we can answer that is that at all the meetings, and all the times I have heard the matter discussed, I have never heard any objection as to terminating the present system. The only difference of opinion was how far certain proposals were to meet the grievance. I never heard any man say that there was not a grievance.

1585. And there would be no reason for a man keeping silence, if he had the other opinion?—No.

(*Mr Davies.*) I can speak from experience of both the English system and the Scottish system. I think that the feeling of security of tenure, which has just been mentioned, is just the same in England as it is in Scotland. In Scotland there is an enormous amount of flitting on the 28th of May of every year. With the weekly lettings of the English houses, there is just as much security of tenure as there is with the Scottish system. The people continue to live in the same house,—my own father lived fifty years in the same house in England.

1586. (*Chairman to Mr Davies.*) What town is that?—I lived in Leicester for eight years, and I have lived in Cardiff for a great many years, and in other places also. My experience is that the tenants stay longer in their houses with a weekly tenancy if the house suits them than they would with a yearly tenancy. There is a rush here to change houses, because all the houses are changed on 28th May. I hold the opinion that a weekly tenancy would keep the tenants in the houses and would give quite as much security of tenure as a yearly tenancy.

1587. It is your view that there would not be as a net result any more removals in the course of a year if there were shorter lets, but the removals would be spread over the year?—Yes.

1588. You do not think that the total number would be increased?—I do not think there would be as many.

1589. (*Chairman to Mr Ross.*) What do you say to that?—I think I corroborate that—I do not think there would be as many. When the letting season comes on in Glasgow there seems to be a fever among the women. If the flitting was spread over the year, then they would not shift so much as they do at present. We do not ask monthly lets for the purpose of shifting every month.

1590. What is your view as to the effect of short lets on the rents? Would you expect that they would be raised or would they remain the same?—Personally I do not think it would make any difference. The landlord at present gets as much rent as he can squeeze out of the tenants. He does not base his rent on what the property cost. It is a question of economics. If he can get £13 for a house that he is at present letting for £12, then he will take it. But we are prepared to risk that in order to get this privilege, because it would be a saving in the end to the general body of workers.

1591. It is the general view of your Council that it would not raise the rents?—That is so.

(*Mr Davies.*) We think it would be an advantage to the proprietor or the factor to do this. Under the present system, if a house is not let on 28th May, the chances are greatly in favour of that house being vacant for a full twelve months and the rent being lost for that house, whereas, if the terms of letting were shorter, the factor would have the opportunity of letting that house much more readily than he would have under the yearly tenure.

1592. (*Chairman.*) There would of course be an increased cost of factorage if there were short lets and if that led to more frequent removals.

(*Mr Ross.*) Of course we deny that there will be more frequent removals. We do not think that there will be as many.

(*Mr Carson.*) We believe there will be less, but they will be spread over the year.

1593. (*Chairman to Mr Carson.*) It has been suggested that one reason for so many lets being in spring as against November is that it is a more suitable season. Do you think that there is anything in that?—I do not think so. I would prefer to remove at the end of the summer season.

(*Mr Ross.*) It is very unsuitable because it is a very busy time and a very awkward time to flit. I know it is the most awkward time for me to flit.

1594. (*Chairman to Mr Ross.*) That is because they are so much engaged?—Yes, but they are very busy, apart altogether from house letting.

1595. Are they not just as busy at the November term?—No.

1596. Why not?—Trade is not so busy. The painter is not so busy in November as he is in May, and also the tailor.

(*Mr Carson.*) Then there is this fact to be remembered, that the weather is better towards the end of the summer season than it is in the spring, in Glasgow particularly.

(*Mr Davies.*) Not only that, but the whole trade, from the workman's point of view, I mean the work available for the workman to do, gets less towards the winter. April, May and June are the busiest months of the year for workmen.

1597. (*Chairman to Mr Ross.*) The other point you take up is the irregularity of employment in the building trades that the present system produces. Do you think that is a necessary incident of the present system?—Yes.

1598. And one that would be largely modified if shorter lets came in?—Yes.

1599. Are you speaking from actual experience?—Yes.

1600. What do you call the building trade?—The masons, joiners, plasterers, painters, slaters, and ever so many more.

1601. It applies to them all?—Yes.

1602. How long does the busy time caused by this present system last? When does it begin?—What we refer to here as the cause of irregularity of employment is the rush for the term.

1603. When does it begin?—The houses have to be ready for May and the mason has to rush up to let in the joiners, and the joiner has to rush up for the plasterer, and he has to be rushed to let in the painter—we know all that takes place. It causes overtime rates to be paid. Representatives of the building trades will give evidence; they will go more into the technicalities of the question.

1604. You take the same view as they do?—Yes, we realise the force of their views.

1605. Do you find it results in a dull period after the rush is over?—Yes.

1606. And there is then want of employment?—Yes.

1607. How long would you say that it is after 28th May until they begin to be busy again?—As far as I can speak, the dull time will last two months at the very least.

1608. What are you yourself?—I am a tailor.

1609. And what is Mr Carson?—A sheet-metal worker.

1610. And Mr Davies?—He is connected with the Municipal Employees Association, and he has worked for years in the building trade.

1611. Do you find there is any effect on the work in the way of not being so well done through having been hurried?—We hear statements to that effect and also to the effect that there is danger to life and limb through tradesmen coming on to a job that is not at a properly advanced stage, and there are cases where accidents have been caused.

1612. Do you find there are practical difficulties owing to the employment being all at the same time in the way of getting the houses cleaned from the sanitary point of view? Do you think there is anything in that?—Yes, the painters and so on cannot come to get the house done up as they are too busy.

1613. And the plumbers?—Yes, and the others. With the changing that takes place there is an extra demand for their labour.

1614. During that intervening period the house might not be in a satisfactory sanitary condition?—That is so.

(*Mr Davies.*) It is quite common for people to bundle all their furniture into one room, and live themselves like pigs almost for six weeks, because they cannot get their walls whitened and cleaned.

1615. (*Chairman to Mr Ross.*) We are to have first-hand evidence with regard to the system in England and Ireland. Are you aware of any difference in the conditions which would make the English system inapplicable here?—No, none whatever.

1616. (*Chairman to Mr Davies.*) Do you agree in that, Mr Davies? Are the conditions of work so similar that evidence as to what happens in England would be useful if not directly applicable to Scotland?—There is absolutely no difference in the way they earn their livelihood in England, Scotland, or Ireland,—the method is practically the same.

1617. And what about the amount of rents in the one country as compared with the other?—I have lived in London, Cardiff, Leicester, and other places, and I find that the rents here in Glasgow, taken per room, are from 25 to 30 per cent higher than in any place I have ever lived in in England.

1618. For the same accommodation?—Yes.

1619. Similar sized rooms?—I will give an illustration. I lived in Leicester in what is called a six-roomed house—a house composed of six rooms and bathroom, and I paid 7s. per week rent for that house. The rates were compounded, and I paid no rates. It was a most excellent house, with a passage and reasonable sized rooms. The ceilings were eight feet high; here they are eleven feet. I am now living in a house of three rooms in practically a

Mr G. Carson, Mr C. Ross, and Mr R. Davies.

10 Dec. 1906.

slum, and I am paying £16 a year rent, and about £5 a year rates and taxes.

1620. Are the rates generally larger in England than they are here?—Wherever I have been the rates are higher than they are here. They are 3s. 9d. here, as compared with about 7s. 3d. in Leicester, and 6s. in Cardiff.

1621. In any case where you had experience, did you know what rates you were paying through their being separated in the landlord's notice, or were they all slumped in the rent?—Wherever I have lived in England, they have always been compounded, and the rent has not been detailed.

1622. So you did not know what you were paying?—I did know.

1623. How?—Simply because I knew how much the rates were.

1624. From your own private knowledge?—Yes.

1625. But you did not know so far as it was intimated to you by any notice?—No, but I believe that every working man who has any taxes at all knows the amount, and the rate per £ off the rates.

(*Mr Ross.*) A low rent makes a high rate per £. For instance, if the rents are lower in Leicester, and the town requires the same amount of money as is required in Glasgow, then the rates are higher, but they are not higher in the total sum.

1626. (*Chairman to Mr Ross.*) Suppose that short lets were introduced, is it your view that that would make a difference in the way of collecting the rates? What do you say to that?—Of course that is a point that we have considered. There are always a great many working men have that prejudice, that the factor ought to have the collecting of the rates. We see that the town could not collect the rates monthly, and we are quite prepared that the landlord should do so, and he should state how much is for rates and how much is for rent. We get that already as regards the stair gas—he states on the receipt how much is rent and how much is stair gas.

1627. Why could the town not collect the rates quarterly?—We have no objection to that.

1628. They could collect the rates quarterly, or the landlord could collect them in the first instance. As far as you are concerned, you do not care which it is?—No.

1629. So far as you are concerned, it would be a matter between the landlords and the authority if the landlords did collect the rates?—Yes.

1630. It would lie between them to fix what would be a fair allowance?—Yes.

1631. Your view would be that the landlord should get a fair allowance whatever the percentage was?—Yes.

1632. I suppose you have had Mr Cross's Bill before you?—Yes.

1633. What do you say about it so far as it meets your views?—The Council did not approve of the details of Mr Cross's Bill; they merely approved of the principle of shorter lets.

1634. What would you desire to substitute for that Bill?—We desire a Bill that would give us monthly lets.

1635. A Bill that would make any let for houses below a certain value beyond a month illegal?—Yes.

1636. Not enforcible?—Not enforcible.

1637. There was a Bill introduced by Mr Cross in 1894, and I would ask you whether it would meet your view or not. This Bill was to the following effect,—no dwelling house of a less annual value than £15 of yearly rent situated within a burgh shall hereafter be let for a longer period than one month, any law, custom, or agreement to the contrary notwithstanding?—The rent is too low.

1638. Your view is that longer tenancies are desirable, provided the option is given only to the tenant,—or do you think that that is too ideal to be practicable?—That is my ideal of a system of letting.

1639. But it is rather more ideal than what you would expect to get?—Yes.

1640. What I have indicated to you, apart from the £15, would be substantially what you advocate?—Yes.

1641. What do you say to the value?—I would say £25 or £26. That would cover most of the workmen's houses.

1642. As distinguished from employers?—Yes.

1643. But including foremen?—I don't know if it would include some foremen. They have higher rented houses than that; but, generally speaking, £25 would do.

1644. Then I understand that the view that was expressed in the earlier Bill of 1890, which merely made a lease that was entered into before fifty-two days before the term day not enforcible, would not in your view affect what you look upon as the main grievance?—No.

1645. It would be a good thing so far as it went?—Yes, but it hardly touches the question.

1646. Have you had any experience of men being turned out of their houses during a strike, in the case of houses owned by employers?—Yes.

1647. Are there many cases in your district where the houses are owned by the employers?—Not in Glasgow. I believe there is something of that kind going on in Dalmuir district, but, generally speaking, there is little or nothing of that kind in Glasgow.

Mr G. Carson, Mr C. Ross, and Mr R. Davies.

10 Dec. 1906.

1648. So it is not a question that affects you?—No, it applies principally to the country districts.

(*Mr Carson.*) It is merely confined to the country districts.

1649. (*Mr Esslemont to Mr Ross.*) You say that this grievance has been ventilated a good deal and that questions in regard to it have been put almost invariably to candidates for Parliament?—Yes.

1650. What view has been taken by members of Parliament in regard to this question, irrespective of party altogether?—They largely give their sympathy and promise their support. Irrespective of party they have agreed to a change.

1651. They recognise that a grievance exists?—Yes.

1652. And so far as they are concerned they are willing to do what they can to promote legislation to do away with the grievance?—Yes.

(*Mr Carson.*) It is only the other day that a member of Parliament admitted that the grievance was quite apparent and there was only the question of remedy.

1653. (*Mr Esslemont to Mr Ross.*) We have been told by parties representing factors and proprietors that this system of short lets is really not wanted by the majority of the working class in this district. What do you say to that?—That is not true. I don't know where they get their ideas from. The desire for shorter lets is very prevalent. I have never heard anyone speaking against it at any conference.

1654. We were told to-day by a factor that, so far as he was able to judge—I think he spoke on behalf of the Partick district—there would not be more than 3 per cent. of the tenants who would be in any way benefited by this proposed change?—We would always have liberty. We are not asking monthly lets for the purpose of shifting every month. We merely want liberty, so that we should not be tied to a house for twelve months or sixteen months, and unable to go to any better employment that might be offered to us.

1655. If only three men out of every hundred wanted to change, you would not say that it was a proper thing for Parliament to legislate on the subject?—No. Of course people don't go to factors and complain about the system of letting, because they know it is hopeless. They come to some other place to complain.

1656. This particular witness gave us some facts. He told us that the Commissioners of Partick resolved to collect all rates from proprietors where the houses were let for a shorter period than one year, and the proprietors made up their mind that, if that obligation to collect rates was to rest on them, they would have to raise the rents, and they raised the rents 15 per cent. This factor said as the result of that practically all the tenants in the Partick district preferred to take their houses by the year?—These things are introduced for a purpose—they are done for a purpose—and thoughtless people might be intimidated by them, but we know better.

(*Mr Davies.*) That is a reasonable position for that factor to take up. If the method you described was introduced and the result was a rise of 15 per cent. in the rents, then that was a very serious matter for the working people. If it had meant an increase of 15 per cent.—which we deny—it would be very serious for all the working people in Glasgow.

1657. (*Mr Esslemont to Mr Davies.*) It is only fair to state that of this 15 per cent., 10 per cent. represented rates—the rates on the occupier at that time amounted to 2s. in the £—and the other 5 per cent. on the rental was to cover the risk and cost of collection of rates. When they compounded, the rents were raised 3s. in the £; of that 2s. was the amount of rates for which the proprietor was responsible, and the other 1s. in the £ represented what the proprietor thought was required to cover the risk and cost of collection of rates?—In England councils allow a percentage to the landlord for the collection of the rates, and that 5 per cent., in my opinion, was an imposition.

1658. That is not my point. There is this fact put in evidence before the Committee, that where tenants found that this change of system resulted in their having to pay 15 per cent. additional—it really amounted to 5 per cent. additional—they preferred to give up their monthly lets and take their houses for the year?—(*Mr Carson.*) That might be the case so far as Partick is concerned, but I think we would be prepared to prove from the membership of the people we represent, that they would not give up under these conditions, because it would correct itself by and by. We are perfectly satisfied of that. We have not attempted to get a fact of that sort, but I think we could get it from the various organisations we represent.

1659. (*Mr Esslemont to Mr Ross.*) It has been stated by

Mr G. Carson, Mr C. Ross, and Mr R. Davies.

10 Dec. 1906.

factors and those representing house proprietors, that under a system of monthly lets it is very difficult to get rid of a bad tenant—a man who won't pay his rent—and they practically lose a minimum of six weeks' rent in addition to the cost of ejection before they get rid of him. Would you have any objection to urge against the process of ejection being simplified and shortened?—Certainly not. We are not here to defend bad tenants.

1660. You have no objection to any change in the law so far as the process of ejection is concerned?—No.

1661. (*Mr Dobbie to Mr Ross.*) What my friend refers to is the fact that the landlord at present has to go to Court and complain that the rent is in arrear and get warrant to evict. Supposing a suggestion be made that the landlord did not require to go to Court, that it was quite enough to show the Sheriff Officer that the rent was not paid to entitle that officer to go and evict the tenant, say on twenty-four hours' or forty-eight hours' notice,—would that meet with the approval of your Council?—No, that is too summary altogether.

1662. How far do you think the legislature might go in altering the present system in regard to ejection. Under the present system it takes about six weeks to get rid of a tenant who has failed to pay his rent. The suggestion is that that ought to be expedited?—I agree with that, but not in such a summary way as you put it at first. I think it could be arranged to get the law simplified—say fourteen days if he is found to be a bad tenant.

That is what we have now, fourteen days.

(*Chairman.*) It means three weeks or a month in addition to the four weeks of arrear. You commence to take proceedings, and it is four weeks generally before you get him out.

(*Mr Howden.*) It comes to between six or seven weeks altogether.

(*Mr Binnie.*) About two months.

(*Mr Dobbie.*) That includes the month of occupancy?

(*Chairman.*) Yes.

(*Mr Dobbie to Mr Ross.*) Notice is given at the expiry of the month, and it may run to fourteen days or it may be three weeks. However, I take it, Mr Ross, your Council would not be parties to any procedure which would enable a landlord to turn out a tenant without getting a warrant from some magistrate or some sheriff?—That is so, we would insist on that.

1663. (*Mr Dobbie to Mr Davies.*) You told us about your English experience, that you paid 7s. a week in one city?—Yes.

1664. Could you tell us upon what rent the landlord paid rates for your house?—I believe there was 20 per cent. deducted from the actual value, and the rates were put on that.

1665. There must be some system under which a real rent is taken as the basis?—There is a deduction on the actual rental value of, I believe, 20 per cent. for that assessment.

1666. That would suggest that 4s. in the £ is taken off in respect of the rate being embodied in the 7s. a week?—I am not quite certain of that.

1667. Then I see in your note that you say that in England, in monthly lets, the rates are collected every six months?—Yes, the usual way is every six months.

1668. Do you think that that would meet the requirements of your Council?—I think if the rates are compounded and the landlords pay the rates, six months would be all right. They should be compounded in the lower rented properties and the landlord should collect them and receive a certain percentage for collecting them.

(*Mr Ross.*) I may say that the collection of the rates all in one sum once a year has been a grievance in Glasgow for a long time. It would be far better if the collection were made four times a year. That is not a question that we thought you wanted to hear about, and I merely say that the workers in Glasgow want to pay the rates oftener than once a year,—they would rather pay them four times a year.

1669. (*Mr Dobbie to Mr Ross.*) They would rather do that than twice a year?—Yes. They are certainly against the present system.

1670. (*Mr Dobbie to Mr Davies.*) You spoke of all the rates being compounded in connection with low rented houses. The Bill before us does not deal with imperial taxes or with parish rates. Is it your view that the whole of these rates and taxes should be compounded?—That is my personal view, that up to a certain rental the rates should be compounded with the rent. Of course, if the rents were paid monthly, the rates would be paid monthly.

1671. Including in your view parish rates and poor rates?—Yes.

1672. Do you think it essential that there should be a distinction brought to the notice of the tenant showing how much was taken as rent, and how much was taken as rates?—My own view is that it is not at all essential. In England, the workman does not bother about it at all. I have had about eighteen years' experience of workmen in England, and I never heard one ask to see what proportion of his payment was rates and what was rent. But he knew what the rates were, how much they were in the £, and he knew that a certain proportion of his payment was for rates.

1673. Is that your answer to the objection we sometimes hear that the workman who did not pay rates directly would have less interest in keeping a check or watch on municipal expenditure? You think he would get the knowledge and be quite as anxious to keep down expenditure, whether he paid the rates directly or paid them through the landlord?—Yes, he would be just as anxious to keep them down.

1674. Do you have the view that the landlord might be tempted to add to the rent something more than the rate, something more than the proper share?—No. I stayed in Leicester for some years and I took an interest in the financial position there. The landlords there did not do that. I do not think that in England the landlord does increase the rent simply because he has to collect the rates. The rent of the house in my opinion is fixed by what he thinks he can get from the tenant for the house, and what the current value of the house is.

1675. Another trouble is in regard to the exemption which obtains in Scotland on the ground of poverty. Were the landlord to pay the rates direct and recover a slump sum monthly from the tenants, how would you consider that the present exemption in favour of tenants who were too poor to pay rates might be continued?

(*Mr Ross.*) Just as it is now. They could make application to the authorities, and the factor would get instructions from the rating authority not to take the rates from so and so.

(*Mr Carson.*) That is the system just now. The people who desire to be relieved from the rates wait at the Municipal Chambers, and if they prove that they are unable to pay their rates, then they get a note to satisfy the collector when he comes that their rates are to be cancelled for the time being. That could be obtained quite easily, and the note, instead of being handed to the collector, might be handed to the factor when he came round, and he would get credit for it.

1676. (*Mr Dobbie to Mr Ross.*) We have had evidence about the question of hypothec. Have your Council any view on that question?—We are against the law of hypothec. We do not consider that the landlord has any right to a preferable claim, any more than the grocer. We do not put that forward in our evidence.

(*Mr Carson.*) We are not strong on that point.

1677. (*Mr Dobbie to Mr Ross.*) But is that the view of your Council?—Yes. We do not think that the landlord should have a preference over and above any other person.

1678. (*Mr Esslemont to Mr Ross.*) Speaking of this compounding of rates, have you considered the difficulty in connection with the matter in this respect, that you would have to begin paying your rates along with your rent monthly from 28th May, and the assessments are not levied at that date?—Yes, we have considered that, but we do not think that that would be an insuperable baarrier to the Committee. They will get experts before them, no doubt. What we say is that, what can be done in England can be done in Scotland. There is no difference in the conditions.

(*Mr Binnie.*) The point from which the start is, is that the 28th May is to disappear, so you see the landlord would commence to charge them the rates along with the rent after he has been served with the notice charging them, and he would know exactly what to charge.

(*Mr Esslemont.*) But the rates at present run from May to May.

(*Mr Binnie.*) They could be altered.

1679. (*Mr Howden to Mr Davies.*) How many men at one time in your experience have had to shift from one work alone in Glasgow? There were a number of men who had to shift at a particular work. Can you say how many there were?—Between twenty and thirty men were required at the sewage works at Dalmuir, and they had to pay their train fares up and down, and to buy food. The cost of going up and down between the works and their houses, and the cost of taking their food out, had to be taken out of their wages, and it was a very serious loss. This expense of travelling from the house to the work occurs in thousands of cases. If the men could shift their house, then this expense would not be there, and they would be so much better off.

1680. (*Mr Howden to Mr Ross.*) But to come back to the law of hypothec. Is it not the case that the Glasgow Trades Council would like to see those who are unfortunate enough to be sold out, protected to some extent against absolute pauperism?—Certainly.

1681. It has been suggested that tools and wearing apparel should be exempt from seizure?—Yes, the Trades Council take up that ground, and they say that these things ought to be exempt.

1682. But even above the tools and wearing apparel and bedding, is there anything else that the Trades Council think should be exempted in order to protect the home?—Yes, a certain amount of necessary furniture should be exempted.

1683. Could you put a sum on it which you imagine would be a fair thing?—No, I am not prepared to put a sum on it. I don't know that we went very closely into details. I have heard £20 mentioned.

1684. Would you apply that law to all creditors?—Certainly.

1685. (*Mr Binnie to Mr Davies.*) You have just spoken of thirty men who removed to Dalmuir?—They went to work there.

1686. And they had to travel?—Yes.

1687. How long have these works been opened?—They have been opened some two years now.

1688. And have they all removed to the neighbourhood of the works?—Most of them.

1689. Some of them prefer to travel?—Yes. Some are recently employed—they are continually changing their men there. Some that were originally employed have left the work and others have been taken on in their place.

1690. You know that a very large number of men employed beside Dalmuir do voluntarily travel every day, thousands of them?—I believe that is so.

(*Mr Carson.*) Messrs Beardmore have fixed up a big work there, and they are building property to which most of their people will shift, but in the meantime they have to put up with it till they are accommodated.

1691. (*Mr Binnie to Mr Carson.*) How many years have Singers' people been down there?—Over twenty years.

1692. And how many of their men travel every day?—In proportion to the numbers there are not very many. When they went down there originally, the works were not so big as they are now.

1693. But how many do travel?—Some hundreds.

1694. Is it not some thousands?—Taking in the shipbuilding and engineering places down there, it will be some thousands.

1695. A good many thousands?—Yes, a good many.

(*Mr Ross.*) Yes, there are a good many.

(*Mr Carson.*) There is not sufficient accommodation in Dalmuir yet.

1696. (*Mr Binnie to Mr Carson.*) There are a number of empty houses?—But it is only recently that they have been built.

1697. (*Mr Howden to Mr Carson.*) Is it not the case that there was a dearth of houses in Clydebank up till about two years ago, and people could not get houses down there?—That is quite a common thing up to recently. I have not been inquiring recently. That will correct itself shortly.

(*Mr Ross.*) It proves that people do not want to shift. People are not migratory.

1698. (*Sir J. Stirling-Maxwell to Mr Davies.*) With regard to the compounding of rates in England, and your experience there, you say that those people know what the rates are. In your experience, have the rates ever made themselves felt in the rent,—has there been a case where there has been a sudden rise in the rates, and rents have gone up in consequence?—Not where I have been living. As a rule I should say that the rates rise very slightly at a time,—a penny or twopence in the £ each year,—and it does not make an immediate difference in the rents. The experience in the towns has been that houses which years ago let for 4s. are now let for 6s., and the houses that were let for 6s. are now let at 7s. and 7s. 6d. That is because of competition among tenants for the houses,—the landlord has raised the rent in consequence of that. The landlord secures his full rent in addition to the rates.

1699. Any question of the difficulty of forecasting what the rates for a year were likely to be, would be a very small question, so far as the case of the individual tenant went. There would not be a difference of more than a penny or twopence or something of that sort?—That is so. It is very rare that rates are raised more than a penny or twopence in a year in any burgh that I know of.

1700. (*Chairman to Mr Ross.*) At the present time, in the case of monthly lets, are many of them forehand?—I understand the rule is forehand.

1701. If the present yearly lets became monthly, would you contemplate that the payment would be forehand?—Probably it would.

1702. And you do not fear that?—No.

1703. You think that is a reasonable arrangement?—It is not a great grievance anyway.

1704. If the law of hypothec were abolished, I suppose that rents would be all forehand?—I suppose the factors would do so for their own protection.

1705. But you are not afraid of that?—No.

1706. You are prepared to take any risk of that?—Yes.

Mr George B. Craig, called and examined.

1707. (*Chairman.*) What is your business?—I am the General Secretary of the Operative Masons Trades Union.

1708. How long have you occupied that position?—For eleven years.

1709. I think the full name of your Union is the United Operative Masons Association of Scotland?—Yes.

1710. Where is its centre?—45 Montrose Street, Glasgow.

1711. What area does it embrace, or does it cover Scotland generally?—Yes.

1712. Where is it chiefly to be found?—In all the large towns. It has seventy different branches in Glasgow and all the surrounding district here. It goes as far north as Wick and as far south as Hawick and Stranraer, and it extends from the east to the west.

1713. How many members, roughly, do you have?—At the present time we have something like five thousand members.

1714. Have you been increasing?—No, we have been decreasing these last two years.

1715. What is the highest you have ever had?—Slightly over twelve thousand.

1716. Have you had this question that we are now discussing before you as an Association?—It has not been directly before the Association, but it has often been discussed in our branches.

1717. Has it ever been discussed by the Executive Committee, whom you represent?—Yes.

1718. How many are there in that Committee?—Nine.

1719. Do they represent the different parts of Scotland?—No, they represent just the immediate centre. If the Executive was shifted to Edinburgh it would represent the immediate centre there.

1720. In the view of your Association, does the present system involve any grievance so far as you are concerned?—Yes, as a trade.

1721. You are not speaking to-night of its effect on working men but its effect on the building trade specially?—We have approached it from both points of view,—first from the point of view of the building trade, and secondly from the point of view of our members as regards the letting of houses.

1722. Taking it in regard to the building trade, what is involved in the present system that you object to?—Shifting in the May term and also in the November term—but not near to such a degree as in the May term—causes a rush of work at the May term and prior to it, so as to have the houses ready for the letting season at 28th May. The consequence of that is that I believe that work is to a certain extent scamped and buildings are rushed up in a way which should not be allowed. Besides, it is the cause of bringing a large number of men into a centre such as Glasgow, and there is not the amount of work there that they might expect which would give them fair or steady employment.

1723. Over the year?—That is so. No doubt there is sufficient to employ them at the time they do migrate, but immediately after the May term there is a corresponding decrease, which throws the men on the market again.

1724. For how long before the May term are they fully employed?—About the end of January and February and March.

1725. For about four months?—Yes, February and March especially, because the rest of the other tradesmen have to follow the masons. Other work going on in the summer time is not in such a big hurry, except in the case of houses that they want to get ready for the November term.

1726. Are there many removals at the November term?—No. Most of them are simply people moving into a new house, and they get into a yearly let after the first half year.

1727. Suppose that removals were spread over the year, would it put more money into the pockets of your people, or would it merely enable the work to be better and more conveniently done?—It would enable the work to be better done and more evenly spread over the whole year, and that would be beneficial to all parties.

1728. The present system does not result in work not being done which would be done?—No.

1729. Have you anything to add in regard to the building trade?—No, there is nothing I can say in addition to what I have already said.

1730. In regard to other trades, such as joiners and plasterers, do they all come on after you?—They all follow after us. In my own experience of the building trade, I have seen buildings where the men were all being crowded together, wanting to get finished, the one above the other, and that involved more danger in the way of accidents than there would have been if they had been spread out a little more.

1731. Does the Dean of Guild Court not prevent that scamping of work that you have referred to?—No doubt the Dean of Guild Court has power to that effect. The building goes on if the plans passed by the Dean of Guild Court are satisfactory, but in my opinion they have scarcely sufficient inspectors to see that the plans are being carried out in their entirety. I have only seen a Dean of Guild Court inspector once or twice at the work, but other times you will get them more often.

1732. Experience shows that it is not sufficient?—That is so.

1733. In regard to the builders, as working men they are, I suppose, in the same position as other working men with reference to the question before us?—Yes.

1734. They are affected in the same way as the others are?—Yes.

1735. Are they at all specially exposed to having to shift their employment more than any other working men?—I believe so.

1736. More than joiners, for instance?—Yes.

1737. Or plumbers?—Yes.

1738. And may they have to go great distances?—Yes, and much more frequently.

1739. Are masons local to the same extent as some other classes?—They are local to a certain extent, but they are a very migratory lot from the fact that jobs are spread over the whole countryside.

1740. Is there a section of them that systematically go to contracts in other places as compared with a section that only do local work?—Yes. There is a certain proportion of them that you would think were inclined to follow country work wherever they could get it.

1741. Are these family men or are they generally unmarried?—They are mixed.

1742. In your experience, does it frequently happen that between terms a mason will get an advantageous job elsewhere?—Yes.

1743. Suppose it is a hospital, or some such building, how long might a job like that last?—It depends upon the nature of the job going up.

1744. But take a hospital?—It might take two or three years. There is one in Paisley that has been going on for the last two years.

1745. Suppose a job was to take two years, would a man necessarily want to change his house?—A good many of them would, for the sake of the time on the job, if it were not for the fact of their being tied to their house, so that very often they cannot leave.

1746. On a short job lasting some two or three months a man would not want to shift?—No, it would not be worth his while.

1747. But it would be with a job extending anything over six months?—Yes; it would not be worth his while shifting for less unless some other circumstances cropped up.

1748. Do you find that there are men who, even although they shift from a job in Glasgow to a job on the outskirts, still want to retain their houses on account of their families being at work in Glasgow?—If a man had a family working in Glasgow, he would put himself to inconvenience more or less to suit his family, but if he had no family he would much prefer to move and go to that new district.

1749. Would you expect that if short lets were substituted for yearly tenancies, the total number of removals in a year would be larger?—I do not think so.

1750. They would be spread over the year?—Yes, that is all the difference there would be.

1751. Do you find that the men who move are not merely unthrifty men, but the good class are exposed to the same necessity in some cases?—That is so.

1752. In your experience, is there much evil resulting from this,—have you had any experience of this kind, that a principal tenant has to leave and a sub-let cannot be got, and he has had to pay the balance of his original rent?—I have no personal experience of that, but it has very often been repeated to me by others who have known the like of that and it has been common talk very frequently.

1753. Have you found that, owing to removals being all at one time, the expense is largely added to?—Yes, I know that myself.

1754. How does that arise?—From the very large number of people who remove on 28th May. You cannot find ways and means of getting removed without paying extortionate prices for a lorry or a van, or whatever means you require to shift with. The rate that is charged per hour is very much in excess of the ordinary rate at any other time of the year.

1755. In your Association, do you not find that while there is a body of opinion wanting shorter lets, there is also a body of opinion from persons that value the security of long tenure?—Not with my Association, because our trade is rather a shifty one, and that same feeling does not exist that might, no doubt, exist in another trade where they had more steady employment than what we are accustomed to.

1756. In point of numbers, how do you compare with other trades?—Favourably.

1757. For instance, are there more masons than joiners?—No, there are more joiners than masons.

1758. There will be more masons than plumbers?—Yes, I believe we will come next to the joiners in numbers so far as the building trades are concerned.

1759. (*Sir J. Stirling-Maxwell.*) Do masons follow the same contractor much?—Not a great many of them. Each contractor has a certain few men, who more or less go with him all over the country, but it is more the custom for a contractor going from Glasgow to Edinburgh to take probably half a dozen men with him and employ the rest locally.

1760. Does he give any allowance for travelling to the half dozen that he takes?—He may give them an allowance for travelling or lodging money.

1761. Is that a usual arrangement?—It depends greatly on the state of trade. One may have more than another in that direction.

1762. It depends on the value of the men to the contractor?—Yes.

1763. (*Mr Binnie.*) Are the Glasgow masons pretty much a class by themselves?—Yes.

1764. And they stick by Glasgow and its neighbourhood?—No, not necessarily. They are forced to go out into the country in the event of trade being busy there.

1765. But as a rule the Glasgow mason sticks by Glasgow?—Yes, if he can find sufficient work in Glasgow.

1766. And he gets employment not only in the centre of Glasgow, but in the north, south, east or west, wherever the building is?—Yes.

1767. Has that led to the fact that masons more than most trades live as near the centre of the town as they can so as to be convenient for the different outlying parts?—That used to be, but the system is now being changed. You will get certain sections in all parts of the town now ready to go further out in the direction in which they are.

1768. They are now branching out in the directions where the building is?—Yes, where the building is likely going to be.

1769. Are there many jobs that continue so long that a man would consider it worth his while to change his house just to be near the job?—I am sorry to say there are not many, but there have been.

1770. But in the ordinary course?—In normal times there are quite a number of jobs going on outside and inside the city where men who come in from other centres and who want to get into the city have to go into lodgings. The same applies to men who are in the city and who are wanting to go out to the country.

1771. These jobs continue so long that they would consider it worth their while to have two removals, one to the place where the job is and one from the place?—It does not follow that they are to come back to the city immediately the job is finished, because the man may go for one job and ultimately stay there.

1772. I thought you were referring to large jobs like hospitals?—Yes, that is the kind of job that a man might shift to, for one job alone, and then come back to the city.

1773. Do you think they would shift and have two removals?—Quite a number would do so.

1774. (*Chairman.*) Can you give me a notion of what it would cost a working man to remove, let us say, from Glasgow to a place twenty miles away to build a hospital?—Personally, I removed from Greenock to Glasgow, and it only cost me some 10s. to 12s. coming by rail.

1775. You are a married man?—Yes.

1776. With children?—Yes.

1777. What did it cost to remove all your furniture?—That was the lot; from house to house, from Greenock to Glasgow, it cost me 10s. to 12s.

1778. Had you to pay a lorry from your house to the train?—No, the Railway Company collected and delivered it.

1779. And that was all it cost you?—Yes.

1780. And you got no special favour?—No. Then there was another removal that I had in Glasgow here, which I was able to accomplish in about two hours, and it cost me 10s.

Mr G. B. Craig. 10 Dec. 1906.

1781. How far had you to go?—From here to Buchanan Street, about four hundred yards.

1782. That was at a Whitsunday term?—Yes, 28th May.

1783. Was the other removal at Whitsunday?—No, I think it was at the end of June or the beginning of July when I came from Greenock.

1784. If it had been the May term, how much more would it have cost?—I do not know.

1785. It would have been more?—No doubt.

1786. (*Mr Howden.*) You say you are in favour of the abolition of the term days as they at present exist. I take it that that applies to all classes of property?—Yes.

1787. Further on, you point out how a mason, being affected by the weather, even when he is away from home, does not earn as much as pays his lodgings. Have you known of cases of that kind in your trade?—Yes, I have known quite a number of cases, especially in the winter season, when a lot of masons are idle on account of stress of weather. I am personally well acquainted with one of our members, who is at present a householder in Kilmarnock. He is working at the present time in Glasgow. He would be up here to-day to see about starting his work, and if this weather should continue, he will be at a loss to know whether to go back to Kilmarnock or to stay here. If he remains here to the end of the week and the frost gets harder, then he has not worked for his keep. Now that frequently takes place all over the country. I had some experience myself, when working at the trade.

1788. You spoke about the cost of your removals. The most of the carrying of your material, irrespective of the hire of the lorry, would be done voluntarily by yourself and your neighbours?—Yes.

Mr G. B. Craig. 10 Dec. 1906.

1789. (*Mr Esslemont.*) Of course the members of your Society are paid a standard rate of wage?—Yes.

1790. Is the rate agreed on between your Society and the Association of Masters?—Yes.

1791. Is there not some rule in regard to an increase in the rate if the men go to the country?—There used to be, but I am sorry to say that it is abolished now.

1792. Is it not the case that that is so in many trades?—I cannot speak for trades other than my own.

1793. Does it exist in any other part of Scotland?—In Crieff, which is about the only place—and there are only about twenty or thirty masons there all told—I believe that if they go a certain distance outside the town they are entitled to lodging money or train fares. Now that system used to exist in Glasgow, but it has been abolished years ago, since the facilities for travelling have improved to what they are now. I believe that is the cause of that being done away with.

1794. I knew a case in Gourock where a contractor attempted to get past that regulation by engaging the men at the job instead of engaging them at his own workship, and I know that that was very much resented?—A contractor takes very few men with him, and he allows them something over their weekly wages, but then another man may go from home to the job and get started there, and he would get nothing, although the other men that the employer took with him are getting more.

[Adjourned.]

THIRD DAY.

TUESDAY, 11th DECEMBER 1906.

At the Municipal Buildings, Glasgow.

Present:

Sheriff Charles J. Guthrie, K.C., *Chairman.*

Mr George B. Esslemont.
Mr Thomas Binnie.
Mr J. T. Howden.
Mr Edward Cox.
Mr Joseph Dobbie, S.S.C.

Mr Stair Agnew Gillon, *Secretary.*

Mr J. M'Michael and Mr H. W. Madden. 11 Dec. 1906.

Mr James M'Michael and Mr Henry Wilson Madden, called and examined.

1795. (*Chairman to Mr M'Michael.*) You are President of the Association of Property Agents in Glasgow, Ltd.?—Yes.

1796. (*To Mr Madden.*) You are Vice-President of the same Association?—Yes.

1797. (*To Mr M'Michael.*) You have been a house factor and property agent in Glasgow for some time?—Yes, I have been in practice for upwards of twenty-five years.

1798. Your firm of James M'Michael & Son has carried on a similar business for fifty-eight years?—Yes.

1799. The Association of House Factors and Property Agents in Glasgow was instituted in 1875?—Yes.

1800. Its object was to improve the position and promote the interests of the house factors and property agents in Glasgow and neighbourhood, and to give expression to their opinions as a body upon all questions bearing upon their profession?—Yes.

1801. What do you include in "neighbourhood"?—Govan, Partick, Airdrie,—the towns lying immediately contiguous to Glasgow.

1802. What number of members do you have in your Association?—100.

1803. Has your membership increased?—Yes, and it is gradually increasing.

1804. Does it include most of the largest house factors?—With one exception the largest house factors are all members of our Association.

1805. Among these are there a large number who have to do with the smaller class of workmen's dwellings as well as the others?—Yes, it embraces factors attending to all classes of property.

Mr J. M'Michael and Mr H. W. Madden. 11 Dec. 1906.

1806. You cannot give any notion of the value of the property factored by the members of your Association?—No, I could not do so. There are the like of railways and large hotels and large warehouses excepted, so that would reduce the rental value; it would make the amount managed by the factors look small. There is an immense amount of property managed by owners or companies which is excepted from the property that comes under factors.

1807. Take workmen's houses under £20, what proportion, roughly, would you suppose of that property was factored by factors as distinguished from property owned by the workmen themselves, or factored by proprietors?—Fully 80 per cent. of it will be factored by factors.

1808. Take your own experience: your firm manages property including a large number of houses under £20 of rent?—Yes.

1809. We are inquiring here into what is called the smaller dwelling houses. Does that term accurately describe the houses in your view?—Generally speaking, my idea of a small house is a house of two rooms and kitchen and under. When you come up to three rooms and kitchen, I think that can hardly be included in the term, "smaller dwelling houses."

1810. But you have houses of £20 which are not small in the sense of the number of rooms?—That is so.

1811. Going up to how many rooms?—Three and four rooms, and where you have attics you may have six.

Mr J. M'Michael and Mr H. W. Madden.

11 Dec. 1906.

1812. Can you tell me how many houses your firm manages under £20?—About one thousand.

1813. And under £10?—About two-thirds are under £10, and the remainder are between £10 and £20.

1814. Have you any below £4?—No.

1815. Then it is between £4 and £10 that there are two-thirds?—Yes. Houses under £4 have been extinct within the last four years,—any that we had.

1816. We are told that the number is diminishing every year. Is that your experience?—Yes, we used to have a number, but we have none now.

1817. Take houses from £10 to £20. What class of people generally occupies them?—The better class of tradesmen or thrifty people, warehousemen, shopmen, clerks, and those engaged in business generally and as servants in the community, postmen and others, and joiners.

1818. These are increasing in number as compared with those below £10?—Yes.

1819. And they always will increase?—Yes.

1820. How would you describe those between £10 and £4?—They might be what you would call the smaller class of tradesmen, labourers, unskilled workmen, and people who are perhaps not very provident.

1821. If you are considering workmen's dwellings properly so called, is £20 a fair limit?—Yes, I think so. It is perhaps a little to the high side; but taking it as a dividing line, it is a pretty fair one.

1822. It has been said that when you come to £20, you come to the foreman class?—Yes, between £15 and £20 you are rather above the tradesman; you are more among people engaged in mercantile work, shopkeepers and so on.

1823. That is borne out by the fact that the inhabited house duty is not charged on houses under £20?—Yes, but where the value of the house is worth more than £20, it is seldom that it is reduced below that for that reason.

1824. But if the theory is not to charge house duty on ordinary working men, then £20 is a fair limit to take?—Yes.

1825. Take the tenure, how are houses under £9 usually let?—They are let from month to month as a rule.

1826. Houses under £4 are always short lets?—Yes, unless country houses.

1827. Take houses between £4 and £9, what proportion of these in your experience are let monthly?—Our experience is about 50 per cent. I know that some factors have about 75 per cent.

1828. And other factors will have less than 50 per cent.?—I don't think they will have much less. You may take it as varying from 50 to 75 per cent.

1829. The 75 being monthly and the 25 yearly?—Yes.

1830. Where there are monthly lets, are they forehand rents?—Yes. They begin forehand, but unfortunately they do not always keep it up. We have a great many houses let at about £8, old dwelling houses, let yearly, but these are coming more into monthly houses now.

1831. Taking the houses generally, between £4 and £9, is the number of monthly lets increasing and the number of yearly lets diminishing, or is it the other way, or are they stationary?—I think they are pretty much the same as before. I don't think there is much difference.

1832. There is no tendency one way or another?—No.

1833. Does a clerk go round and collect the rents?—Yes.

1834. Is that the invariable practice with factors as distinguished from tenants coming to your office?—Yes.

1835. They don't come to your office till there is a grievance?—We have a number who have come up regularly with their rents. They are provident people, and they make a point of coming to the office and paying their rent.

1836. Why?—Because they wish to have the thing paid and settled, whereas there are a great number that you have to look up and press for payment.

1837. Have you any system of cautioners?—Just in exceptional circumstances.

1838. To what extent do you rely on the law of hypothec?—Entirely.

1839. But not if you get forehand rents. If the tenant pays you forehand rent regularly, then it does not matter to you?—It is generally because he has not got furniture that we ask a cautioner.

1840. But suppose you are getting forehand rent, you neither want the law of hypothec nor a cautioner?—No.

1841. Is it only where you are not getting the forehand rent paid regularly that you look to the furniture at all?—The man begins paying forehand rent. We look to the furniture as a means of remedy if he does not keep it up.

1842. But so long as he keeps it up, it is a matter of indifference?—We have no debt then.

1843. If the law of hypothec were abolished, would that mean that the forehand payment of rent would be insisted on?—Yes, generally speaking.

1844. And in that way you have your remedy?—Yes.

1845. It might happen that you would have to insist on forehand rent when it might be hard on the tenant owing to temporary circumstances?—Yes.

1846. At present you can give a certain indulgence when there is furniture there?—Yes, if we see that the house is furnished in keeping with the style of the house, we don't trouble about it.

1847. Do you think that the existance of the law of hypothec is a drawback to the tenant?—No, I think it is a protection to him.

1848. Are houses above £9 of rent usually let from year to year?—Yes.

1849. From Whitsunday to Whitsunday?—Yes.

1850. Have you any Martinmas to Martinmas lets at all?—No.

1851. Have other factors any?—Not that I know of.

1852. Why not?—Because there is no removal term at Martinmas. No persons seem inclined to leave then, besides, the rates are all levied from Whitsunday to Whitsunday, and it introduces liability if you remove at any other time.

1853. What number of lets above £9 are short lets in your experience?—Above £10 we have only four.

1854. Out of how many?—About 300.

1855. What about the four, how have they arisen?—Probably we were not very sure of them and we wanted to have a control over them.

1856. They have not arisen through good tenants saying that they wanted monthly lets?—We never had a tenant that asked that.

1857. Have you never had the case of a thoroughly satisfactory tenant who said, "I am not sure about my 'remaining; I may have to change in the middle of the 'term and I want a monthly let"? You have never had that?—No.

1858. Have you known of it?—It may arise occasionally, but it will be very seldom.

1859. Must there not be many cases where a man contemplates getting a better place in the middle of the term,—but you have never had that occur?—We have had them speaking of it. There may have been cases where they have said that they would like to have their houses taken on short lets, but we would tell them that they would require to take it by the year and get it sub-let afterwards. It may have happened, but it has been very seldom. We have had cases where we wanted the tenants to take houses on a short term and they would not do it.

1860. What kind of case would that be, would it be a satisfactory tenant?—Where a proprietor wanted his houses to be let from month to month for certain reasons, and they objected to it.

1861. Why?—Because they did not want short tenure.

1862. Was it sentiment?—No, it was just for protection.

1863. Was it not the one class of tenure being associated with a more thrifty class than the other?—Not in this case.

1864. That might tell in some cases?—Yes, it does tell. In the general run of cases it is sentiment, but in this particular case it was tenure.

1865. That was the case of a first-rate man?—Yes, a good man. In fact, after we let the houses by mistake by the year, we were asked by the proprietor to approach the tenants, and one of them refused to enter the house at all, and we had to cancel the let; he said he would not stand in the way of our letting it to another party.

1866. Was that a man with children and working in the immediate neighbourhood?—I don't know. It was just a matter of tenure that was the reason.

1867. (*Mr Howden.*) Would not the reason be this, seeing that most of the houses in Glasgow are let on a yearly let, if he was turned out between terms, there would be extreme difficulty in the way of getting a proper house?—I fancy that would be one of the reasons. His tenure would be uncertain, and people want to know if they are going to be asked to leave.

1868. So as to have a reasonable chance of getting another house?—That is so.

1869. (*Chairman.*) It is your interest, of course, to keep a good tenant if you can?—Yes.

1870. Now, in regard to the system of taking houses, when do you personally send out missives?—For houses under £20, we send out no missives. When the clerk calls for the quarter's rent, he just asks them if they are remaining on for another year, or if they are going to remove.

1871. When does he call?—He may begin to call perhaps on 2nd February, and it may be ten days after that before he is round them all.

1872. To what extent do you collect monthly or quarterly?—On monthly lets we don't ask them if they are remaining; they go on on tacit relocation.

1873. But what I want to know is this, whether you have tenants who pay quarterly as well as tenants who pay monthly?—Yes.

1874. Are the quarterly payments made by yearly tenants?—Yes, they are all yearly tenants.

Mr J. M'Michael and Mr H. W. Madden.

11 Dec. 1906.

1875. Is there any system in Glasgow under which yearly tenants pay monthly?—Yes, we have some.

1876. Why in the one case and not in the other?—It is just a matter of precaution, so that we might have the person better under control.

1877. Their wages being paid frequently, it is easier for them to make frequent payments?—Yes.

1878. (*Mr Esslemont.*) You say that your yearly tenants pay quarterly. Is that universal?—With small rents it is almost universal.

1879. With what limit?—Practically from £20 downwards you may say that the great bulk of them are quarterly. There are a few half-yearly, but these are diminishing, and it is now becoming more universal to have quarterly payments.

1880. (*Chairman.*) Are the monthly payments diminishing also?—No, I think there is a tendency to increase them.

1881. For yearly tenants to pay monthly?—Yes.

1882. Which do you think is the best system?—We would prefer quarterly payments.

1883. Why?—Because it is less trouble.

1884. I think you said that your clerk went about Candlemas?—Yes.

1885. When does he require an answer?—By that time they are generally prepared with their answers. Many of them say, "Well, I cannot give an answer to-day; I will give it next week," and we have no hesitation in waiting.

1886. In the ordinary course, is the matter settled one way or another by the end of the first week in February?—Yes.

1887. The contract is coucluded if the man is to stay on?—Yes.

1888. Is there any writing about it?—The house is let verbally by arles; we have no missive.

1889. Why have you no missive when other people have it?—We find that it is a great deal of unnecessary trouble.

1890. Which is the ordinary practice in Glasgow?—I think the missive predominates, but a great many take by arles too.

1891. Have you not fouud a difficulty when you had no missive?—We have had a few cases, and when we find there is to be a question, and the house is one that will let easily, we let the matter drop and let the house to some other person, as there is no loss and it saves trouble.

1892. (*Mr Howden.*) But you have a missive for the start of the tenancy?—Yes.

1893. (*Chairman.*) Have you a copy of it?—No, but I will send one in.

1894. (*Mr Howden.*) Have you any books?—Yes. We have monthly books.

1895. (*Chairman.*) Have there been to your knowledge complaints in Glasgow in connection with the house-letting system?—Yes, I am cognisant of there having been, but I have not received many complaints personally.

1896. Are you in active charge of your business?—Yes.

1897. Have you any partner?—No.

1898. And if your subordinates had any difficulties they would come to your knowledge?—Yes.

1899. About what have you heard of complaints?—I have had a few, especially within the last few years, that it is a hardship being obliged to take houses so far beforehand, but there have been very few complaints.

1900. Is that in Glasgow, or does it apply to the Clyde district generally?—My experience is more in regard to the centre of the city, but I understand it applies generally to the Clyde district.

1901. From what class of tenants have you heard these complaints, about what rents?—Recently they have been as many from tenants up to £50 as from tenants below £20.

1902. (*Mr Howden.*) What answer do you usually give to these tenants?—I have tried to contrast the system that we have with what I have learned from friends about the English system. I was letting a house of between £30 and £40 to an English gentleman, and he said, "It is 'absurd asking a tenant to take his house sixteen months 'before the expiry of the let." "Well," I said, "it is not 'sixteen months, it is only four months, because we are only 'asking a four months' warning. In England you would 'require to give six months' warning"; and he said that that was so.

1903. Is that the law or the practice in Scotland?—It is understood that it is the practice.

1904. It is understood that it is the law?—The law is that a tenant does not need to give his answer,—if he says that he won't give his answer till forty days before the term, then he takes the risk of our finding another tenant.

1905. (*Chairman.*) For how many years have you heard such complaints? Has it been during all your time?—Individul cases have arisen during the whole time of my experience in business, but it has become more a question before the public within the last ten years, one might say.

1906. Have you also come in contact with complaints about the length of tenure?—No, we have had no complaints.

1907. So far as you remember, you have had no applications from yearly tenants to be allowed to renew on a short tenure?—No, with this exception, that probably now and again you may have one saying, "It is possible that I 'may be leaving town in the course of the year. Will you 'let the house for a short period?" In some cases where they have taken their house on for the year they have asked it to be sub-let.

1908. Take the case of a tenant who, on being asked at Candlemas what he is going to do and he says, "I 'cannot tell, I don't know how I will be situated and I 'refuse to give an answer one way or another." How do you treat his house?—It would depend on circumstances. In trying to oblige tenants we have sometimes lost tenants.

1909. You hold yourself entitled in that case to let over his head?—Yes, we have sometimes held on when he would be uncertain, and we have found that we had just held on to our own disadvantage.

1910. (*Mr Howden.*) But in most of these cases, the tenant would still remain?—Perhaps in the most of cases, but a number take advantage to provide for themselves at our expense.

1911. If it had been general, you would have been at no disadvantage?—I don't understand.

1912. If the term had been shorter, you would have been at no disadvantage?—You mean with quarterly lets?

1913. Yes?—Things would be on an entirely different footing then.

1914. (*Chairman.*) What is the reason, in your view, for this yearly period before entry being taken?—All landlords are obliged to warn away their teuants and the warnings must be served forty days before 15th May. In order to have all your arrangements made and know what tenants to warn out and have these warnings served, you require to have all your answers in and houses decided upon within a reasonable distance of the 4th April.

1915. Has the tendency been to make the period for retaking earlier than it used to be, or later?—Somewhat earlier, perhaps a week or a fortnight earlier.

1916. When did that arise?—Within the last ten or fifteen years.

1917. Does that depend on whether the district is one which is growing or diminishing and the demand growing or diminishing?—The tendency would be more where it was growing. Of course where it is diminishing the landlord's interest is not to excite his tenant too much.

1918. But where it is growing, of course there is competition?—Yes, he is getting requests in for houses, and before he can answer them he must know what houses he is to have on hand.

1919. How early have you known a tenant wanting to get arrangements made for the following term?—They begin to inquire about the November term.

1920. What do you say then?—We say that we will take a note of their name and let them know.

1921. How early have you ever known a tenant being forced to re-take in your experience before May?—I don't know of anyone before the middle of February.

1922. Have you not had a case of this kind, of a very eligible tenant coming in the middle of November and going to a less eligible tenant in December and saying he must make his arrangements there and then?—No, my own feeling is against that. I quite understand it being done in some cases, but my own experience is against it.

1923. It would only be done in the case of an unsatisfactory tenant?—It would be according to the disposition of the man, I would say.

1924. Take the case of a tenant who does have to change, how many do you find that you have of such cases in a year?—Those who wish to have their houses re-let?

1925. Yes?—I think about 3 per cent. of our houses let.

1926. That is those who wish to have their houses sub-let and have come to you with that request?—Yes.

1927. I suppose there may be others who would like to get a sub-let, but who don't want to run the risks that would attend it?—As against that we have a number who have no necessity to leave, who have got reasons other than absolute necessity, so if you put the one against the other, I think you may put it at 3 per cent.

1928. That is the number that actually come to you?—Yes.

1929. (*Mr Esslemont.*) Actually leaving?—Yes.

1930. (*Chairman.*) May you have others who come and are told by the clerk, "You are running a risk here; you had better stay"?—A great many come, and if we say, "You have to pay 5s. for letting the house," they say that they won't pay it, that they will stay where they are. We put on that 5s. as a preventative, because it prevents

people wanting to give up their houses with slight excuses.

1931. You say that many come to you?—Some, not a great many.

1932. Can you give any idea of what the percentage would be?—I don't think it would raise another per cent.

1933. You are talking of houses under £20?—Yes.

1934. What is your experience in that matter in connection with houses above £20?—There are a few cases of sub-let.

1935. As many proportionately as under £20?—No.

1936. Is that because those in houses under £20 are men whose employment is of a more shifting nature and they therefore have more occasion to change?—Yes, changes in the family affect the family more drastically than they otherwise would do.

1937. Take a mason; I suppose his work involves a comparatively frequent shifting?—In a case of that sort the man goes to the country and the wife and family stay at home.

1938. If the contract is a long one, then he may shift the home?—Yes, he may, but the family are suited in Glasgow and the conveniences in Glasgow are such that it is better for them to keep on their house in town and for the husband to take lodgings,—it is better to do that than to shift the whole family.

1939. In your 3 per cent., can you give any notion of what proportion of these will give up between taking their houses and the term?—About one-half of them—that is, before the Whitsunday term.

1940. That is to say, in the four months you have as many as in the succeeding eight months?—Yes.

1941. How do you account for that?—I would fancy Whitsunday being the term when there is a great impetus put on, as it were; those who require to remove for any particular purpose would move previous to Whitsunday. During the rest of the year you have just those who are under necessity to remove and they must go at all costs.

1942. But how do you account for so many re-taking their houses and then evidently doing so under a mistake, because they give up their houses within four months?—There are some that deliberately take their houses, and then try to throw them up.

1943. What is their motive?—To secure a house.

1944. (*Mr Howden.*) If they could be better suited they would naturally want to shift?—Yes. I have known cases where they have actually taken a house and then they come in and try to deny liability through the wife having taken the house, or something of that kind.

1945. (*Chairman.*) The reason being they wanted to shift, because they preferred to?—We have had cases of their doing it actually, deliberately.

1946. But such cases will be rare?—Yes.

1947. What does it cost a man to give up a house? Suppose there is a sub-let got at once, would you take the 5s.?—That is for a room and kitchen house. For two rooms and kitchen we charge 7s. 6d., and in some cases we charge 5 per cent. on the rental.

1948. In respect of what?—Trouble in re-letting, looking out for a new tenant. It is as much trouble to look out for a new tenant for the one leaving as for the landlord.

1949. Have you had cases where a sub-let has not been immediately got, and the principal tenant has had to pay although he has left?—Very few.

1950. Can you give any idea how many principal tenants in the course of the year have had to pay either through no sub-tenant being got at all, or they had to pay through there having been no sub-tenant for a portion of the time?—I don't think it would come to 2½ per cent. on the rental value of the houses sub-let. That is the only way I can look into it, just taking a sort of average. For years we had no cases of rent being lost, but this year we have had three, and last year we had two. I fancy that that is owing to the very bad times we have had.

1951. Was that where you lost the rent altogether, or where the principal tenant had to pay?—Where we asked the principal tenant to pay.

1952. What amount did this come to?—Last year it was £5.

1953. From one man?—No, two men.

1954. And the year before?—Nothing.

1955. There would be nothing like 2½ per cent.?—I am even including in that 2½ per cent. cases where the tenants not only did not try to get their houses sub-let, but they did not pay for the time they lived in the house themselves.

1956. But take *bona fide* cases of tenants leaving for one reason or another, and after they have left still having to pay the whole balance or a proportion?—Within the last ten years I do not think we have had £10 paid by tenants.

1957. A year or altogether?—Altogether.

1958. Do you think you are singular in that matter, or is it fairly applicable to factors generally?—It is fairly applicable to factors generally.

1959. You have discussed this question in the Association itself?—The question of letting generally, yes.

1960. In the Association or in the Council?—Both in the Association and in the Council.

1961. Are the members unanimous on the matter?—They are practically unanimous as to some change being necessary, but they are not unanimous as to the methods.

1962. Are they unanimous in this, that the only change they consider unnecessary is in regard to the too early period for warning out in the one case, and re-letting in the other?—Yes.

1963. Are they unanimous in thinking that there is no necessity for an alteration in regard to the law as regards length of tenure?—That is the feeling.

1964. In considering the matter, have you had in view the English practice, and have you obtained any information in making up your mind on the English practice?—We have not gone into it, but the impression is that it is English people who have practically been at the bottom of this agitation.

1965. If the thing was good it would not matter who it was. In England the system generally is one of short lets?—Yes.

1966. And in Scotland the system is one of long lets?—Yes.

1967. You have not any special means of informing yourself of the results in England?—No.

1968. Or whether there are drawbacks in England?—We have heard that there are objections to the system.

1969. What views have you arrived at in regard to the question of sending out missives?—You mean as an association?

1970. Yes?—The idea is that the letting might be delayed till, say, the middle of March or the end of February, and the warning away might be changed to the end of April.

1971. We had evidence from one gentleman who suggested 7th May, twenty-one days before the 28th May, for the warning out?—That would hardly do. It is too close to the busy time of flitting. I think the end of April is late enough.

1972. In Edinburgh they have adopted 15th March?—So I understand.

1973. Have you heard that it has produced any trouble or practical difficulty?—I understand it is not working so well as they anticipated it would.

1974. If you took the warning to the end of April, when would you propose that the missives should be sent out?—In the end of February or the beginning of March.

1975. Does the one in your view have a distinct bearing on the other, the warning and the sending out of the missives?—Certainly.

1976. And the nearer to the term you put the warning, then you would pospone further the sending out of the missives?—Yes.

1977. You said there was a difference of opinion as to how it should be carried out. What is that difference of opinion?—Some want it by legislation, and others would rather that it was brought about indirectly.

1978. Voluntarily?—Yes.

1979. As in Edinburgh?—Yes.

1980. What is your own view?—My own view is that I don't think it matters much as to whether houses are let on short lets or yearly lets.

1981. But in regard to the missive question?—I think it is too early.

1982. But do you think the alteration should be made voluntarily or by legislation?—It should be voluntary.

1983. Would not legislation have the advantage of putting everybody on the same footing?—Yes, that is so.

1984. And if it was voluntary there would be some who would not carry it out?—Yes. Of course it is just the same reason as has led to recent legislation generally, that there are always one or two who oppose a measure and who benefit by the others conforming to it.

1985. There are factors outside your Association?—Yes.

1986. If there is to be an alteration, would it not be better that all should be in the same position?—I have no objection, but I think we might be able to work it independently of legislation.

1987. If there was to be legislation, have you considered any form in which this later sending out of the missive could be remedied?—Do you mean as to how we would make it known?

1988. No, if there was to be legislation. You have seen a Bill putting the matter into shape, viz., the Partick Bill?—Yes.

1989. Would it carry out your view?—Yes, the Partick Bill would.

1990. "It shall not be lawful prior to the 15th day of March to re-let any dwelling house for the year," etc. (*Reads clause.*) That qualification would be just?—Yes. That has always been the stumbling block, what was the

Mr J. M'Michael and Mr H. W. Madden.

1 Dec. 1906.

man to do who had an empty house or a builder who had a new property. By that Bill he is at liberty to let unoccupied houses, but not to approach a tenant who is already in occupation.

1991. To do so would be to interfere with freedom of contract?—Yes.

1992. So a mere objection of that kind would apply to that equally as to a Bill enacting short tenure?—Yes, it would be a question of degree.

1993. What do the factors think about the undoubted fact that there is only one period in Scotland for removing, resulting in a great congestion and a good deal of practical difficulty? That is a pity, is it not?—Yes, it is a disagreeable fact.

1994. And it results in considerable expense, which would not be found if the removals were spread over the year?—Do you mean to tenants?

1995. Yes?—I think that very often things are done in a rough and ready way by the contractors; they are done in a way that they would not be done in if there was more time.

1996. And is there not a difficulty in the way of getting houses cleaned? May it not also involve that a tenant may have to go into a house that may have been in possession of a bad tenant and it would take a considerable time before it was cleaned?—That would occur in a quarterly let in the same way. Of course a proprietor does not want his house to stand empty.

1997. But if you had the removals spread over the year, the persons who might be employed to clean the house would not be overwhelmed with work and would be available?—Yes, they might not have to wait so long.

1998. That being a desirable object, the proposal that you make about the system of missives would have no effect in curing that evil?—No.

1999. And the proposed measure for short letting would?—It would distribute it certainly over three letting terms. I do not think there would be many removals in the winter term.

2000. You have no suggestion that would tend in the direction of removing what is apparently an admitted unfortunate circumstance?—As an association we do not make any suggestion in that line.

2001. Have you any suggestion that would tend towards spreading removals over the year?—I see no other thing than quarterly lets.

2002. (*Mr Howden.*) What do you say to monthly lets?—We always find that monthly lets as a rule deteriorate a property.

2003. (*Chairman.*) They would spread removals just the same as quarterly lets?—Monthly tenants are open to come and go as they like just now. They are at no disadvantage just now.

2004. If there was to be that advantage in Mr Cross's proposal and in the proposals of other people, is the only drawback that occurs to you in connection with the short let the insecurity of tenure?—No, I come later on to the question of taxes.

2005. Does it come to this, that the compulsory enactment of short lets would, in the first place, in your view deprive a tenant who wanted a long let of the chance that he ought to have of getting one, and, in the second place, it would introduce such practical complications connected with rates as to form a very serious obstacle?—Yes.

2006. In the third place, do you think the result of short lets would be to raise the rents or to affect the rents?—We have no data to go on, because the thing would be so universal then that it would quite alter the present circumstances.

2007. Then you are not prepared to say that on the whole, changing from a yearly tenure to a quarterly tenure, for instance, would affect the rents?—In some cases I think it would, and in other cases I think it would depreciate the property to a certain extent, where the landlord was put to more expense through these removals, so that anyone purchasing would give a less number of years' purchase for the property, or in order to recoup himself he would require to raise his rents.

2008. Would that not rather be in the case of a monthly let as distinguished from a quarterly let? Supposing a yearly tenure was changed into a quarterly tenure, would there be that result?—The tendency of short lets is to give undesirable tenants more opportunity of getting into a property. When you come to quarterly lets, there would be more likelihood of undesirable tenants getting in among decent yearly tenants. In many cases I think it would tend to deteriorate some properties which can be kept very respectable just now.

2009. But you have no experience to enable you to reduce that to the test of experience?—No, further than that we have had cases where we have had to cease letting yearly, and have had to let monthly, and we have found that there was more expense. But there was also another element, and that was actual deterioration in the neighbourhood. It would affect the whole community if the thing was spread. That is the only experience we have had, isolated cases where there are other elements probably at work.

Mr J. M'Michael and Mr H. W. Madden.

11 Dec. 1906.

2010. Has there been any experience that would be a test, such as a proprietor resolving to change his yearly tenure for some reason or another into a monthly tenure? Have you ever had a case of that kind?—I have not known a case where the tenant would like it.

2011. Have you ever known it done?—Not further than this case that I spoke of.

2012. And there were exceptional circumstances there?—Yes, it was in the London Road, where we let houses monthly that had formerly been let by the year, and where we previously always got very respectable tenants. Circumstances obliged us to let the houses by the month, and it quite changed the character of the tenants.

2013. The neighbourhood had altered?—Yes; that was evident from the fact that we were not able to get them let yearly.

2014. We have been told about property belonging to the City Improvements Trust, and also about property belonging to the Workmen's Dwellings Company. Do you think these are fairly comparable?—No, they are special.

2015. Why?—Because they make their houses so attractive that they can pick and choose their tenants. They have caretakers and they work on different lines from an ordinary factor, who has just to take the general floating population. Then, so far as I am aware, no landlord would let his property to yield the same return as the City Improvements Department does.

2016. (*Mr Howden.*) You referred to monthly tenants getting among yearly tenants, and that that created a bad impression. How do you do when a bad tenant gets in beside yearly tenants for some time? Are you tied to that bad tenant for the whole time?—Yes.

2017. If you had monthly lets then you would be able to get him out more, easily and more quickly?—Yes, but there would be a greater number, and I think the greater number would do more harm than the benefit we would receive from the liberty of putting them out.

2018. (*Chairman.*) Would the system of shorter lets add materially to your work?—Speaking generally, I think not.

2019. If you get a man for a year, you just make inquiries once about him?—Yes.

2020. If you were having frequent changes in the year, you would need to make inquiries about every tenant, but you would not anticipate that the factors would be entitled to a bigger percentage if there was a change from the one to the other?—I do not think there would be many more changes than there are just now. That is my own opinion.

2021. They might be spread more over the year, but there would not be many more changes?—That is so. I think that calling on a man in February and asking if he wants to change his house has a good deal to do with the flitting. If you left him alone he would not think of flitting.

2022. You referred to the security of tenure not being the only question, and you said that there were other difficulties about rates. What are these?—I think the principal difficulty is making the landlord liable for the rates, making the landlord a rate collector. I do not think he should be asked to undertake that work.

2023. Is he not a rate collector just now?—Only to a very small extent.

2024. In regard to houses under £4?—Yes.

2025. Have you any experience of arrangements in certain cases between landlords and rating authorities?—No.

2026. (*To Mr Madden.*) Have you?—No.

2027. (*To Mr M'Michael.*) We are told it is sometimes done. Are there many cases?—A few.

2028. You have no practical experience of the question?—We had in Partick, but we have not got that property now. We had some tenements in Partick where the burgh rates were imposed on the owner.

2029. How did it work?—The rates came to 2s. in the £, and we put on 3s.

2030. The other 1s. being for what?—To cover the loss.

2031. And the factorage?—No, that is the loss on unlets and non-payments, and we found that it just worked out clear.

2032. For how long did that go on?—For six or seven years.

2033. And you think it was a fair experiment without any special conditions?—I think so. Of course it was a class of property that I do not think the rating authorities ever got one half of the rates out of, with all their trouble to collectors, and yet they saddled the proprietor with

paying the rates in full over the counter, and they did not allow a sixpence of abatement to cover loss.

2034. They allowed nothing?—No.

2035. So far as they went it was a clear advantage to them?—Yes.

2036. And so far as you went it was neither the one nor the other?—It made our rents look very large.

2037. But you made nothing by it?—No.

2038. So far as the tenants were concerned it cost them the extra 1s.?—Yes.

2039. Then the only people who made by it were the burgh authorities in Partick?—Yes.

2040. (*Mr Howden.*) Did that 5 per cent. cover all the loss?—It is not 5 per cent.; it is half of the rate.

2041. Did the extra 1s. cover the whole loss?—Yes.

2042. (*Chairman.*) Why did it not go on?—The property was sold and we lost it.

2043. It is the case that the burghs have an option in that case to collect through the owner?—Yes, that applies to houses let for less than a year, no matter what part of the year. If you are letting a house from Martinmas to Martinmas, they would hold you liable. For any period other than from 28th May to 28th May they hold the landlord liable for the rates.

2044. In that case, what was the let?—Monthly.

2045. Have they exercised that power in many cases?—In a good many cases. The Burgh of Johnstone had it in the Court of Session, and it was held there that the rating authorities were entitled to payment from the landlord.

2046. Why have they not done it in all cases if the advantage is so great to them?—Because of expediency, I suppose.

2047. Did you find there any difficulty in the way of friction, and the tenants objecting to pay rates to you?—They objected to pay what we charged, and they made a protest.

2048. But they had no objection to paying merely the rate? We have been told that some factors think it would introduce great friction between factors and tenants if the factors had to collect the rates, apart from any addition. Do you think there is anything in that?—I do not think there would be what you would call friction if you were allowed to collect the rates in a slump sum with the rents.

2049. Without specification?—Yes, without specification, merely stating that their rent was so much including the rates.

2050. Why?—There are a great many tenants, even respectable people, who look upon a rate as a thing that is an imposition, and if they can escape paying it they will do so, and will not think that they are doing anything wrong. They will tell you, "I am quite willing to pay the rent, but as for paying the taxes, that is another thing."

2051. Suppose you had the other system, that the rating authorities give you a sufficient allowance to cover losses and trouble, would there be any difficulty, so far as the tenants were concerned, in your collecting the rates?—Not if we were allowed to put it in as rent and take it as one sum—if we had not to collect it separately.

2052. What do you say to the other system suggested, that if you had short lets the rating authorities might make short collections. Do you agree with that?—Yes.

2053. Quarterly?—Yes, I understand they do that in London.

2054. Of course you do not kuow what alterations that might involve on other Acts of Parliament, such as the Valuation Acts?—No. Of course they make surveys during the year. By the last Valuation Act they have been able to put on tenants who have entered between times, and they make surveys during the year to rate those who have gone into empty houses.

2055. That is a question of detail?—Yes. Of course Scottish landlords have a different view from English landlords, because they pay a very large rate direct to the authorities. Ten per cent. of the gross rental is paid to the rates, and seeing that they pay their own share to the rating authorities, it is rather hard to make them collect the other share.

2056. Suppose there was an allowance to be made, have you considered whether the allowance in Mr Cross's Bill is sufficient?—It is quite inadequate.

2057. If it be the fact that there is a loss in the case of the Corporation collecting, a loss of some 26 per cent., do you think it would be less or more if the factors collected the rates—taking houses of £10 and under?—They would require to allow the landlord a rebate for empty houses. As it is they charge rates on all houses occupied at Whitsunday, and some houses may stand empty for months in course of the year.

2058. (*Mr Binnie.*) Your experience in Partick in the house you mentioned was that, if you had only charged the tenant the net two shillings that you paid, you would have required to have got another shilling?—That is so.

2059. Otherwise the landlord would have lost one shilling?—Yes.

2060. So that is 50 per cent. in that particular instance?—Yes.

2061. (*Chairman.*) You said you thought there would be a difficulty if the rates had to be specified as collected apart from the rents?—Yes.

2062. If it be right that an occupier should know what he is paying, and if it were necessary to bring that about to specify them separately, do you think that would be a difficulty?—He gets that at present when he receives his assessment paper, and he sees what he is charged assessment on. Just now we pay the water rates on rents under £10, and we add the water rate and the stair gas to the rent and make it one sum.

2063. You do not specify them?—No.

2064. (*Mr Howden.*) Is it usual to do that?—Yes, with rents under £10.

2065. But there are some exceptions?—I do not know if there are.

2066. But it is not essential that it should be done?—No, but it is a convenience.

2067. (*Chairman.*) And above £10?—They are very often collected separately by the landlord.

2068. So it can be done if it is thought desirable under £10, as above £10?—Yes.

2069. (*Mr Binnie.*) But it is the Corporation that gather the rates from the tenants of houses above £10?—The water rates on houses above £10 are collected by the Corporation, but under £10 we have to collect them, and we are allowed a commission of 25 per cent. in the case of houses under £7 and 15 per cent. in the case of houses under £10 and above £7.

2070. Suppose you have a slump sum covering both the rate and the rent, in the case of the rent you can exercise your hypothec?—Yes.

2071. In the case of the rate you cannot?—We can in the event of their being slumped.

2072. Is that under the Burgh Police Act?—Under the Small Debts Act. You will find that in Sheriff Lees book.

2073. In your notes you point out that rates and taxes are not covered by the landlord's hypothec?—That is so.

2074. But you explain that when they are slumped you can exercise the landlord's hypothec?—Yes.

2075. So you have a better remedy than the Corporation has when they are slumped?—Yes, the rates and the rent go together.

2076. Suppose you collected the occupiers' rates under a compounding system, would it increase your clerical work?—If we had to give separate details?

2077. Yes?—I think it would.

2078. But not if it was slumped?—I think not, because all the payments would go together. We collect the stair gas just now.

2079. Do you collect the stair gas in all cases?—Yes.

2080. You do not see, from your point of view, any reason why, if thought desirable, the Corporation should not arrange for a quarterly collection of rates?—That is so. They are the responsible authorities, and they should do their own work.

2081. In many cases of working men getting paid from time to time, the oftener the collection the more likely the rates would be paid?—Yes, it is not so hard upon them.

2082. Now, what about the system of tenants getting relief from payment of rates on the ground of poverty? Do you think that that in any case should be conserved?—Yes, I think so. As it is just now, I understand that anyone in receipt of parochial aid is relieved of his police assessment by showing his card.

2083. And so far as you know the system is a proper system?—Yes.

2084. And it is not abused?—No, we have a number of people in small houses who get relief from the parochial authorities.

2085. Suppose the proposed change were made, would there be any reason why, even though the proprietor paid primarily, the tenant should not still get relief?—Where they remained in the house for the whole year they could make a claim through the landlord, and the landlord could recover it and repay it to them.

2086. (*Mr Binnie.*) Or they could apply direct to the authorities?—Yes.

2087. (*Chairman.*) Summing up the matter from the point of view of the Association, I think you suggest certain remedies?—Yes. (1) Shortening by statute the period of notice before Whitsunday, from forty days before the 15th of May to thirty days before the 28th of May (the removal term). We are unanimous about that. Then (2) the quarterly collection of rates by the Local Authorities, both Corporation and Parochial Board. We are unanimous about that. And further (3) it is suggested by a number of members of the Association to adopt

legislation on the lines of the Bill drafted by the Partick Landlords and Housefactors Association.

2088. That is a point on which there is a difference of opinion?—Yes. Some wish legislation, and others think it might be done by each member acting on his own account.

2089. But they all think that the arrangement is a desirable one?—Yes.

2090. (*Mr Esslemont.*) I think you said from your experience there is no desire among tenants of houses of £20 and under for shorter lets?—That is so. My experience is that the people are quite willing to go on with the present system.

2091. I think you went further, and said that in your opinion the agitation was fermented by English immigrants?—I think they have a great deal to do with it. Letters in the newspapers have bulked more largely than any personal interviews that I have had with people.

2092. You are of course aware that this question has been ventilated both at municipal and at the parliamentary elections?—Yes.

2093. And candidates and members of Parliament representing all parties have recognised that there is a grievance, and they have undertaken to do what they can to secure legislation to remedy this grievance?—I do not think that the fact of members of Parliament undertaking to do certain things actually shows that the grievance is worthy of account, because they very often promise these things without any knowledge of the circumstances.

2094. That would not be true as regards some of the gentlemen who have interested themselves in this question?—There may be a few of them, but a great many of them do not know the working of the question at all.

2095. Do you suggest that in connection with Mr Cross?—I do not think that his Bill is at all suitable.

2096. You said that you thought that the warning-out period had a very direct bearing on the question of missives?—Yes.

2097. And re-taking of houses?—Yes.

2098. I did not quite follow that. Will you be so good as to explain it to me?—We require to send in a list of our tenants who are removing on 28th May to a sheriff officer, so that he may warn them out of their houses, and these warnings must be all completed before 4th April. Now, in order to have that list complete, we must have a week or two to see our tenants and get their answers. When we know those who are leaving on 28th May, we make up our list and send it to the sheriff officer for the warnings to be served. You are compelled by law to send a formal warning.

2099. You never trust to the tenant removing without warning?—We have had bitter experience of trusting to that.

2100. I think you admitted that from removals taking place practically all on one day, there was considerable inconvenience to tenants and risk of damage to their effects through the hurry and scurry of the removal and so on. I suppose the same thing is true to some extent in regard to the property; it also suffers damage through removals?—Yes.

2101. So if the removals were distributed over the year there would be a material saving both to the tenant and to the proprietor?—Yes. Of course we are speaking in ignorance of how the shorter lets would really affect the habits of the people. The habit of removing on 28th May is so engrained that I am afraid you might have that congestion for years to come.

2102. You are against a universal system of monthly lets?—Yes.

2103. But you would favour a system of quarterly lets accompanied with a quarterly collection of rates?—Provided the landlord was not made liable for the rates.

2104. You would favour it with that qualification?—Yet.

2105. (*Mr Dobbie.*) You may have already explained it to the Committee, but perhaps you will be good enough to tell me this: assume there is to be a change in favour of short lets, what period of notice would you as a practical man think would be desirable?—A month; I would give a month's warning to a quarterly tenant.

2106. And what would you give to a monthly tenant?—Ten days.

2107. I think Mr Cross suggested a week in the case of monthly tenants?—It is held to be one-third of the period for which the house is let, and I think that is quite convenient.

2108. Ten days in monthly lets and a month in the case of quarterly lets is what you would suggest?—Yes.

2109. As to the view taken by the sheriff that where rates are slumped with the rent, it is treated as one contract for a rent on the footing of the landlord making certain payments?—Yes.

2110. Have you any view with reference to a clause in this Bill making the measure optional to different areas,—giving a local authority the right if they thought fit to adopt the Bill?—That would defeat the objects of the Bill. It is only recently that a Bill was introduced to make the universal terms of removal 28th November and 28th May. Previously the dates of removal varied in different burghs and counties; thus, the date of removal in Dumbarton was 15th May, while it has always been 28th May in Glasgow; so that a tenant, formerly, coming to Glasgow from Dumbarton had to store his furniture for about a fortnight before getting possession of his house.

2111. If there was to be a change, you think that it ought to apply to all the different areas?—Yes, to the whole of Scotland if the working man is to have the benefit, because what is the good of freeing him from his house if he cannot get a house in the place that he is going to?

2112. What should be the limit in the event of there being such a Bill passed,—what would you advise as the limit for a working man's house?—I think the limit of £20 is a fair enough one. It might be a little less. There would be certain anomalies under that Bill. Take a tenement with two room and kitchen houses, with rents up to £22. Very often the top flat of a tenement of that sort is rated at £19. So you would have this tenement divided, the top flat with quarterly tenants, and the other flats with yearly tenants.

2113. The Bill suggests that different burghs may have a different maximum, Paisley £16, Glasgow £20, and so on. Do you think that that is at all necessary?—I do not think so.

2114. You mentioned what I think is a very difficult part of the proposed scheme, namely, the question of the exemption on the ground of poverty. Do you think it practicable to have any method under which tenants would get the present exemption, except in the case you gave Mr Binnie of the tenant staying in the particular house for the whole period? Would it be practicable to have some kind of arrangement under which a tenant staying six months in one house and paying to the landlord the six months' portion of rates along with his rent, going to another house and paying to the new landlord along with his rent the six months' portion of rates there,—assuming that he was entitled to exenption—could still get the benefit that he enjoys at present?—The only way would be to apply at the end of the year and to show that he had paid his rent and that the rent included the rates.

2115. It might be by certificates from more than one landlord?—Yes.

2116. (*Chairman.*) If the rates were collected quarterly there would not be so much difficulty?—No.

2117. (*Mr Howden.*) You say in your precognition that the agitation for shorter lets has extended to tenants of houses over £20?—Yes.

2118. That would show that some of these people at least have a desire for shorter lets also?—I put it down to selfishness on the part of the tenant wanting to serve himself. He had entered into a bargain and wanted to break it.

2119. He wanted to shift between terms?—Yes.

2120. Do you see any objection to extending such a Bill as Mr Cross's to such tenants as those? These, I presume, will be the better class of tenants that you have very little difficulty in getting your rents out of?—Yes. There might be some system where a person would take a house for a year or on a lease, and he would give six months' warning when he wanted to leave before the Martinmas or Whitsunday term.

2121. Why would you take a six months' warning?—Because a house of that sort is not so easily dealt with as a small house, and to get a new tenant in is a very expensive matter.

2122. You have told us that one-third of the let is the usual period for warning out?—In yearly lets it is only forty days, but it must be served before the Whitsunday term. You could not deal with a large house on the same terms as with a small house, because there is very much more at issue,—the standing empty is a very serious matter as compared with the standing empty of a £10 house.

2123. But it is to obviate what you consider to be a grievance, namely, people having to remove all together on the 28th of May. Do you see any reason why a tenant of a £25 or £30 house should not take his house from September to September, instead of them all taking their houses from 28th May to 28th May?—The date of warning might be modified so that they might remove at the August term and the February term as well as the May term, but a landlord with a large house would require a longer notice than a landlord with a small house.

2124. Is there any reason for taking the 28th of May as the absolute removal term?—Anything else would be an experiment.

2125. Would that not apply to business premises too?—No, I think not.

2126. Why?—Because you must have some security as to your tenure, and the great bulk of business premises are let on leases.

2127. My point is not that you should do away with the lease, but that the tenant should have the privilege of taking premises on a lease from any particular date as at entry,—that is to say, he might not enter at May, but he might enter at August or November, and the term of lease should expire at that time of the year. You do not see any objection to such a system as that?—Yes, the objection to that system is the taxes. The taxes come in wherever we turn.

2128. But suppose there was a quarterly collection?—That would remove a great many of the objections that are before us just now. What makes this letting question very important is the collection of the taxes. If a tenant comes in at Whitsunday and remains in till August and then runs off, and you again let your house in November, the prospective incoming tenant will say, "I won't take that house until you free me from the taxes," because the City take the person they find in the house.

2129. That does not apply to poor rates?—No, these are looked upon as a personal debt.

2130. (*Chairman.*) I think you were to put in some missives?—Yes, I hand in a missive and a monthly book.

2131. I would ask you to look at Article 6 of Mr Marr's missive, dated 1887, where you will see the following:—"In the event of my requiring to leave Govan and its 'neighbourhood on account of my having had to find 'employment elsewhere, the house is to be taken off my 'hand at the end of any quarter during the currency of 'this let upon my giving one month's previous notice to 'that effect and upon my paying up all rent then due 'along with the proportion of stair gas and the water rates 'applicable to my house." What do you say to that as a reasonable suggestion?—That is leaving on account of work?

2132. Yes.—I think if it was limited to that there would be no great objection to its being carried out, but they would require to show that it was owing to necessity that they were going, and not merely because of a whim.

2133. Would you extend it to loss of employment necessitating the taking of a cheaper house, or should it be limited to leaving the district for other work?—Really, I do not think that the difference between any house that they would take and the house they were occupying would come to very much. I do not think it would be a vital matter, a man wanting to shift from an £18 house to a £15 house.

2134. The real point is that you would object to any clause of that kind if it gave an absolute right?—Yes, because I think it would be abused. The landlord would be bound, while the tenants would not be bound.

2135. (*Chairman to Mr Madden.*) Would you tell us about your business? You have been in business for upwards of twenty years, and your experience has been principally of dwelling houses?—Yes.

2136. At present you have under your charge about 800 houses, the rents of which are under £10?—Yes.

2137. From what to £10?—From £4 to £10.

2138. Have you anything under £4?—No, and I have very few at £4.

2139. Are these all let monthly?—Yes.

2140. The tenants can remove on giving ten days' notice under the Removals Act?—Yes.

2141. You have about 350 houses the rents of which are under £10 like the others, but they are let yearly?—Yes.

2142. In these cases the rents are payable quarterly or half-yearly?—Yes.

2143. Have you many payable half-yearly?—Not a great many, but a number do pay half-yearly.

2144. Some factors have told us that they only collect quarterly and monthly. Is that usual?—No, I have a good many that pay half-yearly.

2145. Is that the better class?—Yes, and it applies also to houses of £10 and £20 in the case of pensioners, annuitants, and a great many respectable people with small incomes such as that; these pay half-yearly.

2146. You have charge of over 700 houses at rents between £10 and £20?—Yes.

2147. Are all these let yearly?—Yes, without exception.

2148. And the rents are payable quarterly or half-yearly?—Yes.

2149. Do you concur with the evidence that Mr M'Michael has given in reference to the grievance and the complaints that you have found from tenants relating as they do to the too long period?—Yes.

2150. And not relating to any question of short lets as against long lets?—No, none.

2151. Mr M'Michael has explained that while he is in favour of the period being shortened, he thinks it should be done by a voluntary arrangement. What view do you take?—I should be very glad if it was possible, but I do not think it is human nature. It must be done by legislation, to put every man on an equal footing.

2152. Do you think that they should all be on an equal footing, and that could only be brought about by legislation?—Yes.

2153. And if there was to be legislation, you think the clause suggested by the Partick landlords and house-factors would fairly well carry it out?—Yes, but I take exception to the paragraph affecting new property.

2154. What is wrong with that?—I think that they should be put on the same footing as yearly lets, from 14th or 15th March, new as well as old.

2155. What would you do with property that was ready in February? Would it have to stand?—They could let it to 14th March of next year, or they could let it for fifteen months, from February to Whitsunday following.

2156. Suppose it is ready in December?—Then let it from December to Whitsunday, and from Whitsunday on.

2157. Unless you had this clause, would not letting from December to Whitsunday be prohibited?—I do not think so.

2158. Suppose the property is ready in January, if you enact that, it would be still possible to let for a short period and then let from Whitsunday?—Yes, or let it for the fifteen months right on.

2159. Do you think that the clause as framed would give an undue advantage to new property?—Yes.

2160. With that exception you agree with it?—Yes.

2161. Do you agree that there is a great practical difficulty due to the question of rates?—Yes. There is no desire on the part of the respectable portion of the community for short lets.

2162. But suppose short lets were to be enacted, do you agree with Mr M'Michael that the question of rates introduces a great practical difficulty?—Yes.

2163. What do you say to the suggestion that that may be got over by the Corporation collecting quarterly?—That might overcome it. That is the only feasible way I can think of.

2164. But you object to the matter being put into the hands of factors to collect the rates along with the rents?—Yes, I don't wish it.

2165. You cannot, any more than Mr M'Michael, tell us from practical experience of the working of that system, how it works?—Do you mean with the rates and rents?

2166. Yes?—I have only one instance, and that was in Kinning Park before Glasgow swallowed it up. They charged me with the rates there on all the houses let at 8s. 6d. a month, and I never got a single cent from the tenants.

2167. What was the net result?—I had to pay all the burgh rates on that property.

2168. I don't suppose it was a large amount?—Yes, it was. It amounted to nearly £20 for that block.

2169. Does it come to this, suppose the rates are collected quarterly direct from the occupiers by the Corporation, you don't see any practical objection to quarterly or half-yearly lets instead of yearly lets?—No, I don't see any real objection. I don't think it would be in the interests of the tenants to have them, because under our yearly system just now, if a tenant who is a respectable and clean person takes a house for a year, we are always willing to meet him in the way of papering and painting and doing up the house. Now, if we anticipate four such doings-up in the year, it would be a serious matter, and it would resolve itself into the English system, where you get four walls and do your own papering and painting. I don't think it would be in the interest of the tenant.

2170. A tenant for the year has two advantages: he has security of tenure, and he has a good deal done for him that would not be otherwise done?—Yes.

2171. I see that you limit the statement in your proof to quarterly and half-yearly lets. Suppose they were monthly lets, the objection you have just stated about the tenant not getting much done for him would be emphasised?—Yes. I have 800 monthly lets, and these, with few exceptions, have nothing done for them in the way of keeping the house clean and water-tight—I mean there is nothing done in the way of papering and painting. If they were decent tenants you may give them some paint to put on and some paper to hang, but they are not treated in the same way as a yearly tenant.

2172. Do you find that a yearly tenant, being secure for a year, will do something for himself and will put on paper for himself if he is a handy man, and will do other things that he would not do if he was only there for a month?—Yes, sometimes a handy man will do that.

2173. Would the same man do it with a monthly tenure?—I don't think so.

2174. Have you not found cases where a man had to remove, say for change of employment, and the result was that he was considerably out of pocket, because he had to

pay your charge and the rent for the proportion of time that elapsed before the sub-let took effect?—It is not often that he is out of pocket in such a case as that. Very often we get a house sub-let, because it is in his interest to get it sub-let, and he looks round and generally finds a tenant for us.

2175. Is it a common thing for a new tenant to be presented by the principal tenant?—Yes, quite common.

2176. Is it more common than your finding a sub-tenant?—I don't know, but it is a very common thing.

2177. Mr M'Michael gave us evidence of actual results. Could you say how far you agree with him so far as he talked of the amount actually paid in his experience in a year by sub-tenants not being got?—During all the years I have been in business, I have only one instance of that.

2178. How long have you been in business?—Twenty-four years. This year there was a case in Eglinton Street. I warned the people there that the house would not sub-let.

2179. Did they come in the middle of the term?—No. They took a house between Candlemas and Whitsunday last—they came before Whitsunday—and the change was into a different house in the same property. I warned them that I feared that their house would not sub-let. It has not sub-let, and they have had to pay the rent.

2180. How much?—£19, I think.

2181. Were they removing into a higher priced house?—They were going from the top floor to the first floor.

2182. They would have less of a stair to climb?—Yes.

2183. And you warned them that there might be a difficulty?—Yes.

2184. Do you say that in all your time you have never had another case of net loss to a removing tenant?—I don't remember a single case.

2185. There are many cases where they have had to pay your 5 per cent. or whatever it was?—These are regulated by circumstances. As often as not I do not charge a single fraction. If the tenant is removing through loss of work or poverty, I charge nothing, but if he is improving his condition I charge 5 per cent. We are usually controlled by circumstances in these cases.

2186. Suppose Mr Cross's Bill was passed, and suppose you had quarterly lets, you would still of course have the same grievance, although to a less extent, of a man in the middle of the quarter wanting to leave?—Yes, at least I anticipate it would be the same.

2187. Do you think, if the English system were introduced, and we had monthly lets all over, you would then have a grievance of the opposite kind, viz., men complaining that they could not get security of tenure?—I am afraid our Scottish nature is different from the English in regard to that. Our people want to know where they are to be for some time. Judging from my experience, they would want fixity of tenure.

2188. Under either system there must be individual cases of hardship?—There is bound to be more or less hardship in all cases.

2189. Suppose you had monthly tenure enacted and nothing more, you might have the case, I suppose, of a tenant going in in anticipation that he was to remain there and doing his little improvements, and then the landlord turning him out next month?—Yes.

2190. You say in regard to the number of sub-lets, that you have had requests to make you put it at 4 per cent. of your tenants under £20 rental?—Yes

2191. For how many years is that?—Ten years.

2192. What is your district? Is it the centre of the town?—No, it is chiefly in the outskirts, Crosshill, Gorbals, Partick, Govan, Renfrew, Springburn, etc.

2193. Have you both increasing and decreasing districts?—Yes.

2194. (*Mr Esslemont to Mr Madden.*) With regard to the case that you cited—the only case in your experience of twenty-five years—I think you said it was a case of a tenant removing from one set of apartments to another in the same house?—Yes, in the same tenement.

2195. And it took place immediately before Whitsunday last?—At Whitsunday last.

2196. Did you in these circumstances hold the tenant liable for both sets of apartments?—Certainly.

2197. Although the house into which he removed was unlet at Whitsunday last?—There was no doubt that it would have let, because it was one stair up and there were people after it. It would certainly have let.

2198. I thought that under the present system you had all your houses let three months before Whitsunday?—All the houses were re-taken for the year, but there was a tenant one stair up who wanted to remove to another part of the city, and I undertook to sub-let her house. She said that she had a person who would take it, but the tenant on the top floor had asked for this house, and had put his name down for the first change downstairs. When they heard of this house they immediately came and wanted to take it, but I warned them that there would be great difficulty in letting their house three stairs up. I said that I could let this house, which was one stair up, but if they took it they would be responsible for both houses.

2199. (*Mr Binnie to Mr Madden.*) Have the house factors any grievance in regard to the present system of ejection that you would care to mention to the Committee?—The present system is rather unwieldy and expensive. The ejections are generally taken through the Burgh Court here. To commence with, you have to give ten days' notice to a tenant that you are going to eject, and then you take proceedings which take other seven days or so if they put in an appearance and an objection, which they generally do now; the presiding magistrate, if he is there—sometimes he is not there, but an official is in his place—gives them ten days to remove again. So really, after losing one or two months' rent, it takes almost another month before you can put them out, and it costs about 10s.

2200. I raised that point to know whether you could suggest a remedy that might become operative?—Shorten the period. I don't object to give the tenant ten days' notice in the first instance to remove, but if he does not remove at the termination of the ten days, then present a petition and get decree immediately to eject.

2201. (*Mr Dobbie to Mr M'Michael.*) I see the following sentence in your condition of letting: "Should the rent 'fall into arrear, the tenant to remove on receiving three 'days' notice." Following on that, do you still require to go to Court and get the warrant to eject?—The magistrates do not give effect to that. The tenant, by paying 6d. at the Town Clerk's office in lieu of lodging answers, gets ten days for removal.

2202. So a condition like that does not help you to any extent?—No, they don't give decree on that.

2203. (*Mr Dobbie to Mr Madden.*) Have you any houses above £10 let monthly?—Yes, one.

2204. As against some 800 let under £10?—Yes.

2205. Do you find that the class of tenants under £10 are usually an inferior class of tenants?—No, you get all sorts. We have some under £10, the most respectable people in the city. We have artisans and respectable young tradesmen in single apartments at about £7, and in two or three years you find them in £50 houses.

2206. Have you any experience of houses standing empty in the latter part of a yearly let without any attempt to get a sub-let?—No, none. I have no experience of that, and I have never heard of it. I don't think any factor would do that.

2207. The factor has no interest if he gets the rent?—As a man he has an interest to save his tenant; he has an interest as a man.

2208. You have something like 2000 houses under £20. Do you require in many cases to exercise your right of hypothec?—Sometimes, but not often.

2209. In how many cases out of 2000?—If I take an average of years, I don't think I will have half a dozen in the year.

2210. A suggestion has been made to abolish hypothec. Would that operate harshly against factors and proprietors?—I think so. I don't object to your doing it if you put me on the same footing as a seed merchant or a butcher or a baker, or anyone else, "If you don't pay your account 'by the end of the week, then I will not give you anything 'more till you pay it. If my rent is due and you don't 'pay it, then I will turn you out."

2211. Upon ten days' notice?—No, upon no notice. The shopkeeper does not require to give notice. Why should the landlord?

2212. We need not discuss that. In your experience half a dozen cases represents the number of times annually where you require to exercise the right of hypothec?—That is the outside number.

2213. Another suggestion made to the Committee was that in any event tools and wearing apparel might be exempt from the landlord's preference?—Yes.

2214. You have no objection to that?—No. That is tools of trade? I think that they and wearing apparel are already exempt. You cannot sell these.

2215. Assuming that they are not exempt, you don't have any feeling on that?—No.

2216. (*Mr Howden to Mr Madden.*) You referred to the Partick Bill, and you said you did not agree with the terms of that Bill so far as it affected new property. We have heard something about the difficulty in getting bonds on small properties. Do you not think that if you objected to any man putting up a property and then letting it, it would seriously affect the bonds on that property when he had no tenants to go into the property?—No, because everyone would then be on the same footing.

2217. You miss the point. The property may be ready for bonding and the builder would be anxious to secure a bond. Is it not the case that a man more readily lends money on property when he knows that there are tenants going into it than otherwise?—Yes.

Mr J. M'Michael and Mr H. W. Madden.
11 Dec. 1906.

2218. Would such a clause as that in the Partick Bill act against the interests of the builder?—I don't think so, but I do not grasp your point. I stated that if the house was ready for occupying in December, then you could let it from December.

2219. But you could not let it from Whitsunday?—No, not until 14th or 15th March.

2220. You also spoke about factors being pretty anxious to oblige their yearly tenants by doing repairs. That would not apply if the tenants were monthly?—That is so.

2221. When do factors usually do repairs on property, or when do they usually promise?—I am afraid they are always promising, but the usual time is immediately after they enter the house.

2222. Or in the case of tenants that are staying on, it is just when they re-take their house?—Yes.

2223. Sometimes factors forget their promises on these occasions?—I have heard of such cases.

2224. If a tenant had liberty to come to you every month to get these repairs done, the tendency would be that they would be done?—They come every month; I don't hinder them.

2225. If they had some power over you, then they would get the repairs done?—It is mutual. Some factors might say, "If you are not satisfied, then you can leave."

2226. (*Mr Binnie to Mr Madden.*) You were asked about hypothec, and you said you had only had to exercise it about six times in the year. Do you think it was an advantage to you in other cases besides these in which you had actually to enforce your rights? Did any tenants pay because they knew that you could enforce it?—Yes. These six cases that I have instanced were not six cases where I exercised the full right—that is to say, where I sold. I sold two last year. These were cases where I sequestrated as a threat, and it had the desired effect. I don't care about selling.

2227. But even in cases where you did not go the length of sequestrating, then do you think that the hypothec was an advantage to you?—Yes.

2228. In regard to the letting of new houses, I understand your position is this, that you would not object to builders letting the new houses for any term up to the following Whitsunday; if their house was ready in November they could let from November to Whitsunday?—Yes.

2229. And if they were ready in February, then they could let from February to Whitsunday?—Yes.

2230. Probably with a promise that the tenant could sit on?—Yes.

2231. If they were ready on 15th March, they could let from 15th March to the Whitsunday in the following year?—Yes, that is my position.

(*Mr M'Michael.*) I think there was some question as to the ejections, as to why we preferred the Burgh Court to the Sheriff Court. One reason I may state is that in the Burgh Court you can have six petitions on the one form, and that makes it cheaper. The factor can take out the ejections in his own name. When going before the sheriff, you require to give the proprietor's name, and the petition must be signed by a law agent.

2232. (*Chairman to Mr M'Michael.*) It is the question of cost?—Yes, and it is not so easily managed, because in many cases the property is held by trustees, and the factor may not have their individual names. The Sheriff won't take the form unless the names of the trustees are given. That is the reason the Burgh Court is run after.

2233. (*Mr Esslemont.*) So you prefer the magistrates with all their weaknesses rather than go to the sheriff?—Provided that they were a little more just to us.

2234. (*Mr Dobbie to Mr Madden.*) Assuming short lets were universal, am I right in thinking that your difficulty in regard to new buildings would disappear?—Yes, that is so.

Mr J. S. Lang.

Mr J. S. Lang, called and examined.

2235. (*Chairman.*) You have been a member of the Partick Town Council for eight years?—Yes.

2236. You yourself are a writer in Glasgow?—Yes.

2237. Has the question that we are considering here been before the Partick Town Council?—Yes, from time to time, and latterly at the end of February and March of this year.

2238. Was it considered by the Town Council?—It was considered first by the Parliamentary Bills Committee and afterwards by the Town Council, who approved of the actings of the Committee on the subject.

2239. You are here to give the views of the Parliamentary Bills Committee approved by the Town Council?—Yes.

2240. Was there any difference of opinion in the Town Council, or were they unanimous?—The decision was unanimous. There were a few opinions expressed, but there was no amendment to the approval of the minutes moved.

2241. How many are there in the Town Council?—Eighteen.

2242. Do you have any representatives of the working class?—We are all representatives of the working class.

2243. But are there any working men in the Town Council?—There are two specially who pose as Independent Labour Party men.

2244. You have all parties in your Council?—Yes.

2245. The area of Partick is 1006 acres, and it has an estimated population of over 65,000?—Yes.

2246. That is an increase of some 11,000 since the last census?—Yes.

2247. The assessable rental of the burgh for 1906–1907 is £337,110, and the assessments levied from occupiers for the year 1906–1907 amount to 1s. 10⅝d. per £, and upon occupiers to 8⅝d. per £?—Yes.

2248. At the present rates that gives a revenue of £44,805?—Yes.

2249. Your population is a mixed one consisting of the working classes and residential classes?—Yes.

2250. Look at your total as at 21st November?—This is a table dividing the houses into one apartment, two apartments, three apartments and four apartments and upwards.

Of one-apartment houses there are . .	2455
Two-apartment houses . . .	6642
Three-apartment houses . . .	3428
Four apartments and upwards .	2593
Making a total of . . .	15,118

2251. You have told us how the population has increased 11,000 since last census. Have the whole of these differen sizes been increasing proportionately, or have some been increasing in larger ratio than others?—It is a general increase. The houses erected between 31st March 1901 and 21st November 1906 were as follows:—

One apartment	168
Two apartments	1971
Three apartments	796
Four apartments and upwards .	402
Making a total number of . .	3337

2252. Out of which nearly 2000 are two-apartment houses?—Yes.

2253. That is where the big increase has been?—The totals compare in the same ratio. There are 3428 three-apartment houses out of a total of 15,118.

2254. (*Mr Binnie.*) But the one-apartment houses are not increasing in the same ratio?—That is so.

2255. (*Chairman.*) The number of unoccupied houses of all sizes in the burgh was how many?—12,294, of which—

210 were of one apartment;
568 were of two apartments;
294 were of three apartments; and
222 were of four apartments and upwards.

2256. What aspect of this question has been chiefly before you?—We have dealt with the question in all its aspects, but the difficulty we, as a Town Council, see is in the rating question.

2257. Assume that the proposed changes were made from yearly lets to short lets, have you directed your attention to what would happen in that case so far as rating is concerned?—I would almost require to take it in the order of my notes, in case I overlook something.

2258. But to what extent does that affect you? You have the general burgh assessment and the general improvements rate? Are these the two things?—The principal rate is the burgh general assessment. Notice of that rate is sent out in the month of October. Our assessment rates are made up in September, but of course before the assessment is imposed the Town Council has got to consider what assessment will be put upon the burgh, so that during the year, about the month of August or July, we consider the requirements of the different departments and find out what rate has got to be imposed so as to cover the expenses of these departments.

2259. You are under the Burgh Police (Scotland) Act, 1892?—Yes.

2260. You have got no separate Act?—We have no special Act.

2261. The assessor having made up the valuation roll in

Mr J. S. Lang. Dec. 1906.

the end of May or the beginning of June——?—First of all, let me say that the assessor who makes up the roll is not a burgh official. The assessor who makes up the roll is the assessor of the county of Lanark, and we have got to accept his roll when it is ready. We cannot expedite the making up of the roll in any way. It is made up in this way: in the month of May the factors give the returns to the assessor of the county. The assessor of the county makes up the roll, and he takes four months to do it. We do not get the roll until the end of September or the beginning of October, so till then we cannot tell what the valuation of the burgh is.

2262. You would have to consider what the rate was going to be in the previous month of August?—Yes.

2263. You assess in September, according to the valuation roll then supplied to you by the county assessor, and, as we know, the owners of premises let at a rental of £4 and under are assessed for occupiers' rates as well as for owners' rates, what deduction do they give for such assessment?—Ten per cent.

2264. Is that under the Act?—Yes, it is under Section 344 of the Act.

2265. Then they have relief against the occupier?—Yes.

2266. In practice, is it your experience, as we have been told by witnesses, that there is no distinction made by the owner when he collects the rent; he does not specify so much for rates?—I cannot speak to that.

2267. Where premises are let for a period less than a year, whatever the rent may be, are owners liable in addition to the occupiers under Section 345 of the Act?—Yes, the owner is liable as well as the occupier.

2268. But in your practice in Partick, do you charge the owner primarily?—No.

2269. You do not exercise the power that you have?—No. Of course if the place is unlet we have no occupier to serve the rate upon, and as it is returned as unlet, we do not charge the owner with the occupier's rate.

2270. Suppose the premises are let for less than a year at a rent above £4 and they are occupied, who do you charge?—The occupier.

2271. You have power under Section 345 to charge the owner direct?—Yes, if it is let in shorter periods than a year.

2272. You do not exercise that power?—Yes, we do exercise it.

2273. I thought you said that where the premises were actually let for less than a year you assessed the occupier direct?—No, we assess the occupier because we do not know for what period the house is let. The place is returned on the roll as let to A. B., and we assess A. B., not knowing whether he is there for six months or a year.

2274. Can you not find that out?—Yes, with a little trouble, and we do find it out during the year.

2275. Is the law in this position, that if you chose to inquire in any particular case and found that the let was for less than a year, then you could charge the owner direct?—Yes.

2276. But you do not make the inquiry and you do not do it?—As you will see on page 4 of my notes, we do make inquiry, but we do not have a staff to make inquiry at every house in the burgh. We accept the assessor's roll as we get it.

2277. Why do you make inquiry in these cases and not in others?—Because these are lets for less than a year, and it is in the lets for less than a year that we send to the factor and ask him to fill in the details on a statement. He does so and returns it to us.

2278. You only got fifty last year?—Yes.

2279. There must be many more than that?—That is fifty factors, fifty returns, but there might be ten times that number of individual cases.

2280. Take the cases where owners in Partick are liable for occupiers' rates and give us the enumeration of them. In the first place they are liable under £4?—Yes.

2281. In all cases?—Yes.

2282. And above £4?—They are liable under Section 346 where the premises are occupied for a part of a year only. That includes several things: (1) where the houses are incomplete at the date of the roll being made up and not appearing in it but subsequently let during the year; (2) the subjects on the roll returned as empty but subsequently occupied during part of the year; (3) houses let during part of the year to one tenant and during another part to another tenant, both holding under leases for less than a year; and (4) subjects let for a year or longer and only occupied for part of the year by one tenant and for another part of the year by one or more tenants.

2283. Take the second case, subjects on the roll returned as empty, but subsequently occupied during part of the year. How does it come to your knowledge that they are subsequently occupied during part of the year?—There are two rolls made up; there is a supplementary roll which is made up between January and March.

2284. When do you get it?—We get it in April.

Mr J. S. Lang. 11 Dec. 1906.

2285. And it is from that that you get the information?—Yes. We assess under that again on all names appearing in the supplementary roll.

2286. So you get two rolls, the original roll and the supplementary roll?—Yes.

2287. Are there not cases where the subject might be let for a part of the year without that appearing in the supplementary roll, namely, for the part of the year subsequent to the supplementary roll being made up?—There might be.

2288. And they would escape?—Yes, unless the factor gave notice.

2289. It has been decided in the Sheriff Court that under Clause 345 the occupier as well as the owner must get a notice of the assessment imposed for which owners are also liable?—Yes, in order that the occupier may be made liable.

2290. May I take it that the only cases where occupiers are paying rates directly or indirectly without knowlege of what the rates are, are the cases of houses under £4?—Yes.

2291. In every other case they know what is being paid either directly or indirectly through the landlord?—Yes, that is so. The occupier in every case gets a notice.

2292. And if that is a desirable thing, it is being done except in the case of those under £4?—Yes.

2293. Under Section 346 power is given where premises are occupied by different occupiers during the assessing year to assess a new occupier, although his name does not appear on the valuation roll for the period of his occupancy, and the owner for the rest of the year?—Yes, that is where there is a change of tenants. Last year the number of cases dealt with under that section was 607.

2294. If the net number of removals increase, then that number would increase proportionately?—Yes.

2295. Suppose the net number of removals was the same, but they were spread over the year, would that number increase also? You might have more removals in the sense of being spread all over the year and not all at one time at Whitsunday?—Yes.

2296. But the total number in the end might not be greater?—That is so.

2297. If that were the case, then this number of 607 would not increase?—No.

2298. It is only if the total number is larger that it would increase?—Yes.

2299. How do you work the provisions under Section 343 of the Act of 1892 for relief on ground of poverty or inability to pay?—There are two courts held during the year, one on the principal roll and the other on the supplementary roll. There is a remark upon the assessment notice drawing the attention of the ratepayer to the fact that he may appeal. When they do appeal they are asked to attend this court, which sits for two days as a rule at a time, and their case is inquired into. Particulars as to their poverty, etc., are entered in a schedule, and they are either relieved in whole or in part, or relief is refused. I may say that in my experience there is really no deserving case that is refused relief.

2300. (*Mr Esslemont.*) This schedule is prepared before the Court sits? It is lodged by the appellant?—Yes.

2301. (*Chairman.*) And the relief may be on all the assessments?—Yes.

2302. Or it may be partial?—Yes. We sometimes relieve to the extent of one half.

2303. To what extent do you grant relief?—The number relieved for the year 1905–1906 was 726, representing a rateable value of £726, 13s. 4d.

2304. That did not represent net loss?—Yes, it represented net loss.

2305. A good many of the people would not have been able to pay it. I expect none of them would have been able to pay it. At least we must assume that.

2306. Otherwise they would have no right to apply?—That is so.

2307. Or if they paid it, it would have been with great hardship?—Yes.

2308. There were 726 applications?—Yes.

2309. Now, under £4 there is no right to apply?—No because we assess the owner.

2310. Why is there no right to apply? I know it is according to the Act, but it looks as if these would be the people more than any others that ought to get relief?—But we don't assess them.

2311. However, it is according to the Act. Take the cases that you have spoken to, where above £4 the owner pays for one reason or another, are there any applications for relief in these cases?—Some of these may appeal. There are no owners that appeal under this section.

2312. But are there cases where the owner pays and where the occupier comes with a petition for relief, or are they all cases where the occupier is rated direct?—They are all cases where the occupier is rated direct.

2313. There would be nothing to prevent your entertaining an application from an occupier where the owner had paid the rate?—The time for appealing would be past before he could do that.

2314. Look at the cases you mention where the owner in the case of partial loss has to pay; would it be past in all these cases?—Yes.

2315. (*Mr Binnie.*) You said you had two courts, one of them being after the Supplementary Roll?—On the Supplementary Assessments.

2316. And these are for lets less than a year?—Yes.

2317. Do you not hold the landlord responsible in those cases?—Yes, he is responsible.

2318. You entertain appeals for relief from poor tenants in those cases?—We do.

2319. (*Chairman.*) Would not people be in a position to appeal when the owner had paid primarily for them, where he is assessed primarily?—Yes, where he is assessed as well.

2320. You have had no cases, you think, where the occupiers, have appealed in these circumstances?—There might be cases.

2321. But you don't know how that stands?—The Town Clerk, Mr Donaldson, tells me that there are many,—that is to say, the occupiers get assessment notice as well as the owner, and, therefore, they all appeal if they wish to be relieved.

2322. The average number of premises let by owners for less than a year is how many?—381, with a rental of £2444.

2323. That includes not only monthly lets, but premises let for part of a year only?—Yes.

2324. Do you anticipate that if the law was altered to make the period of letting of houses dependent on the period of payment of rent, there would be a large amount of additional work falling on the rating authorities?—We believe there would be,—there could not help being a large amount of additional work.

2325. What would that result in?—Very considerable expense.

2326. And it would result in additional assessment on account of the additional expense?—Yes.

2327. What would the additional expense be caused by? First of all, there would be an increase of the staff?—Yes.

2328. And second?—Practically the increase of the staff would be the principal thing, but in addition to that, we do not have machinery in the rating Acts and the valuation Acts for the statutory returns,—we have no means of checking the returns. Then, in addition to that, there is of course the loss of assessments through frequent removals. Then there is one very important matter, and that is the interference with the Town Council's calculation of the amount of assessment required to meet the actual expenditure of the year. I might explain that by saying that the returns from the landlords would only show monthly lets—we could not tell whether we were going to get a whole year's taxation from the tenant or not, and, therefore, we could not calculate how much the valuation was to be and on what we could assess.

2329. In your view, if this change were made, what statutes would it affect? It would involve an alteration in the Valuation Act?—Yes, and the rating clauses of the Police Act, at least.

2330. Those are the two?—Yes.

2331. You gave as the first reason for the additional expense, the increase of the staff. What part of the staff?—The whole burgh collecting staff.

2332. And the clerking?—Yes.

2333. You say there is no machinery for the statutory returns. Of course, that is not a fatal objection. It is an objection going to the necessity for devising new arrangements?—Yes.

2334. You said that there were no means of checking the returns. That again is a question involving additional arrangements?—Yes, all these might be met by additional arrangements.

2335. This proposed Bill could not be passed of itself without involving other changes in order to make the thing work smoothly and fairly?—That is so.

2336. Suppose quarterly lets were to be substituted for yearly lets, do you see any difficulty in the collection of rates being quarterly?—Yes, a great difficulty. In the first place, we have no power to collect them except once a year.

2337. Suppose you got power?—Then the difficulty would be this, as I have stated, that the roll takes from May to September to make up, and, therefore, you have got at least four months when you don't know what the rate is going to be, when we do not have the roll and cannot assess.

2338. Would it involve a revision of the roll quarterly?—It would involve four rolls instead of one, which would be impossible, if they took four months to make up one roll.

2339. Would it involve any other difficulty beyond expense?—Of course, I am looking upon that as an actual impossibility.

2340. That would be for the valuation authorities to do?—Yes.

2341. And not for you?—No.

2342. If they could do it, you would get your roll as you get the single roll now?—Yes.

2343. There are no rates collected except yearly?—That is so; they are all collected once a year.

2344. Is there a further difficulty on account of the annual valuation being put in the valuation roll?—Yes.

2345. What do you exactly mean by that?—We do not know what the rent is to be for the year, because, if the houses are to be let only by the month or quarterly, we do not know whether it will be so much a year or not. The assessor puts in the annual rent, and not the monthly rent.

2346. At the present moment there are quantities of houses let by the month; Why, because these are increased, should any new difficulty arise?—There are comparatively few let by the month, but when one-third of the whole population of our burgh are to become monthly tenants, then it does raise a great difficulty.

2347. It would only increase in degree a difficulty that exists at present?—Yes, but to what we think an insuperable degree.

2348. What about the rental being collected along with the rates?—There is a difficulty that strikes us, and that is, that, if the landlord is to be responsible for the rates of the tenant, he does not know between May and September what rate the Town Council is to put on the house, and therefore he cannot collect anything from his tenant.

2349. Unless by estimate, which might be too great or too small?—Yes, the chances are that it would be very much too small.

2350. (*Mr Howden.*) Do your taxes vary very much?—No, they are rather going back.

2351. They are practically stationary?—I don't say that. There might be a difference of 2d. in the £ at any time.

2352. To what extent has your assessment varied?—It has varied over 1d. this year.

2353. Has it increased?—No, it has come down within the last two years.

2354. Are you talking of owners or occupiers?—Occupiers.

2355. You gave the rate at 1s. 10⅝d. What was it last year?—1s. 11$\frac{7}{10}$d.; and the year before it was 1s. 9¼d.; the year before that 1s. 6½d.,—it rose from about 1s. 5d. in 1901 to 1s. 11d., and now it is down to 1s. 10d. The reason of the rise was 2d. which had to be put on the occupiers to help Glasgow to pay for the Clyde purification scheme.

2356. Does it strike you that there is any other difficulty except the one you mention in the landlord's collecting the rates?—Not from the landlord's point of view.

2357. He has that difficulty in rents under £4 at present?—Yes.

2358. He has got to make an estimate?—Yes.

2359. There is never a rebate claimed by him?—No.

2360. Suppose the landlord was to collect the rates, would you anticipate that he would receive an allowance for you for trouble and other losses?—Yes.

2361. At present does he get any allowance?—He gets 10 per cent. under £4.

2362. Have you any case of voluntary arrangements being made in regard to lets above £4?—No, I know of no voluntary arrangements being made.

2363. Have you power to make any voluntary arrangements?—No.

2364. Suppose the suggested change is carried out, what effect do you think it would have on the rents?—It would no doubt tend to raise the rents.

2365. Only if you gave an insufficient allowance to the landlord?—No matter what allowance we gave.

2366. Suppose you give the landlord an allowance that would cover his trouble of factorage and his losses, there would be no increase of rents then?—He has to put something on for the chances of loss, but of course that brings us to the next question, the question about the percentage that we are to allow him, which is a serious matter for the rating authority.

2367. I was taking it that the percentage was sufficient?—Taking it that it was sufficient, theoretically it should not raise the rent.

2368. And you think it would be a very important question what allowance should be granted?—Yes.

2369. If, for instance, instead of the allowance that Mr Cross puts in his Bill, it was to be doubled or trebled, as some factors suggest, then that would alter the whole complexion of the proposal?—Yes, instead of being a gain to us

it would be a loss to us. In fact, whatever it is, I look upon it as an additional loss to what we have already from reliefs.

2370. Has there been any experience in Partick in this matter? In 1894 was there an experiment which you think suggestive?—Yes. We understand that the Partick Landlords' Association sent out a circular raising their rents and blaming the Town Council. The Town Council were only acting under the Act of 1892 by charging the owners with the rates. That showed that the rents were raised for another cause. This is a much greater thing, and it would certainly tend to increase the rents further.

2371. In that case the charge was very much more than any such allowance as is proposed in Mr Cross's Bill?—Yes.

2372. Have you looked at the allowance proposed?—Yes.

2373. What do you say to it?—I do not know that I am competent to judge on the amount of the allowance, not being a factor, but I understand that they say that instead of 7½ to 10 per cent., it will be twice that at least. 7½ per cent. does seem a small percentage to cover contingencies.

2374. Suppose this change did take place and it became necessary to choose between frequent collection of rates by the rating authority and compounding, which in your view would be the better system?—Compounding. I think there is only one conclusion as to that.

2375. Subject to the allowance being properly settled?—Yes.

2376. In the evidence which you are giving, are you proceeding on the assumption that the number of removals in the year would be increased?—Yes, I cannot help saying that, because the number is considerable when there is no Act of Parliament justifying it—I mean to say, that if a tenant knew that he was entitled under Act of Parliament to leave whenever he liked, he might feel inclined to leave far oftener, whether out of thrawnness or necessity, I cannot say.

2377. Suppose, as it is suggested, owners are made liable up to a rent of £15, what amount of rental would that affect in Partick?—£100,046. If the rates were charged on rents up to £16, then the rental affected would be £106,702, practically one-third of the whole assessable rental.

2378. If the limit were raised to £20?—The rental affected would be £150,866.

2379. In addition to the rating question, are you prepared to speak for the Town Council on the general question of short tenure as against long?—Yes.

2380. What is the view of the Town Council on that, the present system as compared with the proposed system?—The general view of the Town Council is that the present system is satisfactory, and that there is no call for a change such as is contemplated by the Bill.

2381. From what knowledge do they form that opinion?—Just from their knowledge of the district.

2382. Have they had this matter brought before them by any deputation or resolutions at public meetings or anything of that kind?—The Town Council as a body have not, but in reference to that I might state that during the last eight years, I myself have had to fight three times for my seat, and on no occasion has this question of the remedies proposed by Mr Cross's Bill been brought before me. I was never heckled on any such question.

2383. I suppose you have been well heckled on other questions?—Yes. I infer from that that there is not the demand for it that some would wish us to believe.

2384. Does your constituency include any workmen's dwellings?—Yes, I should say that two-thirds are working class voters.

2385. Have you yourself known cases where there has been a grievance felt through men having to leave, and being unable to get a sub-let without loss?—During my time I have known of two such cases. One was a case where it was a larger house—a house of £75; and the other case was a case of a smaller house, which I think would come under the £20, where the tenant had to go to England.

2386. What happened? Did it result in loss to him through impossibility to sub-let?—I cannot tell about the sub-let, but he had to pay the rates. We let off the tenant of the larger house because he had taken a house in another part of the burgh, and he was not an occupier under the sense of the Act, although he had taken a house.

2387. Would you expect that there were many cases where a man had to pay the rent, owing to no sub-let being got? You would have appeals from such a man on the question of his having to pay the rates when he was himself not occupying the house. Suppose a man has to pay a proportion of rent because no sub-let can be got, he would also have to pay the proportion of rates?—Yes.

2388. If these cases happened often, you would expect that you would have men coming to you, appealing to you for relief?—Yes, if there were many of these cases, we would have heard of them.

2389. But under the statute, would you be entitled to consider such a case? There must be inability to pay before they can get relief?—Yes. If there had been such cases as you refer to, I think we would have heard of them, because we get complaints of all sorts.

2390. You would have no power to give him relief?—No, but, of course, the tenants and ratepayers don't always know that.

2391. In Partick, have you many residents who work outside?—Yes, a great many. In fact, the people live down there because it is central, and they can work in Glasgow or Dalmuir or in the district.

2392. *Vice versa*, have you people working in Partick and living outside?—Yes, a great many live in the Cowcaddens district, and use the Subway, which is a very quick means of transit.

2393. Have you many who do it by choice and voluntarily?—I think so. Partick is a very salubrious place; the death rate is only 12 per thousand, and I am not surpised at seeing a large population there.

2394. How long has that gone on?—Ever since I can remember.

2395. Do you know of men who for years have had their families resident in Partick and they themselves working at Govan and Clydebank?—I do not know, but I know this, that there are very few of the good class of ratepayers in Partick who change. I know that for the last eight years there have been the same inhabitants in some of the working-class streets. There have been very few changes among men with families, men working in the shipyards, not only in Partick but in Clydebank and Yoker. I could point to men living from year to year for the last ten years in the same locality.

2396. The facilities for travelling have improved very much?—Yes.

2397. (*Mr Binnie.*) What do they pay to go to Clydebank?—1½d.

2398. How much a week?—About 6d. a week, I think.

2399. (*Mr Howden.*) I think it is 1d. each way?—Yes, it will be 1s. a week. They take the cars more than the trains now from Partick.

2400. (*Chairman.*) In regard to the register of voters, would you anticipate a difficulty in making that up if this change were carried out?—Yes, I would.

2401. Arising from what cause?—If a man's rates are not paid by the 30th June he is disqualified from voting. Now it strikes me that the occupier of a £15 house would be dependent on his owner paying his rates for him under the new proposal. If this owner does not pay the rates for him, then he will be disfranchised. There is a doubt as to whether, if the occupier does not pay his rates, the owner will be disqualified from being put on the roll because some of his rates—the proportion payable by the tenant—are unpaid. Again, how can you decide who is to be put on the roll at all, because they are only monthly tenants? A tenant may never pay a year's rent.

2402. All these difficulties suggest this, don't they, that there would require to be special provision made apart from the provisions of this Bill?—Yes, I merely wish to suggest these difficulties, because I think someone could more competently speak to this point than I could. Before I go on, may I mention that the supplementary assessment is now a statutory requirement under the 1903 Act.

2403. What is the section?—Section 60.

2404. Was it introduced by the Act?—It was. Then I also want to make sure that I was clear about what I meant by real value; I think it is on page 5, the fourth paragraph of my *précis*. The value that the owner gives at the beginning of the year cannot be properly stated, because he does not know what his actual rental is to be if it is going to be a monthly let. At the present time he gives the value for the year, but if the lets are to be weekly or monthly, his rent may be 5s. the one week; it may be empty for the next week; it may be 6s. the following week, and 4s. 6d. the week following that. It is impossible for the landlord to give a true estimate of what the value is to be, and that is a difficulty that is sure to be met with.

2405. Unless the monthly let goes on as it did before?—Unless it does.

2406. Now, in regard to the loss of assessments in Partick on rents between £4 and £15, take last year, 1905–1906?—Last year the arrears were £504, and relief on appeal and paupers £516.

2407. Then has that been going down or up, taking 1903-1904?—Going up regularly. There was £377 loss, and relief on appeal and paupers £392. Of course I take it that the increase is commensurate with the increase in population.

2408. I see that you say the owner is to pay rates

Mr J. S. Lang. 11 Dec. 1906.

and the occupier cannot appeal under Section 343 for relief on the grounds therein allowed?—Section 343 is the only right they have just now for appeal, and there is no provision for any suggested alteration for conferring the right on a pauper, or rather on an impecunious person, to get relief.

2409. That would involve modification of the Police Act?—Yes, but if they did not get a right of appeal, of course it would be a serious hardship on the poor at any rate.

2410. Could you give, roughly, in regard to the loss of assessments, the percentage of the total assessments?—We collect 98 per cent. of the assessments in Partick and lose practically 2 per cent.

2411. (*Mr Binnie.*) But divide it into those below £10?—I have not had these figures made out.

2412. You will not relieve tenants above £10?—Oh yes, up as far as £20 sometimes.

2413. Could you give us a statement of how much you lose under £15 and how much you lose under £10?—I could get these particulars and send them in, but those, say, up to £20 and above £20 are very often widows letting lodgings or educating children.

2414. (*Chairman.*) Often going up to £30 and even £35?—I quite believe that.

2415. Now, suppose that the present system applicable to rents at and under £4 were made applicable to rents up to £15, what would be the result of that from your point of view?—Do you mean with the deductions for collecting?

2416. Yes?—It would be another heavy loss to us. It would be a loss, taking the allowances in the Bill. Above £4 and under £7, the valuation is £8675. Taking the assessment on that, it would mean a loss of £62.

2417. Brought out how?—By taking 7½ per cent. above £4 and under £7 of assessments. Above £7 and under £10 it would cover £28,786 of valuation, equal to £2751 of assessment at 5 per cent, £137, 10s. Then, taking £10 to £16, it would cover a valuation of £68,934, or an equivalent assessment of £6606. That at 2½ per cent. would be £165 if the rental was £6 to £20. The amount that would cover would be £44,164 more, representing an assessment of £4232 at 2½ per cent., £105, 16s.

2418. But why do you say that would be a loss? That is an allowance merely to cover loss which you at present sustain?—That is true; but no, we don't sustain all that loss just now.

2419. The allowance is on the footing, isn't it, that it is to be equivalent to the loss you sustain?—As a matter of fact we certainly lose those that are relieved on appeal, but it would be an addition, and I don't believe that any great part of those in arrear would still pay. I believe we would still lose a certain amount of arrears, a certain amount of relief on appeal, and in addition this percentage to the factors.

2420. Suppose the owners collected instead of you, you say there would be still loss that you would have to bear?—I think we might assume that there would still be a loss.

2421. How would that arise—through owners failing to pay?—No, through owners being unable to collect from their tenants.

2422. But you make them pay whether they collect or not?—True, but not if a tenant leaves his property and goes away. I mean, under the new system, if a tenant went away without paying his rent, we could not claim the rates from the owners.

2423. Then do you consider that the whole of that would be loss, or only a proportion?—A very large proportion.

2424. Would you expect that, if the proposed alterations were made, the result would be forehand rent?—I believe so.

2425. Do you think that would be any drawback to the working man?—No, I think it would correct itself.

2426. In what way?—In the first month, of course, there would be a difficulty, because the tenant would have to pay practically two months in one. I think it would correct itself afterwards. Of course, on the other hand, I do not believe that the large class of the respectable tenants would like to be asked to pay forehand rent.

2427. Then I understand the Council are of opinion that, as far as the question of the length of time between the taking of the houses and the entry is concerned, there is a grievance there, but that that is not limited to tenants under £20; it is a general grievance?—That is so. The Town Council thought that this Bill of Mr Cross's did not touch the real question, which was the missive question—that is, the period when they must declare that they are taking the house.

2428. And do the Council think that is a matter that should be left to the factors to arrange voluntarily, or that it is a proper subject for legislation?—They thought it was a proper subject for legislation.

2429. In point of fact, they prepared and have handed in a suggested Bill to meet that grievance?—They did.

2430. Was the Bill approved of by the Council?—Yes.

2431. Involving two things in the fourth clause—the shortening of the period of warning from forty days before Whitsunday to thirty days?—Yes.

2432. And, in the second place, dealing with the interval between the taking of the house and the term of entry?—Yes.

2433. And I see that you propose the thirty days should run from the 28th of May in your fourth clause. When you refer to Whitsunday, do you mean the 15th or the 28th of May?—The 15th of May is our understanding.

2434. Then it is reducing it from forty days prior to Whitsunday to thirty days?—Yes.

2435. So that we are at one about that. It is at present 4th April, isn't it?—Yes.

2436. What would this bring it to?—To the 14th of April. Of course I would like to say in regard to this Bill that this is merely a skeleton of our suggestion, and if there were any alterations suggested, we would be quite ready to consider them. We are not putting this as a hard and fast line, but as a principle on which we might settle the question.

2437. Whether it should be thirty days prior to 15th May, or thirty days prior to 28th May would be a detail?—Yes. I see also the preambles to most of the previous Bills on this question have all dealt with that inconvenience. I will just quote the preamble.

2438. You are referring to the Bill of 1890 of Mr Provand?—Yes, and Mr Cross's Bills of 1894, 1895, and 1897. (*Reads from preamble of 1894 Bill.*) That is really our view, and we think it is emphasised even by the present state of affairs going on ever since year by year.

2439. But you thought that preamble should lead, not to the remedy of the 1894 Bill, which was to prohibit any longer let than for a period of a month, but to the remedy of the 1890 Bill, which was to shorten the period between the taking of the house and the term of entry?—Yes, as also stated in the memorandum attached to the 1890 Bill.

2440. You think that that was a real grievance in 1890 which has not been diminished since, but has increased?—Yes, rather the reverse.

2441. You don't see from any point of view, the burgh's, the landlord's, or the tenant's, any sufficient answer to that being redressed?—No.

2442. And it would be no drawback to anybody?—That is so. In that way it would affect both the £50 houses and the £15 houses.

2443. You have heard evidence here that the practice in Scotland of simultaneous removal at the Whitsundy term instead of being spread over a year is productive of considerable inconvenience and hardship; you agree in that?—Well, I would not like to express an opinion for or against, but I know this, that new houses are now finished for periods other than the term. It has been stated that the houses are all made ready for the term. The builders in Partick finish their houses for all periods of the year. They don't specially work for the terms; they just try to get them finished, and they are as a rule fairly well let even at mid-terms.

2444. It is the case that the majority of removals take place on 28th May?—There is no doubt about that.

2445. (*Mr Esslemont.*) Is it the opinion of your Council that the present system of assessing and collecting rates once a year ought to be maintained?—Yes.

2446. You have not come to the conclusion that that system involves considerable hardship on the wage-earning classes?—No, we know that there is a hardship on the wage-earning classes being asked to pay all at once.

2447. That is the very point?—Our objection to that at the present moment is, first of all, that we have no authority to deal with it in any other way than we are doing. In the second place, it would cost very much more to collect it quarterly or monthly or any other way.

2448. Do you recognise that it is a hardship?—I do.

2449. And that some action should be taken in order to mitigate that?—Well, I would not like to commit myself for the Council, because at the present moment the Council are considering the question. I would not like to say whether we want to mitigate that hardship or not.

2450. It would scarcely be creditable to your Council if they recognised the hardship and they were not prepared to meet it as far as possible?—No, it would not.

2451. Then you say in your *précis* here that you think a more frequent collection of rates would involve great expense?—Yes.

2452. Now, do you think that is the case?—I am sure it is the case.

2453. How often do you collect your gas accounts?—We have nothing to do with gas accounts. Glasgow collects the gas accounts.

2454. How often do they collect them?—Three times a year.

2455. Do you think it would cost them less if they only collected once a year?—No, I think they would lose money by it.

2456. If they would lose money by descending from the collection made three times a year to once a year, doesn't that rather involve the possibility of a gain, as far as the collection of rates is concerned, if it were more frequent than once a year?—Our loss of 2 per cent. is so infinitesimal under the present arrangement, that I do not think we could lose any less.

2457. I think you must be singularly fortunate in collecting 98 per cent. of your assessments. We have been told here, I believe it is a fact, that on rentals of £10 and under the Glasgow Corporation lose 25 per cent?—Yes.

2458. But you are not in a position to say what the percentage of loss is in Partick under £10 and under £15?—No, I will hand that in.

2459. (*Mr Dobbie.*) On the same point that you have not the figures for £10 rents, you have on page 7 figures showing the relief on appeal and the arrears on £15 rents?—That is the loss.

2460. The relief on appeal of course includes more than £15 rents. The irrecoverables on rents between £4 and £15 are £504?—Yes. By the way, I made a mistake. The relief on appeal is also under £15, as stated here.

2461. Under £4 you have got £387 of rental?—Yes.

2462. And the rate upon that is a mere trifle, under £40?—Yes.

2463. So, even adding that £38 or £40 to the £504, that would give us the loss on rents under £15 at something like £540?—Yes.

2464. And I see that is under 6 per cent of your total collection?—Yes.

2465. Your total collection, you tell us, is £44,000?—Yes.

2466. And as Mr Esslemont has reminded us in Glasgow, we were told the loss upon rates under £10 rents was 26 per cent.?—Yes.

2467. But in Partick at present the loss on rentals under £15 is only 6 per cent?—Yes.

2468. What I want to get at is, if you can tell us, assuming the limit in the Bill for smaller houses is £20, would the fact show that the loss is less than 6, and what could you make the loss to be, do you think? I take it less at the £20 limit than at the £15.—Yes, it may be. I will have a statement made up and handed in showing the correct percentage of loss.

2469. Does the schedule to the Bill indicate what might be allowed in the event of compounding being agreed to?—Yes.

2470. Then what is the staple industry in Partick?—Shipbuilding and engineering.

2471. Could one call that a fluctuating population?—It is not a fluctuating population.

2472. If we get trade representatives to tell us that in Partick it is quite a prevalent custom for the employees in shipbuilding yards to migrate from place to place, that would not tally with your experience?—No, I would be very much surprised to hear it. As I stated earlier, I know of the better class of workmen, hundreds of them, who have lived in Partick for the last ten years at least to my personal knowledge.

2473. Come to another clause in the Bill. As you know, a suggestion is made that in Glasgow the limit should be £20, and in Partick £15. Have you considered that suggestion, and can you explain why there should be any difference between the two places?—No, I would certainly suggest, from my own point of view, because we have not discussed that point as a council—we have dealt with the general question—that the lower limit is the better.

2474. Do you think it should be universal, or would you have different limits in different areas?—No, I think it should be universal whatever the limit is.

2475. As you know, there is something approaching local option suggested in the Bill. Would you have each area given the right to determine whether or not the Bill should apply to that area?—No, I think that is a very bad clause.

2476. I should like your assistance on this vexed question of rating. Assume that there are to be quarterly collections, that would necessarily infer, wouldn't it, four different rolls?—Yes.

2477. How do you make up your roll just now in Partick?—It is made up by the assessor for the county of Lanark. Partick is in the county of Lanark, and under the Acts the county assessor makes up the roll.

2478. What does your assessor do?—We have no assessor.

2479. What is the population of Partick?—65,000.

2480. If you had an assessor in Partick whose duty it was to make up the valuation roll for burgh purposes, would that not minimise very much the objections you have to the quarterly collection?—I don't know the difficulties the assessor may have. I do know this, that at present the county assessor has an immense amount of work to do for Partick. Not only has he to prepare the roll for the valuation, but make an individual survey of the burgh so as to check his roll.

2481. There could be machinery laid down including the appointment of a local assessor. Subject to that being done, is there any insuperable difficulty in the way of having a quarterly collection?—No, I think it would be all a matter of machinery and expense.

2482. Of course upon a quarterly collection there would be injustice to some extent in respect of removals between each quarter?—Yes.

2483. If monthly lets became common, then, while the injustice might be minimised, it would still necessarily exist in the case of removals between the dates of each of these removals?—Yes.

2484. I take it that just now the valuation roll and also the assessments are made up giving the names of the tenants at a particular date in the year?—Yes.

2485. And that accordingly that name is the name of the party liable as occupier for the year's rates?—Yes. May I interpose here with regard to whether an assessor of our own would remedy matters. The difficulty would still exist in regard to financing the burgh—that is, in knowing what our rates were to be. We know it just now from the annual roll. We would not know it from the quarterly roll.

2486. As you explained, there is not much fluctuation in your total annual expenditure?—No.

2487. In regard to the supplementary roll, I gather from the answer you gave one of the Committee that there were cases where, notwithstanding that the proprietor paid rates, the tenant could still on appeal get exemption?—That is so. That is to say, the notices are sent out and the tenant may claim exemption. If the tenant gets exemption, of course the owner does not pay the rates.

2488. You mean, then, that there are cases, not where the landlord pays the rate, but where the landlord is liable to pay the rate?—Yes.

2489. And only in that case can there be exemption given to the tenant?—Under the supplementary roll, yes, because they are all individual cases where the landlord is responsible failing the tenant.

2490. You invite both to pay. The tenant can either pay or appeal for exemption. If the tenant pays, good and well; if he appeals for exemption, good and well; if he does neither, the landlord is forced to pay and does pay, but in that case there can be no exemption given to the tenant?—Yes.

2491. (*Mr Esslemont.*) You said you had two Appeal Courts?—One when the main assessments are sent out under the big roll, and the other when the supplementary roll is made up between January and March.

2492. At the second Court you don't deal with any appeal which would properly have come before the previous Court?—We may do that. We do, but of course the majority of cases are under the principal roll.

2493. (*Mr Howden.*) You have been eight years in the Partick Town Council?—Yes.

2494. What was it that induced the Partick Town Council to take in hand the preparation of what they call the House Letting (Scotland) Bill—your own Bill. What induced them to take into consideration the house letting question at all?—We were asked to consider the Bill introduced by Mr Cross. We did so, and came to the conclusion that there were things in it that did not suit us, and that in addition to that the real grievance had not been touched by the Bill. We hold that the real grievance was, being asked to take houses early in January for the May following. That is to say, practically eighteen months ahead.

2495. Who was it that asked you to take Mr Cross's Bill into consideration?—We considered all public Bills that were introduced.

2496. It was simply in the course of business?—Yes.

2497. You say that in eight years you went through three contests, and have not been asked a question in connection with this vexed question?—That is so.

2498. Does that also apply to Parliamentary candidates?—I know it does not. At last election one of the Parliamentary candidates was asked if he was in favour of Mr Cross's Bill, and the meeting would not listen to his answer. When he said "No," and went on to explain why, the meeting would not listen to him. My own feeling is that the public generally do not know what Mr Cross's Bill is; that the public generally think it is a Bill for doing away with the missive system. It has always been referred to as a missive question, and the public, I think, don't understand that the Bill does not deal with the missive question at all. That is my own private opinion.

2499. Then it would not be on the merits of Mr Cross's Bill that the audience were so intolerant?—No, it was

Mr J. S. Lang.
11 Dec. 1906.

because they did not rightly understand what Mr Cross's Bill was.

2500. But probably they knew there was some difficulty in connection with house letting?—Oh yes, that is what I say.

2501. Consequently this question has been more or less before the public of Partick?—For years.

2502. But in your opinion it does not apply to shorter lets, simply to the missive?—Yes.

2503. That is your opinion?—Yes.

2504. (*Mr Binnie.*) Would you look at the figures at the top of page 8. You have given there the loss, haven't you?—Yes, that is only referring to percentages.

2505. Then you have promised to give us your own actual loss?—Yes.

2506. And could you give it to us in the same way over again?—You mean the present loss, yes.

2507. Then you have spoken to the cost of collection, which should be greatly increased if the assessments were collected quarterly. Would you tell us what is the present cost of collection?—I could not exactly say. About £700, I am informed, embracing the collecting of the assessments and the sending out of notices.

2508. Officers and collectors and all notices and everything?—Yes.

2509. You said that would be very largely increased if the collection were made quarterly. Could you form an idea of what the increase would be?—I could not. Of course it would mean increase of staff, increase of printing, and so on.

2510. Can you form an idea of what the increased cost would be?—I could not say offhand. The chamberlain suggests a half more.

2511. Mr Wood, for the Parochial Board, said it would just be four times?—But of course his district is so much the greater and his rental is so much larger. That may be the difference.

2512. That would make no difference?—Oh no, it should not make any difference, because it is a proportion.

2513. Perhaps you will think this over and let us know, when you have time to think over it, when you are sending in those other figures?—Yes.

2514. Then you propose that the warning away should be thirty days before the 15th of May?—Yes.

2515. Is there any reason why it should not be reduced to something like twenty-one days before the 28th of May?—No reason from the view of the Town Council.

2516. Is there any objection you can see from the point of view of a tenant?—I can see no objection.

2517. The tenant knows before being warned away that he has not got his house taken for the following year; isn't that the case?—That is so.

2518. Your warning away is simply a legal formality to make sure that there is no mistake?—Yes.

2519. Would it be a hardship to anyone to reduce the warning away to, say, twenty-one days?—I do not think so.

2520. If you had then in that way reduced the warning away, deferred it to, say, the 7th of May, is there any reason why the letting term should not be postponed still longer than your Bill proposes?—No reason.

2521. Your Bill proposes the 15th of March on the assumption that the tenant is to be warned away on the 14th of April?—Yes, I see no special reason for limiting it to the 15th of March.

Mr J. S. Lang.
11 Dec. 1906.

2522. You could with equal convenience to all parties defer the letting term to the 1st of April if the warning away were deferred to the 7th of May?—Quite conveniently.

2523. That would still further reduce the time?—Yes.

2524. You raised a difficulty about the collection of rates quarterly, which does not appear to me as great as it seemed to be to you. You said the only person responsible for the rates is the person whose name is on the roll?—Yes.

2525. Would it not be quite simple—there must be alterations if there are to be quarterly collections—to make it, say, the person responsible would be "A. B." or the present occupant?—Well, you see we require machinery for that. We require to give, under the present law, a notice assessing someone.

2526. Undoubtedly you would need four notices if you collected it quarterly?—We cannot just now assess an unknown person.

2527. No, but you can have a Bill making the person responsible for the assessment "A. B.,"—that is, the occupier at the beginning of the year or any person occupying the house in the course of the year?—Yes, then we would require to get the name of these different occupiers. Are you referring to four different rolls?

2528. Collecting the rates quarterly with whatever survey is needed in order to make that possible. You do have additional surveys just now in order to get those, but not in every part of the year; you told us that?—Yes, that is so.

2529. Well, you would require to make a similar survey in order to know who was responsible for the quarterly assessments?—Our difficulty is that such a thing would be almost impossible.

2530. In what way?—Because at the present time the year's roll takes at least four months to make up—that is, between May and September—and it would be impossible to have another roll made up. Each roll would overlap the other, and if each roll took four months to make up, we would never get to any finality.

2531. Does the supplementary roll take four months?—No, but there is a very small number. There are perhaps about 400 names altogether.

2532. It would be the same if you had it quarterly?—I don't think so. It would require to be a complete roll, a roll and a survey made over the whole district.

2533. But you require to do that for the supplementary roll?—Yes, but to a very, very small extent.

Well, we will leave it there.

2534. (*Mr Esslemont.*) Does this £700 you speak of as the cost of collection include the amount paid to the assessor for the preparation of the roll?—No, it certainly does not include that.

2535. (*Mr Dobbie.*) How much do you pay under the county rate towards the assessor's salary and the preparation of his roll?—I do not know what the county rate is as applicable to that, as the rate includes several things, such as registration of voters, etc. The Burgh Chamberlain is to give evidence later as to figures, and the tables I have been asked for will be produced by him with a correct note of the present cost of collection of rates.

Mr J. B. Wills.

Mr J. B. Wills, called and examined.

Mr J. B. Wills.

2536. (*Chairman.*) You are a house factor and carry on business in Glasgow? You are a life member and an ex-president of the Association of House Factors and Property Agents in Glasgow, and a life member and director of the Glasgow Landlords' Association?—Yes.

2537. You are here to express your own views as distinguished from any views of the Association?—Yes.

2538. You have had thirty years' experience of the management of all classes of property and have always had a large number of tradesmen and labourers as tenants?—Yes.

2539. How many tenants have you at the present moment under your charge?—3355.

2540. Running from what rent to what rent?—From £4 up to £150.

2541. In regard to the rents under £4, are these in the hands of factors?—Yes.

2542. None of the factors who have come here seem to have had charge of houses under £4 rent?—I had a lot, but they have all been demolished by the City Improvement Trust, and I am left with something like three or four.

2543. But you have had experience in that class?—Yes.

2544. Are you yourself in personal charge of your business? Do you come in contact with tenants directly?—Yes.

2545. So in that way you have opportunities of knowing their views?—Quite.

2546. Have you taken an interest in this house letting question during all your business life?—Yes.

2547. And have you been associated for twenty years with different efforts that have been made to better things?—Yes, that is to say, I wrote to Mr Provand when he started the question in 1890, and I had an interview with him, and I have taken a critical view of all the Bills that have been presented since.

2548. Were you cognisant of the memorandum which Mr Provand prepared and prefixed to his Bill?—Yes.

2549. We have had two views stated, the one that the real grievance is the length of time between the date of taking the house and the actual entry, and the other view that the real grievance is the long let. What, in your experience, is the grievance that is chiefly complained about?—The long let.

2550. Is the other also a grievance?—Yes, it is the present grievance.

2551. And does the other apply not merely to working men's houses, but to houses of higher rents?—Yes, in a modified degree.

2552. The question of long let is a working man's question?—Yes.

2553. There is no agitation for short lets among people paying £100 or £200?—No, they want very long lets.

2554. How do you reconcile that view of yours with the fact that in the original Bill and in the original memor-

andum the only thing referred to is the contract of entering into a long agreement several months before the term day, and nothing is said about long lets at all?—At that time that was the present grievance put before Mr Provand.

2555. Was it the only grievance?—The only one put forward at that time, and they thought at that time that by putting forward the date of letting something would be gained to begin with.

2556. But even then the other question was to the front?—Yes.

2557. When you say it was a grievance, were there meetings about it, or was it a matter you found out by personal contact with tenants?—There were meetings occasionally.

2558. Were any M.P.'s heckled about it?—Not at the early time.

2559. In regard to the remedy for the grievance, is it your view that that could be done apart from legislation, or would it involve legislation?—It necessarily involves legislation.

2560. Why?—Well, one factor would endeavour to get the advantage of another by getting in before him. Decidedly we should all be put compulsorily on the same footing.

2561. Is it the fact that it has been proposed in Glasgow that the factors should agree, but that they have never done so?—Yes, we had a meeting of the House Factors and Landlords' Association, at which they both agreed that this early letting was the grievance. The Factors' Association had a meeting afterwards, and they passed unanimously the resolution that this was a grievance, and the next resolution that came forward was that this should be remedied by legislation, and the vote was equal. The chairman refused to decide and the matter was left over.

2562. Now, in regard to short periods of let, of course houses under £4 have no interest in that. Houses between £4 and say £10 are interested because a proportion of them have yearly lets?—That is so.

2563. And all householders between £10 and £20 are not interested, because practically they are all yearly lets?—Yes.

2564. But that applies between £4 and £20 more or less?—We have no yearly lets as low as £4.

2565. In your experience, how do you stand in that way between £4 and £10? What is your proportion of yearly lets and short lets roughly?—Under £10 one apartment houses 75; two apartments under £10, 649. That is a total under £10 of 724 let yearly. Then of two apartments above £10 and under £20 there are 363; three-apartment houses above £10 and under £20, 449; in all, of houses from £10 to £20 there are 812.

2566. (*Chairman.*) Can you tell us, Mr Binnie, what is the percentage of houses yearly and monthly?

(*Mr Binnie.*) He has given us only the number, I think, of yearly tenants between £4 and £10. He has not given us the monthly tenants?—Yes, next column, page 4.

2567. (*Chairman.*) Yes, there is a table. One-apartment houses at £20 and under, 890. Of these 75 are yearly lets and 815 monthly?—Yes.

2568. Then of two apartments, 459 of these are under £10; 649 are yearly, and 447 are monthly lets. Then two-apartment houses above £10, there are 363 yearly lets; and those of three apartments from £10 to £20 are 449. Tell us, Mr Binnie, what is the proportion of yearly and monthly lets under £10 with one apartment?

(*Mr Binnie.*) It is over 90 per cent. monthly.

2569. (*Chairman.*) Take two apartments under £10, what is the percentage monthly?

(*Mr Binnie.*) It is about 40 per cent.

2570. (*Chairman.*) Then the others are all yearly. Do you suppose, Mr Wills, that that is the ordinary proportion? Is there anything special in your houses?—No. I think you will find it generally to be a fair representation of other factors.

2571. You have no quarterly lets?—No.

2572. (*Mr Binnie.*) Just look at those figures. The two-apartment houses above £10, 363; you have forgotten to carry that to your total, and so that makes a mistake?—No the three give 1459 houses.

2573. (*Chairman.*) There are the three figures entering into the 1459. Have your monthly as contrasted with your yearly lets been increasing or diminishing statistics?—Pretty stationary.

2574. There is no tendency one way or another?—The tendency, if anything, goes towards monthly lets. There are certain properties which we will not let monthly.

2575. But it is not very marked?—No.

2576. What, then, in the question of these yearly houses, is the grievance in your view that the tenants have?—Well, their situations are uncertain and they don't want to bind themselves for such a long period to a house with much uncertainty about their work, and they feel that they are in a measure handicapped.

2577. Has that any special relation to your particular class of tenants, or would it apply generally? Your tenants are no more shifting in their occupation than ordinary working men?—No.

2578. Why do you say that? Is it from personal experience of tenants?—Yes, I know most of my tenants.

2579. Have you found tenants coming and wanting to remove after they have taken the houses? Can you give us a notion of what percentage of sub-lets you have had on an average of three years on the houses let yearly at £20 and under?—4⅓.

2580. Of which 53 per cent are under £10, and 47 per cent. from £10 to £20?—Yes.

2581. Can you tell me how many of these sub-lets have taken place between the taking of the house in February and the entry in May as compared with those after May? Just abont a half.

2582. That seems to be the general experience?—Yes, just about a half.

2583. How does that come about?—In a great many cases people at such an early date are afraid to lose their houses and they take them, and very often they come afterwards and say that they took their houses because they did not want to be thrown out, but that they had got work elsewhere or had some other reason, and then we said we could not take it off their hands but would be quite glad to sub-let.

2584. Does that involve that if the law for alteration that is proposed were made to shorten the period between the taking of the house and the entering, a number of these sub-lets would not need to be arranged?—I think not.

2585. If a half of them are in the first four months and you reduce that to two months, then a lot of these cases would disappear?—Some of them would—a good many.

2586. Of the 50 per cent. that you find between taking the house and the term of entry, can you give me any notion of how many will be in the first two of the four months, as compared with the last two?—No, I could not do that offhand.

2587. Would more be in the last two?—I think they might be pretty equally divided.

2588. Because, if they were, and if you shortened the four months to two, you would get rid of 25 per cent.?—I think they would be about equal. I have had a good many cases, I daresay, altogether, possibly a dozen from first to last, of lets entered into say to-day, and then three days afterwards a call comes from the tenant, who asks to be allowed to give it up, as he has lost his situation.

2589. Can you tell me of this 4⅓ per cent. In how many cases was there any ultimate loss to the principal tenant?—25 per cent. on the number of sub-lets have lost. I have given you a table.

2590. That is your supplementary table. You produce a table showing the ultimate loss to the principal tenants in the three years, from 1903 to 1906. That does not include, does it, the charge that you made in the way of factor's fees?—No, that is purely rent.

2591. That would fall to be added?—Yes.

You have not added it up.

2592. (*Mr Binnie.*) The tenants paid £89, 2s. 1d., and the loss was £21. I suppose what you mean by a tenant paying is the sub-tenant?—No, it is the principal tenant who has to pay for the loss at the time of letting.

2593. What is the second loss?—There is no second loss in that.

2594. (*Chairman.*) But the last column?—The first column is just the gross rent, and the second column what the tenant actually lost.

2595. (*Mr Binnie.*) And what is the third column?—What the proprietor lost.

2596. (*Chairman.*) It is the second last column that is the important one for us. That comes to how much.

(*Mr Binnie.*) £89, 2s. 1d. is the net loss by the tenants.

2597. (*Chairman.*) In addition to that, what would they each have to pay to you, do you think, on the average?—I charge them really the rate that I charge the proprietor, sometimes from 3 to 5 per cent., depending on the class of house. For instance, from £10 to £20 3½ per cent., and under that 5 per cent. Of course there are a great many we don't charge at all.

2598. But you in all these cases do your very best to have no loss at all, or to minimise the loss as far as you can?—Yes.

2599. May I take it that these tenants were all of them or almost all of them satisfactory tenants?—Yes.

2600. Can you give me any idea of the proportion in which they left for work elsewhere?—No, I could not differentiate, but that is the main reason.

2601. It will also arise from loss of employment?—Yes.

2602. Or wanting to take a cheaper house?—Not so much that. What we do is to endeavour to point out to them that all the difference in the rent would not cover the removal expenses and other costs.

2603. It is generally change of employment?—Yes.

2604. There will be cases of death?—Oh yes. That case of 394 Duke Street, where the sum was £13, 2s. 6d., was the case of a lady who died between the taking of the house and the Whitsunday term. The house did not let all year. The trustees had not only to pay the balance of her rent up to Whitsunday, but the whole ensuing year's rent.

2605. Why had sub-lets not been got in these cases?—They were got. These are the results of sub-lets.

2606. Why was a complete rent not got—why was there a balance the tenant had to pay?—The sub-tenant paid.

2607. But you say there was a net loss in these cases to the principal tenant. Now, if there had been a sub-tenant for the full period paying the full amount, there would have been no loss?—No.

2608. But it arises from the failure on your part to get a sub-tenant for the full period?—Yes.

2609. In other cases from the sub-tenant that was got failing to pay the principal tenant?—I have not had any cases of that kind.

2610. It was from an indefinite period?—Yes.

2611. You think that in these cases there was a real hardship to the principal tenant?—There would have been to have kept that.

2612. In the result they had to pay these sums; there is the hardship and the grievance?—I think so.

2613. Suppose you had, instead of a yearly let, a quarterly let, you would still have, although in a less degree, similar cases? You can conceive a case where a person requires to leave within a month, but that would be such a rare thing it is not worth taking into account.

2614. Is the present system generally, in your experience, administered by factors as well as it can be?—Yes.

2615. And the fees they seem to charge, if the system is to be kept up, seem a natural incident to it?—Oh yes; I cannot work for nothing.

2616. In addition to the actual cases of sub-let that you have to do with, you think there are many others, in which, but for the risks that a man runs, they would change the house?—Yes, I know that.

2617. What kind of cases are these?—Here is a man with a family, and he has got a situation say in another town and wants his family with him. He comes to you and says, "Will you take the house off my hands." You tell him you will sub-let it with pleasure. He says, "Will I be liable for the rent?" "Oh, yes, you will." "For what time?" "Oh, well, I would rather go myself and just wait," and he goes himself without his family and goes home perhaps for week ends rather than take the risk of having two houses on his hands.

2618. So he is involved either in the cost of lodgings if he stays away or in the cost of travelling?—Yes.

2619. And apart from cases where people come to you, there will be those, I suppose, where they know the risk that they would run and don't even come to you?—Oh yes.

2620. You think it is not fair merely to look at the actual number of sub-lets, but also at the cases where men would change if they had the chance?—I do not think you can overlook that.

2621. If that is a real grievance, you say the mere alteration of the date of re-letting would not substantially affect that?—It would not touch it at all. It is not a question between sixteen months and fourteen months.

2622. It would merely touch it in this way, that the sub-lets in the first two months of the sixteen would then disappear?—Yes, that is always a problematical quantity.

2623. When you talk of a short period of let, what do you mean, monthly or quarterly? Do you think that quarterly would be a fair arrangement as compared with monthly on the one hand and yearly on the other?—Oh yes, I think so, and I think quarterly would be a very fair arrangement.

2624. Better than monthly?—Yes, I think it would be preferable.

2625. And in regard to the question of the rates about which you are going to speak, it would be easier to arrange that if quarterly?—Yes.

2626. Would you expect, supposing a different system were introduced, that there would be many more frequent removals on the whole or merely that they would be spread over the year?—I don't think there would be many more on the whole. There might be at the start, when the thing was new, but in two or three years it would settle itself. It is costly for a Scotsman to remove.

2627. For a Scotsman?—Well, he has his plenishing and has usually a well-furnished house, and it is costly for him to settle down in another house.

2628. Then everybody seems to be agreed that the present system of removals, being practically confined to Whitsunday, is unfortunate. Do you take the same view?—Yes, strongly.

2629. If a remedy can be got, do you think the one proposed could meet it?—I do.

2630. Do you concur with the other witnesses as to the loss and hardship due to the flitting being all in one rush?—Yes. You never can overtake that within a week or ten days.

2631. Have you any flitting at November?—No, I have no intermediate lets except monthlies.

2632. How do you account for that?—Well, they are taken yearly.

2633. Has that some connection with the rates being yearly?—No. They are taken yearly in January and run from Whitsunday to Whitsunday.

2634. Why not from Martinmas to Martinmas?—It is the custom.

2635. Your view is the same as we have heard from others on that with regard to the difficult question of rates. Suppose you say that the term was quarterly, do you suggest that the landlord should collect the rates or that the rating authorities should, instead of an annual collection of rates, make a quarterly collection?—Quarterly collection would be least objectionable. I would rather have the Corporation collect the rates.

2636. Why?—It keeps any friction away, and I think, generally speaking, the tenants would take a greater interest in taxation if they paid the rates directly. They would feel it more acutely.

2637. You concur with other factors that it is desirable not to mix up the landlord with rates if it can be helped?—Yes.

2638. Also if the landlord collects the rates along with the rents, the tenant may never come to know what rates he was paying?—That is so. There is no doubt they would be served with notices just as they are now.

2639. If there were quarterly collections?—I should say so.

2640. What if compounding of rates were gone in for, would they not be served with notices?—No.

2641. Have you yourself had any experience that is helpful in this?—I have several properties where the houses are mixed, say single houses about £5, 10s., with rooms and kitchens from £8, 10s., and in these small houses I have included the rates with the rents.

2642. By arrangement with the rating authorities?—No. They will not allow you anything unless you take a full tenement.

2643. Then the burgh authority allows you?—7½ per cent, I believe, but I have no experience of that.

2644. What do you do then?—I say the rent is so much, including rent and rates, say 11s. 8d. a month. The people ask no more. They know that that clears them for everything. They have got it all off their heads. I just collect the notices from them and pay the rates.

2645. Do you charge anything in addition to the amount of rates for your trouble?—Yes, I put on 25 per cent. for trouble and loss.

2646. Do the tenants know that?—They have their notices delivered to them personally, and if they just compare them with their rent they would find it out. The balance would be the rent.

2647. (*Mr Binnie.*) Do you state separately what the rent is?—No.

2648. Or when they take the house, what the rent is apart from the rates?—No, I say the rent is 11s. 8d. a month. You have nothing else to pay.

2649. (*Chairman.*) Supposing it was brought to their notice that you were charging for your trouble, would they be satisfied then?—I think so. For instance, in connection with the stair gas, it is well known amongst the majority of the tenants that we charge 10s. per burner and that we get 25 per cent. for collection and repair.

2650. Apart from rates, do you think that short lets would have an influence in raising the rents?—No, I don't think so. That is to say, if there were a greater number of tenants than houses it would, but that is just supply and demand. That in itself would not have any effect whatever. The rents might come down rather than rise, because houses were more numerous.

2651. If, on the other hand, the rating authorities are going to collect and the lets were quarterly, would that involve a quarterly collection?—A quarterly let would mean a quarterly collection of rates, I think.

2652. Would it be a benefit for tenants who are paid at frequent intervals that they should pay their rates?—I think the shorter payments would be better for working men.

2653. You think that that would be quite worth while even though it cost the rating authorities a considerable amount of money?—Yes, they would save considerably by that.

2654. In the end?—Yes, it might cause them some trouble.

2655. Are you of opinion that others with the right of appeal on the ground of poverty should in any case be preserved?—Certainly.

2656. What is your view, then, this being your view generally on Mr Cross's Bill as meeting the situation both in theory and practice?—I think it is the only proposal that has been made that really meets the situation. I cannot see any way that it does not meet it.

2657. I notice you say in your statement that "the 'principle of Mr Cross's Bill leaves to parties the complete 'freedom in bargaining subject to their confidence in each 'other as to terms of payment." Is that so in the end? Wouldn't the result of it be that there would be no yearly lets at all, because there are no yearly terms of payment. It would bring yearly lets to an end?—It would, unless we specified with each other to allow the rent to run for a year, which the landlord would not do. It would bring yearly lets to an end automatically.

2658. And would result in either quarterly or monthly rents?—Yes, or half-yearly. We have lots of people whom we are quite willing to trust for half a year.

2659. But there is no such thing in practice?—No.

2660. Do you think it would then result in not coming into existence?—It might with regard to the better class.

2661. Some of the ones who are now yearly would become half-yearly, and in that way the idea of security of tenure would still be given effect to?—Yes. We have a great many tenants who have half-yearly incomes, and these half-yearly incomes suit the half-yearly rents, and of course it would be all the more so if they paid it quarterly if it came quarterly, but we let it to them half-yearly on account of that.

2662. Have you heard of what is put forward, that the letting to certain classes of working men for security of tenure can be given effect to by half-yearly lets in Mr Cross's Bill?—Yes, the whole measure of tenancy depends on trusting a man.

2663. I understand at the same time that while taking the view you have expressed as to short lets, if that is not given effect to you concur with other factors that the minor proposal about reducing the period between the taking of the house and the entering it is a good thing?—I think it is necessary to have that legalised apart from the other question.

2664. (*Mr Esslemont.*) Look at your table on page 4. You have in houses of two apartments in 649 cases yearly tenancies, and in 447 cases monthly tenancies. Now, are the monthly tenants just as good a class as yearly?—Generally speaking they are.

2665. Do you find in your experience that the houses occupied by these monthly tenants require more repair than those occupied by the 649?—Yes, there are more removals.

2666. Therefore more repairs?—Yes, more or less.

2667. But that is not due to the quality of the tenant?—It is just the tear and wear. You cannot get them to be as careful as you would be of your own.

2668. You say, I think, that looking all round among your tenants, you don't think that there is a disposition to remove unless it is necessary?—That is so. They don't do it for fun.

2669. They recognise, as I have heard it said in the North, that three removals are as bad as a fire?—Quite so.

2670. As to the number of removals, I see you take an average of three years and put them at 407, a little over 12 per cent. on the total number of houses factored by you. You think if the proposals in Mr Cross's Bill were given effect to that percentage would be materially increased?—It would, for the first year or two, but it would not be afterwards.

2671. As to the present period for warning out, do you see any objection to that being altered?—None whatever.

2672. What do you think is a sufficient period?—Twenty-one days before the 28th.

2673. (*Mr Dobbie.*) How do you explain the fact that there are more removals among monthly tenants with two apartments than the yearly tenants?—They are of a more migratory nature and some of them remove to be near their friends. There is a multitude of reasons why monthly tenants do remove. There is no one special reason that could be given.

(*Mr Binnie.*) They have very little to remove.

2674. (*Mr Dobbie.*) You said they belong practically to the same class. Between the two classes is there any distinction between the yearly tenant and the monthly tenant?—Take the houses under £10 on a gradient. You come from £9, 19s to perhaps £6, 15s. Very well, when you come nearer to the £6, 15s class, you are amongst a lot of labourers whose work is continually changing. They are in Govan to-day, Partick to-morrow, Parkhead next week.

2675. That is, that while on the figures we have, the yearly and monthly under £10 look pretty much the same, as a matter of fact in detail monthly ones are more commonly found at a lower rate than from £7?—Yes.

2676. That is quite a good explanation. Then, about compounding, are you in favour of the landlords paying the rates, or do you prefer that the tenants should pay them?—I prefer that the tenants should pay their own rates, but I would not object to compounding.

2677. I see, in your view, their periods of let would necessitate the inclusion of the payment of rates with the rent. Do you think that is so?—Absolutely. If you want the monthly lets, certainly the rates must be included. There could be no further way out of it, but with quarterly lets I do not see why there should not be quarterly collections and payment direct. I would not object to the other.

2678. A suggestion has been made that quarterly collection of rates would necessitate four different rolls. You, speaking as a house factor, might tell us whether you think it would be practicable to collect the existing rates by four instalments from the tenants in the option of the tenants?—Yes, I think so, and I think it ought to be; there was an agitation for that same thing, that they might pay their rates in instalments in two or three or four payments. Supposing a man's rates came to £1, it should be in his option to pay four times 5s. each time as he got his wages.

2679. The difficulty against that is that, with shorter lets, there might be more differences among the tenants, and it would be rather hard to recover from one tenant, say for quarter four quarters' rates. Would you, as a practical man, think it feasible that the house agents should have the duty upon them to intimate to the collector each roll in the course of the year, to enable three supplementary rolls to be made up of new occupiers from whom the remaining instalments might be collected?—I do not know that we would be unwilling to do that. It is not a difficult thing to do.

2680. Not if your removals are 12 per cent. overhead?—No.

2681. If the factors or proprietors intimated each removal as it came within their knowledge to the local authority that local authority could make up the supplementary roll?—I would not say, "as it came to their knowledge," but we could do it at periodical times.

2682. Say quarterly?—Yes.

2683. Assuming there were to be quarterly collections, it might be practicable, you think, to ensure that the collections each quarter would be made from the new tenants, provided that in the middle of each quarter, say, the proprietor or house factor had sent in a schedule of the changes since the last quarter?—It is quite practicable, but it would cost us some trouble.

2684. Do you think it is necessary, assuming that compounding was adopted, that the tenants should know how much is being paid by them for rent and for rates respectively?—Yes.

2685. Is it practicable?—Yes, they could serve with notices as they do now, all the same.

2686. But, as Mr Binnie pointed out, if you let a house for a slump sum, the mere possession of a notice does not indicate to the tenant what the real rent is unless the tenant has come to you and found from you what the real rent is to be. If you let a house and say, "You are to pay so much, including rent and rates," the mere fact that the tenant knows the rates are 2s. a £1 does not tell him what, without the rate and outlay or trouble to the factor, he would get the house for?—If he gets the notice that his rates are, say, 10s., and he notes that his house is £5, 10s.——

2687. How does he know that?—He can be told the rent of his house.

2688. You said when you let your house——?—Oh yes, people generally know by asking what the rent is.

2689. Would you tell what the rates were at the beginning of the year?—We just take an average sum.

2690. You would add an average sum for your own trouble?—Yes.

2691. You tell the tenant three things: first, the rent; then, second, what you are putting on for your own trouble; and, third, the rates?—I would not tell them all that unless they asked particularly.

2692. I quite know that would not give the tenant the knowledge of what the real rent of the house was?—No, it would not give them the net rent of the house, but they would not care anything. That is the rent to them.

2693. But we have been told, now by yourself, that it is most expedient from a public point of view that the ratepayer should know what he is paying to his municipal government?—Yes, I think so.

2694. He would not know of that scheme?—He would have it in the valuation roll. There are valuation notices always served as to the net rent of the house for assessment purposes, and the tenant is made aware of that as he gets a notice served on him.

2695. Your suggestion would be to have a roll for

Mr J. B. Wills. 11 Dec. 1906.

assessment purposes and collect in a slump sum from the tenant?—That is statutory.

2696. (*Mr Esslemont.*) The tenant can easily find out what the amount of the rating is when he knows the rest—the rent and the cost of collection?—Yes, there is nothing to hide.

2697. Except that in some cases we have been told 25 per cent. would require to be added?—Yes, I would not like it. I have to take the good with the bad.

2698. (*Mr Howden.*) Seeing you admit the great rush for houses in January, and the rush at the yearly removal term, the 28th of May, would you not be inclined to extend the provision not in the actual terms of Mr Cross's Bill, but in doing away with the removal term of 28th May and spreading it over the rest of the year for the larger class of houses and business premises?—The removals in that class of house are so few that it would be of no real importance.

2699. But you would have no objection to starting a tenancy say in August for business premises, terminating the next August, if the tenant so desired?—Yes, I would object, and I will tell you why. The property may be sold or change hands at these terms, say Martinmas and Whitsunday, and it is expedient that the tenancies should all terminate at the same time as the transfer of property takes place. The usual terms for the sale and purchase are Whitsunday and Martinmas, and it is advisable that the tenancy should terminate at the same time, so that if the new proprietor wanted to alter the premises or make some alteration in rent or in the tenement, he would be able to enter upon the whole at the same time.

2700. You told us that in certain cases they contracted leases on business premises and the larger class of houses. All those will not expire at the one time?—Yes, all at Whitsunday. Every let I have expires at Whitsunday.

2701. But not all at one time. One may have five years' lease and another only four years' lease?—That is so.

2702. You think it is necessary that they should expire at those terms?—I do not follow you. Suppose I let for five years from Whitsunday 1900, that terminates at 1905. If I let for three years, it terminates at 1903, but it terminates at Whitsunday of each of these years.

2703. My point is that I want to do away with the Whitsunday term if possible. Would there be any great difficulty in the way of doing that?—I think so, a very great difficulty. It would be very inexpedient.

2704. Would that not apply to all classes of property?—You mean shorter lets.

2705. Yes?—No, not in the same degree, simply to business premises and the larger class of houses, business premises principally.

2706. (*Mr Cox.*) The rates on all £4 houses are paid by owners?—Yes.

2707. Above £4 are they collected?—No, paid direct by the tenant.

2708. In your 2800 houses there are 1262 monthly lets. You may say 45 per cent. of your houses are monthly lets?—Yes.

2709. So that of all your tenants 45 per cent. pay their taxes direct?—Yes, that is so.

2710. The authorities already collect a very large percentage of the rates directly from the tenants?—Practically them all, for I have only three or four houses under £4. The Corporation collect all the rates.

2711. They are already to a very large extent collecting the rates of short lets. Supposing the system of short letting was increased, as it would under the proposed measure, why should the authorities not collect them just as at present?—I don't know. It is as easy to collect them monthly as quarterly.

2712. (*Mr Esslemont.*) In these 1262 cases, all of them don't pay their rates direct?—Yes.

2713. Everyone of them?—Every tenant I have practically pays his rates direct except those I specially arrange with.

2714. These are very few cases?—Yes.

2715. (*Mr Cox.*) I have a statement before me that shows that in Glasgow there are probably 60,000 houses that are monthly lets, which would be enough for about 300,000 of the working population of the city. Out of all those are there enough for the man who wants monthly lets. Has he any difficulty in getting such a house?—No, if he wished a house he would get it of a certain class. We would not let every house by the month even supposing it was standing empty. The frequent tenement is this—two rooms and a kitchen house on one side at say £14, 10s. or £15; a room and kitchen say at £9, 19s. or £10, 10s. in the middle, and a room and kitchen of £11, 10s. or £12, 10s. at the side. There are two different sizes of houses on the one flat and three different classes of tenancies. Supposing I had a middle house standing empty at £9, 19s. and these other houses were all let yearly, I would not let it monthly.

2716. Are the monthly houses largely of the poorer class?—Yes, a different class of tenancies.

2717. So a man might want a monthly let and not get a suitable house?—That is so.

2718. (*Mr Binnie.*) You have given us the number of yearly and monthly lets that you have heard of, one and two and three apartments. Could you give us what is the gross rental of these. What is your gross let rental?—I have not made it up. I only made up the number of houses for this commission. I did not know myself till I made that up.

2719. Do you not know what is the gross rental of the property you factor?—No.

2720. I see your tenants of sub-lets lost about £30 for the last three years?—Yes.

2721. What rental would that apply to?—It must be a very, very small percentage.

2722. I am perfectly aware of that, but could you give us some idea?—I have no idea. I will send it in for you.

2723. (*Chairman.*) You can give us that to enable us to calculate the percentage?—Yes, on the gross rental, but that only applies to houses under £10.

(*Mr Binnie.*) Of course.

(*Mr Howden.*) You give us also the annual number of removals between the terms, the whole of the sub-lets.

(*Mr Binnie.*) He has given us the percentage so that we can make that up.

2724. (*Chairman.*) Supposing the compounding system was gone in for, what percentage do you think would be a fair allowance. You see Mr Cross gives 30 per cent. What is your view?—It is ridiculously inadequate.

2725. What would you substitute for that?—For these lets, £4 to £7, I should say 33⅓ per cent.; from £7 to £10, 25 per cent., and from £10 to £20 from 15 to 20 per cent. I should be prepared to say that we would take the same loss as the Corporation has, plus a sum for collection and a sum for loss on empties.

2726. What you are suggesting is only to keep you right, not for surplus profit?—No. If we are paid for our trouble and get the necessary allowance for loss, it is all we want.

2727. It has been suggested that this new proposal which you approve of would affect the value of properties for lending purposes?—It would not alter the class of tenancy in quarterly lets at all.

2728. It has been suggested also that the law of hypothec is all that is needed. In your experience has there been any separate agitation against the law of hypothec?—No.

2729. Is it a mere benefit to the landlord or also to the tenant?—It is a form of security the tenant offers us. I would certainly demand security if I had not the right of hypothec, because I have no other security except that to fall back on.

2730. Does it enable you, in the case of illness for instance, or other causes, to give indulgence to a tenant whom otherwise you might have to turn out?—Yes.

2731. Does it come to this, that the only people who have reason to complain are ordinary creditors?—Yes, and sometimes it is a great blessing to a working man to have the law of hypothec, if he has got to do with the loan purchase men who come round about his wife when he is not in, and the only protection is the law of hypothec.

2732. You have not known of any agitation?—Only grumbling.

2733. (*Mr Dobbie.*) Do these monthly tenants of yours move as a rule at Whitsunday or throughout the year?—Throughout the year, at any time.

2734. You have 12½ per cent. of removals at Whitsunday?—That is not monthly at all, only yearly.

2735. And these monthly people do remove at intermediate dates?—Yes, they are always a floating population.

Mr D Munro

Mr Daniel Munro, J.P., F.S.I., called and examined.

Mr D. Munro

2736. (*Chairman.*) You have been a house factor and proprietor in Glasgow for upwards of forty years?—Yes.

2737. You have been engaged in business all that time?—Yes.

2738. You have given evidence in cases of arbitrations frequently?—Yes.

2739. You have looked at this question in the light of the recent Bill that has been introduced—have you also seen the previous Bills?—No.

2740. What is your experience? There has been a complaint against the present system. What has that consisted of? First of all, who has it come from?—From the working classes altogether, who occupy houses largely under £10 rental, and under £10 they felt it a great

hardship that they were compelled to retake their houses four months before the period of occupancy, and perhaps before that arrived they had to change from the place of employment and remove to distant parts of the city.

2741. How long is it since you have heard of that first?—Four or five years, more or less.

2742. Before that, was it not?—It was not so clamant.

2743. We had a Bill in 1890?—I cannot speak of the precise time.

2744. What attitude have the owners of property and their factors taken up?—They were quite willing to meet the views of the complainers if everybody had joined, and they could have been held to it by some legal enactment, to an arrangement whereby the period would be shorter. The date of warning stood in the way.

2745. Has it arisen in your experience from proprietors or factors going too early or rather from tenants coming too early?—We have a large number of tenants who come before the time, and we have to turn them away. The better class come very early, because they like to have a selection of houses.

2746. These tenants have brought the thing on the heads of all tenants?—Yes, and some of the landlords are anxious to get before their neighbours. That has led to it also.

2747. Taking the question of warning away, what is your suggestion about that?—It is at present 4th April. I think it might be left to the 1st of May.

2748. If that were done, what alteration might be made in regard to the entry, in regard to the taking of the house as compared to Candlemas in the present system?—If this could be postponed, say, to the beginning of May, renewal of lets could be delayed probably to the middle of March or to the 1st of April. Further, it would also have been necessary to enact that all lets for the ensuing year made before a fixed period should be held to be invalid.

2749. You want time enough for both sides to make their arrangements?—Yes.

2750. The present system seems to give an extra amount of time with the resulting inconvenience?—It entails a certain amount of hardship on the working people.

2751. Is that universally acknowledged?—I think so.

2752. There is a difference of opinion among the factors as to whether that should be done by voluntary arrangement or by legislation?—It would never work by voluntary arrangement, because they would go back to the old system.

2753. Supposing that it was done by legislation, what limit would you put in respect of the amount of the rent. Would you make it a general application to all houses or limit it to the houses of a particular rental?—The tenants of larger houses have a great many considerations to take into account, and they prefer as a rule to have some considerable time to arrange for their houses.

2754. I suppose the warning away might apply to all houses?—Yes.

2755. Then the period of taking the house as compared with the period of entry, would that not apply to all houses? Would there be any reason for limiting that?—Issuing the missives would be. The only thing is that the public who occupy houses above these rents are not complaining, to my knowledge.

2756. Then, turning from that to the proposal on Mr Cross's Bill to fix the period of let by the period of payment of rent, what do you say to that?—I think that would involve very serious consequences to the owner.

2757. What would be the drawback to the owner?—It would increase the amount of trouble very much. For instance, at the expiry of each period of let, the factor would require to ascertain whether or not the tenant would want to remain and re-let or warn away. That would be more trouble. His shorter period of let would have the effect of greatly lessening the value of security, inasmuch as the frequent changes of occupancy would entail serious loss of revenue from periods of partial occupancy.

2758. Then I presume that the result would be to make more frequent change of occupancy?—It would be certain.

2759. Why?—Because they would have opportunities of leaving for newer houses in the neighbourhood. The nature of people sometimes is to be restless and leave when there is nothing to restrain them.

2760. Would that apply supposing the period were merely shortened from the year to a quarter as distinguished from a monthly let?—It would apply to all short periods.

2761. In addition, thirdly, would it increase the wear and tear?—Yes.

2762. Is that from the injuries done in the course of removal?—Chiefly on that account.

2763. Suppose there were any such provision, would it require to be accompanied, in your view, with a more summary power for ejectment?—It would be rather awkward in some cases if tenants, after being warned away, were not leaving. I think summary power should be given for ejectment, as a great hardship would be imposed on the incoming tenant, and as a consequence claims of damage might arise against the owner.

2764. There are four reasons you have given, but at the present moment there are thousands of monthly lets, aren't there?—Yes.

2765. Then it would merely extend the number of monthly lets. All these difficulties you have mentioned apply to existing monthly lets, don't they?—It especially applies to houses of the better class occupied by the better class of working people.

2766. In your own factoring, have you any monthly lets above £10?—No, the houses occupied by monthly tenants are chiefly under £8.

2767. Take a monthly tenant at £8, do you say that their houses cost you more at present than a yearly tenant of £8?—Certainly.

2768. Could you put a figure on it?—I could not do that.

2769. Roughly?—I know the tear and wear is very great. In connection with houses under £8 the total outlay for upkeep and taxation would not be less than 33 per cent., but that does not include the loss from removals.

2770. Suppose a yearly tenant of £8 comes to you now—a first-rate man—and says to you, "I want a monthly tenancy; how much will you charge me?" I am referring to a man that you want to keep?—We would refuse to let on monthly terms.

2771. It would be a matter of money, wouldn't it?—Yes, but the short let would not suit us, because it would increase the outlay for the tear and wear.

2772. But if you got recouped?—The loss from partial occupancy would occur in that case too. Besides, we want to keep for a certain class of houses a certain class of tenants. Monthly tenants as a rule are not of the same social standing.

2773. At all events, if you did, you would put on a substantial increase?—Yes.

2774. Supposing, for instance, you were to turn a whole tenement from yearly into monthly lets, and there was no question of mixing up the tenants, you would substantially increase the rents?—We would require to do so. I could not tell you the amount.

2775. Do you say in regard to the thousands of houses existing with monthly lets that the demand for monthly lets is at present being made?—A large percentage of the population.

2776. Is there any demand at the present moment for monthly lets which is not being made just on account of the existence of yearly lets, or have you ever had experience of that?—No.

2777. Have you ever had a case of a man wanting to turn his yearly let into a monthly?—No, but I have had a monthly tenant wanting to pay quarterly and take yearly lets.

2778. What was the reason?—For some of them it was a social question.

2779. Did security of tenure enter into it or not?—I do not know. They don't wish the factor to be coming so often to their door. Respectable people don't care about that.

2780. Is that an element?—Yes.

2781. All you have stated is independent of the taxation difficulty?—Quite.

2782. And the evidence you give is on the footing that the short lets would lead to a substantial increase of rent?—I believe so.

2783. Therefore on that point of view it would be a drawback to the tenant?—Yes.

2784. And payment of rent in advance would be a result?—Certainly.

2785. Why would that be so if hypothec remained?—Simply because of a short tenure and the power of leaving at the end of the period.

2786. At the present moment are the existing monthly lets forehand?—Yes.

2787. Any others would be just the same?—In the same way. We have a number of quarterly rents payable in advance.

2788. In regard to taxation we have two views. In regard to the question of friction some seem to think that it would introduce an awkward element between the factors and tenants, others that there is nothing in them: what do you say?—I really cannot say; in connection with the collection of stair gas there is frequently an amount of friction between the tenants and the factors. The tenant seems to think he should have the benefit of the discount given to the factor.

2789. Would the same thing arise here?—They might certainly object to the amount the factor levied.

2790. Would they know that he was compounding?—They might not know in that case.

2791. Supposing the compounding takes place, what is

Mr D. Munro.
11 Dec. 1906.

your idea about the proposed allowance in Mr Cross's Bill?—I think it is quite inadequate.

2792. Do you agree with what Mr Wills has just said?—I think so.

2793. Covering the amount of loss and a sufficient sum for collection?—I think the amount of loss sustained by the authorities should be the measure of allowance to the factor, with a sufficient sum for collection.

2794. You say that it would require the keeping of a double set of books?—The factor would require to keep a set of books apart from the rents, and if it is to be levied from month to month and quarter to quarter, it would be a very difficult thing in the way of accounting to strike up the proportion of taxation into fractions. It would be almost impossible. The work would be enormous. It would require an accountant of the first order.

2795. Do you think that in the Act the tenant would have to be charged such a sum that they would not as a result make anything by this, but rather lose?—That the landlord should not use, you mean. I do not think the landlord should have any loss imposed upon him.

2796. Suppose the system of yearly let is changed to monthly and with compounding of rents, do you think it would be in the end to the benefit or to the loss of the tenant?—To his injury in the end.

2797. Supposing, on the other hand, that the Corporation were to collect these, say, quarterly. If the system has to be organised, do you think that is a better way than compounding?—I think it is a much better way. The system has been frequently spoken of at our public meetings by the public who wish for quarterly payments.

2798. Apart from this question of short lets altogether?—Entirely.

2799. It would be theoretically a better system. Do you see any practical difficulty to prevent it from being carried out?—Instead of quarterly collections it might be better in three parts. One quarter at the end of the year would be a very awkward time for collecting. It would be a long time to wait till the 28th of May before the authorities got the last quarter.

2800. You suggest Whitsunday, Lammas and Martinmas?—Yes; perhaps Candlemas, Martinmas and Lammas.

2801. Have you found that some rating authorities are taking an interest in this question?—No, except that I saw to-day that the Partick people were.

2802. Do you think, if the new proposal were carried out of short lets, it would affect the value of property for investment purposes?—I think it would certainly do that.

2803. Why?—Because it would lessen the value of the security in the property. There would always be a certain amount of loss with one tenant leaving and another coming.

2804. Can you say there is any difference at the present moment, as far as investors go, between property with yearly tenants and property with monthly tenants?—Yes, certainly.

2805. You have found that?—Yes.

2806. Investors are more ready to invest on a yearly property than a monthly?—Yes.

2807. Is that due to the class of tenants being better in the one case than in the other?—A good deal.

2808. Assume that the better class were made monthly?—There would be uncertainty of tenure, and it would be considered by any investor joined with this obligation to collect assessments.

2809. Investment in property as applied to workmen's dwellings would be diminished?—Yes, I am quite convinced of that.

2810. Whether that result takes place in England or not you don't know?—No.

2811. You think that is a very important aspect of the question?—There is no doubt about it.

2812. In your own experience, have you found many cases where there was hardship to a tenant who had to remove in the middle of a term through his losing a substantial sum of money?—I looked into that. I have gone back three years, 1903 to 1906, and I have found the loss is very, very small.

2813. Give us your total rents you are dealing with under £20?—Under £10 t' e total rental is 64 per cent.

2814. Of what?—Of dwelling houses.

2815. The whole of the houses you are factoring?—Yes.

2816. Then under £20?—Between £10 and £20 we have 20 per cent., and 84 per cent. altogether under £20.

2817. Can you tell us what number of houses you factor under £20 and divide that into 4 to 8 or anything you like?—1132. Of these there is 86 per cent. under £20.

2818. You have 1132 altogether under £20?—Yes.

2819. How many of these are under £10?—834.

2820. Out of the 1132?—Yes.

2821. Have you ascertained what loss there has been to principal tenants during the last three years where they had sub-lets to arrange?—Yes. We had a total of 45 removals in three years, the average for each year being 15 applications for relief of the houses. In one year the tenants lost nothing; in the second year they lost £6, 10s.; and in the third £3; in all the sum of £9, 10s. for the 45 tenants, equal to about 3 per cent. of the rental represented, which was £350.

2822. And the loss is £9, 10s.?—Yes.

2823. Did that arise from there being a period after they left before the sub-let took place?—Yes.

2824. (*Mr Cox.*) Was there any loss to the proprietor?—No, not in these cases. I understand a good many of these applications for sub-letting were made before the term and after they had taken the houses.

2825. Before the 15th of May?—Yes.

2826. (*Mr Esslemont.*) Just one question about the case of investors in property. You said, I think, first of all, that people were not so willing to purchase property which was let to monthly tenants?—Certainly not.

2827. You say in your precognition, that if these altered conditions of letting were coming into effect, investors would not for a moment think of having anything to do with them?—I do not think they would, with the burden of taxation associated with them.

2828. But one of the reasons, of course, why investors are not so keen to purchase houses that are let by the month is that these properties are the older properties?—Yes, and it is not very satisfactory dealing with monthly tenants as a rule.

2829. They are the poorest houses you factor?—As a rule.

2830. But that would in itself make investors fight shy of them?—Well, they do, but they are not so fond of them. There are often degrees amongst them.

2831. But that enters very largely into it?—Yes.

2832. (*Mr Dobbie.*) I think the same reason explains the sentiment which you referred to as existing against short lets in Glasgow. You said respectable people prefer yearly lets?—Yes.

2833. Does not that arise from the fact that the short lets at present are all very low rented and occupied by rather an inferior class and confined to inferior properties?—Well, I don't quite know the point of the question.

2834. I want to know why you think that people as they become respectable prefer yearly lets. You know in England, where there are some respectable folks, yearly lets are not known?—Well, it is different among the Scotch people. We have different ideas, and I am giving you my own experience. I have had tenants asking me to take them from the position of monthly to that of yearly tenants.

2835. I am putting to you that the explanation why there should be the present sentiment against short lets is just that at the moment tenants on short lets are of an inferior class, paying the lowest rents and occupying the inferior property?—That is so.

2836. Therefore, if this custom of short letting became more general and became popularised among all classes of rentpayers, that sentiment would disappear?—It might and it might not.

2837. You are in favour of some change in regard to the notice issued?—Yes, the Bill does not provide for that.

2838. I take it that your idea is that that would be more equitable to the tenant in the direction of giving him more time to make up his mind?—I think it would.

2839. I take it that there is always a scramble for the houses prior to letting?—Yes, always very considerable.

2840. While you agree that the law might be altered, I take it that there still would be the same scramble and discomfort to the tenant whether the letting day was in January or in May. When it did come there would still be the same anxiety on the part of the sitting tenant to take his house or somebody else's?—Yes, at an earlier period.

2841. On the other hand, short lets suggest that that discomfort would be minimised if spread over the whole year?—I do not think so, because tenants as a rule have got a custom at the end of the year as arranged at 28th May, and make their arrangements accordingly. I think the scramble would still continue.

2842. But if the scramble was four times a year?—We can scarcely imagine that. I do not suppose all the tenants would leave *en bloc*. A great many of them would remain till the end of the year.

2843. Do you think the Bill would be a dead letter and there would be the same tendency to have the removals annually at one term?—It might be modified.

2844. (*Mr Howden.*) You want the limit of this Bill up to monthly lets of £12 only?—Yes.

2845. You say that would favour a class who are well-to-do and who are more or less in permanent situations. Take the case of a tradesman who had a small family, how many apartments do you say that man should have in his house?—It depends on the number of his family.

Mr D. Munro. Dec. 1906.

2846. Say four?—It is generally a room and kitchen.

2847. Don't you think two rooms and kitchen would be necessary, especially if the family were grown up?—They won't pay a rent for it unless they are in an extra good position as tradesmen.

2848. Do you know of any tradesmen who are paying more than £12 of a rental?—We may have some at £13, but very few.

2849. You would not say a man was extravagant if he went above that rental?—It depends on his income.

2850. On the average tradesmen's wages?—We decline to give tradesmen houses much above the rent I have stated without some security or advance.

2851. Even taking it at what you say, a room and kitchen, there are a good many rooms and kitchens in the city of Glasgow rented at £12 and upwards?—Not many occupied by the working classes.

2852. I have myself occupied a house above that rental, and I am a working man?—Maybe you are a superior one.

2853. There are many others in the same position?—I do not say there are not exceptions, but I have stated what I believe generally. I have 50 per cent. of my houses let monthly.

2854. You don't want to extend those to £20?—No, I think that is too high.

2855. You are actually in a unique position. You are the only man who has come before the Commission in that position?—It is my opinion; I give it for what it is worth.

2856. You say the change of the monthly lets would increase rents?—It would certainly increase the rents for good.

2857. How do you make such a statement as that in the face of the fact that you say the owner would suffer a serious loss? If there is an increase of rents, there will be an increase of revenue?—Well, I say if we could raise the rents, we would.

2858. You said it definitely?—Only if we could get it.

2859. Then that is problematical?—In that case there might be no loss.

2860. You say here that there would be a particular hardship on tenants who would get monthly lets, because the landlord would claim forehanded rent. Is it not the fact that on quarterly lets at the present time the tenant pays almost exactly a month before the tenancy expires? That means, he pays his rent at Candlemas, 2nd February, up to the 28th of February; it is almost a month forehanded?—Practically.

2861. If you were to alter that to monthly lets, it would be carrying on that system practically unbroken?—No, it is a very different system between Lammas, Martinmas, and Candlemas.

2862. You would demand a month's rent. You claim that a man should pay on the 15th of May. Take it at that, then his tenancy expires on the 28th of May. Very well, you would then claim another month's rent from him, but he would have a fortnight's time, wouldn't he, to cover that, and it would be better if he was to shift in February. You actually charge a month's rent forehanded on these tenants and at quarterly rents?—Putting it over the year, that has been the arrangement approved of in the country for generations.

Mr D. Munro. 11 Dec. 1906.

2863. So that, although that is trotted out as a hardship, it really is exactly the present system?—All that I can say is that it would be made worse by the arrangement in the Bill. They would have to pay the whole quarter in advance at the beginning of the period.

2864. If it was monthly?—It would not increase the number of monthly tenants.

2865. (*Mr Cox.*) Do you not think there is a very real desire on the part of the working people for these short tenures?—I have not come in contact with the working classes to such an extent as to know, but I know this, it has not been clamant so much as the missive question. That has been the complaint, and a long-standing one. This Bill does not settle the question, and the complaints will go on as before in respect of missives.

2866. The agitation has been long continued and seems to be growing, and the evidence that comes before one leads one to consider that there is really this desire on the part of the people; but you have not come across that yourself?—No, I have not met it.

2867. (*Mr Binnie.*) In regard to notice of removal, it has occurred to me that this might be a possible way of simplifying matters, and I would like to hear what you think of it. If any intimation or intention to remove by a tenant could be made in writing twenty-one days at least before the day for removal, and that no warning away should in such a case be required, then the landlord, if he wanted to get quit of a tenant, would require to give twenty-one days' notice to the tenant?—That is prior to Whitsunday.

2868. Yes?—I think that would do. Any reasonable arrangement would do.

2869. That would save any trouble and expense of warning away?—Yes, but the tenants would require to be definitely made aware.

2870. Any intimation or intention to remove would require to be in writing?—Yes, that would do.

2871. And then you don't require to warn them?—No.

2872. On the other hand, if you required to give twenty-one days' notice to the tenant, would that not meet it?—I think it would, or something like that. I should mention that I have some particulars here I have not been asked for. The number of removals from my houses under £20 was 15 per cent. last year.

(*Mr Esslemont.*) That is 2½ per cent. higher than Mr Wills.'

[ADJOURNED.]

FOURTH DAY.

MONDAY, 17TH DECEMBER 1906.

At the Municipal Buildings, Glasgow.

Present:—

SHERIFF CHARLES J. GUTHRIE, K.C., *Chairman.*

MR JOHN T. HOWDEN. | SIR JOHN STIRLING-MAXWELL, Bart.

MR JOSEPH DOBBIE, S.S.C. | MR EDWARD COX.

MR STAIR AGNEW GILLON, *Secretary.*

Mr H. Brechin. Dec. 1906.

Mr HUGH BRECHIN, called and examined.

2873. (*Chairman.*) You are a member of the Corporation of the City of Glasgow, and convener of the sub-committee on the missive system, with which is incorporated the sub-committee on the collection of rates along with rents?—That is so.

2874. How long have you been a member of the Corporation?—About twenty years.

2875. Do you happen to know when the sub-committee on the missive system was inaugurated?—12th February 1903. The Corporation remitted to the Committee on Police Finance the following motion:—"That the Corporation 'exercises all its powers in favour of the abolition of the 'present unjust missive system."

Mr H. Brechin. 17 Dec. 1906.

2876. In 1903, what was meant by "the present unjust

missive system"?—It was felt to be a hardship on the part of people being obliged to take their houses so early, practically for sixteen months. That was one reason.

2877. Was the question, apart from that of the long lets, at all before the Corporation, or was it merely the length of time before entry that they had to take their houses?—Perhaps both; the length of time before entering the house, and, besides, their being bound to continue to pay rent for their houses until Whitsunday the following year.

2878. When was the sub-committee on payment of rates along with rents organised?—The following month, 13th March.

2879. Has the Corporation come to any conclusion as recorded in the minutes, beyond the one you have read, in 1903, on this matter?—Nothing beyond renewing the remit from year to year to the committee who had charge of it.

2880. I think, on 30th March 1903, at the time the sub-committee was formed, the Corporation remitted to the Committee on Police Finance the following motion:—"That, 'in view of the great hardship entailed on the working 'classes by the present system of rate-collection, it be 'remitted to the Finance Committee to consider and report 'on the advisability of obtaining Parliamentary authority 'to provide for the collection of taxes on a specified rental 'along with rents." Were both these motions, of 12th February 1903 and 30th March 1903, carried unanimously?—Yes.

2881. How many are there in the Corporation?—At that time there were seventy-seven.

2882. How many have you now?—Eighty.

2883. Is the view of the Corporation still the same on the matter as it was then?—My answer to that is, that when the present Council was being formed, this remit was rendered without any discussion. Beyond that we reported on 8th August last to the then Town Council what we had done, and the Council unanimously approved of the course which we had taken up to that time.

2884. Have you any working men on the Council?—Yes. What is a working man?

2885. A man who is still a working man in the ordinary sense?—They are representative of working men. I do not think we have anyone labouring with his hands in the Council.

2886. You have them representative of working men, and who have had the credit of having been working men at one time?—Certainly so.

2887. Is the view taken by the Council the same on the part of those who represent the distinctively working men's districts, as on the part of those who represent what is commonly known as the better class districts?—The question, so far as I can remember now, bulked pretty largely in contested elections a month or six weeks ago, and I think in working class districts alone the candidates were tickled as to their views upon this missive question.

2888. Did the question arise in a double form, both what may be called the missive question proper, namely, the long period between the taking of the house and the period of entry, and also the question of long lets by itself?—I should think the period from the taking of the house until entry was perhaps more important in the eyes of ratepayers than the question of long lets.

2889. What is your district?—Dennistoun.

2890. What character is that?—Residential to a very great extent.

2891. In the view of the Finance Committee, are the two questions of the letting proper and the collections of rates inseparably related to one another?—We think that they are.

2892. Why?—Because if the shorter let is to become operative, then, in our opinion, the question of compounding for rates along with rents should follow it.

2893. If the shorter let is to prevail, it would result, I suppose, either in compounding or the rating authorities having to collect more frequently?—The difficulty of collecting more frequently is very great.

2894. But the one or the other would follow?—Well, I think the collecting more frequently under existing statutes is akin to impossible.

2895. It would, in short, require alteration of the relative statutes?—Clearly it would. Of course a house is occupied from 28th May, and it is the 30th of September ere the valuatiou roll is complete. We cannot assess for that year until the valuation roll is complete. It takes a considerable time to send out the notices throughout the city, so that practically at the earliest it is the beginning of November—of course some do pay at the latter end of October, but it is the beginning of November before the collection gets any way.

2896. If you had an intermediate or intermediate collections it would involve a supplementary roll?—I do not see how they could go on the then roll not being made out till the 30th September.

2897. In the view of those you represent, is the custom of tenants becoming bound for a year's rent four months prior to the commencement of the occupancy merely a theoretical matter or involves substantial hardship?—I should think in many cases it will involve hardship more or less.

Mr H. Brechin. 17 Dec. 1906.

2898. We have been told that a very considerable number of cases of removal and consequent sub-let arise between the period of taking the house and the term of entry?—Well, were I to speak as a landlord now, I should say if I thought the person who had taken the house and given it up were good enough for the amount, I might insist on that rent being paid, but how often do we find people taking houses and giving them up, not worth sueing in a sense, and no steps would be taken in that respect.

2899. I suppose it is your experience that, in regard particularly to certain trades, there is necessarily a good deal of shifting during the course of the year?—Clearly.

2900. Does that vary according to the trade?—To a great extent. Some are more shifting than others, I should say.

2901. But some districts of the town might be found to have a larger proportion of shifting people?—Yes, and families have to shift for the purpose of getting better situations now and again.

2902. May I take it that the Corporation have supported, apart from details, the general principle in Mr Cross's Bill?—We have reported to the Corporation what we have done. We waited on Lord Dunedin, when he was Secretary for Scotland in Edinburgh, and also upon the present Lord Advocate during this year, and following that we waited upon the Secretary for Scotland, and the Town Council have approved of what we have done all along.

2903. Did you lay before these persons any written statement you could produce to us?—No, I do not think so.

2904. It was all verbal?—As chairman I had to make a statement in each case.

2905. Do the Corporation minutes contain any statement of your report or your minutes and what the Corporation did?—Yes.

2906. You might hand these in.

(*Witness to Mr McIntyre.*) Get them copied and hand them in.

(*Mr McIntyre.*) I will do so.

2907. (*Chairman.*) Do you have in view, Bailie, that the consequence of Mr Cross's Bill would be practically to put an end to early lets?—No, I don't think it would.

2908. Well, now, just take it, it would be still possible, under his Bill, to have an early let, if the period of payment was one year?—Yes.

2909. But practically that is never done?—No half-yearly payments.

2910. Would not the practical result of it be to put an end to early lets for houses under £20?—It would in theory and practice too, but at the same time there would be an understanding between owner and occupier.

2911. An honourable understanding, but not legally enforcible?—Which would be carried out. It does not pay a tenant to flit every now and again, any more than the owner to have a shifting tenant.

2912. Would not it put an end also to half yearly lets, because we are told there is scarcely such a thing, if at all, as half-yearly lets under £20?—I do not say that. Speaking again as a landlord, I have several properties between £12 and £20, the rents of which are collected half-yearly.

2913. As to the other side, it is said, of course, and theoretically it is true, that it would interfere with the security which a working man has when he holds, as at present, a let for a year? Now, practically, I suppose, even though the tenant is only for a month or a quarter, if a working man is a satisfactory tenant, he is secure enough?—Most assuredly.

2914. It is the landlord's interest to keep him?—Certainly, if a respectable and satisfactory tenant.

2915. I don't know,—you can answer this or not, just as you like,—but we are having brought before us evidence from the Trades Councils, and so far as we have gone they are all in favour of short lets. Is there any reason known to you why the Trades Councils should not be taken as fairly representing the general opinion of working men?—I know of no reason why they should not.

2916. To take an illustration, I see a letter in to-day's *Glasgow Herald*, saying that 90 per cent. of the tenants under £20 don't want a change. I suppose if that is correct we ought to have evidence from those 90 per cent.?—Of course that is perhaps the opinion of one man just.

2917. But is there any reason why, if that is correct, we should not have evidence on that?—Certainly, the 90 per cent. can surely combine in such a way as to bring forward evidence to satisfy you that the writer of this article is correct.

2918. It is a question of evidence?—Clearly.

2919. We have no opinion about it ourselves; we are here to hear the evidence. Then to come to the point about the rates, which is very important and very difficult. If a Bill such as Mr Cross's or any similar Bill bringing about short lets were passed, your Committee are convinced that some change would require to be made on the system of collection of rates, and would you now just tell us what the present system is?—The collection of rates—at the present time the Police Department of the Council are responsible, unless for £4 and under, as I understand, but we have frequently before us applications from house factors to collect rates on properties above £4 and under £10, for which they ask a reduction of 7½ per cent. We ask the collector of rates to give us a report on the application so made, and the report on the collector of rates has been invariably, without a single exception, so far as I can remember, that he saw no reason why it should not be granted. The house factors who have asked that, renew their applications from time to time if necessary, but I have been asking Mr McIntyre, and he has no knowledge of any house factor who has had that privilege, going back and not taking it another year.

2920. It is very important, if we could get from you a statement showing the number of those cases—that could be made up?—Oh yes, Mr Borthwick has that.

2921. Now tell me, first, what section of the Glasgow Police Act, 1886, is it that regulates this matter?—Section 46.

2922. And, as you say, except in the case of houses rated at or under £4 per annum, the payment is made yearly direct on the occupier?—He is responsible for the rates, but the owner makes himself responsible for the rates, less 7½ per cent.

2923. But there are two cases where the occupier does not pay you: first, the house rated at and under £4, and these other cases of voluntary arrangement you have referred to; except in these two cases the occupier pays you direct?—Yes, for which the owner has a deduction, but I cannot remember the percentage of £4 and under.

2924. We are told that these houses are diminishing?—Oh, much, and quickly.

2925. You have explained that at present assessment schedules are not issued, nor is the collection commenced till the latter part of October, and it is impracticable to anticipate that day, however desirable?—The Water Department of the Corporation pays theirs upon the previous year's valuation under a statute of their own, I presume, but I know of no other.

2926. By the 42nd Section of the Glasgow Police Act, 1866, it is expressly provided that assessments shall be levied on the valuation roll of the year that is current, and under the Lands Valuation Act that roll remains open until the end of September of each year?—That is so.

2927. In your experience, is every possible effort made to do the thing as quickly as possible?—Oh yes, there is a great deal of overtime work to get out the notices.

2928 There is a reason for that, in so far as the expense of temporary borrowing is heavy?—Clearly, we have to pay for every penny we require.

2929. So it may be taken that the present period of issue, in your view, during the three weeks during 13th to 18th October is the earliest?—We are extremely desirous of having it at the earliest possible minute.

2930. You referred to the difficulties which would be connected with very frequent collections. These difficulties, I suppose, could be overcome by an alteration in the Valuation Acts, and by the expenditure of more money?—That would be required to meet the difficulties.

2931. But the difficulties are not insuperable?—It is an imperial question, the alteration of the Valuation Acts.

2932. In your view, would it be a distinct substantial advantage to working men in houses under £20 not to have the whole rates falling once a year only, but to be able to pay them along with their rents in periodic instalments?—That would apply to smaller houses than £20, probably from £10 to £15, more than from £15 to £20.

2933. But in a lesser degree to them all?—I think so.

2934. What about the clauses in Mr Cross's Bill, making the matter optional in burghs? What is the Glasgow view of that?—That looks to me quite to safeguard the Bill altogether.

2935. Why should it be there?—Because in large centres I should say the percentage of losses from non-collection of rent is bound to be much heavier than in the smaller districts. Where small districts saw no reason to adopt Mr Cross's Bill, they are allowed to remain as they are.

2936. You see the clause says it may be adopted in whole or in part. Now, in your view, it could not be adopted in part, because the one involves the other?—I have not considered that.

2937. But it does not occur to you that in the same burgh, Glasgow itself, there might be districts where it might be advisable to adopt the Bill, while it might not be advisable in other districts. That would entail extra trouble?—I think it would.

2938. There are two objections. What about the objection that if the tenant merely paid a slump sum, and did not know how much was rent and how much was rates, it would open the way to proprietors charging more than the proper proportion of the assessment, and also that it would be bad from methods of public policy, because the occupier would not know what rate he was paying and would not have any check on the rates?—I think the receipt should distinctly bear what is rent and what the rates amount to. I should be very sorry if a ratepayer lost what is, meantime, his desire to see that his representatives do their duty.

2939. As a landlord, is that practical? Would it not involve an amount of calculation?—No, not to any extent. Every landlord knows the cumulo rating for the year. Multiply that if you like and divide it, it would not mean any intricacy at all.

2940. At all events, the receipt could detail the rates that the occupier has to pay, and the amount per £ he has to pay, leaving him in that case to work it out for himself. I think at the present time the ratepayer does that. He does not know where the penny of an increase is, only that there is a penny over all, and does not trouble his mind in detail. He would have a difficulty in finding out whether it was on police, parks, sanitary, or water.

2941. But it is true that if it was too much of a burden on the landlord to work it out, the receipts could detail what rates are being paid by the occupiers, and the amount per £ at which they are charged?—Yes, that could always be done.

2942. What do you think about the question of the landlord's hypothec, the different proposals either to abolish it altogether or to extend it to cover rates in the event of the landlord collecting the rates?—In my opinion it should be extended to cover the rates as well as the rent, and the landlord is entitled to protection there too.

2943. It has been suggested that the law of hypothec has advantages not confined to the landlord, but that it is really a law in the tenant's interests, because in periods of sickness and other difficulties it enables the landlord to allow a tenant to remain on, the landlord knowing he has security. Do you think that is sound?—That is quite sound.

2944. What about this trouble of the percentage? You already incidentally referred to it. The landlords and the factors are saying that this 7½ per cent. which is in Mr Cross's Bill is totally inadequate, and their ground is that the Corporation at present lose more than that. They say that they lose more than the Corporation, and they put it that if the Corporation lose more than 20 per cent., and they would lose more than that, 7½ per cent. must be obviously inadequate?—I should be surprised to know that 20 per cent. or more than 20 per cent. was lost, but Mr Borthwick will have the total, showing entirely the losses of the Corporation.

2945. You refer to him?—Yes.

2946. What do you say to this? It is said by some people that the Corporation of Glasgow is taking an interest in this matter, not because they are interested in the working man at all, but simply because they think they will get more rates in the end?—The Corporation as individuals have no interest. They act for the community, and what benefits one in that respect benefits another.

2947. Do you find this matter is taken an interest in by members of the Corporation who are not on the committee specially relative to rating?—Not to the same extent. Of course we pay attention to our own departments more than to this.

2948. Do you find the view of those who are specially on the committee for rating is acquiesced in by others who are not?—Clearly, there has been no expression of opinion to the contrary in the Council.

2949. You are a man of great experience in these matters. What do you say to the limit of £20? Do you think it is reasonable?—Ward committees, I think, were so anxious to have the voice of the citizens on this matter that we instructed our clerk to ask the ward committees what they thought, and Mr Borthwick and Mr Henry will have the returns; but as far as my memory serves me, there were one or two for £15. £20—I speak subject to correction—was spoken of in several wards as the limit.

2950. (*Mr Howden.*) Were there none higher?—I don't remember, but the figures will be before you.

2951. (*Chairman.*) You think that is a fair compromise?—I think so.

2952. What about the preservation in any measure that might be passed, or the right to relief on account of inability to pay? What is your view of that?—It is felt by the committees, speaking generally, that inability to pay would not be felt by the ratepayers if they pay their rates twelve times a year, instead of one slump sum.

Mr H. Brechin. 17 Dec. 1906.

2953. Still, we are told that if the people who get relief—practically it comes to this, that if relief was not given the rates would not be recovered. Do you not think that right should be preserved?—A percentage of relief, you mean?

2954. Take the cases where total relief is given, on the ground of inability to pay. We are told that really it would not much matter, because you would not get rates in these cases?—I think there is a minute of our Town Council where persons who are in receipt of parochial relief were exempted from police rates.

2955. The others were not?—Each case is considered.

2956. Don't you think the right in these cases should be conserved in any measure passed?—If it were practical to do so.

2957. But you think it would make it so much easier with periodic payments, that a lot of it would be paid?—Certainly it would, and not felt, I believe, by many who do.

2958. Still, you think if it is practicable it would be desirable to retain that?—There are cases, no doubt—some maiden lady, perhaps, should be relieved of her rates if it is at all practicable.

2959. We are told of maiden ladies who keep lodgers, and have failed to get any in the winter. These are real cases?—Very often we find that to be so.

2960. Have you had any deputations to the Council, or petitions on this matter, from working men or others?—I cannot remember.

2961. I suppose, Bailie, you sympathise, as we all do, with the general principle of not interfering, except when circumstances warrant it, with freedom of contract?—Certainly.

2962. Do you think the circumstances here are sufficient to warrant any interference with such a Bill as Mr Cross's may amount to?—I think the existing condition of things could be improved upon.

2963. Even if it did to a certain extent interfere with it theoretically?—Even if it did to a certain extent.

2964. (*Mr Howden.*) Mr Brechin has told us that they have numerous applications from factors who collect rates under £10, and we are to get figures from Mr Borthwick, but the evidence already submitted here has been all the other way, that the factors don't want anything to do with the collection of rates. How would Mr Brechin reconcile these two statements? The factors said they did not want anything to do with the rates, and the statement made to us that they are on the increase?—Kinning Park was annexed twelve months ago. Within a few months of annexation we had an application from Kinning Park from a house factor. That is fresh in my memory. And once a factor makes an application, I have no knowledge of his not seeking to renew it.

2965. There can't be very much in the contention that they don't want it?—I merely give you as a fact that there are applications.

2966. You told us that the water rates are collected at three periods in the year?—No.

2967. It is one period of the year, but on the previous assessment?—On the previous year's valuation.

2968. Does that make it different?—I think it is a clumsy way of going about it.

2969. But a large difference in the net result?—I do not know. It allows the water rate to be collected earlier than it would otherwise be. The valuation of premises changes from one year to another.

2970. Do they change very much?—In large rented places they do either rise or fall from time to time.

2971. Is it not the fact that the attention of the Corporation was directed to the question of the missive system and also shorter lets by the outside opinion?—There is no doubt of that. It did not spring from within. A member would bring it forward, but he would be advised from the outside ere he did so.

2972. We are deliberately told that it was because of the fact that the Corporation wanted to get some simple method of collecting rates. That would not be a fact?—Not at all.

2973. Does the schedule that is attached to Mr Cross's Bill meet with your approval—that is, his compounding of rates?—Yes, certainly, because he compounds with us.

2974. Do you think the amount of percentage that is stated here, to give to the landlords, is reasonable: £4 and under £7, 10 per cent.; £7 and under £10, 5 per cent.; £10 and not exceeding £20, 2½ per cent., from 10 down to 2½ per cent.?—I think it is quite a fair thing.

2975. (*Mr Cox.*) Suppose the allowance to owners for collecting these rates was to be 20 per cent.; would the City of Glasgow still like the owners to collect them or to collect them themselves?—20 per cent. would be infinitely too much; it would simply mean that the less that is collected the rate is the higher.

2976. (*Chairman.*) Take Mr Cox's question?—I do not think we would. The figures Mr Borthwick will give you will show you the loss.

2977. (*Mr Cox.*) In the remit of 30th March from the Corporation to the Committee it says, "that in view of the great hardship entailed on the working classes." What is meant by the great hardship in the present system of rate collection?—I do not think that a working man thinks that he should pay his rates on the 11th November along with his rent. It is a hardship.

2978. All in one sum?—Yes.

2979. Do you think, if the rating authorities were put to it, they could make more frequent collections than once a year?—You know he has six months' credit at the present time before he is asked to pay rates. He pays rates from 28th May, and he is not called upon to pay these rates for at least five months afterwards, so he has five months' credit just now.

2980. You say it would be very difficult to collect more than once a year, but if you were really put to collect twice or three times, do you not think it could be done?—It could be done, but the loss would be greater and on that account the rates would be higher.

2981. (*Mr Dobbie.*) I do not know that you mentioned—can you tell us, as a public man, whether there is in your view a public demand for any change in the present condition of things?—I have just said, before you came in, that at the ward meetings it was a prominent question.

2982. Can you tell me this—whether in your view the limit, assuming any change is made, should be £10 or £20 or higher? What is your view as to a limit dealing with average working class houses?—In what way?

2983. What is your view as to what is the normal rental?—I have no opinion upon the value of the subject.

2984. The remit to us is to deal only with smaller dwelling houses. Supposing a change is to be made, in your view should it start with the £10, £15, or £20 rent?—I have expressed myself favourable to £20 as a maximum.

2985. Do you think the view you have stated in regard to compounding might be equally well applied to houses of £20 as well as to £10 houses?—No, it is a question of degree. It is not so desirable with a £20 house as with a £10 house, to compound it.

2986. Are you prepared to advocate the application up to £20?—I have given evidence on these lines.

2987. (*Chairman.*) Some proposals are that the limit might be varied, in Glasgow one maximum, in Partick another maximum. Do you think that a practical suggestion?—I think the valuation of a subject is not alike throughout Scotland.

2988. In Edinburgh, for example, and Glasgow the suggested Bill is to apply to dwellings of £20 and under, while in Paisley it is £16, and in other burghs down to £12. Do you think it would be desirable, assuming legislation, that this distinction should be maintained?—I think what is a £20 house in Glasgow or Edinburgh might be less in some rural districts.

2989. Don't take rural districts. Take Paisley or Greenock?—I do not think the difference should be so outstanding. Govan and Partick are practically Glasgow.

2990. Say between Glasgow and Partick and Govan on the one hand?—There would be difficulties in the way of carrying that out.

2991. You told us about 7½ per cent. in the case of this voluntary arrangement with the factors. Do you know how that was arrived at?—Since ever I have taken an interest in Corporation work we have had applications. If I remember, it was the North British Railway Company at Cowlairs that was one of the first to ask this for their houses.

2992. The 7½ per cent.?—Yes.

2993. You referred to ward meetings, and the question being a prominent one. Is it the case that at these meetings, although you said to a very large extent it was the long period between the taking and the entry, still you say the other question on the shorter lets was also up?—The question generally was brought before the candidates and their opinions were asked upon it.

2994. As far as your experience or knowledge goes, was there, as far as working men were concerned, no appearance of difference of opinion?—I do not think so. The candidates acquiesced in the principle of Mr Cross's Bill, I think.

Mr James Henry, called and examined.

2995. (*Chairman.*) How long have you been Assessor under the Lands Valuation (Scotland) Acts for the City of Glasgow?—Fully twenty-three years.

2996. You are also Surveyor of Police and Municipal Assessments for the city, and have been so for some period?—That is so.

2997. And prior to your appointment as assessor, you filled various posts in the same department?—I have.

2998. So you have had forty-three years' experience?—I have.

2999. You have prepared a statement showing the total number of dwelling houses, and the number of unoccupied dwelling houses in Glasgow at various rentals for the years 1901–2 and 1905–6?—Yes.

3000. In regard to the statement, which shows in 1901–2 a total number of houses in Glasgow of 163,291, as contrasted in 1905–6 with a total of 175,277, was there an extension of Glasgow between these two dates, or is that due to increase merely?—Well, we have taken in Kinning Park since 1901.

3001. How many did Kinning Park amount to? How much of the difference between the two?—Of course, it is a small number. There are some 14,000 people altogether.

3002. Then you have in 1901–2 a total number of empty houses of 4467, as contrasted with empty houses in 1905–6, 13,495?—Yes.

3003. I notice, in regard to the houses at £4 and under, the number in 1901–2 was 2915, and in 1905–6, 2045. Has the diminution been going on progressively?—Yes, that class of house is gradually diminishing.

3004. I notice also that the next class, those of £4, 1s. and under £7, has also diminished. The number in 1901–2 was 34,620, and in 1905–6 33,782. Do you expect these will go on diminishing?—They are not building that class of house, and that is the reason for the apparent difference in figures.

3005. All the others have increased?—Yes, all above those rentals.

3006. Apparently in about the same proportion?—Yes, very much so.

3007. In Glasgow the system of letting dwelling houses in the month prevails largely in localities where the houses are small. The great bulk of single-apartment houses are let by the month?—Yes.

3008. I suppose in the case of house letting by the month, you find that in many cases the occupiers remain in the same house for years?—Yes.

3009. Paying the rent monthly. That is to say, monthly tenure does not necessarily imply short occupancy?—No, no.

3010. In your experience, what is the advantage of monthly letting for a working man as compared with yearly letting?—Monthly letting has its advantages, especially to the poorer class of householders, for the nearer in point of time a working man's payments out are to his payments in, the better for him. They are proportionately less and more easily paid than a quarter's rent, and a quarter's rent is more easily paid than a half-year's rent, and the same principle equally applies to taxes.

3011. How do you account for it that in point of fact so many of the houses under £20, say, between £10 and £20, are not monthly but yearly? Is that the tenant's doing or the landlord's doing?—I think it is both, but I think the tenants themselves don't want—in rentals above £10—any change.

3012. Do you make the contrast between those above £10 and those under £10?—I do.

3013. Do you think that in the case of those under £10 most of them would prefer to have a shorter tenure as contrasted with those above it?—It would be to their benefit to have short tenure and pay their rents monthly.

3014. Is that because they include proportionately the larger number of persons who require to shift than those above £10?—There are 94,000, I think I said in my evidence, in that class of occupiers, or fully half of the ratepayers of the city, and it would be a great boon to that class of ratepayers were they allowed to pay their rents and taxes in smalls. They buy their provisions in smalls; it is smalls all round with them; they cannot afford to pay large sums at one time, and, therefore, if they had the option of paying rent and taxes monthly, they would be more stationary tenants; they would not be inclined to remove; and were that plan or system uniform over the city, there would be no inducement to remove, because they would always have paid their taxes up to date. Just now that class of people move to evade the tax collector. I know from my experience that large numbers of them have that reason for removal—the tax collector. They cannot afford to pay down 15s. to 25s. in the shape of taxes, but if they were allowed to pay 1s. 6d. a month or so along with the rent, they would willingly pay it. Many a working man does not want to evade paying his share of taxes, but with £1 or 18s. a week he is not able to lay past £1 or 25s. for taxes, and his children crying for bread.

3015. You think the two questions are inextricably combined?—I do.

3016. Why do you make the distinction between houses under £10 and between £10 and £20?—My reason for fixing a £10 rent is this: in the first place, we are dealing with half of the ratepayers in the city. Another reason is that at present in Glasgow we have a differential rate. All houses under £10 are rated at half of the values assessed from those above £10, and therefore I want to stop at £10 rental. The legislature has thought £10 was a good amount for a working man.

3017. Why did you say so? Because of the differentiation on the police rates fixed at £10?—Quite so.

3018. Is there any other place?—I do not think so.

3019. It is under the Glasgow Act?—The Glasgow Act of 1866, and I never knew a ratepayer occupying a house rented over £10 to complain that the working man was getting half more value than he was. There seems to be a feeling among well-to-do people that he should be treated in an exceptional way, and therefore the rental under the 1866 Act was fixed at £10. That is my reason for drawing a distinction at £10.

3020. What is the exact distinction in regard to the police rates?—Under £10 are charged on the lower rate.

3021. Namely?—50 per cent.

3022. (*Mr Howden.*) On the police rate only?—Yes, police and sanitary. I might also add the water rate in Glasgow has been fixed by the legislature at £10. It is paid by occupiers of houses, and that is included in the rent. The landlord recovers the water rate of houses under £10 along with the rent.

3023. That is another reason?—Yes.

3024. Is the third reason what Bailie Brechin was telling us, namely, that in the case of certain voluntary arrangements between factors and the Corporation the limit there was £10?—Yes, there is a provision made that the factor or landlord may arrange with the Corporation to pay all the rates on houses under £10, getting an allowance of 7½ per cent. for his trouble and loss—any loss that may arise.

3025. You say there is a provision. Is that in one of the Acts?—Yes, the 1866 Act, Section 49.

3026. Read it, please.—"The Magistrates and Council, 'and any proprietor of land or heritage, the annual value 'of which is under £10, may contract for payment by such 'proprietor to the Magistrates and Council during such 'period as shall be mutually agreed upon, of any assess-'ments imposed, or which may be imposed, in respect 'thereof, on the occupiers, in pursuance of the provisions 'of this Act, in consideration of an abatement on the 'amount paid by such proprietor not exceeding 20 per 'cent.; and in every such case so much of the assessment 'imposed, or which may be imposed, in respect of any 'rent or heritage referred to in such contract, as corre-'sponds to the period for which it is let, shall be payable 'by the occupier to the proprietor, and may on settlement 'with the Magistrates and Council be recovered by the 'proprietor as rent in addition to any other rent agreed to 'be paid by him, provided that the abatement agreed to 'be given shall be the same rate in every such contract 'entered into by the Magistrates and Council."

3027. Do you know how the amount of abatement came to be fixed as not exceeding 20 per cent.? Do you know the history of that?—No.

3028. Could you give us any idea of what proportion of the occupier's rates in Glasgow is paid by occupiers in houses under £10? That would be one figure; another would be what proportion is paid by occupiers between £10 and £20. You can easily make it out?—Oh yes, I have the numbers.

3029. But I want to see to what extent the occupiers under £10 and under £20 are interested in the question of the rates?—Quite so. I will be pleased to put in a statement showing that.

3030. You have talked about the Corporation and the tenants and their interests, what about the interests of the landlord? Would he not be seriously compromised if he had the duty of collecting the rates?—Well, he would be just in the same position with regard to the monthly police rates as at present with the water rate.

3031. And with the rate in houses under £4?—Yes. Of course that will soon disappear altogether. And also with regard to the lighting of common stairs the landlord is charged just now 8s. per burner for every light in the common stair, but he is entitled to recover from the tenants 10s. for those lights. He recovers that along with the rent,

Mr J. Henry. 17 Dec. 1906.

and he would just recover the monthly rates as he recovers at present the water rate and the stair lighting.

3032. Just go over these cases and tell us what allowance he gets. Take the case of rates in houses of £4 and under?—He gets 25 per cent.

3033. Under what statute?—The 1866 Act.

3034. Then the water rate and the stair lighting, what allowance does he get?—20 per cent. on the stair lighting.

3035. Then I suppose the landlord's interest in this matter, in your view, would depend on whether he was to get a proper allowance or not?—Quite, that is the view I take of it. Give him a reasonable and proper allowance to meet his losses and something for his trouble; but he won't have much trouble, because he is collecting the rents at any rate.

3036. But, of course, if he got an insufficient allowance it would be a hardship?—Certainly. I think the landlord should be protected in this way.

3037. Do you think that it would be fair that he should have additional remedies to enable him to collect the rate?—He would just have the same remedies as at present.

3038. But not the same as you have?—Oh, he is entitled to recover the stair lighting just now. I read from the Act of 1866, Section 361: "The proprietor or proprietors of 'every land or heritage having an access by a common stair 'shall provide and maintain suitable gas pipes and brackets, 'lamps and burners in such common stair to the satisfaction 'of the inspector of lighting (or Magistrates and Council), 'and placed as the city inspector (or Magistrates and Council) 'may direct, under a penalty of Forty shillings payable by 'each such proprietor, and the Magistrates and Council shall 'cause them to be supplied with gas and lighted in the same 'manner as the public street lamps, and for each burner the 'proprietor or proprietors shall pay to the Magistrates and 'Council such sum not exceeding ten shillings per annum as 'the Magistrates and Council may from time to time direct, 'and the said sum shall be recoverable by the proprietors 'from the occupiers in proportion to their respective lands 'and be deemed to be a debt recoverable in the same way 'as rent."

3039. The effect of that, in your view, was to give the landlord a hypothec over the furniture?—In the same way as rent. I think that would cover it.

3040. You think it would be reasonable that he should have the same right over furniture in regard to rates, if he had to collect them, as he now has over rent?—I do.

3041. What amount of allowance do you think the landlord should get, supposing he had to collect the rates under £10?—Mr Borthwick has gone into that matter, and will give information.

3042. Does any reason occur to you why, if the landlord gets 20 per cent. in the case of the rents under £4, and in the case of stair lighting, he should only get 7½ per cent. under Mr Cross's Bill?—But I would differentiate. I give you the £7 rent, because in dealing with the allowance to the factor, those between £4 and £7 should be treated differently from those at £7 and under £10.

3043. Let us see how Mr Cross's Bill proposes to deal. Look at Glasgow. Over £4 and under £7, 10 per cent.; £7 and under £10, 5 per cent.; £10 and not exceeding £20, 2½ per cent. You think there should be a difference in all these cases?—Yes.

3044. Why?—The trouble in collecting is between £4 and £7.

3045. And also probability of loss?—Yes, there is a great amount of loss there.

3046. Diminishing as you go up, both trouble and loss?—Yes.

3047. Then you think that under £4 might quite remain 20 per cent., and between £4 and £7 would be fairly 10 per cent. That would be a half?—Of course you are going into a little different class of people. The higher you go up, there are people better able to pay.

3048. That would be halving it each time—above £4 and under £7, 10 per cent., and between £7 and under £10, 5 per cent., so that it would be in the same proportion?—Yes.

3049. The result of your views is, first, that with reference to dwelling houses rented under £10 in burghs, there should be introduced a system of compulsory monthly lets?—I do.

3050. You are not pinning yourself to Mr Cross's Bill or any other?—No, I am giving you my opinion.

3051. Second, that the system should be accompanied by a scheme to recover the rates from the tenants monthly along with rents?—Yes.

3052. I suppose, in your view, if the matter was first of all dealt with by the legislature only up to the limit of £10, that would not prevent the legislature subsequently, if that was found to work well, taking it up to £20?—That is what I would like, a safe experiment up to £10.

3053. And you think there is ground for making a difference between £10 and £20?—A strong ground.

3054. (*Sir John Stirling-Maxwell.*) Do you find that in the case of houses close to the £10 limit, there is any attempt to evade taxation by artificially placing the house below the limit?—I find this, that working men, when they go to the factor for a house, if he says £10 or £11, he hesitates about taking it, but if he gets a house at £9, 19s., he is delighted. Somehow he has got the idea into his head that this saving of the high rate to him is of such importance that he will do his very best to get a house under £10.

3055. But are any illegal arrangements, have you any reason to suppose, entered into?—No. I would say the landlord, in giving me his return, gives me an honest and fair return.

3056. We have a witness coming to-day from the Glasgow Dwellings Company. They collect rates themselves for you?—Yes, along with the rent.

3057. From all these houses?—Yes, I believe that goes over all the letting—the letting of these houses that are paid by the month.

3058. You don't collect rates in any of the Dwellings Company's houses?—Well, the notices in terms of the statute are all sent in to the occupiers, but they hand them over to the factors. That is the arrangement between the factors and the occupiers.

3059. They are all paid by the factor?—Yes.

3060. (*Mr Dobbie.*) With reference to your views on short lets, am I right in thinking that you agree that short lets would be advantageous in regard to tenancies up to £20?—Well, I don't object, but many of my friends take the view that they should go up to £20. As I have already stated, I don't want a great revolution in this matter. I want to go cautiously, and I think £10 would be a very good limit in the meantime.

3061. I am talking of rents at the moment. Can you give us a reason for altering the present system referable to £10 rents? What distinction do you find between occupants of houses up to £10 and occupants of houses up to £20, in regard to class?—When once you go above £10, you get into a class of people that can look better after their interests than those under £10.

3062. What do you think the effect of any change would be with reference to, say, removals. Do you think that short lets would lead to more removals?—Quite the opposite. I am satisfied that the tenants of those small houses would be more stationary. I am certain of that. One would be surprised how stationary those people would become if they paid their rents with short lets. There would be no inducement to remove. They don't want to, if it were not that they could not meet the assessments in one slump sum, and so long as there are empty houses to be got, they will run from house to house to evade the tax collector. I think I am speaking correctly when I say that a number of working men, a great number, are wanting to pay their way all round,—don't want to shirk responsibility. But help them to pay their way in the matter of taxes. They are helped just now in the matter of the rent by the factor taking their rents monthly instead of quarterly or half-yearly. Help them in the same way with their taxes.

3063. Would not that be an excellent reason for applying the same help to the 45,000 or 55,000 tenants who pay between £10 and £20?—It might be applied to all the ratepayers in the city for the landlord to pay the whole of the taxes.

3064. That would be an ideal reform, from your point of view. Tell us this. We hear from you now that one recommendation of short lets would be that there would be less removals, and more ability to pay—would not that be met by having a more frequent collection at the instance of the present collectors?—If a more frequent collection were practicable.

3065. Why is it not practicable?—Bailie Brechin gave us reasons for that. If you wish mine, I would just say that as assessor under the Lands Valuation Act I make up the valuation roll. The roll is not completed till the 30th September.

3066. When do you begin it?—Immediately after Whitsunday.

3067. When do you give your notices?—I make a survey of the city every year. That survey is begun on the 29th of May, after the Whitsunday term. It takes about a month for my large staff to go round the city.

3068. (*Mr Cox.*) How many have you on your staff?—Thirty-two. While surveying the city, I also send out landlords' schedules, to get from the landlords and factors names and rentals of the occupiers. Those of course don't all come in on one day, but over the month. At the end of the survey these schedules are pretty largely in. There are always some who are late, but when I remind them that they have failed to make their return and use a little gentle pressure, I get the returns. That takes me into July, because June is occupied with the survey. Those

Mr J. Henry. 17 Dec. 1906.

returns are compared with the information got on the survey. There are discrepancies frequently between the survey and the returns, which are cleared up by a re-survey of the premises. After that is got through there is the making up of the valuation roll. The valuation roll is written out, and copies of every entry are sent out. The landlord gets a copy, showing all his tenants and rents, and each tenant gets a copy also, showing his name and rental on the roll. Appeals are allowed up till 8th September by the proprietors and occupiers. They may be adjusted with the proprietors and myself up to 8th September if anything is wrong. After 8th September we have the Appeal Courts, and these courts adjourn from time to time as necessity arises, but they must be all over by 30th of September. After the 30th of September I make out my assessment rolls. By that time the assessments for the year have been fixed, and I make up my assessments. Well, there are the writing of rolls, the extension of the rentals, and the extension of the rates. After the assessment rolls are copied, assessments extended, and made up, I issue assessment notices to the occupiers. I have also the duty of writing the receipts corresponding to those entries, and the rolls and receipts are put into the hands of the collectors. The issuing of the notices usually begin from 18th to 20th October, and all are out perhaps by 4th or 5th November.

3069. To be paid when?—Within fourteen days of that date. Of course there are some districts where the fourteen days expire, but there is no money coming in from some districts where there are working men, and they are reminded by second notices from the collector that the assessments fall to be paid, and that may be over seven days.

3070. How often could you collect, do you think, so as to be practical, in your view, as compared with the present annual collection. Can you collect twice?—No, you see the first half year is gone and the collector is as busy as he can be during the remaining six months, dealing with that first lot of tenants.

3071. (*Mr Dobbie.*) You won't get your assessments in promptly, do you?—No, we have to wait patiently on some of the ratepayers. They are good enough, but they just want to get a little time, some of them.

3072. Is it usually granted by the assessors?—It is quite impracticable to get in the money. If you were to give them six months there would be a great loss in the collection in that way.

3073. We will get evidence as to the present loss to the Corporation?—Yes.

3074. Is it your view that, whatever that loss may be, a deduction might reasonably be allowed to landlords in the event of compounding being operative?—I do not know if the landlord would lose as much as the Corporation, because he would be getting his money regularly. We cannot send men round every month to collect in small sums.

3075. Is it your evidence that there might quite reasonably be a smaller allowance to landlords than the actual loss shown by burghs just now?—But he would not lose the same money as the Corporation.

3076. Assuming that limit was fixed for defining houses to be let on short lets, say £20—whether it is £20 or £10 or £15, may we take it from you that compounding should apply to the same houses—that is, that you would not have compounding up to £10 and short lets up to £20?—Oh! go along with the lets.

3077. What ever the limit is, the two must go together? I—do think so.

3078. (*Mr Cox.*) Look at the list of empty houses. You don't have the figures for this year 1906-7?—No, they are not made up yet. I do not think they will vary very much from these years.

3079. We got figures from Mr Wood. I suppose they apply exactly to the same district?—No, he has Glasgow, but not Govan, Cathcart, or Eastwood. A large portion of the south side is in Govan parish, within the city.

3080. There is a great fluctuation with regard to empty houses?—There are a great many houses built just outside the city boundaries. Cars have taken out a lot of people within the last two or three years with penny fares.

3081. Would that not make it difficult to fix a reasonable allowance to owners for collecting rates?—Empty houses?

3082. But there is a fluctuation; an allowance that might suit an owner this year might not suit him next year?—I think the same allowance might do in every year.

3083. It would not do for meeting every loss?—No, he would do as now with regard to the water. You observe I am speaking of the £10 rent, and he is just now getting the water rate and stair lighting rate along with the rent, and he is quite happy.

3084. Although they don't collect from empty houses? These figures are taken from the valuation roll?—Yes.

3085. Some houses that are empty when the valuation roll is made up would be filled, and others might be empty, so it stands to reason that the owner might, through these fluctuations, suffer loss in the collection of rates?—I cannot see it. Of course the lets are to embrace the rates. If his house is only let for six months the rates would just go along with the rents.

Mr J. Henry. 17 Dec. 1906.

3086. Why is it, do you know, that the owners and factors and so on are opposed to the idea of their collecting rates?—I do not think they are all opposed to it. We have factors quite willing as long as they don't suffer any loss with a reasonable allowance, and I believe that landlords, were this system adopted, would find it to be in their interests after all, because frequent removals to a landlord is a serious matter, and the more stationary his tenants are the more it is to his advantage. I have no hesitation in saying that it is to the advantage of the occupier to remain. Of course there are working men who have to move for their work and so on.

3087. (*Mr Howden.*) You told us you fixed £10 as the rental on the basis of the statute that was passed in 1866?—Yes.

3088. Don't you think, looking to the facts you have given us yourself in connection with £4 and under, and £4 and under £7, how they are decreasing in number—they have decreased 870 in five years under £4, and 838 under £7 in five years—don't you think that would be a reason why you should slightly raise the amount at least as far as they are concerned?—I have no objection. At the same time I feel that the £10 is the rent that I would be prepared to stand by in any change of the system.

3089. But these people must be housed somewhere, I presume, and if they are demanding merely better housing accommodation, the same class of people, they should surely get the same advantages as they had in 1866?—That is all true, but if you are going to deal with half the householders in Glasgow, it is a big jump.

3090. But if you are satisfied that it would work satisfactorily under £10, why should it not be the same with houses up to £20, where presumably more stationary and better class of tenants prevail?—I have considered all that, but I just feel that I am safe in saying £10, and I would like to see how it works with them, and if I see it working well, if I am spared, I will be quite prepared to go up to £12 or £15.

3091. Do you also think there are no working men staying in houses above £20?—Oh yes.

3092. Would you not be inclined to extend the benefit of shorter lets to those individuals?—I leave those gentlemen to look after their own interests. They are better able to do so than the man that has a small wage. He is helpless compared with people living in that class of house.

3093. How are they going to look after their interests? Is not this one of the methods of looking after their interests, to see that legislation on proper lines is passed for their benefit?—Yes, but I am not so sure but what there are a large number of people who don't want any change. They want to pay their rent quarterly, as they do at present, or half yearly, as at present, and want to pay their taxes too. There are working people who are very methodical in the way of laying out their money to meet rent and taxes, and don't want any change. I am dealing with a class of people who require to be helped just because there is a want of method and ability to lay past money to meet a year's assessment and a quarter or half-year's rent. I want to help these people to pay rent and taxes monthly, and they will get nicely along through life.

3094. Does not the provision of Mr Cross's Bill precisely cover these tenants?—I am not taking his Bill.

3095. But any such system as Mr Cross's Bill provides that the length of tenancy ought to be determined by the amount of rent?—Mr Cross is anxious to help the working man in his Bill, but I am giving you the length I am prepared to go.

3096. You are not prepared to go any further than £10?—I am not prepared to advocate it.

3097. (*Mr Cox.*) Of the very large number of people you speak of that want no change, there are none who have come forward to give us any evidence to that effect?—Perhaps not.

3098. Have they had an opportunity given them?

(*Chairman.*) Oh yes.

3099. (*Mr Cox.*) It would be very desirable, would it not, if we could hear both sides?—Certainly, and if your Committee think that there is a large number of people that would not like this change, by all means let us have them.

3100. You have told us there is a large number?—I am just expressing my views and feelings.

3101. (*Chairman.*) But you rather expect a larger number of these, if they exist, to be persons paying above £10 than persons below £10—all those who value the security of tenure particularly?—Well, this Act of Parliament would be general, I understand, and I would go the length of saying that it should not be limited to Glasgow, but embrace Edinburgh, Glasgow, and Dundee.

Mr J. Henry. 17 Dec. 1906.

3102. What I mean is, as far as opinion in favour of no change is concerned, would you expect there would be more of that in people who paid higher rents than £10 than in those who paid below £10?—Oh, certainly, I should think there would be if there would be any under £10.

3103. You gave us full details about the valuation roll; tell us about the supplementary?—It is made up in March, and there is a survey in the city of all empty houses. When I say empty houses, I mean appearing empty on the valuation roll and houses that have been built since the original roll has been prepared. Whatever sum is paid between the date of occupancy and Whitsunday is entered on the supplementary valuation roll. That may be a quarter's rent or a half-year's rent that goes into the supplementary roll, and there is a supplementary assessment on the rental as appearing on that roll.

3104. Do you get any returns of the city done by survey?—I am quite entitled to call for returns, but I have no difficulty in getting the information without the returns. I issue notices to the owners or factors, a copy of the entries in the valuation roll, and also to the occupiers, and there is the same course open to them of appealing and getting rentals adjusted where necessary. The same provision is made in the way of appeals as provided for in the original roll.

3105. You spoke about compounding in favour of it; what do you say to the condemnation by the English Royal Commission on compounding? Have you seen that?—No, I have not considered that.

3106. In this Bill of Mr Cross's it is proposed to differentiate between Glasgow and Edinburgh on the one hand, and such burghs as Paisley, Partick, Govan, and sundry others on the other hand. In the one case £20 and in the other £16. Do you see any warrant for that?—Well, in the first place, take Edinburgh and Glasgow.

3107. Is there no difference between Glasgow and Govan?—I don't think so.

3108. What about Partick?—The same.

3109. And Clydebank?—The same.

3110. And Greenock?—The same.

3111. These are the ones you know specially about?—Yes.

3112. (*Mr Dobbie.*) If you did desire a change of £10 or £20, in your view that might be made applicable to the whole of the burghs?—Oh yes.

3113. You would not differentiate at the term you mention?—Well, you see, when you go to small burghs, people pay their rent and taxes without much trouble.

3114. (*Chairman.*) Take Kilmarnock, Falkirk, etc.?—Yes, where there is no change going on. Of course the Bill provides for a difference. In Aberdeen, Dundee, etc., it is to be 7½ per cent., and, under £7 and up to £16, 2½ per cent. Well, I would expect that the factors or landlords in those small burghs must have very little loss, because there are not the same opportunities for people leaving; there are not the same facilities for getting houses; and, as a matter of fact, they are more stationary. There would not be much loss in some cases.

3115. But would you have a maximum rental, varying in different burghs?—I am inclined to put down the £10 as applicable to all burghs.

3116. Arising out of a question Mr Cox put. Supposing short lets were more prevalent and a house was let and the landlord paid rates upon that house less the compounding allowance, in the event of the house becoming vacant in the course of one or two or three months, how do you propose to make up to the landlord for the loss of the rate through the remaining nine or ten months?—That is a question for the Committee. If it were only occupied for three months, it would be very hard for the landlord to pay twelve months. It depends on the percentage. If he gets a big percentage, that is to cover his losses and trouble.

3117. It represents the irrecoverables?—Exactly.

3118. It does not represent the rates on empty houses?—It is only on the valuation roll as occupied houses.

3119. (*Chairman.*) If we thought that 7½ per cent. is too small, it should be larger?—Yes. He might have an empty house for one, two, or three months, and the difficulty is dealing with appeals, as it would be in Glasgow. I would be inclined to say, give a percentage that would cover his losses in the event of people leaving and the house being empty for two, three, or four months.

3120. (*Mr Dobbie.*) We will get evidence to show the amount of rates irrecoverable?—Yes.

3121. We want to get any indication of what is not recovered through partially empty houses?—It is only the landlord that can give you that.

3122. You get the re-let houses by supplementary roll?—Yes.

3123. We don't represent the case of houses being let and then being empty if the assessment has been imposed on the landlord?—No, if you are going to saddle the landlord with the rates, give him a reasonable allowance that will cover all his losses.

Mr J. Henry. 17 Dec. 1906.

3124. Is that also to cover the risk of collection and the risk of paying rates on empty property?—No, occupied property as appearing on the roll.

3125. (*Chairman.*) It is trouble, irrecoverables, and partial lets?—Yes.

3126. (*Mr Dobbie.*) Can you give us any views of the effect of any such change in regard to unfranchised voters?—Yes.

3127. What would be the effect of this?—You will observe that I limit my statement to municipal assessments. In Parliamentary burghs, failure to pay poor rates is a disqualification, and if a man pays his poor rates and has a twelve months' occupancy, he goes on to the Parliamentary roll of voters. The Parliamentary list of voters is also the municipal list of voters, but if a man fails to pay his municipal rates, he has no vote at the municipal election. I don't want to disturb the Parliamentary franchise, and that is my reason for confining my statement to municipal assessments.

3128. In spite of all you have told us in favour of collecting rates and rents together, are you still of the view that poor rates and parish rates on rentals under £10 could well be collected, in spite of short lets, from the tenant direct?—Well, the amount is small. I find that people pay their poor rates, but they don't pay their municipal rates—because it is a small sum.

3129. They flit to avoid municipal rates, while they are content to pay the poor rates and the parish rates?—That is so.

3130. (*Chairman.*) You would approve, would you, of the way in which clause 9 is limited? It says all rates and assessments in except imperial taxes and poor rates, and for school, registration, and special rates levied by Parish Councils, etc.?—Yes, I approve of the clause as it stands.

3131. (*Sir J. Stirling-Maxwell.*) Suppose your plan was carried out, in what form would your assessment be imposed on the landlord; would each house have to be assessed?—No. Here is a landlord owning a block of property with twelve or twenty tenants. Add the whole rental together, as is done at present by the water authorities. They just add the rental together, and it amounts to, say, £300. £300 is the rent less the deduction.

3132. (*Chairman.*) What would the deduction be?—Supposing you make the deduction 10 per cent.

3133. Oh yes, the allowance?—He is just assessed on the whole rental, with the 10 per cent. deduction of the rental, and rated at the usual rate.

3134. Does that mean a great saving of work?—It means a saving of work to me in the way of preparing the assessment roll and issuing the notices.

3135. In that way it should increase the allowance, I suppose, because the difficulty in assessing would be put on to the shoulders of the landlord?—You see just now there are landlord's assessments. In the case of a good many of the assessments the landlord pays one half. I don't show each tenant portion in making out his charge; I just slump his rental and charge him on it for whatever rate it is.

3136. The reason I asked you was that some people think that if the rates are paid through the landlords, the tenant ought to know at least how much is paid, separate from his rent, and the house factors complain that that would be difficult to do?—I do not see it. They do it with water and stair gas.

3137. (*Chairman.*) They don't specify it?—No, but I rather think they should.

3138. (*Sir J. Stirling-Maxwell.*) Would that be any great objection, assessing each house separately, even if the landlord paid that?—I don't see that it would serve any good purpose, because they would hand the notice over to the landlord.

3139. (*Chairman.*) They would see what they were paying?—They would not remember it.

3140. (*Chairman.*) Would there be any objection to it if we thought it the proper thing?—No, it is what is done just now. There would be a great saving of work and trouble. When these notices go out, they are not very careful about laying them past, and they are lost, and they would not be sent to the landlord.

3141. (*Sir J. Stirling-Maxwell.*) Supposing they are sent to the landlord direct, the question is, could you do the arithmetic, the allocating the rate for each particular house?—The tenant would not see them.

Yes, that would be stated by the landlord when he exacted the rent.

3142. (*Chairman.*) Suppose that was made compulsory, he would have the means of doing it without any trouble to him?—No, only I would have all the trouble in making out these separate assessments.

3143. (*Sir J. Stirling-Maxwell.*) Could you put a figure

Mr J. Henry. 17 Dec. 1906.

on that trouble, and give us an idea of what saving it would be on your staff?—Well, at that period of the year I get a great lot of work done by extra hands. It would be a pity for them. They would be getting less work, but when you think that there are two hundred thousand ratepayers, and each has a separate assessment notice and you are going to reduce them to about one hundred thousand, you can see that, with all the calculations, and the notices and the rolls, the saving of time and the expense would be considerable.

3144. To you?—I don't grudge it.

3145. You could not have put them more precisely than as considerable?—Considerable.

3146. (*Mr Dobbie.*) You are really one of the most important witnesses we will have. You told us you did not see any difficulty in separating the rates and the rents. You make up the rent roll, don't you, subsequent to May?—Yes.

3147. Is it not a practical difficulty in letting a house by the monthly let at Whitsunday that you could not tell then what the cumulo rates were to be for the current year?—No more difficulty than they have at present The water rate is not a stereotyped rate.

3148. But the landlords don't attempt just now to show the actual difference?—No.

3149. The reason given was that it was impossible to go into it in May and see what it was. Is not that a substantial reason?—No. The rates don't vary very much. Supposing there would be a penny per £ of alteration, and there is very seldom that, suppose it amounts to 8d. or 9d., the landlord has no difficulty.

3150. You think it would be practicable to estimate?—Yes. Take the stair lighting. There are a dozen tenants having four burners at different rentals. The landlord is a man of figures and knows what each tenant should pay. He takes care not to charge less, rather taking a penny or twopence more.

3151. (*Chairman.*) He could not be out or in more than one shilling?—No, he could not be.

3152. (*Mr Dobbie.*) That does not make the difficulty here with the ratepayers who know accurately the increase or decrease of the rates?—Yes. That is quite right too, and I would give the tenant a receipt showing that.

3153. But here the tenant has got to have his rate and rent fixed at the beginning of May and told what his monthly sum is. He won't know whether the rate is going up a penny or twopence, will he?—If he gets a copy of the rates from the factor, and after all the tenant is in the factor's hands. It is a question of supply and demand.

Mr J. Henry 17 Dec. 1906.

3154. I am almost with you. But if there is to be monthly letting with regard to smaller houses; if rent and rate are to be added, the tenant will be invited to pay one-twelfth part of a certain fixed sum independent of whether the rates go down or up?—That will be the contract.

3155. (*Mr Howden.*) In connection with property that would be partly let, that is for two or three months in one year, would it not be practicable to assess it on the full twelve months' rental, and then on satisfactory evidence being given to the collector that the house was not occupied for a certain time, to give him back a rebate equivalent to the amount?—Well, if the Committee fixed an allowance making provision that he is to appeal in the event of the house being empty and not remunerative, that he should get rebate to the extent of the period that the house has been unoccupied.

3156. Would it not be the best way to give a rebate?—I think it would.

3157. That would never be taken into account in fixing the rate?—Quite so.

3158. (*Chairman.*) At present a large number of people get relief on the ground of inability to pay. Is it your view that whatever changes are made that right should be conserved or retained?—There would be a difficulty to begin with.

3159. Assume the £10?—Yes. I begin by saying that the rates would not be felt to be the same, shall I use the term obnoxious, burden as at present, for the working man would pay them in Scotland as in England, but if the Committee were inclined to think that those people who have been getting off hitherto should still get off, if those people will show at the end of the year that they paid their rates along with their rent, and that they were formerly getting relief, I would be inclined to return them the money.

3160. To them direct or through the landlord?—To them direct. They would make the claim, assuming that they had made out a case for relief, and it would be a great boon to get back a month's rates. It might help them to pay a month's rent.

3161. You don't see any practical difficulty, if it was thought desirable, in that being done in the way you mention?—None.

Mr James Dougall Borthwick, called and examined.

Mr J. D. Borthwick

Mr J. D Borthwick.

3162. (*Chairman.*) You are Treasurer to the Police Department of the Corporation of Glasgow, and have held the appointment for twenty-five years?—That is so.

3163. The Finance Committee of the Police Department has under its charge the district offices where the whole assessments levied by the Corporation are paid with the exception of the water and gas rates. Are they separate departments or one?—Separate departments.

3164. Are there three?—There are three rate-collecting departments.

3165. Your district offices are four in number, and the fortnightly reports made by the district collectors on the progress of the collections are submitted to the Finance Committee through you?—That is so.

3166. The cumulo rate of assessment imposed by the Corporation during last year 1905–6 for municipal purposes only (*i.e.*, excluding Juvenile Delinquency and Lunacy assessments, which, though collected by the Corporation, are not administered by them, but including the public water rate) amounted on rentals of £10 and upwards to 3s. $5\frac{11}{16}$d. per £. That was the rate excluding the Juvenile Delinquency and Lunacy assessments. You collect these but do not administer them?—They are simply paid over by the Corporation to these administrative bodies.

3167. You include the public water rate?—Yes.

3168. Of that rate of 3s. $5\frac{11}{16}$d per £, 2s. $6\frac{31}{32}$d. was paid by the occupier, and $10\frac{29}{32}$d. by the owner?—Yes.

3169. You heard what I asked Mr Henry, and I suppose it could quite easily be done—what proportion of the occupier's rate is paid by houses under the different classes which he mentions—namely, £4 and under, £4. 1s. and under £7, £7 and under £10, £10 and under £15, £15 and under £20?—I think so.

[*Note.*—See questions 3451 and 3452 for this information.]

3170. On rentals under £10, but over £4, the occupier's assessment was 1s. $10\frac{3}{4}$d. per £?—That is $8\frac{7}{32}$d. less than on rentals of £10 and over.

3171. How does that arise?—In respect that two assessments (the general police purposes assessments and the general sanitary purposes assessments) are charged at only half the rates on lower rentals—that is, on rentals over £4 but under £10.

3172. Does that apply also to owners?—No, the owners' assessment is the same on both classes of rental.

3173. I wonder whether you could give us a list of all the different assessments?—That can be quite easily done.

3174. Just a table?—Yes, I will tabulate the rates which make up these cumulo rates.

[*Note.*—Table D, since prepared and handed in, supplies the information here promised.]

3175. Besides these rates of assessment which vary from year to year, are there imposed in each year three charges which don't fluctuate?—Yes.

3176. We have heard something about these. Tell us what they are?—There is, first of all, a charge of a penny per £ payable by owners for cleansing private streets and courts, this charge being levied on about three-fourths of the rental of the city. It is only levied on property either bounded by or which has the right of access by or to a private street or court.

3177. That is an owners' tax only?—Yes. We regard it, in short, as a charge for work done on behalf of the owner, which the Corporation does for him in consideration of this charge.

3178. Then the second?—There is also a second charge, payable by owners, of 15s. per lamp for lighting private streets and courts, and, third, a charge of 10s. per light for lighting common stairs, payable (under the deduction of 20 per cent.) by owners, but recoverable by them from occupiers.

3179. Is the same deduction allowed whatever the rent of the house is in these stairs?—Yes, the charge and the deductions are uniform.

3180. The lowest class and the highest class?—Yes.

3181. The Corporation collected, you mention, with their own assessments, those for Lunacy purposes and for Juvenile Delinquency prevention. The Lunacy purposes amounted last year in the part of the city situated within the parish of Glasgow to 3d. per £, and in the part within the parish of Govan to $2\frac{1}{2}$d. per £, being divided equally between owner and occupier?—Yes, that is so.

3182. The Juvenile Delinquency assessment of $\frac{15}{16}$d. per £ was assessed uniformly over the whole city and paid by occupiers all along?—Yes.

Mr J. D. Borthwick. 17 Dec. 1906.

3183. These are respectively paid by owners and occupiers. In no case does the owner collect the occupier's portion?—No.

3184. On rentals of £4 and under, no assessments are charged against the occupier. All the assessments are levied on the owner, and last year the rates were:—for owner's rates, 8$\frac{23}{32}$d. per £, as against 10$\frac{23}{32}$d. on rentals above £4; and for certain occupier's rates, 9$\frac{13}{32}$d. per £ under a deduction of 25 per cent., but without any right of recovery from occupiers?—That forms an absolute charge on the landlord which he has no power to recover. It is included in his rent, of course.

3185. Can you tell why the percentages of 20 per cent. in the case of lighting the common stairs, and 25 per cent. in the case of rents under £4, were fixed at these figures?—No, I find these rates in the 1866 Act.

3186. Was that the origin of the rates in both cases, or were they levied before that?—I think they were levied before.

3187. You might look into that and see whether earlier the percentage was the same or larger or smaller?—I will do so.

[*Note.*—A reference to the Acts seems to show that the levying of assessments on rents under £4, and the lighting of common stairs compulsorily by the Corporation, were both sanctioned for the first time by the 1866 Act; so that the abatement of 25 per cent. in the one case and of 20 per cent. in the others originated with that Act.]

3188. The cumulo sum represented by all these assessments and charges, either levied by the Corporation for their own purposes or collected by them on behalf of other authorities, was £1,001,652. Of that sum there was collected at the close of the financial year at 31st May last, plus the amount estimated at that date as still to be recovered, £978,802, leaving as the balance, which it was estimated would be outstanding at the close of the collection, £22,850, equal to an outstanding balance of 2$\frac{1}{3}$ per cent. on the amount levied?—That is all correct.

3189. Has the collection of arrears proved rather better than the estimate?—It has. The proportion ultimately left outstanding will be fractionally less than the 2$\frac{1}{3}$ per cent. I have named.

3190. By the way, before we forget, does any reason occur to you for those percentages I have referred to, 20 per cent. and 25 per cent., being exceptionally large? An exceptional amount of loss in the lighting of common stairs, for instance?—In that case the landlord pays the charge, supposing he had not a tenant in the property; supposing there was not a single tenant in the whole tenement, the landlord would still be charged, because necessarily the stair must be lit, so that the landlord's percentage of loss on that assessment may be considerable. He has only the right of recovery where the house is occupied, and he must pay whether the house is empty or not. Then, in the case of rentals under £4, he has no right to recover. It forms a part of his charge in connection with the property.

3191. And what is allowed for it in that case?—I suppose because he has no right of recovery. If you take the similar class of assessment under the Burgh Police Act of 1892, the landlord there also pays the occupier's assessments on rentals under £4, with a deduction of 10 per cent.; but he has the right to recover from the tenant. In Glasgow, he has to pay without any right of recovery, hence I take it the larger rate of discount allowed.

3192. He just adds it on to the rentals under £4?—Quite so. In Partick or in Govan, or in Kinning Park before it came in a year ago, the householder at £4 has or had his rent to pay plus his assessment. In Glasgow he pays rent only.

3193. You have never heard any suggestion that either of those deductions was excessive or too little—have not been accepted as fair?—They have been accepted. I have never heard the deduction on rentals under £4 criticised, because it is a mere bagatelle. The whole assessment we get from that class of rental is under £300 for the whole city, but I have heard repeatedly criticism in various quarters in respect of the deduction of 20 per cent. that is allowed on the stair lights as being an excessive allowance.

3194. Nothing the other way?—No. I do not think it is reasonable to suppose that under any circumstances the landlord loses one-fifth part of what he pays to the Corporation. Rather, I should put it, that I do not think it is reasonable to suppose he loses a fourth part of what he pays to the Corporation, because he pays to the Corporation 8s. and has the right of recovering 10s., 25 per cent. more than he pays. Putting it the other way, no doubt from the charge of 10s. he only gets a discount of 20 per cent. The difference between stating his margin at 25 per cent. or at 20 per cent. depends on whether the calculation is based on the cost price or the selling price.

3195. On the arrears of £22,850, that includes £9023, payment of which was not pressed for because of assumed inability to pay?—That is so.

3196. You have no statutory powers to grant relief on that ground?—No, not on the ground of poverty. All that can be done in such cases is simply not to press the charge, and the charge therefore remains uncancelled and forms part of the amount outstanding at the close of the year.

3197. You have statutory power to consider applications?—Not for relief from poverty.

3198. No similar provision to the one in the Burgh Police Act?—No.

3199. Was it intentionally omitted?—I rather think it was from what I have heard.

3200. You bring the same thing about?—Yes, by not pressing. I remark further that practically the only cancelling of a charge once made is when premises which have been occupied for part of a year are vacated by their tenant and a new tenant comes in. On his appeal the charge is restricted to the period of occupancy. If, however, premises remain empty, no one being interested in appealing, the charge remains uncancelled and forms part of the amount outstanding at the close of the year.

3201. Is that amount carried forward from year to year?—No, we don't carry forward, but in speaking of the percentage of loss in any year, there is included an amount which might be cancelled for empty premises. To that extent the loss is fictitious.

3202. Have you any applications, in point of fact, formal applications for relief, such as they have in burghs where the 1892 Act applies?—Cases of poverty. Well, the practice is that persons in receipt of outdoor parochial relief present their relief cards at the collector's counter, the fact is noted, and the amount, though it remains uncancelled, is not pressed for.

3203. But even in that case there is no statutory right?—No, no statutory right of exemption. In other cases of distress, persons not in receipt of parochial relief make a statement of their circumstances to the collector, who notes the particulars and puts them before the Sub-Committee of the Police Department Finance Committee, who consider these cases along with the collector and instruct him how to deal with them.

3204. Have other authorities either in special Acts or general Acts provision for applications for relief?—I cannot say whether in any of the local Acts there are such powers, but there are such powers in the General Police Act. I do not know whether it is so in Edinburgh.

3205. As to the allocation between occupiers and owners of the cumulo sum collected at the close of the financial year, or estimated then as recoverable, the occupiers paid £693,272, being—

For general purposes	£659,741
For stair lights (charged against owners, but recovered by them from occupiers)	24,687
For Lunacy and Juvenile Delinquency purposes	31,694
Making	£716,122
Less estimated outstanding at close of collection	22,850
	£693,272

—That is so.

3206. Then you have paid by owners. The total sum there is £285,530, under the heads—

For general purposes	£232,515
For occupiers' assessments on houses of £4 rental and under . . .	299
For private streets and courts cleansing and lighting charges . . .	20,777
For lunacy purposes	31,939
Total	£285,530

—Yes.

3207. Approximately, therefore, 71 per cent. of these monies was contributed by occupiers and 29 per cent. by owners?—That is so.

3208. Then you have heard the evidence given by Bailie Brechin and Mr Henry as to the Corporation having had for a number of years the question of short lets for smaller houses, and also the question of assessments along with rents before them?—I have.

3209. Is it the fact that, as to the letting question, it has not merely been the question of the undue length of time between the date of taking the house and the date of entry, but also the whole question of short lets?—Yes, the whole question of short lets.

3210. What is your own view derived from your own experience in the past?—I say I am personally in favour of both these proposals, of short lets for smaller houses, and the collection of assessments along with rents.

3211. Is that from a general point of view, or merely as an official of the Corporation looking to their benefit?—From a general point of view.

Mr J. D. Borthwick. 17 Dec. 1906.

3212. As a citizen?—Yes, on general grounds.

3213. Taking the three interested bodies, landlords, tenants, and the rating authorities?—It would be good, I think, all round. These are the three that are interested, and I think these proposals are beneficial to all three.

3214. Do you think they necessarily go together?—Yes, necessarily.

3215. You have considered, I suppose, the alternative of the landlord's collecting the occupiers' assessments along with rents,—namely, that the Corporation should assess more frequently?—Yes.

3216. And you reject that?—If that had been practicable it would have been done many years ago. It has not been done simply because it has not been regarded as practicable.

3217. In theory there is nothing against it?—Certainly not. The more frequently you could have collections the better.

3218. I see, and you think that that principle can only be carried out by the landlords collecting it?—Yes.

3219. You think that at present the system of collecting only once a year is objectionable in the case of smaller houses?—It is by no means an ideal system.

3220. Now it is a fact, is it not, that at the present moment there are large numbers of occupiers on short lets?—Undoubtedly that is so.

3221. Does that satisfy the demand for short lets or not?—I do not think the advantage should be confined to those householders who are already on short lets, but the principle ought to be extended very considerably.

3222. But then, Mr Borthwick, if these people are on short lets, should not other people, if they wanted them, be on short lets too? What is to prevent them? Is there a market?—These people are on short lets because the landlords themselves wish to have them on that system.

3223. But the same landlords have got other smaller people of yearly lets?—Yes.

3224. Now is that because the other smaller people prefer the yearly lets, or is it the action of the landlords that brings about that difference?—In my opinion it is largely the action of the landlords.

3225. For what reason do the landlords pursue that action?—They wish to have their houses let for as long a period as possible, although, in my view, the landlord does not consult his own interest on the whole in refusing short lets.

3226. Is it your view, then, that there is a considerable number of working men who desire to get, in Glasgow, houses under £20 of rent on short lets and cannot get them?—Who desire to get them on short lets and cannot get them. That is so.

3227. On the other hand, from your experience, is there not a large number of working men who prefer the security of a yearly tenure of cases of houses under £20 of rent?—I do not think that the security of any good tenant—any decent man who is behaving himself and paying his way—would be in danger to any extent by the introduction of a system of short lets.

3228. In short, the system of short lets would not interfere with the system of security which a man naturally values, if he was a satisfactory tenant?—I suppose theoretically it would, but practically the cases would be very, very rare, and I should say would form a negligible quantity, in which that security would be interfered with.

3229. It is said that the proposal for short lets would interfere with the freedom of contract. Is it your view that, at the present moment, there is any freedom of contract? There is no freedom of contract, because the landlords are not willing to let houses on short lets which the working men would like to have?—That is so. Of course there is theoretically freedom of contract. The conditions are not equal on both sides.

3230. How do you account, Mr Borthwick—you have been so long connected with these concerns—for the difference between England and Scotland in this matter?—I have no theory on the point. The practice of the two countries is different; that is about all one can say.

3231. You don't see any difference in their actual conditions?—No, it is not the conditions at all.

3232. The work is as shifting in the one case as the other?—I should think so.

3233. But in your view the difference is greater in the large burghs than in the small?—Yes.

3234. Why?—A smaller burgh has a smaller area, of course, and I think there is probably less necessity for a man to remove his house unless he wishes to remove from the burgh altogether. I think, even in a small burgh, it would be a great advantage to the working man if trade there was slack and he wished to find his way to another centre. No doubt the number who wish to clear out from a small burgh would be less.

3235. And still less in rural districts?—Yes.

3236. Where employment goes by the season of the year a good deal?—Yes.

3237. So that you agree with Mr Henry in the distinction he suggests between the houses under £10 and those between £10 and £20, in so far as he suggests there is more necessity to move in the case of those under £10, and also less ability to deal with landlords than in those above £10?—There is something, I think, in both of these statements, but I would not be afraid of extending this principle of short lets and compounding of rates to a point beyond where Mr Henry is disposed to go as an experiment.

3238. Where would you go?—The limit suggested by Mr Cross is £20, and I don't think I would be afraid of going to £20.

3239. But not more, at all events at first?—No, probably not.

3240. Now, in regard to the part of the proposal that we think is necessarily involved, viz., the compounding, what in your view would be the advantage of that to the tenant?—That for the present system, which requires him to make payment in one sum, there would be substituted an arrangement by which payment would be accepted in light instalments over the whole year. I suppose, in the poorest class of property, rent is collected weekly. I think I have not heard at the table any remarks as to more frequent payments than monthly, but rents are collected weekly and fortnightly in the poorest properties.

3241. Under £4 you mean?—Above that.

3242. Between £4 and £7?—Yes. And instead of asking payment of assessment in one sum, they would be taken in dribblets, weekly, fortnightly, monthly, quarterly, as the case might be.

3243. Just for convenience, kindly give us the calculations of the rates on the different class of houses up to £10. Take £4, 11s. rate, what would that be in the year? Take last year's rates, not to a fraction, you know. Just give us Mr Henry's figures, those £4, 1s. and under £7. What would that be? We were taking £7, £10, and £20?—On the third paragraph of the first page, on rentals under £10, and over £4, the occupier's assessment is stated as 1s. 10$\frac{3}{4}$d. per £: that multiplied by 4 would be 7s. 7d. as the charge on a £4, 1s. rent.

3244. £7, how much would that be?—13s. 3$\frac{1}{4}$d.

3245. £10?—That comes under the high rate of assessment.

3246. Take £9, 19s.?—18s. 11$\frac{1}{2}$d., I think.

3247. And £10?—That is at the high rate of 2s. 6$\frac{31}{32}$d., say 2s. 7d., which would be practically £1, 5s. 10d.

3248. £15?—£1, 18s. 9d., I think.

3249. £20?—Twice £10, £2, 11s. 8d.

3250. (*Sir J. Stirling-Maxwell*).—Can we have the total figures, Mr Chairman, the figures for all the rates paid?

3251. (*Chairman.*) These are all the occupier's?—Yes, for municipal rates.

3252. (*Chairman.*) These are the total municipal rates. You can give us the Lunacy and the Delinquency?—Roughly, the Lunacy rate is 1$\frac{1}{2}$d. per £ to the occupier, and the Juvenile Delinquency 1d., that is 2$\frac{1}{2}$d. per £ practically to add to each of these rentals.

3253. Give us £10 and £20?—2s. 1d. to add to the former and 4s. 2d. to the latter. For the £10 that would give a total charge of £1, 8s. roughly, and for the other £2, 16s.

3254. You cannot for convenience give us what we should have got from the other witnesses before, what the parish rates come to?—I have not it with me.

3255. To save us going back to the previous witnesses, you might give us it and put it in.

3256. (*Mr Dobbie.*) Could you give us a schedule?—The rate is not uniform for the whole city. If I tried to show the exact rate for each district that would make a complicated table, but if I give it you for the Glasgow Parish, well, while not absolutely correct, it would be practically so.

3257. (*Chairman.*) Can you include in it the Parish Council rates as well?—Quite readily.

3258. Mr Cox was suggesting, if it could be done, it would be a great convenience if you could put columns along with these; the first column would show whether paid by occupier direct or by owner; and you might consider, Sir John, we have been considering what we would ask Mr Borthwick to put in. If you could put in the case of any where there is an allowance granted, the amount of allowance. Could you do that, it would be a very great convenience to us if you could put it in one table?—I think I know what the Committee wish, and I will try to put it into such a shape as will give the particulars you want. I submit to the Committee a table, which appears in the Appendix to last year's Police Department Accounts, of our own rates, the municipal. The figure I quoted in my evidence, 3s. 5$\frac{11}{14}$d., is shown in large type. The manuscript addition shows the corresponding rate for the current year, 3s. 6$\frac{3}{16}$d.

3259. (*Chairman.*) If you could prepare a draft table

Mr J. D. Borthwick. 17 Dec. 1906.

and send it in to us, we might have some other column to suggest to you after; that would be the best way.

3260. (*Mr Cox.*) Yes, that is the table that will show every rate?—These municipal rates which I have just quoted are, as you know, levied on the full rental, the rental as it appears on the valuation roll; the poor rate and the school rate are not.

3261. (*Chairman.*) If you could add a note at the bottom of the statement in regard to any matters of that kind it would gather the whole thing into one in a very convenient way. You will do what you can?—Are the Committee prepared to express any opinion as to this point, namely, as to whether, to secure uniformity of statement, they would wish the school and parochial rates put in, not at the nominal rates which are levied on, say, only four-fifths of the rental, but at what would be the equivalent of these rates if levied on the full rental.

3262. We want to know what the occupier has to pay out of his own pocket?—I will try to put it in such shape as will give you the information you want.

[*Note.*—Table C, since prepared and handed in, supplies the information here promised.]

3263. You have spoken to the advantage of the occupier. Is the advantage of short lets confined to the occupier?—Certainly not.

3264. What is the advantage to the owner?—There are various advantages to the owner. Removing would be spread over the whole year, and so, if the tenant who desired to remove would have a reasonable chance of obtaining a house at any time, the owner would equally have a reasonable chance of letting at any time, instead of, as at present, if he misses the market, being probably left with an empty house for the whole year. I am clearly of opinion that short lets would tend, not to more, but to less frequent removals. I have long thought that the annual recurrence of a house letting term has a most unsettling effect. The missives come in and everyone is set asking the question, "Shall we remove?" or "Shall we not?" When people meet the question passes, "Well, are you flitting or sitting?" I think that if a tenant knew that he could remove at any time on giving reasonable notice, he would rest on that knowledge and the question of removal would, as a general rule, only be raised when one cause or another rendered removal desirable. I am satisfied that at present many removals take place for which there is no reason in the tenant's circumstances, or in anything in their houses rendering it desirable for them to go. The people are unsettled and the question is raised, and people remove simply because this is the proper time of the year for doing so.

3265. Is that something you know of, the two ways of managing, with the result that some mistresses are in the habit of asking their servants regularly, "Are you going to stay?" while others never ask that, and the question never arises?—That is so.

3266. Do you think there would not be more frequent removals? would they be more spread over the whole year?—The removals that did take place would certainly be spread over the whole year, instead of taking place largely at one time as at present.

3267. In addition, do you agree with the view that one removal term causes a great deal of inconvenience and loss through the whole of the work being thrown within a very short period?—Undoubtedly loss to the tenant and also to the landlord, who is forced to get his houses done up at one time.

3268. There is a loss, some people say, I understand to the trades employed? Do you agree that there is over-pressure at one period?—Yes, and want of work at other seasons.

3269. Do you contemplate that the result of short lets would be to raise the rents or not to interfere with the rents?—I do not think it would interfere with the rents, balancing one thing with another. It would neither raise nor lower rents. That is a negligible factor, I think.

3270. What about the position of an owner who finds himself with an undesirable tenant, an annoyance to the neighbourhood, say, who yet pays his rent and cannot be turned out?—It seems to me that, with a system of short lets, this is one of the advantages an owner would enjoy. He would be able much more speedily to rid his property of an undesirable tenant.

3271. Do you think it would raise the question of the law of hypothec one way or another?—I should not wonder but it might.

3272. How would it bear, in your view, on that?—If the right of hypothec were abolished, I should think the landlord would be more disposed to ask prepayment of rent.

3273. And go in for short lets?—Yes.

3274. But the statutory enactment of short lets would not necessarily lead to the law of hypothec being interfered with?—No, I don't think so, not necessarily.

3275. As to owners: owners, apparently, and the factors object to the friction that would be caused if they had to collect assessments. What is your experience about that, where they actually do collect the assessments?—As Bailie Brechin said, at present quite a considerable number of owners find it to their advantage, though their brethren stand aloof. The fact is that certain men do find it advantageous.

3276. You think that has been submitted to test—it is not mere opinion?—No.

3277. Is it found, in fact, that tenants very often show a disinclination to pay rates, and a desire to get rid of rates as contrasted with the payment of rents?—They can more easily give effect to their disinclination to pay rates than they can to their disinclination to pay rents. Perhaps the disinclination may be equal, but the cases in which the tenants avoid payment of rates are no doubt very much more numerous than those in which they evade payment of rents.

3278. And if the two were collected together, you think the difficulty of getting the rates would be lessened?—Yes, undoubtedly.

3279. Without a corresponding drawback to the landlord, if he got a proper allowance?—Without a corresponding loss to the landlord.

3280. The question having been before the Corporation, is it a fact that there is no agreement as to the limit of rental to which a system of short lets and compounding might be applied?—The Corporation has never agreed on any limit.

3281. What sums have been suggested?—I have heard £10, £12, £15, and £20 named.

3282. In reply to inquiries made three years ago, did eighteen local associations, including thirteen ward committees, express themselves in favour of a change?—Yes.

3283. Of what change?—The abolition of the missive system, and a system of short lets.

3284. What kind of organisations were they?—The Trades Council and Labour organisations were asked to express their opinion for the guidance of the Corporation.

3285. Were they unanimous in their view?—They were not unanimous.

3286. To what extent did they differ?—I have not the figures, if you wish the numbers.

3287. Perhaps you have them sufficiently here?—I have only dealt here with those who approved of the change.

3288. Those who approved differed over the figures they named as the maximum?—Thirteen of the organisations, including eight ward committees, named £20. Other four ward committees named respectively £10, £15, £25, and £35, as the limit of rental, while the remaining ward committee, approving of the abolition of the missive system, did not suggest any limit.

3289. Were those areas, including a substantial number of the houses that would be affected, under £20 or £30?—That is so, all these areas.

3290. Were there several who were against a change, and in favour of the retention of the old system?—I think that is so.

3291. That would be very interesting to know. At whose instance were these inquiries made?—The sub-committee of which Bailie Brechin is convener.

3292. Did you send out notices?—The town-clerk wrote a letter.

3293. Have you a copy of it there?—This is the remit—"to communicate with the various ward committees in the 'city, and with other organisations interested in the missive 'system, on the question of, up to what rental they were 'of opinion the present missive system should be abolished, 'keeping in view that such may necessitate the collection 'of rates along with rents."

3294. Looking to the sentence beginning "keeping in view," that shows necessarily, doesn't it, that the missive system was meant to include the short let question?—Oh, undoubtedly.

3295. Well, now, what is the result?—The result of the favourable expression of opinion is mentioned in my print.

3296. What about the unfavourable?—(1) Glasgow United Trades Council were favourable; so were (2) the Independent Labour party, Glasgow District Executive Committee; (3) Glasgow Workers' Municipal Election Committee; (4) Plasterers' Federal Union, Glasgow District; and (5) Independent Labour Party, Blackfriars Branch. These were the five outside organisations that expressed themselves in favour of the abolition of the missive system on rentals up to £20. Then those that were either neutral or opposed to the change were—The Citizens' Union, the Association of House Factors and Property Agents in Glasgow, and the Ratepayers' Federation, Limited. These were the associations that expressed themselves as either neutral or opposed.

3297. We know about the Citizens' Union and the House

Factors. The Ratepayers' Federation, Limited, does that still exist? We have not heard about them. What was the date?—Three years ago.

3298. You have not known, have you, of any working men's organisation that has expressed disapproval of the proposed change?—No.

3299. Were there any of the ward committees against the proposed change?—Yes. I think so.

3300. Tell us about that.—Dalmarnock, Calton, Mile-end, Whitevale, Blackfriars, Cowcaddens, and Anderston were all in favour of abolition, and fixed limit at £20. Hutchesontown was also in favour of abolition, and of making it illegal to let house property under a rental of £20 for a longer period than one month. Gorbals Ward, in favour of abolition, did not suggest any limit of rental. The four wards which, approving of the abolition of the missive system, suggested limits of rental other than £20, were:—Park Ward, £35; Townhead Ward, £25; Dennistoun Ward, £15; and Sandyford Ward, £10. Park Ward is one in which there are houses of a pretty good class. Broomielaw Ward was not in favour of the abolition of the missive system, but recommended that missives should not be issued before the month of April. Blythswood was in favour of a reasonable reduction of the time at which houses require to be taken prior to the removal term, but was not in favour of the collection of rates along with rents. I think Broomielaw was the only one opposed to the abolition of the missive system. Opposed to the collection of rates with rents were also Hutchesontown and Pollokshields, as well as Blythswood. All the wards, except Hutchesontown, favourable to the abolition of the missive system either expressed or implied approval of the collection of rates along with rents.

3301. Is that the lot?—One ward, Kelvinside, thought the Corporation should not interfere.

3302. They express no opinion on the rentals?—No, and two ward committees wished to keep an open mind on the subject until the matter had been considered by the Corporation, viz. Govanhill and Maryhill.

3303. How is the ward committee elected? What is a ward committee?—At the annual ward meeting, sometimes the principal part of the time of the meeting, which should be devoted to hearing the representatives of the ward, is devoted to electing this committee.

3304. Just tell us—Broomielaw was the only one that was against interference with the missive system. What kind of ward is that?—A working men's ward, undoubtedly.

3305. You have no explanation there?—No.

3306. Then Blythswood, Hutchesontown, and Pollokshields, against compounding. What sort of wards are these? Take Blythswood, residential or working men or what?—It is a mixed ward.

3307. Blythswood must include a good deal of business property. Does that not apply to Broomielaw too?—Undoubtedly.

3308. Are there many working men's houses in Blythswood?—There must be a number, but it is nothing like one of the most distinctly working-class wards.

3309. What about Hutchesontown?—It is a better-class working-men's district.

3310. What about Pollokshields?—Pretty much a villa district.

3311. So is Kelvinside?—Yes.

3312. What about Govanhill and Maryhill?—These are both mixed areas.

3313. Now, you have referred to the cases where arrangements have been made for owners, in certain cases, collecting rates, and you have prepared a table, haven't you, which we are going to call Table A, showing the amount of occupier's assessments (*in cumulo*) imposed, collected, and outstanding, as at the close of each year's collection, including both the assessments imposed by the Corporation for Municipal Purposes only, and those (*e.g.* Juvenile Delinquency and Lunacy assessments) collected by the Corporation but not administered by them, (1) on rentals over £4 and under £10, and (2) on rentals of £10 and upwards? That table is correct?—These tables are correct.

3314. Are there any remarks you have to make on these tables? How long do they extend over?—They cover a period of twenty-eight years, giving the amount imposed, collected, and outstanding, and the percentage the outstanding bears to the amount imposed in each year from 1878–79 onwards.

3315. Look at the table dealing with £4 and under £10. The percentage outstanding in the first year was 39·53 per cent., and a steady improvement follows, until it comes down to the year 1896–97, from 39 per cent. to 13·86 per cent.?—That is so.

3316. Then there is a turn, and increases occur, and last year 25·61 remains outstanding? How do you account for these fluctuations?—I explain that at the period the table starts with, the collection was not receiving the attention that probably it should have. There was a certain amount of slackness in the work of collection. In 1881–82, November 1881, a new convener was appointed to the Finance Committee, who took the view strongly that I have impressed just now, and he induced the Committee to take a much closer supervision of the work of collection, with the result that a steady improvement, as the table shows, followed until the year 1891–92 is reached, with a loss of 14·90 per cent. What I would like very particularly to direct the attention of the Committee to, is the loss during the eight years 1891–92 to 1898–99 inclusive. The loss for these eight years averages 14·65 per cent. In each of the eight years the result of the collection is practically uniform, the year with the highest percentage, 1894–95, being only 0·41 per cent. above the average, and the year of the lowest, 1896–97, being only 0·79 per cent. under the average. If, instead of being presented in tabular form, these results were shown in the form of a diagram, the curve would become practically a straight line for this period of eight years. Now, I regard these eight years of average percentage as showing the normal loss on a normal collection.

3317. Properly attended to?—Yes.

3318. Apart from any such causes as bad trade or war or anything of that kind?—Yes.

3319. As a fair basis from which to calculate, allowing, of course, a reasonable margin?—As a fair basis from which to calculate, if it were to be assumed, which, however, I do not admit, that there is any connection between the Corporation losses under the present system and the discount that they might be expected to allow.

3320. Assuming that they were the same, or that they were similar?—Assuming that there was any connection between the two things, I think these years are a fair basis to calculate on.

3321. If you were calculating what the Corporation's probable loss in the future would be, you think these eight years a favourable basis for them to go on?—It should be so.

3322. To what do you attribute the rise since 1898–99?—In my precognition there are some remarks in regard to that. But, before that, there is a paragraph explaining how this average loss of 14·65 per cent. may be apportioned between different grades of rental.

3323. Yes, I should like that.—Dealing with this average of 14·65 per cent., and in view of the fact that the proportion of assessment uncollected is greater on lower rentals than on higher, if £7 were regarded as a dividing line in the class of rental over £4 and under £10, I may state that, on the basis of the first year of the eight years' period referred to, which year may be taken as fairly typical, the amount outstanding from all causes was:—

On rentals of £4, 1s. to £7, 27·86 per cent.

On rentals over £7 and under £10, 5·87 per cent.

While, as I say, these percentages are based on the first year of the eight years' period referred to, 1891–92, and while that is going a long way back, as these average years are practically uniform, the figures based on any one of them may be taken to apply to the whole eight years' period. Deducting the amounts, payment of which was not pressed for on the ground of poverty, and an allowance for what would, on appeal, have been cancelled for empty premises, the amount outstanding at the close of the collection from every other cause was:—

On rentals of £4, 1s. to £7, 18·94 per cent.

On rentals over £7 and under £10, 2·29 per cent.

Now, in my view, these are the maximum losses that should be incurred by the Police Department on that class of rental, apart from any allowance the Corporation may see fit to give on the ground of poverty.

3324. When you take the amount outstanding "from all causes," what do you include in all causes?—Just what I say.

3325. There are poverty, empty houses: anything else?—The 18·94 per cent. under £7 must, to a large extent, be due to improvidence on the part of the ratepayer. I have, in the difference between 27·86 per cent. and 18·94 per cent., discounted the relief given to the decent poor.

3326. You don't show anywhere, do you, Mr Borthwick, what it costs the Corporation to recover the rates?—No, but I have the figure for it.

3327. Would that have any bearing on what it would cost the landlord, or would the conditions be so different?—The conditions would be quite different. It would not and could not possibly cost the landlord the expense which it costs the Corporation. They have to maintain a separate staff for this very thing. The landlord would simply collect rates along with his rents. I do not think there is any analogy.

3328. You could not give a 25 per cent. or 30 per cent.? You could not make any percentage roughly?—No, I think not. The net cost of the four collecting offices last year was £5777. The gross cost was £8635; but the amount

Mr J. D. Borthwick. 17 Dec. 1906.

Mr J. D. Borthwick.
17 Dec. 1906.

recovered from persons in arrear with payment of their assessments in name of penalty yielded £2858. Deducting that, the net cost of the offices to the rates was £5777. For that sum we collected, as shown in the first page of my evidence, £978,802, so that it worked out at something less than 12s. per cent.

3329. Is that cost merely salaries and wages, or capital spent on buildings, and all that kind of thing?—It includes rent for the offices, printing, and stationery.

3330. It includes everything?—Yes, the entire cost.

3331. So that, in your view, the present percentages outstanding are higher than they need to be or ought to be?—That is so.

3332. Do you think the difficulties of the country in the way of war in 1899 had an effect in compelling generous treatment of the families of men on active service?—I think it was the outbreak of the South African War in October 1899 that accounted for the start of this worsement in the collection.

3333. And relief, in point of fact, from assessment, has been given to a greater extent than formerly?—Much greater.

3334. When a habit is started, it is apt to continue?—That is what I am afraid of. I think we are drifting back towards the position we were in twenty-eight years ago.

3335. But that you might be able, if it were fairly enforced?—Fairly enforced, without oppression. I do not think there was anything oppressive in the collection of that eight years period. It was a fair collection.

3336. You said, if the two were comparable, that would be a fair basis. What is your view as to the loss, suppose the landlord was to collect, as compared with the loss that the Corporation suffers?—If the landlord gave you his loss in rental at present, I do not think that the percentage which that bears to his rent-roll would be increased to any appreciable extent by your adding on the collection of assessments. If you gave the landlord an allowance for unlet property——

3337. And partial lets?—Yes, and partial lets. Under the Glasgow Police Act, 1866, we make an abatement for all periods during which premises are unoccupied, and I think the landlord, under any system which would place on him the payment of the rates, should receive an allowance on that score. He should only be charged, I think, rates for the time his house is occupied. It seems to me thoroughly inadmissible to charge assessments on empty houses as Poor Law authorities do.

3338. They charge on premises empty the whole year?—Yes, on rental as it appears on the valuation roll. That seems to me quite inequitable. If a man is not uplifting any rental from the property, it is surely very hard that he should be assessed on it. But it is on whether such an allowance is made or not that there would depend very largely the fairness of the discount or abatement to be allowed the landlord for collection of assessments. The landlord is clearly entitled to one rate or abatement if he is to pay assessments on the full rental as it appears on the valuation roll, let or not let, and a very different rate should apply if he is allowed a deduction for empty premises.

3339. You are just going to come to that. Before doing so directly, in your second table on document A, you give occupiers' assessments on £10 and upwards. The percentages outstanding are much smaller than on the other table. Why is that?—Because the higher the rental, the less the rate of loss will be.

3340. That goes up to the fullest amount?—Yes.

3341. You have no notion how it would look, if you had shown between £10 and £20? It would have been substantially less than under £10?—Enormously less.

3342. If we are to recommend any change, there may be a question as to the limit. Now, it is very important to see what is the practical difference between those paying under £10 and those paying between £10 and £20. Could you, without inconvenience, give us the percentage and arrears between £10 and £20, not working it out elaborately, but perhaps taking a year or two?—I think so. It could not be done without some little work, but the information could be got and supplied to the Commission.

[*Note.*—See note at end of evidence, *i.e.* following question No. 3455.]

3343. One year would be all we would want, and we would compare it with the same as you have already given us. We want to see if there is really a substantial difference between the people. Mr Dobbie points out on page 6 an illustration of what it comes to. There you have on rentals of £4, 1s. to £7, 27·86 per cent., and on rentals over £7 and under £10, 5·87 per cent.?—I prefer you would take the figures lower down, on rentals of £4, 1s. to £7, 18·94 per cent., and on rentals over £7 and under £10, 2·29 per cent.

3344. If you went up above that, it would be marked, would not it?—The reduction would be very marked.

3345. Not so marked as the difference between £4 to £7, on the one hand, and £7 to £10 on the other?—I can give you each pound of rental between £7 and £10, the per centages the average of which is 2·29.

3346. It would be interesting to see where it really arises?—Let me go back. Take the line above; we lose 18·94 per cent. between £4, 1s. and £7. Well, between £4, 1s. to £5 the loss is 34·91; between £5, 1s. to £6 the loss is 17·54; between £6, 1s. to £7 the loss is 8·50. Now that averages 18·94. Then, on £7, 1s. to £8 the loss is 4·48; on £8, 1s. to £9 the loss is 2·07; £9, 1s. to £9, 19s. the loss is 0·78. On these three grades of rental the average is 2·29. Now, you can imagine what the loss will be over £10. Take it without distinction of rental at all, £10 and over, it is 0·39.

3347. (*Mr Dobbie.*) Assuming compounding it up to £20, a very much smaller rate would be required than if the limit was under £10?—Surely, but I do not suppose you would approve of an ungraded rate. I think Mr Cross's graded rates for the higher rentals are needlessly liberal, more so than his allowance of 10 per cent. from assessments on rentals over £4 and under £7. That is not relatively so large an allowance by any means as 2½ per cent. from assessments on rentals of £10 and over, and I think that is what he recommends.

3348. Yes, over £4 and under £7, 10 per cent. Your figures show that if you take £4, 1s., it is 34 per cent., and if you take £6, it is only a quarter of it. You will give us that?—I think there is no analogy between the losses which the Corporation incurs and the abatement which it might be expected equitable to give to the landlord.

3349. These last figures are, without taking off anything for exemption for poverty or empty houses?—It is after taking these off.

3350. You are making no allowance in these for either?—No.

3351. And you think there is no analogy either with the cost of collecting or the loss incurred?—No.

3352. (*Mr Cox.*) These averages are not brought out exactly by the figures you gave?—I have not the figures beside me for bringing out the averages. You are not adding the three percentages together and dividing the quotient; that will not give the average unless the amount at each rate is equal.

(*Mr Cox.*) That is quite true.

(*Mr Dobbie.*) Upon these gross outstandings, you might put others in. You have given the figures of the 18 per cent., but the real outstanding is 27 per cent. You might give us the figures dealing with these rentals on the actual gross arrears.

3353. (*Chairman.*) Haven't you that?—No.

[*Note.*—The allocation asked for, of the percentage outstanding from all causes, making no allowance for exemption for poverty or empty houses, of 27·86 per cent. on rentals of £4, 1s. to £7, was:—between £4, 1s. and £5, 45·84 per cent., £5, 1s. and £6, 26·11 per cent., and between £6, 1s. and £7, 15·85 per cent. The similar allocation of the percentage out-standing of 5·87 per cent. on rentals over £7 and under £10, was:—between £7, 1s. and £8, 9·68 per cent., £8, 1s. and £9, 5·73 per cent., and between £9, 1s. and £9, 19s., 3·03 per cent.]

3354. On that second table of rentals, £10 and upwards, the percentages outstanding are smaller, but show the same trend?—Undoubtedly.

3355. We had evidence from Councillor Brechin of the arrangement mutually entered into betweeen certain owners and factors under £10 and the Corporation, by which the factors, in consideration of the deduction of 7½ per cent., pay their tenants' assessments. You have prepared a table referring to that?—Yes, Table B.

3356. Was that owing to the private action of factors, or were they in any way concussed into that by the Corporation?—No.

3357. Who came to whom?—The factors to the Corporation.

3358. What led them to do that? Finance?—I expect their interest in letting the property.

3359. Not that they expected to make anything out of it?—It seems to me it would tend to secure permanency of tenancy. To avoid the rate collector is the reason for running away which so many tenants have. That temptation is taken out of the way.

3360. Yes, but the basis of 7½ per cent. was based to cover cost rather than yielding profit to the factors and their employers?—It was an inducement which the Corporation were prepared to offer in consideration of the payment of assessments by the factors.

3361. But would it, in the end, result in gain to the factors, which they would not have got under the other system, through their getting an allowance for the trouble of collection?—I think it could not have resulted in loss, otherwise they would have withdrawn from the arrangement.

Mr J. D. Borthwick. 17 Dec. 1906.

3362. But it would result in profit to them, as they would be paid their fees?—If the allowance they receive is in excess of any loss through failure to recover assessments they have paid, as I assume it must be, there is profit to them. There is no doubt it is profitable to the Corporation.

3363. Through getting better payment of rates?—Yes.

3364. And also to the profit of the factor, because he would be paid for his trouble in collecting the rates. Your table B states the rental over £4 and under £10 on which the occupiers' assessments have been paid to the Corporation by the owners in consideration of a deduction allowed to the latter of 7½ per cent. That has progressively increased, has it, with the exception of one year. It dropped a few pounds between 1902–03, when it was £10,627, and 1903–04, when it was £10,623. With that exception the amount has annually increased?—Yes; that last large increase in one year from £10,861 to £15,824, followed on the inclusion with the city in November 1905 of the former burgh of Kinning Park. In Kinning Park, as in all places administered under the Burgh Act of 1892, owners who let premises for less than a year were liable in payment of the assessments thereon, without receiving any deduction whatever from the Burgh Authorities. But after Kinning Park came into the city, these owners received an abatement of 7½ per cent. for continuing payments which they formerly had made without abatement. It was open to them, of course, to decline to pay the assessments, but instead they continued making the payments for an abatement of 7½ per cent., which they were obliged formerly to make without any abatement.

3365. And the rate under this arrangement of 1896–97—did it start then?—No, I only go back ten years.

3366. When did it start?—It has been going on during all the period of my service with the Corporation.

3367. Are any of the factors who are parties to that arrangement members of any of the Factors' Associations, or are they outside factors?—I cannot say. I do not know.

3368. Is there anything special in their composition?—I do not see any reason why these gentlemen should compound and others should not.

3369. Is the compounding in the hands of a very small number or spread over many? Have you any notion how many of the factors are involved in this thing? It is not the case of one or two men factoring very large estates, is it?—Well, the largest single item is the property of the Corporation City Improvement Department.

3370. How much of it consists in that?—Of this £15,800, £5900 is the rental of property belonging to the Improvement Department, but that property is managed just as any private estate would be. It is no argument against compounding here that the Corporation are dealing with their own property and their own assessments, because the official at the head of that department wants to show a balance on the right side just the same as any factor or landlord would, and if it were not to the interest of the Department to pay those assessments, they would not be paid. So that I do not think it is open to anyone to say that to the extent of that £6000 this figure goes for nothing because it applies to Corporation property.

3371. (*Sir John Stirling-Maxwell.*) Was it the same in 1896?—I do not doubt it would be, Sir John.

3372. (*Chairman.*) The question of short lets, I suppose may in its application to the Corporation property be somewhat affected by the fact that they have caretakers, but you think not the question of compounding?—No doubt the Corporation tenants are a selected class.

3373. It is open to that observation at least. Can you tell us what the workmen's dwellings represent?—No, I have no knowledge of that.

3374. What we would like is, how much of that is property of the ordinary class, without being open to any comments at all. Take the Corporation and the Glasgow dwellings, you have nothing else?—I think not.

3375. You can give us the Glasgow dwellings and then we will see how it stands. You do not see, do you, any reason why, if that is done in regard to that property and is found to answer, it should not be done in regard to others?—I do not see any reason. Apparently the factors see such reasons, because they don't avail themselves of this arrangement.

3376. Have you had complaints as to the deduction being too small in these cases and endeavours to raise it?—I have not heard of any such complaint from any quarter.

3377. You have no notion of how that percentage would be fairly divisible between the cost of collection and losses?—No. It was not made up on that basis. It seems to me the cost of collection is nil.

3378. It would mostly be what then—losses?—The cost of collection is nil. The inclusion of the assessments cannot add a cent, I should say, to the cost of collection.

3379. Do you suppose that in any of these properties there is any amount given off on the ground of poverty? There could not be, because they don't pay it in full?—No, where the tenant is in receipt of parochial relief in a property for which the landlord compounds, we still give the tenant relief. We don't charge the landlord the assessments.

Mr J. D. Borthwick. 17 Dec. 1906.

3380. That is outside the 7½ per cent altogether?—Outside, we don't charge these assessments.

3381. It is only in that case?—Yes, and in this other. If the property is not let for part of the year, the landlord will intimate that his house is empty for, say, six months. He gets his 7½ per cent. off the six months for which only we charge. His only loss can be if he fails to recover assessments when his house is occupied; but unless his house is occupied we don't charge him.

3382. But the hypothetical lady with lodgers gets no look-in in this arrangement?—No, if there is a tenant the landlord has to pay.

3383. You know that in Mr Cross's Bill the adoption of the Act in whole or in part is made optional. Have you any view in regard to that?—I think it is desirable that option should be given. I should fancy, in a small burgh, the authorities might be glad to adopt the clause fixing short lets, and yet, in their own protection, they might not find it needful to bracket with that the collection and payment of rates by the landlord. They might be willing to collect the rates themselves, knowing their loss is practically nil, and yet they might be desirous of giving the ratepayers the benefit of short lets.

3384. In other cases there might be burghs desirous of doing neither the one nor the other?—Yes.

3385. With the present views of the Glasgow Town Council, of course there is apparently little doubt they would adopt the Act in whole or in part?—Unless they were prevented from doing so by the large discount to be paid. I think that is the only thing that would deter them.

3386. You have noticed the difference between Glasgow, with a limit of £20, and Govan and Partick, with a limit of £16. Do you know anything to justify that?—It is very difficult to justify that. It seems to me the conditions are very much the same.

3387. Would you say the same about Paisley and Greenock?—I had rather not express an opinion.

3388. At all events, Govan and Partick you cannot distinguish?—I don't think so. With regard to B table, you observe a very considerable portion of the rental that is compounded for is under £7 of rental.

3389. You are now referring to the statement in B table showing the proportion of the above sum of £15,824 effeiring to each £ of rental from £4, 1s. to £9, 19s. inclusive?—Yes; the addition is roughly £8000.

3390. You are adding together what?—The first three lines, so that something over the half of the rental on which the landlords are willing to pay assessments with a 7½ per cent. allowance is the rental on which the Corporation incurs its biggest loss, being under £7.

3391. (*Mr Howden.*) Do the landlords of the present time pay assessments on unlet property, owner's share?—Not municipal assessments; they do parochial and school assessments.

3392. Do you not think it fair that they should pay part of that assessment, for instance, the police rate? Unlet property surely needs as much protection as let property?—Well, I do think you might, with greater fairness, ask the landlord to pay police rates than you can ask him to pay parish rates. Still, I think it is a stiff thing to ask him to pay assessments on what is yielding him nothing. Undoubtedly you are rendering him a service.

3393. Have you any idea how many removals there were in Glasgow last Whitsunday?—No, I have no means of knowing.

3394. Would it be fairly stated at 33,000?—I would not be surprised to be told there was that number.

3395. (*Chairman.*) Is there any means?—Mr Henry ought to be able to tell the changes.

(*Mr Howden.*) This is a statement from the Gas Office.

3396. (*Chairman.*) How do they find it out?—There must be houses in which gas is not consumed.

3397. (*Mr Howden.*) At Whitsunday term it should be a difficult job for the gas men to overtake their work?—I suppose it will be.

3398. (*Chairman.*) I suppose you could get this from the Treasurer of the Gas Department of the Corporation. If it is the case that 33,000 removals were recorded in his books, that would be an accurate way of getting it?—It would not overstate the removals. As I said, there is a large number of small houses to which gas is not supplied. They burn oil.

3399. This would be a minimum?—It would be a minimum, I should say.

3400. (*Mr Cox.*) This £15,824 you award by commission for collection of rates, that is a fourth part of the £69,000 paid?—Yes, it is.

[*Note.*—See No. 3407.]

Mr J. D. Borthwick. 17 Dec. 1906.

3401. That is the amount as appears as being let when the valuation is made up in June?—Yes, including the supplementary survey.

3402. You allow 7½ per cent. off that. Do you allow any further abatement if any part of the property should become unlet during the course of the year?—Yes, we allow that.

3403. Say on every six months of the year some of the property is unlet, you allow on that?—Yes, we only charge rates on the period for which the house is let. Suppose it was occupied for six months, and the landlord got three months' rent only, we charge for six months, so that he would lose the rates on three months.

3404. His risk of loss is only a risk of not getting the rates from his tenants?—Yes; the rents or the rates from his tenants.

3405. Are separate receipts given?—I do not think so.

3406. At the top, Table B, that is the rental?—Yes.

3407. And this on Table A is assessment?—Yes, that is so. The two figures are of different denominations, Mr Cox. The £69,542 in Table A is assessment imposed under date 1905–06, and the £15,824 in table B is the rental on which assessments are paid by the landlord.

3408. Could you tell us the assessment leviable on table B?—Roughly it is at 1s. 10d. per £, that is about £1600.

3409. Of which about one-third is payable by one proprietor?—Yes.

3410. On that rental of £15,000, representing £1500, you gave 7½ per cent. rate to proprietors?—Yes.

3411. So that when rates are collected by yourself, taking into account that you get these rates collected for 7½ per cent., your loss for outstandings was 27·86 per cent.?—The 27·86 per cent. is the amount outstanding on rentals of £4, 1s. to £7; the 7½ per cent. allowance is from assessments on rentals of £4, 1s. to £9, 19s.; the average amount outstanding on that class of rental is, as I previously stated, only 14·65 per cent.

3412. You would exceed 27·86 per cent. Does not that explain why it is not quite fair, on the part of factors, to compound?—Well, unless it paid those who own this £15,000 of rental to pay the rates, I do not see that they would do it.

3413. We know why the public body does it. It is part of their scheme?—Well, I do not think it would be done, as I have said, in the Improvement Department property, unless it paid the Improvement Department as property owners to do it. It would not be done for the sake of this theory that rates should be compounded.

3414. We may take it, then, that the outstandings just now are 27 per cent. You hinted you were apprehensive least they might drift back to the 30 per cent. and 39 per cent. which obtained thirty years ago?—I do not think they are in the least likely to drift back to that. I say the drift has been in that direction. I shall be very much surprised if they get to worse than they are just now, say 25 per cent.

3415. But assuming there is no war or bad trade, you think 14 per cent might be taken?—Yes.

3416. And you gave us your evidence on the footing of 14 per cent. being a reasonable allowance?—No, on the basis of 14 per cent. being a reasonable loss. I do not think that the collection on the present lines direct from the occupier can show a much better result than 14 per cent. outstanding, but I don't think that has any relation whatever to the discount that might be allowed to the landlord. There is no connection between the two things. I do not think that an improvement in any direction should be made to cost as much as the inferior system which it replaces.

3417. We are just sitting to discover whether this would be an improvement?—I think this would be an improvement.

3418. Your evidence is that, despite your own experience dealing with that 26 per cent. of loss on these figures, we might take the 14 per cent. as what might be expected to be lost?—Yes; always bearing in mind that these two percentages do not apply to the same rentals—the 26 per cent. applying to rentals of £4, 1s. to £7, and the 14 per cent. to rentals of £4, 1s. to £9, 19s.

3419. How do you force payment of arrears in cases where you insist on recovery?—In the last resort by arrestment of wages over 20s., or by poinding.

3420. You have certain preferences, have you, in cases of bankruptcy?—Yes; there is a preference in bankruptcy, subject to the landlord's hypothec.

3421. Can you imprison?—I cannot tell whether theoretically or not we can. Certainly we have never done it.

3422. It may be that the weapon may be effective without being put into force?—I don't think there is such a weapon.

3423. If you had compounded up to £10 or £20, in your view would the landlord's right of hypothec be a sufficient weapon to enable him to recover, or would you give him the right to get a summary warrant to recover by means of arrestment and even imprisonment?—I would give him all the powers he had for recovery of his rent and no more.

Mr J. D. Borthwick. 17 Dec. 1906.

3424. Mr Cross's Bill applies solely, as far as compounding goes, to municipal rates, and that would leave, assuming the change to be made which would give short lets, compounding in regard to your collections should leave untouched parish rates and school board rates?—That is not Mr Cross's Bill in its more recent form. It compounds for all rates except imperial rates.

3425. (*Chairman.*) No, not 1906. In 1905 I notice his clause runs "on all rates and taxes except imperial taxes and school rates." He may have suggested it?—In any case I think all rates should be compounded for.

3426. (*Mr Dobbie.*) As a practical man, assuming there are short lets, compounding would require to apply to all the local rates?—Clearly, with a suitable allowance in each case.

3427. (*Chairman.*) As far as you know, would one allowance be suitable?—You would not require a differential allowance, I should think.

3428. (*Sir J. Stirling-Maxwell.*) Can you tell the total number of people who don't pay their rates?—That £17,811 which is said to be outstanding in 1905–06 of assessment on rentals under £10 represents 23,338 persons out of a total number assessed of 89,824.

3429. (*Chairman.*) That is a percentage of how many?—25·98. The percentage in money is 25·61. The percentage of persons 25·98.

3430. (*Sir J. Stirling-Maxwell.*) Can you tell us what number are not forced to pay on the ground of poverty?—I have not made it up. I have the figures in the office.

3431. Can you let us have that?—Yes, clearly.

[*Note.*—In 1905–6 at rentals under £10, 11,997 persons were, either in whole or in part, relieved from payment on the ground of poverty. At rentals of £10 and over, 2008 persons were similarly relieved in whole or in part.]

3432. In cases where rates are compounded, what is the procedure? Does the notice go to the ratepayer or to the owner of the property?—No, I cannot tell you. I know the form of the assessment paper which the Water Department issue, who charge to the owner domestic water rate on all rents under £10, in which each tenant's name is given, with the amount of his rental and the proportion of the charge effeiring to him and to that rental. The schedule, with these particulars, is sent for each property to the owner.

3433. I notice the ten years for which you give your figures in your Table B, the ten years during which the collection by the Corporation and their rates have been getting worse and worse, the percentage of loss has been increasing; but there has been no change in the rate of compounding, has there?—No.

3434. Has there been any increasing nnmber of complaints?—I never heard of any complaints from any quarter. The rate of compounding, 7½ per cent., has applied during all the years I have been in the Corporation service.

3435. Although your loss has nearly doubled?—In the early years it diminished, though in recent years it has increased; but the allowance has been uniform all through.

3436. About the table you are preparing for us. If you state the school rate and the poor rate, as you propose to do, in terms of the Corporation rates, I suppose you will put in a note to show what the difference is?—Yes, I will do that.

3437. (*Mr Cox.*)—Are those properties where the owners collect the rates fairly representative of the Glasgow properties, or perhaps better than many, and therefore a better class of tenants from whom there would be less likelihood of making a loss? Would that be the reason of the owners being willing to compound?—I would think they are a fair average of Glasgow property.

3438. Is Kinning Park not a new district—new houses?—No, it is a working-class area.

3439. You don't think there is anything in the quality of the properties that would render collecting easier by the landlord?—I know no reason.

3440. (*Chairman.*) For instance, if they were all pretty near £10?—The table B shows the amount of rental at each £ from £4, 1s. to £9, 19s.

3441. (*Mr Cox.*) Of course, in those Corporation dwellings, these are the better class altogether, where, we are told, there are no losses at all. They are selected tenants?—Yes. I quite admit that.

3442. Do you not think that would apply to the great bulk of this £15,824?—I do not think so. The £5000 added on in 1906 is, of course, just the working class property in Kinning Park, the property on which the landlord was formerly paying the assessments without any deduction. He comes into Glasgow and continues to pay the assessments and gets 7½ per cent.

3443. (*Chairman.*) Have you any idea how many house-

Mr J. D. Borthwick. 17 Dec. 1906.

holders would be included under these rentals amounting to £15,824 in Table B?—There would be no difficulty in putting that alongside.

3444. You could give us the names of the factors who compound, so that if we found one on a large scale we might examine him?—Yes, I will give you that information.

3445. I mean someone that is not in the Improvement Trust, or anything of that sort?—Yes.

[*Note.*—The information desired in No. 3443 and No. 3444 has been supplied by an addition to Table B.]

3446. Did you say that in regard to the rates of compounding mentioned in Mr Cross's proposed Bill, that on the higher rents compounding was excessive?—Yes.

3447. What do you say for £4 and under £7, 10 per cent.?—Well, looking to the fact that a certain number of landlords are at present, and have been for these years compounding at 7½ per cent., and to the fact that deduction is given for all unlet premises, I think that even 10 per cent. is a very full allowance. Still, personally, I would not object to 10 per cent. on that class of rental. I think it is a pretty fair rate.

3448. What would you propose to substitute for 5 per cent. in the case of £7 and under £10?—I hardly care to suggest rates.

3449. Would it be substantially under that?—5 per cent. is, I think, too high a discount in view of the figures as to the present losses, though, as I say, there is no connection between the two things. I should think 2½ per cent. would be a very fair allowance between £7 and £10.

3450. And between £10 and £20 there is practically no loss?—There is practically no loss there. If you gave a landlord 1 per cent. it would be ample enough. It is found money from my point of view.

3451. Then you prepared a statement of the total occupiers' rates applicable to the people under £20?—Yes.

3452. It is only an approximation I can submit, but I think it may be taken as not being very far out. Now, referring to page 3 of the proof, of the £693,272, there shown as being rates paid by occupiers, about £163,461 effeirs to rentals under £20. That is to say, 23·58 per cent. of the whole. Of that £163,461, £60,362 effeirs to rental under £10, that is, 8·71 per cent., and to rentals between £10 and £20, £103,099, or equal to 14·87 per cent. These are approximate figures, but I don't think they are very far out.

3453. So that if the change were limited to £10, if the limit were fixed under £10, it would affect one way or the other the amount of £60,362 either advantageously or detrimentally, as it might work out?—Yes.

3454. It is a less serious experiment than an experiment that would apply to 23½ per cent. of the whole?—Yes. From the Corporation point of view—I should say from the rate-collecting point of view—you would do almost all that we have any special interest in if you deal with that class of rental, but from the tenant's point of view I think you ought to go the whole way to £20.

Mr J. D. Borthwick. 17 Dec. 1906.

3455. (*Chairman.*) That is a very interesting distinction. I do not think that you have a note of all these points; if you have not, you can see the notes on that statement Sir John was referring to is very interesting.—You wish to know the number of tenants whose rates are represented by this £15,000 of rental and the names of the factors?

(*Chairman.*) The amount in each case, that we may select a few of the big ones.

Note.—Subsequently to my appearing before the Committee, I was asked to divide the assessments outstanding at the close of last year (1905–1906), on (1) rents over £4 and less than £10; (2) between £10 and £15; and (3) between £15 and £20, so as to show on each of these three clases of rental, (*a*) the amount remitted on the ground of poverty; and (*b*) the amount found irrecoverable from other causes.

I beg to explain, in regard to the figures shown as outstanding in Table A, that these state the actual result as ascertained at the close of the collection in each year, with the exception of the year 1905–1906. For that year the figures given are those as ascertained at 31st May 1906, with an estimate added for the amount of arrears to be subsequently recovered. As stated in my evidence above, the collection of arrears proved better than the estimate. Taking credit for the amount recovered to 11th December 1906, in excess of the estimate, the figures for 1905–1906 should be stated thus, instead of as in Table A:—

	On rentals over £4 & under £10.	On rentals £10 and upwards.
Net imposed . .	£69,542	£621,602
Collected	52,664	616,798
Outstanding . .	16,878	4,804
Percentage outstanding	24·27	0·77

The subdivision of these two outstanding amounts of £16,878 and £4804 (together £21,682) between poverty relief and irrecoverable otherwise is as follows:—

	Poverty Relief.	Irrecoverable otherwise.	Total outstanding.
Under £10 rental .	£6,488	£10,390	£16,878
£10 to £15 inclusive .	1,571	1,204	2,775
Over £15 to £20 rental	600	506	1,106
	£8,659	£12,100	£20,759
Over £20 rental . .	364	559	923
	£9,023	£12,659	£21,682

Mr John Mathieson.

Mr John Mathieson, Paisley, called and examined.

Mr John Mathieson.

3456. (*Chairman.*) Well, we need to confess our ignorance and ask you who you are. Who do you represent, Mr Mathieson?—The Town Council.

3457. Are you a member of the Town Council?—Yes.

3458. How long have you been a Councillor?—Fifteen years.

3459. Of the Town Council of Paisley?—Yes.

3460. Have the Town Council considered the question raised directly in Mr Cross's Bill as well as the question generally?—I may say that we agree generally with Mr Cross's Bill, with the exception of Clause 9.

3461. That is the compounding clause?—Yes.

3462. Has the Council considered the matter as a whole?—Yes.

3463. Have they passed any resolutions on it?—That resolution I have handed to you now.

3464. Namely, the resolution that a certain clause should be added to the Bill?—Yes, that is the modified Clause 9.

3465. Do I understand that they otherwise approve of the Bill?—Generally, yes.

3466. Were they unanimous on it or divided?—They were unanimous in approval of the Bill, with that clause included, but they are not unanimous as to whether there should be compounding at all or not.

3467. They have not fully discussed that yet. The last meeting was adjourned, because there was a division of opinion as to whether there should be compounding at all or not.

3468. One side thought it should be deleted altogether, and the other that this clause should be added?—Yes.

3469. Have they appointed any Committee on the matter, or have they discussed it on the Council itself?—I have been on the Council several years and attended various conferences in Edinburgh and London, authorised by the Corporation.

3470. Have they conferred with Lord Dunedin?—In Edinburgh, I think it was the first conference with Mr Graham Murray.

3471. And the present Scottish Secretary?—Yes. There was a conference with him along with others.

3472. The Town Council represents a large area of working men?—Yes.

3473. Has the matter been discussed at ward meetings at all?—Well, generally the public that have taken any interest in it approve of the Bill. I don't think they really realise the effects of this Clause 9. What they probably want is a short let and the missive system done away with.

3474. How have they shown their interests?—There is a Tenants' Defence Association, for example, and they have declared in favour of the Bill, but they also agree with that.

3475. Have you had a recent election?—In November.

3476. Was it at all made a question at any of the ward meetings?—Not particularly. I brought this clause up at our ward meeting and explained that we had agreed to it, but there was no opposition shown to it.

3477. In your district, is there a large number of working men?—A good number; there are working men in every district in Paisley.

3478. Do you find any difference of opinion among working men on the short let and the missive question?—There has been no great interest taken in it at all outside of the Tenants' Defence Association. The Landlords' Association had a deputation the other night condemning this outright. They will have nothing to do with compounding.

3479. Did they express any opinion on the other?—They are against the Bill altogether.

3480. As regards the working men, what view do they take?—They are in favour of this and the reform.

3481. Both short let and missive question?—Yes.

Mr John Mathieson. 17 Dec. 1906.

3482. In Paisley, have you as much of a shifting population as in Glasgow?—Well, I could not just say.

3483. Are the trades similar?—I might for your information state that last year the reason we were very strong on that amendment was that we relieved over 1200 on the ground of poverty.

3484. How many, do you know, altogether in Paisley?—I can only give it from memory. There were a great many applied for relief on the ground of poverty. There were over 2000 delinquents in addition to the 1200. They did not apply for relief. There are nearly 4000 altogether that lost their votes by not paying the rates, so that would affect the roll to a considerable extent if the landlords had to pay these rates.

3485. Would that be an advantage?—No, I think it would be a disadvantage.

3486. What would you do to prevent that?—Well, you might delete it altogether.

3487. What?—This clause, and leave things as they are.

3488. You think that compounding is attended with that drawback, that it would add persons to the roll who should not be there?—I think so.

3489. Are you referring to Parliamentary arrangements, or municipal, or both?—Both.

3490. Suppose a Bill somewhat on the lines of Mr Cross's were to be passed, do you see any reason for making a difference on the limit between Glasgow on the one hand £20, and Paisley £16?—Yes, I do. The reason is this, the rents of the houses in Paisley of the same class are very much lower.

3491. Conld you give us an idea?—From 15 per cent. say.

3492. Is that because they are less substantial or because everything is cheaper?—Everything is cheaper. One reason is that there are too many houses. They are over 15 per cent. at least cheaper, unless you come to the very new houses. But, generally speaking, there should be a difference.

3493. You think the difference made is a fair difference?—I quite approve of the schedule for that as far as Paisley is concerned.

3494. Your knowledge is pretty much limited to Paisley in that matter?—Yes.

3495. You don't know about Greenock?—I would not like to give an opinion.

3496. You have proposed a clause in these terms—"Notwithstanding the payment of the tenant's rates by his landlord, the tenant shall be entitled to appeal against such rates on the ground of poverty, and in the event of his appeal being sustained, the landlord shall have relief from payment of the amount of such rates, or if he have already paid the same, he shall be credited with the amount thereof, and such rates shall not be chargeable by him against such tenant." Do you see any practical difficulty in working this clause?—No.

3497. Suppose the rate has been paid by the landlord, he would be credited with the amount, and the rates would not be chargeable by him. Would that mean he would give back the amount that he had got from the tenant?—Suppose the landlord has paid this, the tenant applies and gets relief, then the landlord would have to pay him back, wouldn't he?—Of course if they appealed at the proper time. There would not be very much of the rates paid at that time. Mr Cross's Bill provides for the rates and rents to be stated separately in a book to be given to the tenant.

3498. That is what people say it should provide?—Yes, that would keep the tenants right.

3499. You approve of that?—Yes.

3500. Why?—Because it is very handy and simple. I worked that system for years. I have some property, and I give a book showing the rents and taxes separately.

3501. Have you an arrangement with the burgh for compounding?—Oh no, there is no compounding in Paisley.

3502. How does the necessity for showing them separately arise then?—To show how much they are paying in rates.

3503. But at the present moment they pay their rates themselves?—There are certain rates the landlord already pays, two rates under local Acts.

3504. What are they?—The local water rate and the burgh improvement rate. Landlords have to pay these two rates in Paisley, with all lets less than six months, and in one sense it is compounded. They get 10 per cent. for collecting water and 25 per cent. for the burgh improvement rate, and it is these rates I was referring to.

3505. You are not bound to show these in the books separately?—No, it is a matter of convenience.

3506. Do you find it difficult to work it out arithmetically?—No, very simple.

3507. If it is done with these, you don't see why it should not be done with others?—That is so.

3508. Do you agree that if there is compounding—— ?—Personally, I would have no compounding at all.

3509. And if you have no compounding, would you propose to have more frequent collections by the rating authorities?—Yes, I think it could be done quite simply. There are far too many difficulties made.

3510. How do you prefer the latter course?—Because I think it is an injustice, in certain cases, to tenants who have to pay, and an injustice to landlords at the same time.

3511. What is?—The compounding.

3512. But would not that depend on the ground of allowance?—Yes, so far, the allowance in my opinion proposed in the Bill is far too little.

3513. Are you going on the average of 10 per cent. on the water and 25 per cent. on the burgh rate?—It would require to be something like that, to make it fair all round. I know there is at least 25 per cent. of loss on the smaller lets in Paisley.

3514. Do you think it would be more or less on rates if they had to pay them?—There is 25 per cent. of loss on rates already.

3515. On rates in the hands of the Corporation?—Yes, small rates only.

3516. (*Sir J. Stirling-Maxwell.*) What do you call the small rates?—Under £5 I am taking. Between £4 and £7 we would require at least 15 per cent.

3517. What do you say between £7 and £10?—Perhaps 7½ per cent. would do there.

3518. And between £10 and £20?—It is £16 in Paisley. That would be 5 per cent. there. There is a point that has not been brought out, that factors in Glasgow are in favour of compounding because they get 7½ per cent. It is all right for them, but not the landlords, for this reason: they get a percentage for their collecting, and whatever loss occurs falls on the landlords. Suppose they don't get the rates at all; sometimes they neither get rates nor rents; the rent falls on the landlord, but the factors have no loss at all.

3519. The landlords have interests apart from the factors?—Yes. In Paisley it was pointed out that to pay 2½ per cent. the factors might have to get 3½ per cent. for collecting.

3520. Suppose you had a factor who had an absent landlord. Take the thing stated in the matter, the statistics there might be of very little consequence, because the factor would be all right?—In any case.

3521. It would right itself in the case of a landlord looking after his own interests?—That would be different, but the bulk of the property is under factors' hands.

3522. And with a landlord who was not taking a personal interest, it might go on without showing anything?—He would be a loser.

3523. Are these suggested allowances of yours the result of any experience, or your own idea?—I have had very great experience in Paisley for fifteen years. I was Treasurer for six years, and took a great interest in the incidence of taxation, and how much loss there was on the different classes of people.

3524. And also your own as owner?—Yes.

3525. Is it working-class property you own?—Both kinds.

3526. That would apply to other rates. £7, 10s.—7½ per cent., is that based on this to prevent loss?—Yes.

3527. And to cover the factor's commission for collection of the rents on irrecoverables or unlets?—It would need that at least to cover all these points.

3528. Have you any idea of the factor's commission by itself? Mr Borthwick thought it would be practically nothing?—The factor's commission is from 3 per cent. to 5 per cent. of all the money he collects.

3529. But if he collects the rents at the same time, why should he have anything more?—Well, he charges it anyway, whether he should have it or not.

3530. (*Mr Dobbie.*) He won't draw two commissions?—No, he draws commission on all the money he draws.

3531. Whether it is collected at the same time or not?—Yes.

3532. It would be no answer to him to say, "You are there anyway, you might as well collect the rates as the rents"?—No.

3533. (*Sir J. Stirling-Maxwell.*) How is the allowance so much larger for the collection by burgh rate than the water rate, 25 per cent., as against 10 per cent.?—I do not know. That was fixed by a local Act for Paisley only.

3534. Is there any difference in what is done?—Well, as a rule, the people always pay the water. They cannot do without water; but I cannot give a proper reason why there is a difference, except that it is fixed by Act of Parliament. Meantime it averages about 17½ per cent. if you take the two together, the rates that are at present.

3535. How does the loss exactly fall on the landlord? Would it be that he got nothing at all or that the tenant

Mr John Mathieson.

17 Dec. 1906.

was able to pay the rent and not able to go so far as to pay the rates as well?—Meantime there are a great number of successful appeals and the landlord loses nothing there.

3536. But in a case where there was not an appeal?—Then the landlord is not liable for the municipal rates at all.

3537. I am asking you from the point of view of the landlord, would it be that the landlord could get his rent and not his rates?—Very often in the smaller class he loses both the rent and the rates.

3538. That is what would happen, he would lose both?—Yes, make it all the worse.

3539. In the case of a monthly let, the actual sum involved in any one payment would not be very much?—In Paisley they collect these two rates along with the rents under monthly rents, but in all the other rates the landlord is clear of any loss. The loss is borne by the Paisley community, whereas, under this clause, the loss from any poor persons would fall on the landlords only, and the occupiers of large houses would escape, except as far as the allowance would make it up?—Yes.

3540. (*Mr Dobbie.*) About this suggestion that the factors' interests are antagonistic to the landlords', I would like to understand your point. Is it that the factor would collect rents plus rates and charge commission on both?—Yes. Take a tenement of £100 rental, he would get his 2½ per cent. on £110, which would mean 5s. on the tenement for collecting the rates of that tenement monthly.

3541. Are there many houses in Paisley under £4?—Very few, but a good many of the old properties are under £5. We have a number of maiden ladies in Paisley, and it is a great number of these that seek relief, that would not get it under this clause.

3542. Is it under £4 or £5 that the landlord pays the whole rates at present?—Under £4.

3543. Have you any property under £4?—I think I have only one tenant.

3544. Can you tell us what the yearly loss to the proprietor is in cases under £4 where he pays the whole rates?—No, I could not answer that. There are not very many under £4.

3545. Are there many monthly rents in Paisley?—I have been informed by a large factor that there are about 2000, but I do not know what there are of my own knowledge. Then there are 3000 people who don't pay their rates—more than that.

3546. Have you any view in regard to the process of ejection as a proprietor?—Personally, it does not affect me, but I believe there would be far more ejections if this clause passes. In Paisley there are not one half of the ejections that there are in Greenock, because they are very lenient in Paisley, especially on the yearly lets. I have known them letting them stand for six months or even twelve months in cases of illness or idleness, but no landlord could afford to do that if they had to pay the whole of their rates. Therefore, it would be a great evil to the tenant, especially under this clause, if it passes. In Paisley there were 400 ejections, I am told, and there were 800 in Greenock, a town of the same size.

Mr John Mathieson

17 Dec. 1906.

3547. Have you any views on the law of hypothec, assuming short lets become operative?—I think the hypothec, while in some respects it may not be counted fair to all creditors, is a great benefit to the tenants in many cases. I could give you an example. I had a tenant myself, and allowed him to run for a year. They were in poverty, and the grocer came in and pointed their furniture and came to me first to see how much they were owing. They let them alone, and they recovered and paid both me and the grocer.

3548. We have not the grocer here, but tell us how he took it?—He got his money in the end.

3549. (*Chairman.*) Your distinction is a perfectly fair one. You say it is advantageous both to landlord and tenant apart from other creditors?—Yes.

3550. (*Mr Dobbie.*) If short lets were becoming common, hypothec would not continue for a year only for the period of let?—The fact is, that, if these monthly lets come in, there will not be very much use for hypothec.

3551. What will take place?—If they don't pay their rents, they will be ejected.

3552. There is one clause optional in the Bill. Does that meet with your approval?—I think it is a very good thing, because the landlords, say in Millport or Rothesay, would object to short lets, because people from Glasgow would take the houses for six months during the summer and give them up. It would not pay them at all.

3553. During the course of your evidence you support the view that the newer class of property in Paisley is higher rented than the older class?—But as a rule the rents are lower all over.

3554. But is that a fact? Did you not state that the rent was higher in the newer property than in the older class?—Yes.

3555. Is there large building going on in Paisley?—Very little.

3556. It has been pretty prevalent?—Within the last year or two it has stopped. It is over-built.

3557. If they ever start again to build, they will build a better class of property?—Very likely.

3558. And the rents will more nearly approximate those of Glasgow?—Probably they will.

3559. And when it comes to the old properties being taken down and new ones going up, it will become the same?—It may in the future.

3560. (*Chairman.*) Have you any local Act, or just the Burgh Police Act?—Just the Burgh Police Act so far as it goes, except the one I have referred to.

3561. Have you any example of the voluntary arrangements between factors and the burgh that Mr Borthwick spoke to?—No, there is no such thing in Paisley.

Mr A. Baillie and Mr Hugh Lyon.

Mr Andrew Baillie and Mr Hugh Lyon, sworn and examined.

Mr A. Baillie and Mr Hugh Lyon.

3562. (*Chairman.*) Mr Baillie, you are Secretary and Treasurer of the Glasgow Tenants' Protective Association?—Yes.

3563. Mr Lyon, you are Secretary of the Scottish Carters' Association, and you are President of the Tenants' Protective Association, of which Mr Baillie is secretary and treasurer?—Yes.

3564. You are also a Director of the Cowlairs Co-operative Society?—Yes.

3565. Then, Mr Baillie, you have been interested in the matter of house letting in Scotland among the working classes for the last thirty years?—Yes.

3566. What was the beginning of the whole thing. Do you remember the origin of any complaints?—As far as I have taken an interest in the matter, it is, at anyrate, owing to the labouring conditions that we have been working under, and it is becoming more acute as we go on.

3567. Has your experience been confined to Glasgow? Have you any knowledge of it as affecting Scottish burghs in general?—I have had a very favourable opportunity of touching all parts of Scotland nearly in my occupation.

3568. What is your own occupation?—At present I am in the shipping trade.

3569. What department are you concerned with?—Outside, going about looking for traffic, freights, and so on.

3570. What is your view on the real grievance?—The exceedingly long lets.

3571. And that aggravated by the long period between the term of taking and the term of entry?—Yes.

3572. But in your view that is a question of increasing it, not of being the real grievance?—Yes.

3573. What is the limit you think the grievance extends to substantially—the limit of rent, I mean?—I have just got a brief for our Association, and we made it £20, but that was deleted. We tried to come into harmony with the forces at work to redress the grievance, and we have reduced it to £20, but I believe up to £25 it would be a proper thing to do.

3574. Is that because the ordinary working man, as distinguished from the foreman or employer, occupies houses up to £25?—The big bulk would come under £20, but there are exceptional cases, and I do not see why they should be exempted.

3575. That would be in general cases of working men having members of their family who are bringing in money?—There would be such conditions.

3576. This matter has been considered in the Tenants' Protective Association. How many do you include? What is your membership?—Our paying membership is over a thousand, but we get people at public meetings to come and support us, and unanimously pass resolutions by the thousand.

3577. What proportion of the thousand paying members are working men?—They are all working men. Well, I beg your pardon, I have members whom it would not affect at all, who are simply in sympathy with us. The big bulk are working men who have felt the grievance.

3578. Is there any difference of opinion in your Association, or are you unanimous?—Quite unanimous—red hot!

3579. What led to the formation of the Association?—Just public opinion, people having a grievance, and the only constitutional way we had of bringing it before the powers to be.

Mr A. Baillie and Mr Hugh Lyon.
17 Dec. 1906.

3580. How old is the Association?—There have been associations formed from time to time for twenty years, but we have kept together for five years now.

3581. Can you hand in a copy of the constitution of the Association?—Yes.

3582. If it is the case, Mr Baillie, that, instead of the mass of working men who occupy houses under £20 wanting a change to short lets, they are opposed to it, do you think you should have come in contact with that opinion?—Undoubtedly.

3583. But that is not your experience?—Not at all.

3584. Do you not find some who are so impressed with the importance of security of tenure that they will rather retain that with all the drawbacks of long lets?—The landlords, so long as they have a good tenant and get the rent, will give as good as fixed tenure.

3585. They want, in addition to what they have from character, the opportunity of leaving if circumstances should require it?—They want more freedom; that is all we are claiming.

3586. And I think, with a view to this inquiry, your Association elected Mr Lyon president, and yourself to give expression to your views?—Yes.

3587. I suppose these views are not theoretical, but based on actual experience? It has been suggested that this agitation is one that has proceeded from a certain number of Englishmen who have come into Scotland. What do you say to that?—That is quite erroneous. They have naturally drifted into it, because they feel it, perhaps, in a different degree from what a Scotsman does. They look upon it as a perfect outrage.

3588. What proportion of your paying members will be Englishmen?—Well, we have not one on the committee, and we have a pretty large committee, selected at a public meeting.

3589. Is there any trade in Scotland into which a large number of Englishmen have come?—Oh, they are quite general, just the same as Scotsmen going into England, where they can better their condition.

3590. More Scotsmen go into England, I think, than Englishmen come to Scotland?—When an Englishman comes to Scotland, as a rule he is a specialist.

3591. The proportion in any trade is very small?—Very small in comparison.

3592. Do you find, then, in regard to details, certain differences of opinion among you, such as the one you pointed to as to the limit. There will be differences of opinion as to a thing like that?—Yes, but the remedy we adopt will adjust that.

3593. Do you find also a difference of opinion as to whether there should be compounding or not?—Yes, there is more that way.

3594. But on the general question you are unanimous?—We are leaving that to the authorities to work out. We know they must have funds to carry on the good government of the city, and we look upon that as their business, and it is not insurmountable. It is being done in other places. I have lived under it myself.

3595. Whether it was done by compounding or more frequent collections, it would be all one to you?—All the same to the general tenant.

3596. What is the practical grievance in regard to the long let, and the long time before entry that they have to take their houses?—It affects the tenant in many ways.

3597. In what way?—Losing work, ill-health, and many changes.

3598. Take, first of all, monthly collection of rent as compared with quarterly or half-yearly, which is best for working men?—A month.

3599. As near as possible to his payment of wages?—Yes, and the sum being proportionately smaller, it is much more easily met by those who have not much money to come and go on.

3600. They have not the facilities for accumulating money that others have?—A big class would be spending, and not be spending too much. It is just a case of meeting their necessities. The great bulk of working men are anxious to meet their obligations.

3601. And they would do it more readily if their obligations had to be met more often?—Yes, both rates and rents.

3602. Do you think both would be better paid in the end?—Bound to be.

3603. Therefore, in addition to the interest of the tenant, it is in the interest of the landlords to have a change?—Quite so.

3604. In your experience, are there many cases of men who, after taking a house, may find that they could get employment elsewhere, and were prevented moving because they are tied to the house for a month's period?—That has been a very general complaint to us in our Association.

3605. Do you think it would not be fair merely to look at the cases of men who actually do remove, but that we must also consider the cases of men who would remove but for this difficulty?—The obstacle is there. It cannot be overcome.

Mr A. Baillie and Mr Hugh Lyon.
17 Dec. 1906.

3606. Is it the case that we must also consider that if a man moves, while a sub-tenant may be found and there may be no loss in the end, he is still exposed to the anxiety all through the subsequent period, that the sub-tenant might not be able to pay, and no recourse might be had with him?—All the legal responsibility rests on him and the consequent anxiety.

3607. I think you are handing in some cases which you think are illustrations of what you mean?—Yes, some letters we received from complainers.

3608. It seems to be agreed that it would be very desirable to have the period from the taking to the entry shortened. Everybody is agreed on that. Personally, do you think that could remove the substantial grievance or still leave it unredressed?—That is only begging the question, we think.

3609. But it is good so far as it goes?—Very little difference; it would not remedy our grievance at all.

3610. For instance, now, we are told that out of cases of men removing, 25 per cent. occurred in the first two months, February and March. Of course, if the period of letting were limited to April, you would get rid of these?—I don't see how they can prove that under the present conditions.

3611. At all events, whatever number there are, there are some cases of a man taking a house, say, in the end of January and finding out in the end of February that he has to move?—That is occurring all the year round.

3612. There is no greater proportion to one period than to another?—No.

3613. What is your view as between half-yearly, quarterly, and monthly tenure? Of course, you think anything less than a year is better than a year?—It would be a very good way of allowing a large class of tenants to let themselves out. If a man was in a precarious situation, he would say a month. Another man whose occupation was more reliable, would say three months. There are other classes who would say six months. It would work automatically. That is the great advantage of Mr Cross's Bill; it is so elastic that it would work automatically for different classes of people.

3614. The elasticity stops at half-yearly, because no landlord would agree to one payment in the year, would he?—It does not follow that, because you are paying six months, you might pay up twenty.

3615. It would kill yearly lets?—That is what we mean to do.

3616. You would still find arrangements made for payments half-yearly?—I am sure that would occur.

3617. Are there in Glasgow many cases where there are payments half-yearly?—A good many.

3618. These are about £20?—Yes, generally speaking, it is quarterly.

3619. Under £20 it is more often a quarter?—It is quarterly rents.

3620. What proportion quarterly and what proportion monthly in your experience?—I should say 75 per cent. quarterly and the others monthly and half-yearly.

3621. That would be between £10 and £20. Of course below that more frequently monthly?—Yes, according to the class of property they have.

3622. And the class of tenant?—The two go together.

3623. You have an illustration here. On page 3, you say you think removal involves such a hardship that, even if the period of tenure were made more free, more frequent removals would not occur, and so on.

3624. It is your view that while removals would be spread over the year, the total number of removals would not be substantially increased?—I am sure that would occur.

3625. Do you anticipate that the rents would be substantially increased or not, taking the thing all round?—Well, we are more concerned about the shorter lets, but we are quite willing to take the risk of an increase.

3626. You don't, in point of fact, anticipate that it would be substantial?—No, we don't anticipate that.

3627. Take the rates and taxes in Glasgow on a house of £20, you say the amount would be something like 4s. 6d. to 5s. in the £, that is taking police, poor, school and water rates? Is that taking both municipal and Parish Council rates?—Yes, that is just the sum total.

3628. Your experience is that when a man is called on to pay something like £5 in addition to a quarter's rent at the end of the year, it is very hard for him to meet it?—The big bulk of working class tenants find it that.

3629. Although the same class may easily pay it over the year?—He would not find it to the same extent at all. It is at the end of the year when he is short.

3630. What happens, suppose a man has not laid past, and the £5 of rates has to be paid at once. Does it mean the pawnshop or what. We suppose he has no friends who can advance it?—If he is an honest man it is a big

effort. He has to resort to all kinds of ways to raise the money.

3631. Suppose he has nobody able to lend to him, he has either to realise his effects or to go to the pawnshop?—That is his resource.

3632. I suppose we are all agreed that the less he has to do with the pawnshop the better?—That is one of the moral objects we are aiming at.

3633. I think everybody agrees with that. You talk of the landlord as well as the tenant. In your view, would the proposed alteration be to the benefit also of the rating authorities?—Yes, I think they would reap a great benefit from it.

3634. Then you think that although both your interest and that of your Association is on behalf of the tenants, the change would not only be to their benefit but in the end to others also?—All round.

3635. That would depend on proper allowances being made for compounding and the landlord being properly protected?—Our contention is that there would be more money coming in, net money, and if that is a result, you must admit they would be better off all round.

3636. Do you think this matter affects more directly tenants up to £10 than those between £10 and £20?—No, it does not follow. There is an artisan class, shipbuilders and engineers, and all that class fluctuating very much now. Works have become so gigantic and get such big orders—thousands of menare employed to complete certain kinds of work. These men are only there while the work lasts.

3637. With regard to the distinction you pointed to, you mean the skilled class of artisan as distinguished from the labourer?—Yes.

3638. Up to what rent does a labourer pay for his house?—As cheap as he can get it, from 3s. a week. There is labour and labour.

3639. But in Scotland, about what rent does the labourer, as distinguished from the artisan, pay for his house?—It depends upon his own resources. You can easily judge for yourselves. He has got 18s. a week and has to keep himself, and he cannot afford to take a pound a week house on that.

3640. I suppose with regard to Trades Unions and Tenants' Protective Associations, their interests are most directly connected with the artisan?—Yes, that is our aim, to relieve and help the class of workmen you refer to.

3641. Are there any Trades Unions of labourers?—Mr Lyon is better posted on that.

3642. How does that stand, Mr Lyon?—There are several Trades Unions who look after nobody else but unskilled labourers—some of the largest in the country.

3643. (*Mr Dobbie.*) Are there any in Scotland?—They are in Scotland, but their headquarters are in England.

(*Chairman.*) One has come in contact with a good many, but they are usually skilled people.

3644. You have a reference here, I notice, to the success of the co-operative movement. What bearing has that on this question?—As far as the co-operative societies are concerned in the question, the point that Mr Baillie wishes to draw out there is that there are several co-operative societies that have to a certain extent house property. They of course want to set an example to the private landlord by letting houses monthly and doing away with the missive system, and they find that, to a certain extent, it is a hardship on both parties, because they are placed in this position—say, for instance, their members are all anxious to become tenants of their own houses, but they find they are tied to a house of another landlord. Say, for instance, Mr Baillie here is an occupier of a co-operative house and I wish to occupy one too. I find in the month of February that all co-operative houses are occupied, and I have to sign my missive with the landlord I am with or else vacate the house. The result is that I sign my missive, and then I find that Mr Baillie leaves the co-operative house, and the co-operative society finds that they cannot get a tenant then.

3645. (*Sir J. Stirling-Maxwell.*) Do all the co-operative houses let monthly?—Yes, most of them, I am quite certain.

3646. (*Chairman.*) Is that a big thing?—Not to any great extent—not to the extent we would like it. Still, it is a position. Supposing there were landlords who were anxious to let their houses monthly or quarterly, the system prevents them from doing so.

3647. (*Mr Cox.*) Are they put up for the purpose of the men who take them becoming owners of the houses?—No, they are let simply by monthly lets.

3648. (*Sir J. Stirling-Maxwell.*) Is it an investment of co-operative funds?—I don't think any of the societies have gone in for house letting. There are some in the country who have done so and sold them on the hire purchase system, but in Glasgow the cause of co-operative societies building houses is more than anything else the fact that they have generally to build shops to suit themselves, with the result that they build houses on the top.

3649. (*Chairman.*) In any of these cases, Mr Lyon, are arrangements made for rates being paid with the rents, or is it the ordinary system?—I think the rates are paid along with the rents.

3650. But you have no personal experience?—I could not exactly say.

(*Mr Howden.*) We have evidence that Cowlairs Co-operative Society do so.

3651. (*Chairman to Mr Baillie.*) In addition to what you have said, is it your view that with rents below £20, if they were monthly lets, removals would be more economical and expeditious?—Yes.

3652. You agree with the evidence we have had, and for the same reasons?—Yes.

3653. And also so far as the trades referred to spreading the work over the whole year and preventing pressure at one time of the year?—Yes.

(*Mr Lyon.*) There is another class which I represent, the carters. These are men who conduct the removals. I have known a man to be out for a week night and day at the term time working continually.

(*Mr Baillie.*) You have to pay 200 per cent. more at his crowded time.

3654. (*Chairman to Mr Lyon.*) Then it is an advantage to the tenant and an advantage to the carter by having the thing spread over the year?—It is a hardship on those who have got to remove, too, because they have to pay 5s. an hour for a horse and lorry which at other times he would get for a shilling.

Everybody admits, landlords, factors, and everybody, that the present system of one removal term is a great misfortune.

3655. (*To Mr Baillie.*) You referred to public meetings held in Glasgow during the last fifteen years protesting against the present system; have there been, on the other hand, counter meetings?—No, I have not heard of them.

3656. You say if a feeling had existed in favour of the present system there should have been counter public meetings?—Undoubtedly there would have been.

3657. You are not concussing the other people to be silent?—Their forces are so great that they could have got people to turn out. I am quite justified in saying that the landlords are annoyed at our meetings because of the remarks of their association to that effect, and that they could have demonstrated to the public in the same way; they had more opportunities and more money. We depended just on public opinion.

3658. Supposing a factor with a large number of tenants, if it was the fact that these tenants under £20 rental were in favour of the present system, there would be no difficulty in taking a plebiscite of them?—None whatever.

3659. There was a special meeting you referred to in February 1904; what was that?—That was the Conference we held in the Waterloo Rooms, called by our association of the different public bodies, trades unions and men who were in touch with the question.

3660. Was it reported in all the papers?—Yes, in the *Herald* and all the different papers. The report would appear on the 26th. I think I have a copy of the report. It was to have been handed in to the secretary; I gave it to be handed in. There is a scrapbook with reports.

3661. You will arrange with Mr. Gillon to hand it in?—Yes.

3662. What was the result?—We held this meeting, and we had delegates present from Glasgow, Greenock, Paisley, Falkirk, and Dundee, and a great many more places, representing big bodies of men, and resolutions were drawn up and passed, with which these men, went back to their constituencies. Of course all were voluntary workers, and it would not just be followed up, but whenever we had occasion we could get strong support.

3663. Was there any difference of opinion at that meeting?—The resolution was passed unanimously. As regards the missive question, there was a little dispute about the rates.

3664. Then you had a deputation, consisting of delegates from many of the west country towns as well as from many in the east country, to the number of 100 or 120. That was the one that waited on Lord Dunedin?—Yes.

3665. You know about this. It is said that while the matter interests other burghs of Scotland, it is mainly a west of Scotland question?—We have been more active, but, to be adopted, it must be universal for Scotland.

3666. For Scotch burghs?—Yes.

3667. You don't suggest that it should apply to rural districts?—Well, it would not affect them to the same extent.

3668. At all events there is not general demand for that?—It is the burghs. In villages it would just be individual cases. I am not in a position to give you that.

3669. The other matter is the question of rates and taxes. Have your association any marked preference for the compounding system as compared with frequent

collection by the local authorities? Have you anything to say specially on that?—I think I may say we have a feeling that we would like to pay our own rates, but in the event of difficulties being raised with that, we are quite willing to waive the question in order to get the benefit of shorter lets.

3670. Supposing the rating authorities raised difficulties and had put a compromise that they should make a collection four times a year. I suppose you would prefer the collection to be twelve times by the landlord to four times by the landlord?—We are quite open on the question.

3671. Then four times a year would be an enormous advantage?—Very great, because the rates are not so heavy as rents. Splitting £5 into four, would make it easier than paying £5.

3672. What does undoubtedly obtain to a considerable extent, namely, evasions of the payment both of rates and rent, would be substantially reduced?—Undoubtedly.

3673. In the case of landlords getting any undesirable tenants, he cannot be turned out because they pay their rental. Although undesirable, the landlord would have a benefit there?—Yes.

3674. There are a good number?—Yes, immoral, and one thing and another.

3675. Such people may be paying their rents?—They are paying the rent, all right and neighbours don't complain because they don't want to be mixed up with them. They just make up their minds that they are going to leave when the year comes round.

3676. (*To Mr Lyon.*)—How long have you been interested in this question?—Ten years.

3677. You were previously in Falkirk?—Yes.

3678. Did you find that there was a grievance felt there?—A very great grievance, as I found in Glasgow. In fact, have seen elections fought on the question.

3679. Municipal elections?—Yes.

3680. We have been noticing that Falkirk has been dealt with along with Aberdeen and certain other burghs, the limit there being £16 instead of £20 a year. In your view, is there any reason for it?—Not that I know of.

3681. Are rents any cheaper in Falkirk than in Glasgow?—I do not think so; it is not my experience.

3682. Are the conditions similar?—Yes, much the same. Perhaps the houses are not so commodious.

3683. You can corroborate Mr Baillie in his evidence generally, particularly to a large meeting and other forms of expression of a grievance?—Yes.

3684. When did you become president of the Protective Association?—At the last annual business meeting.

3685. You can speak also as to individual cases of hardship that have occurred?—Yes. I have had personal experience myself.

3686. It is said that every system will have cases of hardship, and if you had monthly lets as compared to yearly, you would have cases of hardship on the other side, namely, of men being turned out by landlords as compared with the security that they have here for a year. What do you say to that?—The difference is that at the present time you are paying the full penalty for your security, and yet you are sometimes forced to pay double, unless you can get a substitute. That was my personal experience when I left Falkirk. I had to travel back and forward from Glasgow. I came to Glasgow in May six years ago, and had to travel till November term. Even then I had to find a substitute and pay the full rent to the landlord and run the risk of getting six months' rental from the substitute. When I came to Glasgow I was in the same position in the house I was going into.

3687. Supposing you had had a system of monthly lets, might you not have taken a house in Glasgow with the expectation of remaining for at least a year, and then, if it were a monthly let, the landlord comes and says, "I have a friend, you must clear out." That would be a hardship?—It would. It would be an exception for the landlord to put out a man.

3688. The difference would be that that would be against landlords' interest. His interest is to keep a good tenant, and therefore cases happening against his interest would be few?—Yes, exceptionally.

3689. (*To Mr Baillie.*) Do either of you two gentlemen have any experience of the English system?—Yes, I have had a good deal.

3690. Is it the case that while it has advantages over the Scotch system you have mentioned, there are any counter draw-backs?—I never heard the question raised in England. As an illustration, I lived in a house for ten years outside of London. I agreed to pay my rent half yearly, first of all. The house belonged to a Building Society. They came to me and asked me if I would pay it quarterly, and then they came to me and asked me if I would make it monthly. They were wanting the use of the money. I agreed. I paid it monthly for the bigger part of the time, paid my taxes to the local authorities half yearly. I have all these receipts; I can show them. I had the option of leaving half yearly on a months' notice. On the other side of the same street they had the option whether they would pay it all in a slump per week. My neighbour paid it 11s. per week. On the system I had I saved about 6d. a week.

Mr A. Baillie and Mr Hugh Lyon.
17 Dec. 1906.

3691. But why should it require a statute here to have short lets? There is no statute in England against long lets?—That is the unfortunate thing, it is use and want. They have got the whole of our tenants here; the thing can be settled up in a moment if it was possible to get tenants, but the factors or landlords have got such a grip of them that they cannot let go.

3692. Why don't the factors and landlords have the same thing in England?—My humble opinion is that Englishmen are not so docile as Scotchmen are.

3693. But there is nothing essential to prevent it? No, nothing like Mr Cross's Bill or anything of that kind?—No. The Englishman looks upon renting his house the same as buying his clothes or butcher meat.

3694. Do you find a landlord, if a sum including rents and taxes is paid, expected to charge more for taxes than he ought to?—They never speculate on that at all.

3695. Do you find that if a tenant does not know what he is paying for rates and taxes, he takes no interest in the municipal government?—They will always get to know, because they always know what they are paying in the sum total. Perhaps you don't get it analysed, but on the whole they pay 5s. or 6s. 8d. in the £.

3696. So you can ascertain by a simple calculation?—Yes. Another thing is that while you pay taxes on the full amount here, in England they tax you on three-quarters, and it looks bigger.

3697. But the taxes are bigger in England?—Proportionately they look bigger, because they are only on three-fourths of the rent.

(*Sir J. Stirling Maxwell.*) But the actual amount you pay, is that bigger or smaller?

3698. (*Chairman.*) We have been told it is larger?—I believe it will be larger in England. The rents are smaller.

3699. And the rates larger?—Yes.

3700. (*Mr Howden.*) Is there much difference in the sum total of both rents and rates? Do you actually pay more here?—Yes. You get better value in England as a whole.

3701. (*Chairman to Mr Lyon.*) Of course, there will be differences of opinion as to what the ideas of a working man really are, whether security of tenure, on the one hand, or being able to remove, on the other, is better. I suppose the view of your Association is that working men could best know that themselves?—I have never found the working man yet that was in favour of the missive system.

3702. The general view is that it would not raise the rents. Suppose it were the fact that short lets would raise rents, that would naturally affect the view of the working man in wanting them, wouldn't it?—I do not know regarding that.

3703. It would depend on whether the increase were substantial or not?—That is so.

3704. They are prepared to take the risk of that apparently?—Yes, that is their opinion.

3705. Have you any view as to the limit in this Bill? Mr Baillie said £20 had been agreed to. What would you place the limit at?—I would have no limit at all. I would simply abolish the missive system.

3706. Do you mean you would have houses without limit and with enforced short lets?—Yes. I think it is just as hard sometimes for a man with a rent of £45.

3707. But to a very diminished degree that is so. The hardship is greater up to £20. You are talking theoretically?—Yes.

3708. Have you anything to add in addition?—No.

3709. Is Cowlairs Co-operative Society a large affair?—Yes, it has over 6000 members.

3710. Mostly working men?—All working men.

3711. And fairly representative of working men generally?—It is considered one of the largest working-class districts in Glasgow. It contains large locomotive works, such as Hyde Park, the Caledonian Works, and North British.

3712. This matter has never been brought before the Co-operative Society, has it?—Well, it has been brought before the Society through their own property. The missive question has been brought before them in that fashion.

3713. But you are prepared to say you represent fairly the views of the members of the Society, as far as they are known to you?—I am not representing the Cowlairs Co-operative at all.

3714. But your own individual views, as far as you

know, represent the general views of members, as far as you know them?—Yes. They have appointed representatives separately. They have two coming.

(*Mr Baillie.*) I produce the report from the *Herald* of 24th November 1904. We had a great public meeting and filled the City Hall.

3715. There does not seem to have been any counter-meeting?—No, they were all agreed.

3716. (*Sir J. Stirling Maxwell.*) Are your members drawn from all parts of Glasgow?—All parts. We go from one hall to the other. We have been round all the public halls.

3717. You don't admit members from the outside?—We don't care where they come from. We have several in Falkirk, but we don't get a chance of coming into touch with them.

(*Mr Lyon.*) There was an association, to my knowledge, in Falkirk, and there is one in Greenock at present, and one in Paisley similar to the Tenants Association in Glasgow. I believe the Paisley one has been longer in existence. In Glasgow, the question originated years ago. The difficulty in getting associations of that kind is that it is only one grievance that has an effect on people, and it affects them acutely at one time of year, when they sign the missive, but that is the only time you can get enthusiasm raised. Of course it is affecting them all the year round, but it is when they come to sign the missive that they feel it. So it is difficult to keep them up against it in small towns. There are no other benefits to be derived from the Association.

3718. (*Chairman to Mr Lyon.*) Tell us what exactly happened when you came from Falkirk to Glasgow; when did you leave?—I did not leave till November for the situation that I am in now. I was appointed to it in the month of May, but I had signed a missive in the month of February for the house, so I had to stay. I took lodgings and went back to Falkirk every week-end until the May term, and I could only leave the house then that I paid the full year's rent, but I found a substitute who agreed to pay me a half-year's rent. I was responsible and had to pay the half-year's rent before I left Falkirk.

3719. Up to that point, what loss you actually sustained was in having to travel from Glasgow for six months?—If I had gone at May, I would have had to pay a year's rent in Falkirk and a year's rent in Glasgow.

3720. What happened after that?—When I came to Glasgow I had to pay six months' rent for the house I went into.

3721. You were not actually paying two rents of two houses?—I had to pay one and was responsible for the other.

3722. You did find a substitute?—Yes.

3723. Are there cases where people do not find substitutes?—There are thousands of such cases—I do not know whether it is really a wide experience, but I think it is pretty wide—where you may sign for a house in January and find in March that you have a situation in some other quarter of the town. You go to your landlord and ask him to try and let the house between March and May. He agrees to do that on condition that you pay 10s. for his trouble, and he agrees to try and let the house. You remove, but you find possibly that when the first three months of the year are up, the landlord has not found a tenant for the month of May, and he makes you pay the rent of the house for that year. That has been done very often.

3724. Any cases you have handed in are cases where the people have had to pay for two houses at once?—Cases of that kind.

3725. (*Mr Dobbie to Mr Lyon.*) You give reasons here for the view that houses below £20 should be let monthly; is that the view of your Association?—Yes, of the Tenants' Association.

3726. What rent, as a rule, do you think the members will pay?—I believe that most of them are over £10—between £10 and £20.

3727. At what terms do the tenants of from £10 to £20 houses pay under the present system?—Mostly every three months. I pay £15 for a room and kitchen, and I pay it quarterly.

3728. That is the common period for paying rents between £10 and £20?—Yes.

3729. Mr Cross's Bill would make it quarterly?—Yes; I could leave at the end of three months.

3730. Would a quarterly let meet the views of your Association? Mr Cross's Bill would simply substitute for a yearly let, a quarterly let in your case, and in the case of most of your members?—I believe it would mean most of the artisan class, but if we came down to the skilled labourer and unskilled labourer, it would not meet their position. We find that they generally pay their rents monthly or weekly—the lower you go the less time you have.

3731. We have had proposals in different Bills, one, for example, with a clause prohibiting all lets for longer periods than a month. Of course that is very small, but may I take it from you that Mr Cross's Bill, which would substitute quarterly for yearly lets in cases of rents above £10, would be reasonably satisfactory?—Yes, I believe it would.

3732. (*To Mr Baillie.*) In your proof, you say that you are strongly in favour of rates and taxes being collected once a month through the landlord. Is that your own personal view or the view of the Association?—I am afraid that is my own personal view. I have not a brief for my Association on those details.

(*Mr Lyon.*) I believe the members of the Tenants' Association are very much divided on the question of rates. Some people think of course that if the landlord was to collect the rates it would take away the interest of the tenant in municipal affairs or Parliamentary affairs at election times.

(*Mr Baillie.*) But at the later meeting we were, broadly speaking, in favour of the compounding, seeing there is a difficulty with this rating question. I can see difficulty where a monthly tenant moving about might cause a difficulty with the municipal authorities in collecting the money, and therefore we are willing to waive that point and bring it into harmony with the shorter lets, and we look upon the municipal authorities as practical men who could work out the technical part of the problem.

3733. (*Mr Dobbie to Mr Baillie.*) The distinction is very marked. As you know, there is exemption on the ground of poverty in the case of a great number of tenants just now. Obviously, if the landlord paid the whole rates up to £20, he would not be prepared to give that exemption which at present the impecunious ratepayer gets from the Corporation?—We do not want to disturb that at all. We would give the landlord the same power of exempting his tenant who makes out a case the same as just now. It is a concession, and we would still allow the landlord to claim that concession for his tenant.

3734. Then you would adopt the clause which the witness from Paisley gave us, suggesting that the ratepayer might, as at present, apply for relief, and on getting it from the Corporation get repaid from the factor or landlord?—Yes, undoubtedly, as a matter of fair play to the landlord.

3735. About this compounding and quarterly collections, apart altogether from the question of exemptions, there is a question of voting. We have heard to-day that there are something like 19,000 electors disqualified for not paying poor rates, that is for Parliamentary voting purposes. They would be qualified if the rate was added to the rent?—Not if it was shown that they did not pay it.

3736. But you may take it as a matter of experience that in the cases where the ratepayer does not pay his poor rates, it would be very much less if the rate was added to the rent collected monthly?—It would certainly. If they paid monthly more people would be on the voting roll. That would be an advantage.

3737. It is an important point, as between compounding and frequent collections, and I had hoped that your Association would have come to a decision on that part of the question?—We have been so interested in the bigger greviance that these minor points have not been discussed very extensively. We find at public meetings that by the time we have got through that, the time is gone. That is all in our favour, bringing these people on to the roll, and making them respectable whether they will or no.

3738. Has your Association expressed any view in regard to the landlord's remedies, such as hypothec?—Under our constitution one of our rules is for the abolition of the law of hypothec.

3739. Has this been one of your objects in the past?—Yes, from the very first.

3740. Are we to take it, then, that the thousand odd members of your Association are pledged to the abolition of the law of hypothec?—Yes.

3741. Have you got this put in detail? Have you discussed it at public meetings?—We are all just one about that.

3742. Can you put in a minute showing any conclusion or decision come to?—No, we never passed a resolution to that effect. There are resolutions about rates, but at the annual public meeting the constitution is submitted and adopted.

3743. It is submitted to the general members?—Yes.

3744. (*Sir J. Stirling Maxwell.*) Have all got a copy of the constitution?—Yes.

3745. (*Mr Dobbie.*) Apart from the landlords' question, we are considering here any grievances tenants may have, and we have had some evidence in favour of the view that no creditor should be entitled to remove tools or bedding from a house on account of the physical and other discomforts necessarily following. Have you any such exemption as

Mr A. Baillie and Mr Hugh Lyon. 17 Dec. 1906.

that in favour of tenants?—We have. It is a gross hardship that the landlord should have, through the law of hypothec, power to remove tools and absolute necessities of life while the people are in the house.

3746. May I take it that, assuming the law did not think proper to abolish hypothec, meanwhile would it be a step in the right direction if it exempted from the landlords' hypothec tools and wearing apparel?—Certainly it would be a great concession.

3747. (*Mr Cox.*) Do you not think there are points of view from which the law of hypothec is an advantage even to the tenant? If, for example, he became ill, his landlord, having his furniture there, and knowing he would not lose, would be contented to let him stay?—Practically speaking, I believe you could presume on the good feeling of the grocer as well as the landlord.

3748. You must have a house above your head?—Well, the landlord does not give it any more than he can help as a rule. They are very smart, that is our experience in Glasgow. I have had many, many cases of complaint about landlords coming down on them immediately the rent is due.

3749. In the case of moonlight flittings, of which there are a good many in the course of the year in Glasgow——?—We are not here to defend people on that point at all.

3750. Do you suppose these are for the purpose of escaping rates rather than rents?—When anybody resorts to that, they are just in a general fix with their debts. One thing follows on another.

3751. (*Mr Howden to Mr Baillie.*) I see, in Clause 9 of your precognition, you say under the new system provision could be made whereby undesirable tenants could be readily ejected. What do you mean, exactly, by that?—Presuming that such a system as Mr Cross's should be introduced, and that the landlord found he had an objectionable tenant in a tenement, he would get him removed within a very reasonable time, whereas, at present, for all the nuisance, you have to prove your case. Before you can take action against people you have to get up a lot of proof, and it is sometimes difficult. But the landlord does not require to give reasons for saying, "You have to go" at the legal term. It would be palpably to his mind and to the neighbours' minds that these objectionable people we resent away.

3752. That is all you mean by that?—That is all I mean.

Mr A. Baillie and Mr Hugh Lyon. 17 Dec. 1906.

Mr George Kerr, jun.

Mr George Kerr, Junior, sworn and examined.

Mr George Kerr, jun.

3753. (*Chairman.*) You appear on behalf of Partick Labour Representation Committee, and you yourself are a Councillor for the third ward in Partick?—Yes.

3754. Is it a large ward?—The second largest in the burgh.

3755. What is the population of Partick?—65,394.

3756. How many are in your ward, roughly?—About eleven and a half thousand.

3757. Is it fairly representative of working men?—Yes, largely.

3758. What are you yourself?—A machineman.

3759. Have you been long in Partick?—Thirteen years.

3760. How many are there in the Partick Town Council?—Eighteen members.

3761. What kind of organisation is the Labour Representation Committee for which you appear on behalf of?—It is an organisation composed of trades unions, co-operative societies, Independent Labour Party, and socialist organisation generally.

3762. Limited to Partick?—Yes, Partick Parliamentary constituency, which includes a portion of Maryhill.

3763. Roughly, how many does the Committee represent?—Say about a dozen trades. It has a membership possibly of four or five thousand.

3764. Has this matter been before the Committee several times?—Yes, it has been before them in view of municipal elections. This Committee is for the purpose of securing representation on local and national bodies.

3765. How many are on the Committee itself?—Two delegates from each trade, about thirty or forty altogether.

3766. You have no means of bringing a matter like this before all your constituents? They never meet, do they?—No.

3767. It is in the hands of the Committee?—Yes, but they report to their various societies, and at election times it is brought before the electors.

3768. May I take it that the views of the Committee are fairly representative of the views of your whole constituents?—Yes.

3769. Are the Committee unanimous in their view?—Yes, on long lets as a grievance.

3770. Among your trades, are all the trades affected by this question equally, or some more than others?—Practically all the same.

3771. Owing to the introduction of machinery and works getting executed in much shorter periods, are working men of all sections oftener on the street looking for work than used to be the case?—Yes.

3772. Do you connect that with the introduction of machinery?—Largely, and also with the introduction of hustling methods.

3773. But I suppose that, as compared with the old days, before the introduction of machinery, the working classes are much more unsettled?—Yes; owing to the introduction of machinery.

3774. Is shipbuilding a staple industry in Partick?—Yes.

3775. Will it employ half of the working men?—More than half.

3776. Do you think the existence of men out of work has any connection with this house-letting question?—Yes. I believe many men, because of the house-letting system, are prevented from going elsewhere to look for a job because of the necessity of either having to pay two rents or having to get a sub-tenant and be subjected to a lot of hardship in doing so. For instance, I have known of a man having to leave to go to Rothesay in the interests of his health, having got a job to suit him. He advertised his house in the *Citizen* every night for a week, and the factor was very dilatory in putting up a notice board intimating that the house was to sub-let. This was due to the fact that he had other houses in the property to let. When the tenant found a sub-tenant, the factor wanted to put an extra 10s. on to the rent. There are such things as that.

3777. So you are in the hands of a particular factor?—Yes.

3778. Of course, if you have a very active factor, if he is sympathetic, that may be a very different case from the case of a factor who is lazy and regardless?—There are very few of them very sympathetic in that direction.

3779. But it is the interest of the factor to let his house if he can; he gets his commission?—Well, if he is assured of his commission, of course that is a further hardship on the tenant.

3780. The 5 per cent., or whatever it may be?—Yes.

3781. Suppose a factor sub-lets, does he charge anything to the landlord, or is it the principal tenant that is made to pay?—It is always the principal tenant.

3782. He won't get anything from the landlord?—No.

3783. Of course a single man in lodgings, as you say, has no obligation?—No.

3784. It is the case of married men who have houses of their own?—Yes.

3785. You are not referring at all to the cases merely of labouring men, but men of the best class?—Men of all classes.

3786. It is not the mere shifty men that are always flitting about that you are really concerned in, but men of good class?—Yes.

3787. Do you find that there is any one period of the year, more than others when this liability to remove is chiefly to be found, summer or winter, spring or autumn?—I find it is pretty general. Of course, in the shipbuilding industries, weather conditions affect the employment largely.

3788. In the case of the shipbuilding industry, when a contract comes in for a man-of-war, they will bring men from all quarters?—Yes, it creates a business, and there is a large section employed for the time being.

3789. How many men will be employed at once on a man-of-war?—I have known a matter of 1200 men employed on one.

3790. These men might have to be drawn from a considerable area; they would not all be found on the spot?—No.

3791. Suppose a man arranges to go and take lodgings in the district to which he removes and leaves his family to work out the remainder of the tenancy in the place which he leaves, does that add substantially to his total cost?—Yes.

3792. Whether he travels or not?—Yes.

3793. If he travels back and forward it will be so much more?—All the more hardship.

3794. We know, of course, of these cases you have referred to, but are cases numerous where, in the event of a sub-let, the principal tenant has to pay for the whole or a portion of his original let?—Well, yes, they are getting more numerous.

3795. I suppose that will vary with the number of unlet houses, but if there is a large demand for houses, these cases will be fewer?—Yes, of course.

Mr George Kerr, jun.

17 Dec. 1906.

3796. But supposing the house-building had been over-done, and there were a lot of houses vacant, there might be many?—Just so.

3797. In addition to that direct grievance, are there incidental grievances also in the way of increased cost and discomfort owing to the removals being at one period of the year?—Yes, removals being at one period of the year necessitates the people having to pay very much higher prices for the use of vehicles, and then their furniture runs all the more risk of damage owing to possibly three or four flittings being up one close.

3798. We have had a good deal of evidence on one side, and information on the other, so I may take it you agree as to that, and also as to the trades concerned?—Yes.

3799. There is a further point, namely, that a workman is often tied to a house for twelve months which is not very suitable; it may be draughty and damp, and this grievance would be rectified by shorter lets. The people would require to be provided with better houses or would remove to where they could get better houses. These are the cases which never actually come to statistics of removal, because they grin and bear it?—They have to.

3800. On account of the risk of having to suffer loss?—Yes.

3801. I see you point out that it also results in bad and imperfect work on the part of builders and others. How is that?—Because of the rush at the term time.

3802. The work has to be done, and if pressed it cannot be so well done?—Yes, and it is often done under contract to be accomplished at a certain time.

3803. You have pointed out drawbacks of the present system. In your view, are there not counter-balancing advantages that it has over short lets?—No, I don't know of any.

3804. You don't attach importance to the idea of security of tenure?—Not if the tenant pays his rent regularly, he will have a fixed tenure.

3805. Is it your view that, supposing a plebiscite were taken, your members would all go in for short lets?—Yes.

3806. Supposing they got an offer to convert their tenacy into short lets, they would accept?—Yes.

3807. Supposing it was left to yourselves what the short let was to be, what proportion would wish quarterly, and what proportion would wish monthly lets, do you think?—Quite the greater proportion would say monthly lets, I believe 75 per cent. at least.

3808. There would be a substantial number who would prefer quarterly?—There would be a number, but very few, I believe. The great number would be for monthly lets, because it would be handier for paying, and also for getting out of the house. The great difficulty is being tied to the house not only for reasons of work, but for reasons of illness.

3809. Still, as you express yourself, you think there is a sufficient amount of desire for quarterly lets to make it reasonable that they should be provided for as Mr Cross's Bill?—Yes, I think monthly and quarterly lets should be provided for.

3810. Then, in regard to the question of rates, if it be the fact that short lets would necessarily lead to shorter payment of rates, what view do your people take as to compounding of rates, the landlord paying them and more frequent collection by the rating authorities?—I believe we were pretty well divided on that point. I believe the greater proportion would prefer the landlord to have nothing to do with the collection of rates.

3811. So that it could be done?—Yes.

3812. And if it cannot be done?—That a notice be sent by the authorities stating the amount of rates, so that the tenant would know precisely what he was paying for rates.

3813. You might have them whether the landlord collected them or the rating authority?—Yes.

3814. But whichever did it in either case, the tenant should know?—Yes.

3815. What is the advantage of that?—In order that he would know whether it was his rent or his rates that were increasing or decreasing.

3816. It would be a check on the landlord and induce him to take an interest in municipal affairs?—Yes.

Mr George Kerr, jun.

17 Dec. 1906.

3817. (*Mr Howden.*) Is there any large feeling on this question in Partick?—Yes, I believe it is very largely due to my attitude on this question of short lets that I was returned to the Council.

3818. We have had a representative of the Partick Corporation present who told us he had gone through three campaigns in Partick and had never been once asked that question?—I heard him make that statement, and I also read it in the papers. I do not know anything to the contrary, but I question it. There is one thing I do know, that it is made a very large question in my connection and in three wards—the second, third, and fourth, which are woven into each other—and when practically every night the candidates in the third and fourth wards were being asked this question with regard to shorter lets and the abolition of the missive system and collection of rates, I expect that he also would be asked it.

3819. Was the Partick Parliamentary representative ever asked that question?—Well, I was trying to get a press cutting about that. I understand that he was asked in Partick at the time of the election and is pledged to support Mr Cross's Bill.

3820. (*Chairman.*) Is that Mr Balfour?—Yes. Proofs of that can be had from the office of the Partick Press.

3821. (*Sir J. Stirling-Maxwell.*) The candidates on both sides have usually been in favour of it, haven't they?—No, I think Mr Parker Smith was against it.

The reason I said so was that there was a notice here from the scrap book which has been issued on behalf of Mr Parker Smith.

(*Chairman.*) Mr Parker Smith says—"In my view lets 'for a year are too long. The English system of short 'lets is much preferable, and it should be provided by law 'that the lets of very small houses should terminate 'monthly."

3822. (*Mr Dobbie.*) That is dated 20th January. He has found his salvation too late?—I understand from press reports of Councillor Lang's evidence that he said neither of the Parliamentary candidates had been asked questions in order to make out that it was not a burning question, and also that he stated this question had never been before the Town Council, whereas, as a matter of fact, it has been before the Council twice in one year.

3823. When?—In March of this year there were five votes in favour of Mr Cross's Bill.

3824. Five separate votes?—The Council took a vote on Mr Cross's Bill versus Mr Provand's Bill, and for Mr Cross's Bill there were five votes.

3825. And the balance for the other?—Yes.

3826. Mr Lang in his proof said it was brought before the Town Council. Councillor Lang did tell us that in Partick there was almost no migratory population, that even during a strike the workmen remained in Partick until they got work there. Your experience is to the contrary?—Yes, within eight days during the recent November election it was brought out by my election agent that in the third ward there were practically about one hundred and fifty people who had left the district in search of work.

3827. Supposing it is practically impossible in the case of small-rented houses to collect monthly, in separate sums, rates and rents, and if the view was taken by Parliament that rates should be compounded and collected by the landlord, would the failure to distinguish the amount of rates included in this monthly payment be fatal, in your view, to any such method?—I think it could be done quite easily. The rating authorities could quite easily send a notice stating the amount of rates.

3828. Which, in fact, were exigible in a particular burgh for the current year?—Yes, for these houses, and that would permit people to know and to take the necessary interest.

3829. That would satisfy your objection, even though it would have the effect that they paid a slump sum monthly?—Yes.

Mr Robert Lemmon and Mr W. Lorimer.

Mr Robert Lemmon and Mr William Lorimer, called and examined.

3830. (*Chairman to Mr Lemmon.*) You are Secretary of the Horsemen's Union in Greenock, and also you are a councillor and magistrate of the burgh?—Yes.

3831. (*To Mr Lorimer.*) You are a blacksmith residing at 5 Lauriston Street, Greenock. What connection have you with the Union?—I am President of the Blacksmiths' Union in Greenock and represent Greenock Trades Council.

3832. We have no precognition of you, Mr Lorimer?—No.

3833. You represent Greenock Trades Council?—Yes.

3834. (*To Mr Lemmon.*) Let us hear first about your special matters. What is the Horsemen's Union?—A Trades Union of carters.

3835. What number may it consist of?—About 350.

3836. Are there horsemen's unions in all big towns?—Yes, there are two in Glasgow.

3837. How long have you been on the Town Council?—Four years.

3838. How long have you been a magistrate?—Since November.

3839. (*To Mr Lorimer.*) How long have you been President of the Blacksmiths' Union?—Two years.

3840. How many does that consist of?—There are 198 members at the present time.

3841. How many does the Trades Council represent

Mr Robert Lemmon and Mr W. Lorimer.

roughly?—About twenty-five branches of different trades.

3842. But not twenty-five trades?—No, possibly about twenty.

3843. (*To Mr Lemmon.*) You are Secretary of the United Trades Council. Is that of the whole council?—Yes.

3844. Including blacksmiths and all the others?—All who are affiliated with the Council.

3845. How many altogether would that include?—Over 5000 members.

3846. Have the Trades Council as a whole had this matter before them?—Very frequently.

3847. At meetings of the Council as a whole or only committees?—Meetings of the Council as a whole.

3848. Have the Corporation had the matter frequently before them?—Yes.

3849. Who are you speaking to here, Mr Lemmon; for the United Trades Council along with Mr Lorimer?—Yes.

3850. Not for the Corporation?—The Corporation of Greenock is sending Bailie Bennett later on.

3851. Is the Horsemen's Union a part of the United Trades Union?—Yes, just like the Blacksmiths.

3852. You, gentlemen, represent say 5000 working men in Greenock; how many working men would there be in Greenock altogether? Have you any notion?—A great many more than that.

3853. I suppose you are fairly representative of all the large unions?—That is so.

3854. You have no reason, I suppose, that your people would be more inclined to start a proposal of this kind than other working men?—No. I think all those who have houses by the year as a rule favour the same view.

3855. In Greenock the houses of the working men usually consist of one, two or three apartments with rents varying from £4 to £23. Are there any number under £4?—No, I don't think so.

3856. (*To Mr Lorimer.*) Is it like Glasgow, few in number and diminishing?—Yes.

3857. (*To Mr Lemmon.*) Is Greenock increasing?—Yes.

3858. The total number of inhabited houses for 1906–1907 is 14,681. Of that number there are let weekly 102, fortnightly 31, quarterly 3, and monthly 4296, being a total of what you may call short lets of 4432. That deducted from the total number, 14,681, leaves 10,249, most of which are let yearly. Have you any information of how many may be let quarterly or half-yearly of houses under £20?—These figures have been given to me by the Burgh Assessor.

3859. You gave us the quarterly. As far as you know are there any considerable number let half yearly?—No, I do not think so.

3860. You bring out that there are houses let monthly which owing to the statutory arrangements are not stated in the valuation roll so that there are no doubt more houses let monthly?—The Assessor told me so.

3861. He did not give you an idea of how many more there might be?—No, these are the figures from his books.

3862. All they know about?—Yes.

3863. Under the Greenock Police Act, 1877, the Corporation are empowered to levy the assessments falling upon occupiers where the rent does not exceed £5 upon the owners in place of the occupiers under a deduction of one fourth of the assessment?—Yes.

3864. And last year the number of tenants occupying houses so assessed of rentals not exceeding £5 was 1125, and the rental assessed upon amounted to £5413?—Yes.

3865. Then the Corporation are also entitled under the same Act to levy assessments on the owners in place of the occupiers in the case of all premises let for less than a year the rentals of which are £5 but do not exceed £8, under a deduction of one-fifth of the assessment, and the total number of houses so let last year was 3116 with a total rental of £18,858?—Yes.

3866. The assessable rental on burgh for rates leviable upon occupiers last year was £346,348?—Yes.

3867. In addition you have obtained information from the Assessor that the number of occupied houses in Greenock last year of all rentals was 14,576 and that in addition there were 333 vacant houses?—Yes.

3868. What, Mr Lemmon, is the grievance in Greenock that the working men complain of?—Having a house on for a year and also the time of the year at which they have to take the house.

3869. Suppose that the period at which they had to take the house, instead of being four months from the term of entry, was reduced to say two months, would that remove the grievance?—I do not think so if it was still a yearly let.

3870. Has the matter been brought up in Greenock in connection with the municipal elections?—Yes, and also at the Parliamentary election.

3871. By way of questions?—Yes.

3872. Did you find that the working classes differed in opinion among themselves, or are they fairly unanimous in the matter?—They are fairly unanimous.

Mr Robert Lemmon and Mr W. Lorimer.
17 Dec. 1906.

3873. As judging by questions at these meetings and otherwise?—Yes, and frequently the Council was memorialised on the question long before it was so popular as it is to-day.

3874. How far back would you put it that this grievance has been ventilated?—Twelve years.

3875. What is the practice in regard to the payment of wages in Greenock?—Weekly in all the shipyards now.

3876. What are the main trades in Greenock?—Shipbuilding.

3877. What else?—There are sugar refineries.

3878. (*Mr Lorimer.*) Sugar and ships.

3879. (*Chairman to Mr Lemmon.*) Is the shipbuilding interest specially shifty more than some other trades?—Their work is of a temporary nature, that is to say, it has often slack spells.

3880. When they want to move off elsewhere?—Yes, to look for work. Some of the trades are very bad in that way.

3881. Take the question in regard to shipbuilding. Suppose a big contract was got at Clydebank, and your work was slack at Greenock, might you have men moving off there?—Yes, they often go off to Belfast.

3882. How long may men go for?—When they are out of work in Greenock, and if they have the prospect of work in Belfast, they will go. The possibility is that they may stay there.

3883. Supposing that you go for a temporary job, how long does a big ship take to build?—We build them very quickly now; it is always a number of months.

3884. In that case would he want to bring his family?—I think, everything else being equal, he would prefer to have his family with him.

3885. Of course though he went to Ireland in connection with one ship, he might have a chance of staying on?—Yes.

3886. In regard to Greenock, is the work among artisans and labouring classes as constant as it used to be?—I don't think so.

3887. (*To Mr Lorimer.*) Why not?—The introduction of machinery is the chief cause, by simplifying labour, and, as the result, throwing skilled labourers on the street.

3888. And is that, Mr Lorimer, from the work being more rapidly done?—That is so, they will build a large ship in three-fourths of the time now-a-days.

3889. Now, may that come in either of two ways, either that they have to remove their families, or although they keep their house on in Greenock under the present arrangements they have to take lodgings in other towns?—That is so.

3890. (*Mr Lemmon.*) A foreman joiner was telling me quite recently that they have been finishing big ships very much more quickly than they were a short time ago.

3891. (*Chairman to Mr Lemmon.*) Is it the case, as others have said, in your experience that if a man has to pay for lodgings in another town, even although he does not travel at the week-ends, it runs away with his earnings as compared with having one house to support?—Yes.

3892. (*To Mr Lorimer.*) If he travels periodically?—It increases the cost.

3893. In shipbuilding, what kind of wages are made?—The artisan class you might say earn an average of 35s. 6d. on the Clyde, and the labourer about 16s. on the average; the lowest in some cases is 12s. 9d. a week of fifty-four hours.

3894. What would it cost a man to go and return between Greenock and Belfast?—A return ticket would be 8s., but they do not use return tickets, they would use two single tickets at 4s. each.

3895. That is the cheapest way you can go?—Yes.

3896. (*To Mr Lemmon.*)—You think from the point of view of the effective administration of a household that when men have to go in that way, and when the head of the house has to remain absent, the effect on the family is not advantageous?—I do not think so.

3897. You mentioned, I see, one of the difficulties of yearly lets is the short time a tenant has to look round him for another house. How does that arise?—The missives are sent out and returnable in eleven days. That sends everybody a-hunting for houses, and possibly has a tendency to keep up rents, and if they do not get a house they have to run the risk of being left without, as sometimes happens.

3898. You will consider the other question of the two, namely, the suggested advantage of security of tenure?—Yes, I remember having that put before me at the Conference in Edinburgh with Lord Dunedin.

3899. What view was taken?—Lord Dunedin referred to the East End of London where certain Jews provided accommodation for families who could be turned out at a moment's notice, and great hardship had resulted from an

arrangement of that kind. I replied tnat we would be quite willing to take the risk of that.

3900. Do you find that there are some working men, however, who take another view of that and think that it is so important that it counter balances the admitted drawbacks of the present system?—I have not heard that.

3901. You have not met them?—No, I was representing the Council at that meeting, and I reported what had been said, and of course we did not experience it, and it was altogether foreign to anything we had conceived on the question. Lord Dunedin mentioned very strongly how it affected a certain district in London, but I think the explanation even went to minimise the effect of it. It is possibly a certain kind of landlord that they have in that quarter. Ours are of a higher standard.

3902. You have not found that any of these 4296 who have at present monthly lets are clamouring for yearly lets?—No.

3903. But a good many the other way?—Yes.

3904. You have been talking about your own interests and the tenant's interests; what is your view as to the effect this would have on the landlord's interests? Do you think it would be seriously detrimental to them or the other way?—I think they are very well protected.

3905. But suppose monthly lets come in as well as yearly, do you think they will lose or would there be advantages on their side?—I often have to assist people to get two months' rent paid before they can get into a house at all.

3906. How does that arise?—They have to give two months' security.

3907. These are monthly lets?—Yes, they have to pay two months forehand before they get into a house.

3908. (*To Mr Lorimer.*) That is for the one month forehand rent, and what is the other month for? I can understand it being forehand the first month?—If a tenant has no rent book or anybody to vouch for him as a cautioner, the landlord makes him pay two months before he gets the key. He is allowed to sit for one month then, and from that on, he always pays a month in advance.

3909. That is just forehand rent?—Yes.

3910. Do you find that even where there is sufficient furniture to make the landlord safe that is hypothec?—Yes, under certain rental, irrespective of the furniture that he may have to recover in his hypothec, he claims forehand rent.

3911. (*To Mr Lemmon.*) Suppose that were the result in consequence of some measure such as proposed, you are not afraid of that? In short, you are not afraid of forehand rents?—No, I don't think so.

3912. Even though the result was that people now in yearly tenancies had to pay forehand. Are they prepared to do that?—Yes.

3913. (*Sir J. Stirling-Maxwell to Mr Lorimer.*) In houses below what rent is that monthly rent exacted?—In Greenock up to £8.

(*Mr Lemmon.*) 10s. or 12s. a month.

3915. (*Chairman to Mr Lemmon.*) Then above £8, between £8 and £15?—The let is generally for a year.

3916. May I take it that those monthly lets, 4296 in number, are almost all of them under £8?—I think so.

3917. How high up in the way of rent will the monthly lets go to?—There may be exceptional cases that go up to £10 or £12.

3918. I suppose above £12?—No.

3919. Suppose if a more frequent collection of rents led to some extra charge for the additional trouble to the factor, what would you say?—I think that for the reform the tenants would be generally willing to pay. They have to pay for everything in a way.

3920. You say here on page 4, that when it suits the landlord and factor they adopt the plan of the Bill, what do you mean by that?—They only let for short periods.

3921. That is to say, this would merely increase the number of monthly lets that exist already?—Yes.

3922. Which is the class most affected by the existing system, the artisan or the labouring class?—The artisan.

3923. I suppose most if not all of your union members belong to that class?—That is so.

3924. What do your people think about the landlord's hypothec? Have they any strong view on that?—Personally I think the landlord should stand in the same way as any other creditor.

3925. But is that not a question for the other creditors than between landlord and tenant? Do you find any practical grievance as between landlord and tenant from the law of hypothec?—I know the other creditors don't like it.

3926. (*Mr Lorimer.*) It is a matter of indifference to the tenant who should claim his sticks provided he is going to lose them, but as a matter of right the Council has expressed the opinion that the landlords should not get preference over any other creditors.

Mr Robert Lemmon and Mr W. Lorimer.
17 Dec. 1906.

3927. (*To Mr Lemmon.*) In Greenock is there any practice of demanding the security of cautioners to any large extent above £8?—The great bulk of the people who inhabit houses above that have sufficient furniture.

3928. (*To Mr Lorimer.*) You referred to a rent book; explain exactly what you mean? Does it mean as showing that they have paid in previous tenancies?—Just so, or it may be shown by receipts.

3929. But in other cases there is a signature of the landlord's clerk showing what has been done?—Just so.

3930. (*Mr Dobbie.*) They are vouchers for good character?—That is so.

3931. (*Mr Howden.*) Do they not ask a line from your previous factor in Greenock?—I have a good deal of practice in assisting people of this kind to get a house, and even if they have a book fairly well clear they must pay two months' rent.

3932. (*Chairman to Mr Lemmon.*) Then it is said that in practice there is really not so much grievance as you would make out because a sub-tenant is practically always got and there is no loss in the end. What do you say to that?—There is a loss because the man who wants to get off his house has to clear the expense, which may not be very big, but a few shillings when a man is idle is a considerable amount,—even half-a-crown.

3933. What about the cases where a sub-tenant is not immediately got?—He would not get clear.

3934. Have you found that existing?—The fact in Greenock is that houses of this class are very scarce at the present time, and there is not much difficulty in getting them let.

3935. That depends on whether there are many empty houses or not?—On supply and demand, yes. From £10 to £12 and upwards, the supply is not equal to the demand in Greenock.

3936. Owing to the fact would you say that the grievance is greater in Glasgow, in practice, than in Greenock?—It may be. There may be a better supply of this class of houses.

3937. In Greenock is it the case, that just as in Glasgow, there is practically one removal term?—There are not many at Martinmas; generally at 28th May.

3938. Would you expect, bailie, that the total number of removals in the course of the whole year, or that they would not be much increased, but spread over the year? We think they would be spread over the year.

3938*a*. That would be a great advantage?—I think so, where people were suited and their rent was regularly paid they would remain as now.

3939. I suppose you agree with the evidence we have already heard, that it would benefit the building trade?—Very much so,—more trades, particularly joinering, and painting, and decorating,—all the building trades, to a large extent, but those who are in the inside so much more.

3940. Not the plumbers so much as others?—No.

3941. What do you say to the differentiation of the limit between Glasgow and Greenock,—£20 for Glasgow, and £16 for Greenock? Do you think that is warranted?—No, we think it is far too low.

3942. You may think they are both too low, but take the difference between them, are the rents in Greenock cheaper than in Glasgow?—I don't think so.

3943. The other conditions are similar?—Yes.

3944. Suppose they were both the same, what do you say is the maximum of rent?—£30.

3945. Why is not £20 enough?—Because a workman with a grown-up family requires more accommodation, and two room and kitchen houses are let in the street I live in, at £23.

3946. What will one room and kitchen houses come to?—£14

3947. Have they bathrooms?—Yes, some as high as £16.

3948. What will two rooms and kitchen come to?—£23.

3949. Are there not two rooms and kitchen with bathroom below £20?—There are; but a modern house in a good locality is and £20 upwards.

3950. Is there any special reason why the value of a house should be high?—Yes, building material, and the feu-duties are very high.

3951. Building material would not be more than elsewhere?—We are removed from the stone quarries.

3952. £30 would be your maximum?—I think so.

3953. Some gentlemen who have come here have said that, while they would be in favour of your view, they think £20 might be a fair compromise. What do you say?—I am speaking of what I know to be a fact for two rooms and kitchen house at the present time.

3954. Lastly, what about the rates? Do you think it would necessarily follow that if there were shorter lets, there would be more frequent payment of rates?—I think that would be a benefit.

3955. Well, then, we have been told that there are two ways, either the landlord paying the rates with relief against the tenant, or the Corporation collecting more frequently. Which way do your people advocate, or are they indifferent?—The landlord should be responsible.

3956. It would not matter to the tenants, would it, unless the landlord got too big an allowance?—I think it would simplify matters if the landlord did it.

3957. One gentleman said theoretically he would rather pay his own rates, but he put it that, practically, it would be very difficult to carry it out, so he approved of compounding. Do you take the view that you would rather pay your own rates and know what you were paying?—That is so.

3958. But it might be so difficult that you have got to go in for compounding?—Yes.

(*Mr Lorimer.*) The rates and the rents to be separate?

3960. (*Chairman to Bailie Lemmon.*) You would still want to know what you were paying?—So that the taxpayer would know exactly what he was paying.

3961. Also that he would know if he was paying too much?—By commission, that is so.

3962. It is said, Baillie, that this is a question which is really being agitated by Englishmen?—I do not think so. It might be that Anglo-Scotsmen see the benefit that their English fellow-workmen have.

3963. Are any of your officials English by birth?—No.

3964. Are any of your committee Englishmen?—No, some of them have worked in England, and they are always bragging of the advantages of the system there.

3965. That is quite fair. Those that have practical experience of the English system and the Irish system, what do you find is their view?—I find they are very much in favour of it. They say it is a great advantage. In the last months of the year a tenant's liabilities are very high. His rates always come in at a time of the year when work is very slack. The cost of living is higher in the winter time. In fact, in Greenock an effort has been made to have the rates levied twice a year, but we have been told by those responsible for the book-keeping that it cannot be done. It has not been done, but one of our magistrates has made an effort on two different occasions to see if it could not be possible. The rates are payable at a time when I think the people are least able to afford it.

3966. What month?—November.

3967. What time would they best be able to afford it?—I think it would be best if it could be divided. In summer work is steadier, not being so much broken by weather.

3968. Supposing you had it twice a year?—Whitsunday and Martinmas? There is a good deal of time lost with weather in outdoor work.

3969. You have not found, on the other hand, men with experience of these systems taking the opposite view—preferring the opposite system?—Not except at the Conference in Edinburgh, when Lord Dunedin put it that way.

3970. Not by those who have had practical experience in their own cases?—No.

3971. (*To Mr Lorimer.*) May I take it that you concur in the views the Bailie has put forward?—Yes.

3972. You are appointed by the Greenock Trades Council to give evidence along with him on these lines?—Yes.

3973. There are details in Mr Cross's Bill which, perhaps, you have not applied your mind to, such as the rate of allowance to be given to the landlords?—Yes, the Council had that up for consideration.

3974. What did they think about it?—They seemed to think the rates allowed by the Bill were very fair and reasonable. That was the impression our Council had.

3975. Of course what you are anxious about is the general principle, however it may be carried out in detail?—Yes.

3976. (*Sir J. Stirling-Maxwell to Mr Lemmon.*) Have you had experience at Belfast?—I have never lived there. I am speaking of what I have heard from several members of our Council who have worked there.

3977. The system is the same as the English system?—Yes.

3978. Does that form an inducement to go to Belfast?—I don't know that exactly. They go when they get work.

3979. Does the feeling influence them that if they go to Belfast, they can get rid of their houses when they want to, and come back? Are they more inclined to go to Belfast than to come from Belfast to Greenock? We have many people coming from Ireland to Greenock, but I don't know so much about the tradesman class?—There will be a great many artisans in Belfast.

3980. We have not heard of such a consideration?—When I have heard the matter discussed, it was the system that a tradesman at the end of the week knew how he stood, instead of having his rates coming up against him at a certain period.

3981. He paid his rent at the end of the week, or the month, and he was clear, and they spoke of it as an advantage?—.

3982. (*Chairman.*) Instead of a running liability?—Yes.

3983. (*Sir J. Stirling-Maxwell.*) When a man has got a lease he must get rid of, and must get a sub-tenant, what sort of a person does he find? Is it only some person who arrives in Greenock and wants a house?—Yes, or it may be someone who has been living in a smaller house, and wants your house. There are many people who, when they want to shift, instead of shifting at the time, there being only a week allowed at the end of January to take a house, wait on and see if they get a chance of a sub-let.

3984. In that case they voluntarily saddle themselves with two houses? It does not follow that they get a sub-tenant for their houses?—But they will not give up their houses until they know that they have a sub-tenant.

3985. They will have to get credit, in the end, from the outside?—Yes, they have to satisfy the landlord and factor, as well as being willing to take the house.

3986. Would there be cases, for instance, of a man marrying and wanting to settle down; would there be chances of getting a sub-tenant?—Mr Lorimer and I could speak from personal knowledge of certain people who had to do with lodgings after getting married.

3987. So that there are a certain number of sub-tenants?—Yes.

(*Mr Lorimer.*) I know of a case that occurred in Greenock, where a man refused to sign his missive within the specified time. The house was let over his head, with the result that he could not get a suitable house within his means, and he had to store his furniture, split up his family, and go into lodgings for a clear twelve months. In Greenock we are in an entirely different position from Glasgow, owing to the fact that there are not so many houses unlet in Greenock to suit the working classes.

3989. Did the case occur recently?—A year last May. He got a house to suit him.

3990. So that it is not safe to decline to sign the missive?—He was left.

(*Mr Lemmon.*) We think that has a tendency to keep up rents. I know of a case, two years ago, when a member of my Union got married and wanted a house at the end of the year. It was on to December before he got it. If he had not had a little influence with the factor he would not have got one. The factor told him he could let the house twenty times over.

(*Mr Lorimer.*) If you are going to marry in June, July, or August, you have to take a house in May.

3993. (*Sir J. Stirling-Maxwell to Mr Lorimer.*) There is more danger of being left without a house at all than there is of having two houses on your hands at once?—That is so. They only build to meet the demand.

3994. Has that raised the rents higher in proportion than they are in Glasgow? I think there are very few in Glasgow about £7?—So far as the older houses are concerned in Greenock, I am prepared to say the rent is a shade lower on the properties that are being put up. On modern dwellings the rental is nearly as high as in Glasgow, because supply and demand determine the rent, and the factor, even Mr M'Alpine, is taking as much as he can demand according to supply.

3995. (*Mr Dobbie to Mr Lemmon.*) Who is Mr M'Alpine?—A spec. builder in Greenock, he of the Holy City at Kilbowie. We in Greenock anticipated a drop in rents, say a pound; that would affect the others, and the result is that they are actually higher than one of the ordinary dwellings—£9, 15s. for a room and kitchen. But they are not built on a very modern plan, a great many tenants going up one stair, and going into a kitchen and off the kitchen into a room. There is not the usual lobby that there usually is in most artisans' houses where rooms go off the lobby. That is M'Alpine's plan. It is considered old-fashioned.

3996. (*To Mr Lorimer.*) Sir John asked you whether the practice in Belfast operated favourably for Greenock workmen. I suppose you cannot test that until you have the same practice at both ends. Going to Belfast, the local man would leave a house taken by the year at Greenock, therefore he cannot get the benefit of the rental let at Belfast, so long as he has a house taken by the year at Greenock?—As far as the housing is concerned, when a man is idle it is a secondary consideration. His job is the first thing—that is, where he gets a job, and in Greenock we can generally get rid of these houses. The advantage, so far as the let is concerned, is a question not of primary importance to the workman in Greenock.

3997. (*To Mr Lemmon.*) Has it always been so prosperous so far as the demand for houses is concerned?—For some years back.

3998. Has your Council considered the clause making the Bill optional?—I think that is its weakness, because, if

Mr Robert Lemmon and Mr W. Lorimer.
17 Dec. 1906.

the Bill is to be adopted, we think it would be better to adopt all round in the burghs.

3999. You would not give each burgh the option to adopt it or not?—I think it would be better if it were not optional.

4000. Another clause is that certain police rates and burgh rates could be compounded and paid by the factor, while other rates, poor rates and school rates, would have to be paid by the occupier. Is it the opinion of your Council that all rates up to the rent limit should be paid by the factor or house proprietor?—I think it would be better to have all paid together, and the tenant knowing what he was paying.

4001. Rather than have the poor and school rates paid direct by the tenant and the others by the factor?—I think it would be better if all were paid together.

4002. It would be better if the amount he were paying were made clear to the tenant, the amount he was paying for rates?—I think that would be better.

4003. We have had evidence saying that at present, where the factor does pay the rates, as a rule at least, the tenant just pays a slump sum?—That is the case. The factor pays the rates in Greenock, under a certain rent.

4004. And just levies a certain sum on the monthly or weekly tenant?—Of course. The sum he is allowed is very high, 25 per cent.

4005. In England we had evidence to show that there, as a rule, where rates are compounded, the tenant is simply invited to pay a fixed sum per month, no definition being drawn between rate and rent. Now, if it seemed impracticable to show exactly the proportion of payment proper to rent, and proper to rate, would it meet your difficulty if the tenant got a notice showing what in fact the rate per £ was in a particular burgh?—I think so.

4006. Does it bring home to him the fact that the rates are so much?—Yes.

4007. Leaving it to the proprietor to pay the rates, and leaving it to the tenant to pay a slump sum in lieu of rates and rent?—Yes.

4008. (*Mr Howden.*) Does Mr Lemmon see any reason why the removal term, as at 28th May, should not be abolished, and all lets made to run from the date of entry?—No.

4009. You tell us you are in favour of the abolition of the law of hypothec. Assuming that we could not get all that, would you favour an Act that would make the necessary effects of a tenant secure, say up to the length of £20, against arrestment from any source whatever—that is, tools, personal effects, and bedding?—I don't think you should be allowed to take a man's tools, to deprive him of the means of earning his livelihood—that is, the tools he works with.

4010. Also personal effects? We had evidence which went to show that that was not the law here at the present time. You don't agree with that?

4011. Would you also protect a man's home, to see that he was not left exactly bare, that he should have some stuff left, even if he were in arrears?—I think the landlord should be on the same footing as other creditors.

4012. You would give the other creditors the right to sell off a man's furniture?—Not if I could prevent it. I do not think anybody should be left stranded.

4013. Can you state the amount that you would be prepared to protect the tenant up to, Mr Lemmon, against all comers?

4014. (*Chairman.*) What would plenish a house in the barest possible way?—£20 will not go very far; but not comfort——

4015. We are not talking of comfort. That would leave him absolutely bare?—That is so.

4016. (*To Mr Lorimer.*) Do you give the same answer, Mr Lorimer?—The opinion expressed by our Council is that, in so far as the actual things necessary to the maintenance of the man and his family are concerned, the law should not have any control over it. If you take away his means of living, you leave him worse than he was before.

4017. (*Mr Dobbie.*) Also the maintenance of his health?—That is so.

4018. (*Mr Cox.*) Would you put it out of the power of a man to pawn his tools, because that happens sometimes?—He will not be a very sound man, or will be very desperate before he does that.

Mr A. Stark.

Mr Alexander Stark, called and examined.

4019. (*Chairman.*) You are the General Secretary of the Carpenters' and Joiners' Society, which extends to England, Ireland, and Scotland, with headquarters in Glasgow?—Yes.

4020. There are about 7000 members?—Yes.

4021. Where are they chiefly?—The membership is principally in Scotland.

4022. What proportion of the 7000 members will there be in Scotland?—5543 in Scotland, 1215 in England, and 121 in Ireland.

4023. How old is the Society?—Over forty-five years.

4024. What is the difference between carpenters and joiners in the trade?—There is no difference whatever. It is simply what you may say the naming by the different countries. In England the house joiner is called a carpenter. In Scotland we call them joiners all over.

4025. When referring to ships?—We always refer to joiners. The shipwright in Scotland claims the name of carpenter, but in England he is called a shipwright.

4026. Have your Society considered this matter more than once?—It has been up at different times.

4027. In your Executive Committee only, or in meetings of the Society?—At meetings of the trade in Glasgow and Edinburgh it has been spoken of at different times.

4028. What kind of number have attended any of these meetings?—In Glasgow there would be probably about one thousand members at the meeting, and in Edinburgh, probably about the half of that, 400 or 500.

4029. How many members are in Glasgow and district as compared with the rest of Scotland?—I am better to let you understand to begin with that there are two Joiners' Societies, the one the Amalgamated, and the other my own, the Associated. Altogether, in Glasgow district I reckon that there are nearly 2¾ thousand members, and in the Clyde district 3000 members. That includes both societies members.

4030. But you were talking of joiners?—Yes.

4031. What has been the conclusion in regard to the question we are considering?—The desire of my Executive and of the members in general is that the yearly tenancy of a house is bad to the general interests of the building trade. We think that if a shorter period of lets were brought about it would be more beneficial to the building trade as a whole.

4032. In the building trade, do you include the joiners also?—Yes.

4033. You say you approve generally; is there a minority who take a different view?—I cannot say I know anyone.

4034. Is there any difference of opinion as to whether the lets should be shortened to a month or to a quarter?—Well, we prefer the monthly certainly, but, at the same time, we would not object to the quarterly. Quarterly certainly would benefit us to a great extent at the present time, comparatively speaking.

4035. Just now you have got one term?—Yes, that is so, Whitsunday.

4036. In what way would it benefit the building trades?—Our opinion is that it would divide the work to a greater extent over the whole period of the year.

4037. During what period of the year have you a busy time?—The busy time is, generally speaking, from the beginning of March to the month of June.

4038. March, April, and how far into June?—Well, the slackness begins after the term day. Sometimes it extends a few days past that.

4039. The busy time lasts for a quarter of the year?—Yes, under ordinary circumstances.

4040. Do you mean, apart from being under big contracts for building hospitals, etc.?—They might extend further on in the year.

4041. But in the ordinary case?—Yes.

4042. Suppose that short lets took place, of course you would always have frosty weather and so on to deal with. To what extent would the rest of the year, the other nine months, be occupied more than it is now?—If shorter term periods were brought about, the houses, generally speaking, that are being built in the winter without any great hurry, could be gone into with more expedition, and the fact that tenants might be procured for them whenever they were finished, whereas it is at present impossible to get tenants except at Whitsunday.

4043. If work is available, there is no period of the year where all work is absolutely stopped. Indoor work goes on?—Yes.

4044. Mason work is stopped necessarily every year for a considerable period?—With frost.

4045. Absolutely?—No.

4046. What other trades would be stopped whatever their arrangements are?—Plasterers and slaters.

4047. Plumbers?—Not to the same extent.

4048. Do you find over-pressure during these three months you have mentioned?—No, not an over-pressure. Unfortunately we never get the over-pressure to that extent.

Mr A. Stark. 17 Dec. 1906.

4049. We have been told that there is an over-pressure resulting in work being scamped?—Yes, I admit all that.

4050. Does that result from over-pressure?—Yes, I must admit so; I have said in my statement that many contractors work short-handed in winter and autumn months. If work has to be finished in May it has a tendency to scamp work.

4051. Do you find also, as I see you bring out, that when a number are so busy, a number of tradesmen are tempted to flock into the large towns from the surrounding country districts? What is the result of that?—The demands for men for the time being are great, and the result is that when a number of jobs are finished, we have greater numbers of unemployed in those particular districts.

4052. Have there been communications between joiners and their employers in regard to this question at all?—No, not that I am aware of.

4053. I see you refer to communications between men and their employers about altering the time for fixing the wages. Has that any bearing on this question?—Well, I have been requested, of course, to state our grievances under the present system and our opinion as to the effect any new legislation would have, and that is the reason I put that forward. That is certainly a grievance in the present state of affairs.

4054. How would short lets remove that grievance?—It would not be so particular then as to springtime.

4055. Because the work would be spread over the year?—Yes.

4056. So that your view is that any such measure as Mr Cross's, apart from mere details, would have the effect of regulating and steadying employment to a far greater extent than at present?—Yes.

4057. Do you think that, through the benefit to your trades, incidentally, shop-keepers and other industries would also benefit?—Yes.

4058. In the way of more consumption and more slump payments?—That is so.

4059. The steadier a man is in employment, the more he can afford to pay for himself and his family?—That is so; the steadier a man is in his employment, the more he can afford to pay for extras for himself and his family.

4060. As far as you know, are the views that you have expressed applicable not merely to Glasgow and the Clyde district, but the other areas?—I am safe in saying it is quite applicable to all our large towns in Scotland.

4061. Do you yourself ever go personally among your English and Irish members?—Yes.

4062. Have you found any difference of opinion among them on the question of the letting period, or any desire in England or Ireland to adopt the Scottish system?—No, it is quite the opposite.

4063. Are there any grievances in England and Ireland which are not to be found in Scotland, different to the English and Irish system?—I am not aware of any.

4064. You are likely to have heard of them if they had existed?—I have worked in Belfast myself for some time, and found from my experience there and all round that the system is very satisfactory to the workers.

4065. Were you a lodger?—Yes.

4066. But coming in contact with men who had houses?—That is so.

4067. You did not find any grievance from that kind of insecurity of tenure?—That is so.

4068. Did you find any grievance there on account of the landlords collecting the rates as well as the rents?—No.

4069. You did not find it to be a power put into the hands of the landlord to charge more?—I cannot say that I did.

4070. What is your view of the desirability of having to separate so that the tenant should know what he is paying?—I am quite favourable to having the two paid together, but it would be necessary, in order that the tenant might know where he stands, to have them separately stated.

Mr A. Stark. 17 Dec. 1906.

4071. That is not done in England or in Ireland?—It is done in some parts of Ireland, I think.

4072. But if it is not done in England, and generally it is not, it rather seems to point to a practical difficulty in doing it?—Practically, from the factor's point of view.

4073. What rents do working joiners generally pay who are not foremen? Up to what do they go?—You get joiners in different grades of houses, a single house up to three and four-roomed.

4074. Take the man who has not a wage-earning family. How much will he pay?—The ordinary working man with one or two of a family has a room and kitchen house.

4075. What will that amount to?—It depends on the locality again. It may be rented from £10 to £15, 10s.

4076. Two rooms and a kitchen?—Will rent from £14 or £15 up to £22 or £23.

4077. What are the joiners' wages?—At the present time the ship joiner gets 8¼d. an hour.

4078. What does that come to per week?—For fifty-four hours that is 37s. 1½d.

4079. These are the Union rates?—Yes. House joiners work fifty-one hours in the summer and forty-eight to forty-two in the winter, and gets 9½d. an hour.

4080. To what extent, in these two classes, may the employment be constant all the year round? Must there be no broken time at all?—Well, in these times there are some cases. Of course there are steady men who have been long in one employment, but long jobs are very scarce.

4081. But there is nothing in the conditions of employment, as there is in the masons' case, to prevent working?—Yes, many times men working in buildings are knocked off by wet weather.

4082. (*Mr Howden.*) Do you know of any reason for maintaining the 28th of May as a removal term?—No, I fancy not.

4083. Do you see any reasons for shifting it?—Yes, many.

4084. Do you know any cases of any of your members being compelled to pay two rents owing to having to leave a certain district?—Yes.

4085. Could you cite a case?—Well, I could cite many cases. When I was appointed to my present position, three years ago, my appointment took place from the 1st October, and I had to remove from Govan to Edinburgh. When I gave up my Govan house, I had to get a tenant for it, and I got a house in Edinburgh after some difficulty. The people who took my house in Govan had also to find a tenant for their house, but I could not go further back as to what the other tenant did. That was two cases in connection with myself, where we had to find sub-tenants.

4086. (*Chairman.*) There was no net loss there?—No, but I was liable all the same. If I had not been successful in getting a tenant for a house, I would have been held liable.

4087. (*Sir J. Stirling-Maxwell.*) How did you get the tenants?—It was through an acquaintance of my own.

4088. (*Chairman.*) What is the most numerous trade? You will have more men, for instance, than the plumbers or the slaters?—I think the blacksmith and the joiner trades might have it, from this fact, that you will scarcely get a country village but what has got a joiner and a blacksmith.

4089. As compared with masons?—Well, I believe the joiners have it.

4090. You represent a very large interest in that way?—Yes.

4091. You talk of another Society; are their views similar to your own?—I am safe in saying the views I have put forward are the views of our sister Society, the Amalgamated, for this reason, that we work in joint action in all trade matters.

Mr Daniel Baird and Mr David Chalmers, called and examined.

Mr D. Baird and Mr D. Chalmers.

4092. (*Chairman to Mr Chalmers.*) You are Secretary of the Scottish National Plasterers' Association, Glasgow District?—Yes.

4093. (*To Mr Baird.*) What is your position?—General Secretary of the Scottish National Operative Plasterers.

4094. For the whole Scottish Association?—Yes.

4095. You have a large district?—Quite so.

4096. Mr Chalmers represents the Glasgow District?—Yes.

4097. What other districts have you?—Edinburgh, Aberdeen, Dundee, Kirkcaldy, Falkirk, Dunfermline,—I think altogether the country is divided into about twenty-five districts.

4098. As far as you know, are the views of the Glasgow people in any way different from the views of the people of other districts?—Speaking generally for the West of Scotland, our views are identical so far as the North of Scotland is concerned, and I believe the Edinburgh District have somewhat modified terms. They are said not to be so much affected.

4099. The question, in short, is more a pressing one for the Glasgow District?—Yes.

4100. As far as you know, are there any of your trade who take the view that there should be no change?—None whatever that I know of.

4101. Take your whole organisation just now; what is the membership?—It varies very much at the present time. It runs between 1200 and 1300. That is our Union. That does not not account for the whole of the trade.

4102. (*To Mr Chalmers.*) Of these, how many are in the Glasgow District?—At the present time there will be about 560 or 570.

4103. (*To Mr Baird.*) How old is your Association?—This is the second time our Association has been formed, and as at present formed it is something like twenty-five years old.

4104. What is the view of your Association generally on the question we are considering?—Our view, as far as the 28th of May as a uniform term day is concerned, is that it is very determintal to the interests of our trade.

4105. You take that view both as working men generally and as also speaking in the interests of your own trade?—Yes, indeed the members of the building trade suffer threefold from the present system of letting. In the first place, we suffer because of the cramming of the most of our work into a short period of the year. In the second place, we suffer as householders in the ordinary way; and, in the next place, we suffer as ratepayers, because, being residenters and ratepayers in Glasgow, and the bulk of our work being crammed into a certain period of the year, and there being a rush from the country, that deprives us of the opportunity of maintaining ourselves in the position of citizens and ratepayers.

4106. How is that rush created? Are there advertisements put into the papers at that period for additional men?—Undoubtedly.

4107. And they come from as far as where?—From the surrounding districts around Glasgow; from all parts of Scotland; from Ireland and England. They advertise in England, Ireland, and Scotland.

4108. Suppose the lets were shortened. What effect would that have?—Well, as far as the smaller houses are concerned, it would not do us any great good. It would not affect the building trade very materially, unless it applied to the whole of house property, such as warehouse property and office property.

4109. Then it would be very important?—Very important indeed.

4110. But is the term for the class of property you have mentioned as much limited to Whitsunday as it is for the working men's houses?—Just the same.

4111. But, as far as it went, you would benefit by the smaller class for what it was worth?—To a certain extent we would.

4112. Are you more interested in this thing than other departments of the building trade?—Just about equally.

4113. Your interests are identical?—Just so.

4114. Do you agree with what we heard from our two friends last in the box as to the period of busy time about three months?—Yes, I have looked over some of my returns from our large districts. I went back three years to 1904, and I found that in Glasgow we had 782 members. In August of the same year it fell to 487. In 1905, the trade was beginning to decline, and in April we had 513 members on our books; in September we had 385.

4115. What does your membership depend upon?—On their being able to pay their contributions to the Society.

4116. And if they are not able to pay, do they get out of benefit?—Yes.

4117. (*Mr Howden.*) They may go to other localities?—Yes, of course. We generally get hold of them sometime. In April this year we had 508, and in July we had 322.

4118. I suppose your trade is, owing to conditions of weather, wet and frost, to a certain extent stopped necessarily?—Our trade is stopped, of course, by frost.

4119. You say your building trade would remain normal throughout the year if the present system were abolished, but I suppose there are considerably varying periods when there is nothing doing?—Well, we are of course slacker at certain periods than others, but by different methods of going about our work, such as closing in buildings and lighting them up, we can in a measure cope with the frost when it does not become too severe. In severe frost we cannot work, but it is very rare that we have a very severe frost.

4120. That would stop you entirely?—Entirely. That is in Glasgow; in the country districts it is different.

4121. Is your trade more liable to men having to shift from one job to another than other trades?—Well, I believe it is more liable than, say, the joiners.

4122. Why?—Because our work on the job does not last so long. The joiner is the first man on the job and the last.

4123. What is the order? Is the mason first?—No. The joiner is first. He stakes off the ground and so on.

4124. Who comes next?—Then the mason; then the slater and bricklayer and plasterer and painter.

4125. When does the plumber come in?—Generally before the slater.

4126. Suppose there is a great pressure on the work, is it possible to get the proper order? Are your men rather apt to be mixed up on the job?—I have worked on a job myself in Glasgow where we had joiners, painters, plasterers, and electricians working in one office, a lawyer's office.

4127. That was because the job was hurried?—Yes.

Mr D. Baird. and Mr D. Chalmers. 17 Dec. 1906.

4128. What is the detriment?—It amounts to this. In many cases, when we arrive at a stage like that, if work can be cut out of a job, then it is done away with because a tenant does not want tradesmen to be troubling him when he is carrying on his business.

4129. Do you coincide with witnesses who said that the result of the present system is that a man going to a job in another place and leaving his wife and children in a yearly tenancy and taking lodgings elsewhere adds a serious item to his expenditure?—It does, because if it is in the winter time he may be knocked off by weather where he has gone to.

4130. Does the cost of removing often deter a man from changing his employment?—Certainly, I know that is the case.

4131. Of course it will vary infinitely?—That is so.

4132. Roughly speaking, in Glasgow, what would it cost for an ordinary man with 25s. a week to remove? It is largely done by hand, is it not?—It all depends where it is to. If he is removing from one locality to another in Glasgow, I daresay. It would cost more than that. It would not cost under £2 at least.

4133. £1?

4134. There is a lot of assistance given in cases of that kind?—There is sometimes. It is not a great deal.

4135. There are cases where there is a reason for people removing?—That is so.

4136. So that, apart from all the general interest as working men, you think you have a special interest in this question as members of the building trade?—I do.

4137. But you think the two questions don't conflict, but are the same?—That is so.

4138. You referred to your interests as ratepayers. What did you mean?—That, being citizens and ratepayers in Glasgow, we think we should not be handicapped by any interference with the course of trade. Uniform term causes the bulk of our trade to be done in a short period of the year, and in consequence we are deprived of the means of earning our living during the remainder of the year. As ratepayers we suffer. We ought to get the same benefit from the city trade as other tradesmen do.

4139. In regard to the annual collection of rates, what does the ordinary working man do? Does he bank a certain amount in view of the £5 he may have to pay in rates, or keep it in the house?—I do not think he does. I think he waits on to see what turns up, what position he is in.

4140. He may be in a position of considerable savings?—I do not think he is in that position at any time. He is not in a position to save it.

4141. Savings banks are used?—Oh yes! Taking it all over, there is a very small percentage.

4142. (*Mr Dobbie.*) Have you had emigration?—We have about five hundred who left Scotland for America this year to come back again. They are coming back just now. They went to New York principally.

4143. Is that quite a common thing?—Yes, quite.

4144. (*Mr Cox.*) Do they carry on their own trade there?—Yes.

4145. (*Sir J. Stirling-Maxwell.*) What does the journey cost them?—From £6 to £8.

4146. What do they bring home usually?—I have a son just now in New York. Since he went there last April he has sent home about £40 after keeping himself. He could not have done that working five years constantly in Glasgow.

4147. He will be a very good fellow?—Just a young man whose time was newly out.

4148. What age is he?—Twenty-two.

4149. (*Mr Dobbie.*) Do you think that one result of shorter lets would be to spread work throughout the year and make it less necessary for the emigration to take place?—Undoubtedly. Of course, if there are greater inducements as far as wages are concerned in America, I daresay they would go there still, but not so many.

4150. Can you give us any views upon details of some proposals we have had in regard, for example, to Mr Cross's Bill. Have you studied the Bill?—I have seen it, but not studied it.

4151. Tell us shortly whether you approve of £20 as the limit for short lets or not?—Well, I do not approve of the £20 as a limit, nor does my Association. We believe that there should be no uniform term at all; that the 28th of May as a uniform term should be abolished, and that houses should be taken from the day of entry to a corresponding period, according to arrangement.

4152. All houses?—All houses.

4153. Including warehouses?—With regard to smaller houses. I do not see that, so far as Mr Cross's Bill is concerned. The fourth clause, I think, deals with shorter periods in accordance with how you pay your rent. I think it is a very fair way.

Mr D. Baird and Mr D. Chalmers.
17 Dec. 1960.

4154. Your members usually pay quarterly, do they?—The majority of them, I think.

4155. That would mean, as you quite see, and it would transfer the present yearly let into a quarterly let under Mr Cross's Bill?—Well, as far as those who pay quarterly.

4156. Would that be fairly satisfactory to your members?—Yes, fairly satisfactory.

4157. In regard to the rating question, is it your view that, with compounding—that is, with burghs getting the rates from the landlord, and the landlord collecting from the tenant—that would be more satisfactory than quarterly collections by the burghs?—No, I favour the collecting by the burghs.

4158. Frequent collections?—Yes.

4159. (*Chairman.*) How often?—Quarterly, I think, would be fair, for this reason. I think that once a man loses connection with his rates, it so far lessens his interest in public affairs. The fact that he has to pay rates thrusts upon him the responsibility of a citizen. I do not think he should lose that.

4160. (*Mr Dobbie.*) Assuming the rating experts tell us that it is practically impossible to have more than one collection?—Of course that kills the argument.

4161. Then, rather than have the present condition of lets, you would acquiesce in the view that the landlord might pay the rates and collect them monthly or quarterly along with the rent?—Oh, decidedly.

4162. Beginning at May, it is said to be impossible to distinguish the actual amount of rate to be added to the rent. For example, some rates are only fixed in September, therefore it might only be an approximate amount, not the actual sum for that particular period. Would that objection be overcome if the tenant was told at the proper time what the current rate was, whether it was increased or decreased by comparison with the previous years, although the information did not enable him to find out precisely what rates he was paying to the landlord?—I daresay that would meet the difficulty.

4163. (*Mr Cox.*) Something was said about the quarterly dividends from the Co-operative Society as being useful for paying rents. Does that mean that these dividends would be sufficient to pay the quarterly rents?—No, it would be a rather large purchaser if that was the case.

Mr D. Baird and Mr D. Chalmers.
17 Dec. 1906.

4164. What do you suppose a dividend might come to?—I myself am a co-operator, and I think I run from something like £18 in the quarter in the Co-operative. Of course I don't purchase everything from the Co-operative, but I do to a great extent. You have 2s. in the £ as a rule. That is the amount. I have a fairly large family, and of course it very much depends on the size of the family.

4165. (*Mr Howden.*) Does any danger arise to workmen from being on a job to sign in connection with the rush? You have mentioned, of course, that you have known cases where various workmen were working together who were altogether unsuited to the methods. Do you know any case where that has happened?—Yes. I was working on a job at the corner of St Vincent Street, the very job that was mentioned, where there were so many tradesmen, and there was an electrician came on the job. The job not being in a condition for his work, he was not quite aware of the dangers that were besetting him on every side, such as elevator well-holes being left open—that is to say, the house was not fitted up. He ran through a door into another room and went right down through. That is a simple case of a job not being in a position for his work. Painters would have been in the same position.

4166. You attribute that to the rush and the hustle?—Yes.

4167. What is your opinion in connection with the law of hypothec?—My view of the law of hypothec is that the landlord may be in no more favoured position than any other creditors.

4168. Would you favour an Act that would protect the goods and chattels of workmen?—Yes, I think there is such an Act in America, and I would favour such an Act as that.

Mr W. Cross.

Mr William Cross, Secretary of the Amalgamated Slaters' Society of Scotland, Central Board, called and examined.

Mr W. Cross.

4169. (*Chairman.*) Where is your Central Board?—The office is in Partick; the meeting-place is 132 Trongate, Glasgow.

4170. Are you Secretary?—Yes.

4171. How long have you been Secretary?—Three years.

4172. How large is your Society?—Between 1000 and 1100.

4173. What proportion would you say would be in the Clyde District?—That takes in practically Glasgow, Greenock, and Paisley.

4174. A majority?—I believe more than half.

4175. Has your Society considered the question we are discussing?—Yes.

4176. Have they done so at meetings of the Society, or only at Committee meetings?—The Glasgow Branch had considered it at meetings of the Society.

4177. When?—Not altogether in the form of a resolution, but it has been considered, as the matter has been publicly discussed from time to time.

4178. Have they varied in their view, or always taken the same view?—Always the same.

4179. What has that been?—For the alteration of the present system. They take the view that the present system of the May term ought to be abolished.

4180. Both as workmen, and specially in the interests of their own department of the building trade?—Both from the trade point of view and as occupiers.

4181. Do you agree in the view you have heard given by other departments of the building trade, namely, the joiners and the plasterers?—That it has a deteriorating effect on the trade? Yes, most certainly.

4182. Would it affect your department equally with others?—Yes, but to a less degree, although exactly in the same manner. The members of our trade are naturally a shorter time on the building during construction, but it affects us in exactly the same fashion.

4183. There are a good many slaters outside of your Society?—Not so very many. The opinions here expressed are the opinions of the organised portion, and the unorganised portion is comparatively very small. I have spoken to a number of men, both organised and unorganised, and I have not heard an opposite opinion.

4184. What are the slaters' wages?—Ninepence an hour, with a week of fifty-one hours in the summer time, equal to £1, 18s. 3d. They are as low as 7½d. in the winter time, about 30s. a week.

4185. What will they pay in the way of rent?—The ordinary room and kitchen will be rented, according to the locality, from £10 to £16.

4186. How many did you say were in the Society?—About 1040.

4187. Roughly, how many of these will be in room and kitchen houses?—I could not give you an accurate idea, but I am safe in saying that two-thirds of them don't pay more.

4188. To what extent, in point of fact, do your men remove? Do they go to England?—Sometimes, but in the majority of cases it is a case of removing between various towns in Scotland.

4189. Do many men come from England and Ireland to your business?—Not so many, because the method of work is slightly different, and the men are not so conversant with the style, but there are cases in which they do so.

4190. We have been told that in certain trades advertisements are put into the papers, and they come from different parts. It would not apply so much to you?—It does. In our busy seasons we have known cases where the advertisements were inserted in outside newspapers for men required in Glasgow, while no advertisements were inserted in Glasgow papers.

4191. What is the result?—The result is to bring men in from the country districts where there is an extra pressure on for a short period. It naturally follows that after that work is finished there is an overplus of labour in the city so far as the particular trade is concerned.

4192. Do you find, under the present system, that builders are reluctant to start operations until such a time as will enable them to have their houses ready for the annual term?—They prefer to hold up operations until there is time to have them ready.

4193. That is not a good thing for the work or for the workers themselves?—Certainly not. We are of opinion that if we had a different system the work would naturally distribute itself over the whole year more evenly, at least there would be no incentive for any builder to withhold operations.

4194. Your trade is to some extent affected by weather, like those of plasterers and masons?—Yes, wet stops us, and frost and snow. We could work even in frost and snow, as far as new work is concerned, actual slating, we can work, but wet weather is very much against us.

4195. To what extent would you say in an ordinary year you will absolutely average—how many days?—Sometimes in the winter time you might be stopped for a com-

Mr W. Cross. 17 Dec. 1906.

plete week, almost every man. At other times, during the summer, it is a day now and again.

4196. A month in the year, on the average?—Yes, even more sometimes with a very severe winter. Conditions vary with a heavy fall of snow and frost on the top of the roofs; when snow-bound, it is a case of being entirely suspended for two or three weeks.

4197. Even if work were spread over under the proposed new system, there would be certain parts of the year when work would be stopped?—Yes.

4198. But the boom at Whitsunday would not exist as it does just now?—We don't think so.

4199. You agree, I understand, apart from your special interests, as far as the working men's interests generally are concerned, in all the views that have been expressed?—Yes.

4200. Are you in the position of other trades of being unanimous in this matter, or have you some men who take a different view?—I have not heard.

4201. How many Englishmen have you in your trade?—To my knowledge, about two, or perhaps three.

4202. Are any of your officials English?—No.

4203. Are there any on your Committee?—No.

4204. You don't agree with the view that the English view is at the bottom of the objection?—Certainly not. This is on the merits of the Scottish system.

4205. Have you had any experience yourself of actual loss from failure to get a sub-tenant?—I can scarcely give you specific cases, beyond one of a relative of my own who, living in Glasgow, had to go to Kinross in August and failed to get a sub-tenant. He had to pay the rent of the Glasgow house up to the May term.

4206. And have you known of cases where, rather than run the risk, they will not try it?—There has been a general feeling expressed on the part of our members that, when they were forced to shift to Edinburgh or Aberdeen or Dundee, if they had been able to get clear of their houses in Glasgow, they would remove all their home there.

4207. These were cases where it would have been an advantage to do so?—Yes. Of course there are exceptional cases, where a man might like to go back again, but in the majority of cases the men feel that they ought to be in a position to be at liberty to do so if they desire it.

4208. Without the risk of being liable?—Yes, for double rents.

4209. Do you take the same view as others, that it would be advisable that rates should be paid at short intervals as well as rents, whether by the landlords or direct to the rating authority?—My personal opinion is that the rates should be paid direct by the tenant.

4210. If it turned out to be practicable?—Yes.

4211. (*Mr Howden.*) What is your opinion of the law of hypothec?—It is just as it has always been. I see no reason why the house factor or landlord should be placed in a more favourable position than any other creditor.

4212. You would be in favour of the Homestead Act as expressed by Mr Baird?—Yes, most certainly.

4213. (*Chairman.*) Would that have any effect without any other legislation in producing short lets, supposing the law of hypothec were abolished? You see, Mr Provand has suggested to us that all that is needed is to abolish the law of hypothec, and the landlord would then be encouraged to favour short lets. Do you quite follow that, how the one thing would follow the other?—No, I cannot say that I have given that side of the question any consideration.

4214. (*Mr Dobbie.*) What limit would you put on any change in regard to rent? We have had various suggestions?—I do not know. Our general opinion is, as tradesmen, that it is not so much a question of limit in rent. What we would like to see, as already stated by Mr Baird, is a system that all property, even business premises, ought to be taken at any term, and the abolition of the May term altogether, so that houses, irrespective of the rental, should be at liberty to be taken at any period of the year. The matter of business premises could be fixed up by a lease, but that could take place in any month during the year.

Mr W. Cross. 17 Dec. 1906.

4215. I suppose you are in favour of all local rates, both burgh rates and poor rates, being treated in the same fashion, either with frequent collections or paid to the factor?—Yes. I am in favour of that: the whole thing being placed together. It would be apt to mislead many working men if it was otherwise.

4216. In one of the Bills, for example, the suggestion is that the burgh rates should be compounded, leaving the poor rates and the school rates as at present. Is it your opinion that all local rates should be compounded?—I think all local rates should be on the same footing, either compounding or paid by the tenant.

4217. Have you any view in regard to the fact of payment by the landlord on the enfranchising of a number of ratepayers who at present don't pay their poor rates. There are some 19,000 males in Glasgow who would have a vote, if they paid their poor rates by a certain day?—I should think that would be a benefit to the working classes. It would force these practically to take an interest in their civic affairs as they ought to do.

4218. In your view, it is desirable to put on these delinquents the responsibility of citizenship by making them pay their rates through the landlord and give them their voice in the management of public affairs?—I stated before my opinion in favour of paying the rates by the tenant himself if practicable. There is a feeling among a good many of the workers that there is a possibility that they may be charged too much, unless the separate charges are stated separately.

4219. Would it not be an objection, in your mind, to the rates being compounded and paid by the factor, that by that method 19,000 people in Glasgow alone, who at present don't pay their rates, would be forced to pay them?—It would not be an objection on my part. I would consider it beneficial.

4220. (*Sir J. Stirling-Maxwell.*) Is your chief reason for asking that rates should be paid direct, to make sure that they should not be overcharged with the rent?—That is the only reason I am thinking of at the present time.

4221. It is not also your reason that you want the ratepayers to know what they are paying and take an interest in public affairs?—Well, that is practically the chief reason why the tenant should have the right to pay for himself, so that he may understand what he is doing.

4222. That is his rent, if the rates were separately stated?—There would be no objection to that.

4223. (*Mr Dobbie.*) The great objection would be that there would be less tendency to exempt on the ground of poverty in the event of the tenant actually paying the rent monthly. He could not very well plead poverty and get money back?—I believe it would ultimately work out to the benefit of the corporations and the house factors.

4224. And detrimental to the poorer tenant?—Not exactly, because there are certain times of the year that a man might be perfectly able to pay. At other times poverty might be brought about through no cause of his own; and in cases where the rates are practically lost at the present time, there would be at least an opportunity of gaining a certain percentage.

4225. You quite realise that one result of any change in the let may be that any ratepayers, who cannot afford, under the present system, to pay, might be compelled or be able to pay without compulsion?—You practically mean that those who are free at the present time on the plea of poverty will be forced; but I don't think that naturally follows. I think that men's circumstances must always be taken into account.

4226. You admit that many people who cannot pay a slump sum and don't pay at all, would pay a factor by monthly instalments?—I believe the means would be placed within their power where they don't pay at the present time.

4227. And one result of the change would be that people would, in fact, pay under the new system, who under the present system don't pay?—That is so.

Mr Archibald Gardner.

Mr Archibald Gardner, called and examined.

Mr Archibald Gardner.

4228. (*Chairman.*) You are General Secretary of the Scottish Amalgamated Society of House and Shop Painters?—Yes.

4229. How long have you been Secretary?—Since the institution of our Society in 1898.

4230. Your Society represents over 4000 workmen in various towns in Scotland?—Yes.

4231. Where are your headquarters?—Glasgow.

4232. Do you take the same view in regard to the question of yearly lets as other members of the building trades do?—Yes, generally speaking.

4233. And for the same reasons?—Pretty much.

4234. Does the matter affect you in any way differently?—It affects us very much more than other trades.

4235. Why?—Because we are put into a season's rush for a few months in the year, in every town in Scotland, with the exception of one or two coast towns and visitors' towns, where there would be busy times quite apart from the question of lets at all; but that is only with reference to such places as Rothesay and Troon, and some of those other small places where they depend very largely on the visiting season. In these cases there always is a decided

Mr Archibald Gardner.

17 Dec. 1906.

rush from February up to the end of May, quite apart from the house-letting season.

4236. Why does it affect your trade more than others?—Because there is always more painting work done. When a tenant goes into a house there is always more done in the way of painting and papering than in the way of joinering and plastering.

4237. So it affects it much more in a new building?—Also, because we are last on the ground, and the consequence is that the tenants are often on the top of us before we get right into the building.

4238. But have you not a lot to do in the holidays with the people cleaning and so on?—Not except in very large houses.

4239. From the trade point of view, your difficulty is just that it tends to perpetuate the season trade?—Yes.

4240. How long do you put it as lasting?—Well, in Glasgow, the season begins in March, sometimes April. I have seen it the April holiday before anything was done, and before Glasgow Fair everything was wound up.

4241. When is Glasgow Fair?—In the middle of July, but the rush is sometimes over by the end of June. It all depends on what kind of season it is. It generally applies to all towns in Scotland that the Fair holidays in July or August end the season.

4242. Is your trade specially affected, like some others, more in the Clyde district than in other parts of Scotland?—No, it is affected pretty well all over Scotland, in the burghs.

4243. In Glasgow, do you find that men come from the country districts, and during the winter seasons that great numbers of them are idle?—A very large number.

4244. What percentage?—I don't think we have 20 per cent. working at the present time. Some of the towns are even worse, and some are better. In the smaller towns work gets a steadier flow; the larger cities are the worst sinners.

4245. Do you know a shop which has sixty men in the summer which has not six employed in the winter, and at the present time, in one of the largest establishments, are there only some fifty men employed, mostly at country work?—Mostly at mansion houses in the country. A fortnight ago there were only two men in that shop employed in the city. The bulk of these men employed in the country are young men, and that is one point. When the season begins there is a big rush; we get men from the country, but quite apart from that—many of the young men want experience and come into the towns, and we find that they are sent out to the country jobs with one or two of the staff to look after them. There is a big job just now, and there are only two of the staff on the job, and twenty over and above. In consequence, the older men, the citizens and ratepayers, are going about idle.

4246. Has that any connection with the weather?—No, want of work in winter seasons.

4247. You think these other conditions are conditions that would be affected by the change to short lets?—Yes, if there were quarterly lets, it would do away with one big removal term, and there might be more flittings every quarter. In one or two of our small towns there is a November term as well as a May term, and the November term always brings in a few jobs.

4248. You have a statement here, coinciding with others, that the rush is responsible for scamping of work, and that, from a sanitary point of view, this is baneful. What do you mean by that?—In connection with the smaller working men's houses in Glasgow, there are a lot of flittings. You go into a house of that kind at the May term. There is no time to clean up. It does not matter how filthy the house is, they put on the paint on the top of the filth. You paper a room, no matter what it is like. I have seen cornices and walls infested with vermin. You have no time to clean them out, and as a matter of fact, the men don't want to clean them out, and want out of the place as soon as they can get. Bugs may be running over the walls, but you stick the new paper over them as you have not even time to make a job. With a new tenant in the house and the furniture lying in the middle of the floor, you cannot get at the work properly, and a good deal of really necessary work is not done.

4249. We all know that putting on one paper on the top of another is a very bad thing from a sanitary point of view. That is not the same with paint?—Well, you are covering up the filth instead of scraping or washing off the old dirt. It used to be that we washed off the old dirt. Now we just paint it over.

4250. Is new tenement work rushed for the term?—It is:—and generally for the May term. The job has to be completed, and it is often the last minute when we get at it. In conseequence I have seen cases of work being done with one and two coats which should have received three. The builder is sometimes late in making a start, and may be kept back by the weather, but he wants it finished for the term. There was one case recently in which the work was kept back but was occupied at the May term, and now they are tearing out all the joisting for damp rot, and one of the tenants has died, for which I am inclined to blame the condition of the house.

4251. Of course, under any system, a certain number of these cases would always remain, but you think the difficulties would be greatly alleviated and lessened with a system of short lets?—Yes.

4252. And what you have referred to in the way of over-pressure resulting in inferior work; of course, even in the case of those, they are doing their very best, and giving the best work?—Yes, it is unavoidable under this system. Say you go into a room littered with furniture, where you can scarcely move, if you take too much time your employer gets at you.

4253. What are a painter's wages?—They vary from 7d. and 7½d. to 9d. per hour in Glasgow.

4254. How many hours?—Fifty-one in Glasgow. Those who are fortunate make 38s. 3d. a week in the summer season, 29s. on the average over the year, but these are men who are never idle; but often wages fall as low as £1 a week on an average.

4255. To what extent do wages vary in other parts of Scotland?—6½d. per hour is our lowest. They go from 7d. to 9d. in most towns.

4256. In regard to the rents your men pay in large towns, you have seen the list of towns for a smaller maximum. Are the rents in these towns less, for instance in Aberdeen and Dundee?—Oh yes, they are lower than in Glasgow.

4257. Are they substantially lower?—I should say so. Edinburgh, I think, is the nearest to Glasgow.

4258. But the other towns mentioned are lower? Do you include Partick and Govan as distinguished from Glasgow?—Yes.

4259. (*Sir J. Stirling-Maxwell.*) Have these irregularities of employment been increasing lately?—Things have been getting worse for a number of years back. The change has been gradual. The season has been getting shorter for the last six or seven years.

4260. Do painters make expeditions to America the same as the joiners?—No, generally our men go for good. They may come back by and by, but they have not gone merely for a trip. They move about from time to time in England and Ireland in search of work.

4261. (*Mr Howden.*) Have you made any representations to the local authorities in connection with stripping off papers from walls?—Yes, both in Glasgow and in all the branches they had that matter before them, and resolutions were passed and authorities approached.

4262. Have they not received you favourably?—No, they don't seem to think it worth while.

4263. Do you think it is dangerous to have so many different trades working together in a building?—Yes, under present conditions it is very dangerous for all to be working on top of each other.

[ADJOURNED.]

FIFTH DAY.

THURSDAY, 3RD JANUARY 1907.

At the Municipal Buildings, Glasgow.

Present:

SHERIFF CHARLES J. GUTHRIE, K.C., *Chairman.*

MR GEORGE B. ESSLEMONT.
MR THOMAS BINNIE.
MR EDWARD COX.
MR JOHN T. HOWDEN.
MR JOSEPH DOBBIE, S.S.C.

MR STAIR AGNEW GILLON, *Secretary.*

Mr J. W. Bennett.

3 Jan. 1907.

MR JOHN WALLACE BENNETT, called and examined.

Mr J. W. Bennett.

3 Jan. 1907.

4264. (*Chairman.*) You are a member of the Town Council of Greenock, and have been so since 1900?—That is so.

4265. You are one of the representatives of the third ward, which is a working class constituency?—Yes.

4266. You were Dean of Guild for the three years ending November 1906, and are now a magistrate?—That is so.

4267. What is your own business?—My business is that of an outfitter in Greenock.

4268. Was your seat contested, and did you stand for re-election to the Town Council in 1906?—Yes.

4269. And during that contest was the question of the missive system specially brought up?—That is so.

4270. And I think what is called the reform in the missive system was a special feature of your candidature?—Yes, that is so.

4271. What is meant by that expression, "reform in the missive system"?—The basis of the question was Mr Cross's Bill, which was before Parliament last year. That was being discussed, and has been discussed by the Council, and an opportunity was afforded at the election for discussing it with the constituents.

4272. Did that question embrace both short lets and the lengthened period between taking and entry, or mainly the latter?—Short lets, and also the disadvantage of the long engagement to tenants.

4273. Which seemed to bulk largest in the view of the constituents?—There were two concurrently. They regarded the long period and the responsibility as a decided objection, and they regarded the shorter lets as a cure, and they very much desired that.

4274. I suppose the lengthened let would be looked upon as aggravated by the period before the beginning of the entry?—That is so.

4275. In regard to Greenock, we were told that it depended on ships and sugar?—There are ship-building and engineering and sugar factories and other industries where they employ the ordinary working classes.

4276. Does that apply to all the wards, or are there wards in Greenock as distinguished from yours, which are not largely working class?—It applies to seven out of eight wards, and also to a part of the eighth. We are practically an industrial community.

4277. When was the question first before the Council?—About two years ago. Early last year there was a conference held in Glasgow, to which two of our members were delegated to appear.

4278. And the result of the conference was——?—I do not know.

4279. What instructions did those members get?—They were just to appear as representing Greenock on the question of the House Letting Bill, and they reported to the Council in favour of Mr Cross's Bill. I produce an excerpt from the Minutes of the Law and Finance Committee of 30th May 1906, showing what took place in the Council when that report was made. This is a copy of that.

4280. We will put that in. It comes to this that you proposed that a petition be sent by the Council in favour of Mr Cross's Bill. That was seconded, and an amendment was moved, "that with a view to obtaining further in-'formation on the subject the matter be remitted to the 'Law and Finance Committee." There were fourteen for your motion and four for the amendment, so that your motion was carried. The result was that the Town Clerk was instructed to prepare the petition and have it sent to Mr Halley Stewart, M.P., for presentation to Parliament, and also to the Secretary for Scotland and the Lord Advocate?—Yes.

4281. The amendment was not a negative to your motion, but asking for a remit to the Law and Finance Committee. In the speaking was there any direct opposition to your proposal?—There was opposition to the proposal.

4282. I mean on the merits?—Yes, there was opposition by the late Bailie Steel, who was afraid of the result of the adoption of this shorter let system. He was speaking very largely as a proprietor of property in Greenock.

4283. Are there a number of your Councillors who are proprietors of house property in Greenock?—There are several.

4284. You are here to-day to give evidence on behalf of the Corporation of Greenock. You are not a proprietor?—I am not.

4285. Give us the figures. The total number of inhabited houses in the burgh of Greenock for the year 1906-07 is 14,681?—That is right.

4286. They are let by four different periods, namely, weekly, fortnightly, quarterly, and monthly?—A portion are.

4287. What you call short lets?—Yes.

4288. The weekly being 102; fortnightly, 31; quarterly, 3; monthly, 4296; the total of the short lets being 4432. This, deducted from the total of 14,681, leaves 10,249, which are let yearly?—That is so.

4289. Are you under the provisions of the General Police Acts?—No, we are not.

4290. You have local acts?—Yes.

4291. In one of your local acts provision is made that the valuation survey books shall show the duration of let of houses, the rent of which is £8 and under?—That is so. The Local Act of 1877, the Greenock Police Act. We administer our affairs under the 1877 Act.

4292. Where the rents are above £8, the return, you say in your precis, need not show how the premises are let, whether yearly or otherwise, and, in point of fact, do they ever show it?—No. And where they let for a year they need not show.

4293. The assessor has shown the figures there as accurately as they can be made?—Yes.

4294. There may be some houses let by the month above £8 which don't appear?—No, rather this, that between £5 and £8 the responsibility for the rates is on the proprietor to the rating authority the same as they are under £5 if the premises are let for less than a year; but to avoid that responsibility in many cases premises are ostensibly let for a year, although the rentals are paid monthly or at shorter periods.

4295. Have you any notion what number of these houses there may be?—I have no further information than what I give.

4296. As to the houses in relation to the rent paid, the figures are—at £5 and under, 1158; above £5 and up to £8, 3992; above £8 and not exceeding £16, 6647; so that you have 11,797 out of the total of 14,681 which are let at £16 and under?—That is so. We have less than 3000 above £16.

4297. Tell us what that leaves for convenience, 2884?—That is right.

4298. So that, if a measure were passed affecting all

houses in Greenock under £16, it would cover the whole, with the exception of 2884?—That is so. I may say that we put this in here because in the Council we discussed the limits as put forward in Mr Cross's Bill as applied to Greenock, £16. Individually, some of us are of opinion that that limit is too low; personally, I am.

4299. What do you think it should be?—I don't think £25 would be an extreme limit.

4300. We had a suggestion from one of the Glasgow witnesses that, at all events, as an experiment to start with, it might be safe to limit the application of the Bill to £10 houses, becauses he pointed out that that would cover about 50 per cent. of the whole householders. Now, you cannot tell me how that would work out in Greenock. Suppose the limit was £8, the number of houses out of the total would be 5150. You would have a little more than one-third?—Yes, about one-third.

4301. The Corporation themselves have 256 houses; how does that come about?—Under their Improvement Scheme they erected houses when clearing out part of the town.

4302. These are rented from £5 to £15?—Yes.

4303. Do the Corporation pay rates in the same way as other proprietors with occupants at and under £8 being 130 in number, so that you have had some experience in that way?—Yes; and our experience is that the application to that Bill is an extension of that principle.

4304. In Greenock in what cases are occupiers' rates paid by owners? In all houses under £5?—Yes.

4305. Then in houses where the let is less than a year?—Where the let is less than a year and the rent is between £5 and £8.

4306. They are paid there again?—Yes.

4307. Are there any special rates, such as the water rate, where the rate is paid by owners, as in the case of some other towns?—There are a few small assessments, roads and bridges, water, and health rate, small assessments such as registration and so on, amounting to very small sums, which are responsible for a considerable loss, because we have to recover these from the occupiers, and the amounts are so small that the expense is not worth it.

4308. (*Mr Binnie.*) Are they collected separately from the others?—We have not the power for collecting them from the proprietor the same as others.

4309. (*Chairman.*) You gave us the house under £5 and then the house between £5 and £8 where the let is less than a year. Are there any other cases?—Well, in those cases where we have the power of collection between £5 and £8 from the proprietor, that power does not apply to all the rates; and the occupier's portion of such assessments as roads, health improvement, and similar assessments, are practically, if we don't get them from the proprietor, irrecoverable from the occupiers.

4310. All the other rates between £5 and £8 you recover from the owner?—Yes.

4311. What do you think, from the rating authorities' point of view, would be the effect of the passing of some measure on the general lines of Mr Cross's Bill, so far as assessments go?—Well, there is one thing we would like to make clear, that, if facilities are given for shorter lets, the responsibility must go with that to protect the rating authority. That is one thing we feel should be insisted upon, and, if any part of the Bill is adopted, the assessments clauses must be carried with it.

4312. Have you considered the two ways of managing the rates if there are shorter lets, either compounding or more frequent collections by the rating authorities?—We have considered that, and we considered the compounding of rates as the most satisfactory method.

4313. Is that on the ground of principle, or because the difficulties of more frequent collection by the rating authorities are insuperable?—There is a difficulty with the more frequent collections certainly; but we consider that the proprietor is more closely in touch with his tenant, and that to collect the rates with his rent is practically no extra trouble to him, and we consider it would be a great benefit to the rating authority, because it would reduce the number from whom our rates would be collected, and would naturally increase our security and benefit the ratepayers largely.

4314. Your view is from a practical point of view. What I mean is, I suppose, theoretically everybody should pay his rates direct to the authority, and then would know exactly what he was paying?—Well, we believe it would be a good thing for the tenants to know what they were paying as rates.

4315. And it would be a good thing if they would just pay their rates to the people who are to apply the rates, in theory?—I am not so sure about that. I think the tenants, at all events, have a desire to pay in one sum with the rent.

4316. To whom?—To the proprietor.

4317. You don't mean in one annual sum?—No, in frequent payments.

4318. But as far as the tenant is concerned, if he gets frequent payments, would it matter to him whether these frequent payments were made to the rating authorities or to the proprietor?—No.

4319. But I suppose practically, if the frequency of the payments was to be anything like monthly, it would be quite impracticable that they could be made to the rating authority?—We believe so.

4320. We have had a suggestion that the rating authority might possibly collect four times, but nobody has suggested once a month?—When we consider that the valuation books are supposed to be ready at the end of June, so that we can get the valuation made up to the end of September, it shows the work that has to be done in the offices of the Corporation; and my own opinion, and the opinion generally held amongst our people, is that it would not be a proper thing to have more frequent payments made to the rating authority than at present, but we do think that to collect from the proprietors where they have the premises let for short periods would be an advantage.

4321. You concur in the evidence that has been given by the other rating authorities on that question?—That is so.

4322. And even if in theory it were better that the rating authorities should receive the rates direct, you think even on that assumption it is not practicable?—That is my opinion.

4323. Is it your view that, so far as the tenants are concerned, it is an undoubted benefit to the working class to make frequent payments, whether it be rent or rates?—Clearly.

4324. And you concur in the evidence that has been given?—I do, certainly. I think it is a very difficult matter for a working man to save up large sums. That has in many cases been so, and it has been made more so since the application of payment of wages weekly.

4325. Is that a recent change?—Quite recent with us.

4326. What is that?—The payment of wages weekly has been insisted on by the Workmen's Unions throughout this district, and I think it will add to the difficulty of gathering large sums which may be necessary for rates and rents.

4327. Has it been a question between unions and masters?—Yes, previous to the last strike. A month or so before that there was payment of wages weekly on the Clyde as a question between masters and men.

4328. It did not lead to a strike?—No, it was arranged.

4329. It has been generally arranged with the men?—Yes.

4330. In place of what?—Fortnightly.

4331. To return to the landlords' and factors' view, they very naturally think that, if your proposal were carried out, they would have to pay a great deal in share of rates, that they would have to pay 100 per cent., which they would never recover from their tenants?—I say that they would be quite entitled to a fair commission for the collection of rates, and the Bill provides for something of the kind. The amount is a matter for arrangement between themselves. I have no knowledge of what they would lose, but it seems to me that with the more frequent payment of rents the rates would be quite as easily recovered as rents.

4332. Would it have an effect on the choice of tenants?—I think they would be very careful in their choice.

4333. In the cases you mentioned, the houses under £5, is there any allowance to the landlords there?—Yes, and also between £5 and £8.

4334. The allowance under £5 in Greenock is 25 per cent., what is it between £5 and £8?—20 per cent.

4335. Under which section?—51.

4336. Of the 1877 Act?—Yes.

These commissions I consider are altogether too large.

4337. Do you happen to know whether these have been written in from the previous Act, or whether they originated in the 1877 Act?—I am not aware of that, but this has been a provision since 1877.

4338. Has there been any agitation about it?—No.

4339. Why do you say they are too high?—I just think that one-fourth is too much for the collection of rates from their own tenants.

4340. But does it not cover three things—the trouble, the cases of loss from people failing to pay, and, third, the cause of partial and total unlets?—Only for three months. If the premises are unlet for three months they have a claim for abatement of rates.

4341. Apart from 25 per cent?—Yes. On these grounds I consider this altogether out of proportion to the responsibility they take.

4342. But you have not experience to say what could be done?—No, I only notice that it is very greatly in excess of what is proposed in this Bill.

4343. You know that where the parish rates are paid by owners they get no allowance?—I was not aware of that.

4344. Assume that that is so?—I suppose the landlord

Mr J. W. Bennett.

3 Jan. 1907.

won't lose in the end; it will just be added on to the rent?—The tenants pay all taxes.

4345. Have you considered the question which has been suggested, whether, if you are to have compounding, there should be any allowance at all, or whether the landlord should not just be allowed to adjust that in the matter of rent with the tenant?—I have not considered that closely. The only thing is that it would be an unfortunate thing for the tenants not to know what was being spent by the Corporation or the rating authority on their behalf. If they did not feel that they were paying those in addition to the rent, they would be inclined perhaps to be too extravagant in their demands.

4346. But how does the giving of an allowance to the landlord affect that question?—It depends on the allowance altogether. We, at the present time, make a considerable loss on our assessments, and I am inclined to believe that, even paying landlords for their responsibility, it would be a profit to us as a rating authority.

4347. What is the loss at present?—The loss at present is £1480 plus £788, that is, the loss of the other assessments I have referred to, namely, roads, health improvement, and land valuation; the occupier's portion of which can only be recovered from occupiers is 9·77 per cent., or £788, which altogether is £2268, or equal to 1½d. on our rates.

4348. In that calculation you have just mentioned you have illustrated the difference between the case where you can only recover from the occupiers and the case where you recover from the owners?—That is so.

4349. In the case where you recover from owners, they having their relief from the occupiers, the loss is only 3·66 per cent.?—Yes.

4350. Whereas in the case where you recover direct from the occupiers it is as much as 9·77?—Yes, that is on all these small assessments.

4351. You think that is a fair illustration of the amount to be expected if you recover the whole from the owners?—I would anticipate that we would do so at a saving of at least 1d. in the £ to the ratepayers over the town.

4352. (*Mr Esslemont.*) This 3·66 does not cover the amount of assessment collected from owners; it is the whole assessment?—The whole assessment.

4353. (*Mr Binnie.*) Practically, you lose nothing that the landlords pay?—We lose nothing where the landlords are responsible, that is so.

4354. (*Chairman.*) You simply, then, make your allowance?—Yes.

4355. Is the view you have expressed in favour of direct assessment on the proprietors in the case of all houses under £16 the view of your Council?—Yes.

4356. And the view also that it should be in all these cases arranged by means of an allowance whatever the rate may be?—Yes.

4357. Is it your view that however it may be done, whether by direct notice to the tenants or otherwise, the tenants ought to know what they are being charged in the way of rates?—That is my opinion. I think they ought to be made aware of what they are paying in taxes.

4358. Have you considered how they best could be done if the owners paid direct?—It could be done by the same methods as at present.

4359. And by the occupiers continuing to get notice?—Of what they are entitled to pay.

4360. We were told by one factor, or are to be told, that his method was, in the case of several houses, that he collected the tenants' notices of rates, they getting the notices, and then he paid them in one sum?—Yes.

4361. Do you see why the notices should not continue to be sent to the tenants?—I see no reason why the same machinery should not be continued.

4362. That would satisfy that view?—It would.

4363. Last year the number of rentals under £5 was 1125, and the rental assessed amounted to £5413. Then the rentals of £5 up to £8 was 3116, with a total rental of £18,858, or total assessable rental being £346,348. What amount of assessment was paid by people under £8? Just add those together. What rates did the people under £8 pay out of the total rates?—We are dealing with the assessable rental.

4364. What is the total assessable rental of people under £8?—£24,271.

4365. Out of a total of £346,348?—That is so.

(*Chairman to Mr Binnie.*) What percentage is that, Mr Binnie?

(*Mr Binnie.*) Seven per cent.

4366. (*Chairman to Mr Bennett.*) So that the interest in the rating question of the people in houses under £8 is about seven per cent. in relation to the whole?—Yes.

4367. You have told us the total number of houses already, 14,681. It is slightly different, because we are dealing with the calculation that goes on the Valuation Roll.

Vacant, there are, ...	333
And occupied, ...	14,576
Giving altogether, ...	14,909

4368. Just now your vacant houses are not abnormal?—No; small houses are practically not unlet at all in Greenock.

4369. What do you call small houses?—Two and three apartment houses, which are somewhat difficult to get in proper localities at the present time.

4370. Of these, 1125 were assessable for police assessment and other assessments, following its incidence, either:—(First), as at £5 or under, irrespective of how let; and (second), 3116 were assessable of £5 up to £8, inclusive of both rentals, because let for less than a year.

4371. Do you mean that you add together the 1125 as at £5 and under to the 3116, making altogether 4241?—Yes, that is the same figure as you had before.

4372. You know the question has arisen of the effect of this bill of enfranchising a certain number of people, both for municipal and parliamentary franchise, who at present are disfranchised?—Yes.

4373. Tell us about that in Greenock. In 1905–06 the number disfranchised under the Town Council Act of 1900, on account of not having paid all burgh rates, was 6945. The number of qualified municipal voters for the same year was 8528?—That is right. Taking off the starred and adding the female voters, the total strength of the burgh of that year was 8528.

4374. And nearly 7000 in addition might have had a vote but were disfranchised?—Disqualified for various reasons. Some of them were starred in the Parliamentary Roll. There is a number who, if they don't pay their poor rates, are not put on the roll at all. If they pay their poor rates, and not their burgh rates, they are disqualified for municipal purposes. The number of Parliamentary voters for 1906–07 on the roll was 7886. Of these there were disqualified for non-payment of burgh rates, 694; leaving on the Parliamentary Roll, voting for municipal purposes, 7192; the number residing seven miles beyond the burgh was 121. The number of females in the burgh was 1557, and of these there were disqualified 342, leaving 1215, making up 8528 as the total on the Municipal Roll.

4375. It is suggested that if all rates were paid by proprietors, and if proprietors don't recover the rates from the tenants, you have a number of tenants exercising a vote which they have no right to, because they won't have paid the rates in respect of which they are supposed to vote?—These are contingencies which I cannot understand, because I understand that the principle sought to be applied in Scotland is what already exists in England, and, personally, I cannot see any reason why the Scotch occupier should not have the same privilege of voting as they have in England; and some of our people who have had experience of living in England cannot understand all the trouble that is being made about this. We quite realise that if the occupiers in Greenock, who are occupiers and entitled to vote, were qualified, we would automatically increase our voting strength by at least 5000.

4376. You realise that?—Yes.

4377. You don't see why it should not?—No.

4378. You admit the case might occur that I suggest that a person would be voting although he himself had not paid in any shape his rates, because, while the landlord had paid them for him, he had not chosen to pay them to the landlord?—I could see such a contingency arising; but, if the rates were paid, the occupier is entitled to vote, I understand, according to the English system.

4379. By anybody?—Yes. The same argument might hold good if any political party were to make sure, on an election coming on, that the poor rates of their particular friends were paid before the time limit ran out.

4380. And you think the same principle would apply to the Parliamentary franchise as you have enunciated in the Municipal?—I think so.

4381. What is good for the one is good for the other?—I think so. I expect they would have the residence qualification as at present.

4382. On a general question of the present drawbacks as to having only one term of removal and the consequent overpressure of one period of the year and want of employment at others, the drawbacks to the general building trades, the high rates that have to be paid in connection with removals, the difficulty of cleaning houses, on all that general kind of evidence I understand you and the Greenock Corporation are of opinion that these were well founded complaints?—Quite a strong grievance.

4383. Do you see any other way in which that grievance can be effectively removed than by some such method as indicated in Mr Cross's Bill?—I think that is the proper

Mr J. W. Bennett.

3 Jan. 1907.

Mr J. W. Bennett.
3 Jan. 1907.

method, to abolish the 28th of May and have the 28th of any month as the term of occupancy.

4384. Then it comes to this, that you practically go in for a monthly let?—In principle, yes. If they choose to have their rents quarterly, then, of course, according to the terms of the Bill, it is a quarterly let.

4385. Do you realise that the effect of the Bill would necessarily be to kill yearly lets, because there are no rents paid yearly under £20?—Yes, I realise that.

4386. And substantially would kill half-yearly lets, because there seem to be very few cases?—Yes.

4387. So that it would reduce the lets to quarterly and under.

4388. If that be so, wouldn't it be more straightforward for the Bill to say so rather than to approximate the period of let to the period of payment—to say that there shall be no lets longer than a quarter?—Does it make any difference if they do put it that way; if they determine the period for payment of rent to be the period of occupancy or let.

4389. Does it make any difference in the appearance of freedom of contract?—Yes. Of course, the object of the Bill is to abolish the missive system. It does not hide that, and it determines starting from the point, that if a proprietor is going to let his premises to a tenant, and wanting the rent paid quarterly or half-yearly, then that is the duration of let.

4390. Do you yourself have any knowledge or any reason to suppose that, assuming the short let system works well in England, it would not work well in Scotland?—I have no reason to think so.

4391. You don't know any question of difference in conditions in employment?—I don't, especially in industrial communities.

4391*a*. Or the question of how there is a difference between England and Scotland, because in England they have no short-let Bill?—I have no knowledge of that.

4392. You are £16 under Mr Cross's Bill?—Yes.

4393. Do you see any reason for that?—No, I think it is too low.

4394. Do you see any reason for differentiating between you and Glasgow?—No, our rents are quite as high as they are in Glasgow, especially the modern houses.

4395. Whatever rules the one should rule the other?—Yes, if you are going to legislate for the benefit of working men, you are legislating for them as a class; and when their families become wage-earners, and are grown to manhood and womanhood, they want more accommodation, and naturally seek more extensive houses, and my impression is that £25 would not be an extreme limit.

4396. It has been put to us that the ordinary working man, as distinguished from the foreman, without a wage-earning family, is substantially in houses of under £20, but that the ordinary working man who has a wage-earning family may quite well be in a house up to £25 or £30. Do you see any reason why, because he has a wage-earning family, he should not have the same benefits as one who has no wage-earning family?—No; naturally we discussed the limits under the scope of this Bill, but as individuals we thought the limit was too low.

4397. What do you say to Mr Henry's views, already referred to, that Parliament, having already up to £10, sanctioned the principle in the water rate of owners paying the rates, but not having gone beyond that, it might be a fair experiment, as a start at all events, to limit the application to £10 and see how it worked?—Personally, it might be a very good experiment to make, but I don't think it should be limited to £10. If you are going to face the question at all, you should face the question as to workmen occuping dwellings suitable to their requirements. You should rather make it £25, and see how that worked, and it might be raised to something higher afterwards.

4398. It has been put to us that there are workmen who value the long let because of the security of tenure which it involves. What is your view, whether that security of tenure is really needed in the case of respectable working men?—I don't think so. I don't think anyone has anything to fear, or will suffer any inconvenience, if he discharges the obligations he takes upon himself and lives respectably, he will have his house as long as he wishes to have it. The proprietors don't wish frequent removals, I am sure, and this is with the object of giving workmen the privilege of moving when necessity arises.

4399. You think that a tenant can fairly trust to a state of matters continuing which it is in the landlord's interest should continue?—I think so.

4400. What do you say to the other objection that tenants who are yearly have had to step down socially to be classed as short let tenants?—I think it is altogether sentiment.

4401. It exists, however?—Yes.

4402. But would that exist if short lets became universal?—I don't think so.

4403. It is the present contrast?—They might feel the change, but I think it is entirely sentimental.

4404. You have a word to say on the very important question about the optional clause. I see you are against that?—I think that is its weakness.

4405. Why?—Because if it is made optional in its application, the Bill will not provide the remedy it seeks to provide, unless it is adopted pretty generally in the industrial centres. Particularly it will not give the benefit to the working classes which it means to give them, freedom of contract, and, unless it was made general, some curious results regarding the franchise might follow.

4406. As for instance?—Supposing, for example, it was objected in Glasgow and not in Greenock, or in Greenock and not in Glasgow, it automatically increases our voting strength by about 5000, and, if it was not adopted in Glasgow, the parties would have to conform to the present method.

4407. Supposing you limited it to industrial burghs. There seems a good deal to say in favour of a small residential burgh like Rothesay, or these places where the people take houses for the whole summer. Would there not be a great difficulty there?—I know there have been arguments used in that way, but I do not see the difficulty, because Glasgow people who have houses in Rothesay are not going to take them for two or three months and store their furniture; for the rest of the year besides, you have coast towns in England, such as Blackpool, where the same rule applies as over the whole of England.

4408. And where, so far as you know, the difficulty is not felt?—It is not felt.

4409. That probably is a true answer, if there is an answer to the argument that in England the same difficulty applies and is not felt?—I don't think it is felt to be a difficulty. There may be a fear on the part of parties of the Clyde watering place, that it is going to interfere with their rents—I regard it only as a fear.

4410. Say I want a certain house, I am not going to turn out at the end of six months if I take a house at Rothesay?—But if you took the house at Rothesay in the usual way, and you were in the position that you wanted to keep it, you would take it not for six months, but take it with the intention of remaining there right through the year, and the proprietors would get to realise who their friends were, as at present, and they would shut up the house during winter. Do you mean to say that you were going to take a house for the summer time only, with a lot of furnishing to be done? It is a most unusual experience. They would naturally want a much higher rent for the summer months, if that was the effect the Bill was going to have on them.

4411. You think that, just as in the case of the working men, the interest of the landlord would not be to disturb such tenancies, even although he had the right of terminating them?—That is so, and, of course, I could realise the greater benefit to any burghs and towns where workmen are employed in large numbers. In the other it is quite a small matter, but I do not see the difficulty that has been put forward.

4412. (*Mr Esslemont.*) Under this Local Act of 1877, you say in your precis that the Council has power to assess landlords of houses let at and under £5 direct, and has also power to access the landlords in place of the tenants where the rental is £5 to £8 inclusive?—That is so.

4413. Do you impose all assessments on the landlords in cases of the rents from £5 to £8?—We do; but, as I have indicated, that does not apply to the power of recovery by landlords of occupier's rates.

4414. I know you qualify it; but you go on to say, "and the premises are let for less than a year?"—Yes, that is a condition.

4415. You said that you thought 25 per cent. was too great an allowance?—That is my opinion.

4416. Too large a discount to give to landlords for the expense and risk of collection?—Yes.

4417. You have not submitted any detail showing the amount outstanding as, say, any excess of rents up to £10, £15, and £20?—I have not.

4418. We had evidence from Glasgow to the effect that the shrinkage was more than 25 per cent. on small houses under £10?—Of course, we have no table to show under £5 or under £8 where the landlord has accepted the responsibility, because they, and they alone, can give us that information. We lose nothing.

4419. No; but if you knew exactly the amount of loss incurred by the Corporation in the cases of houses let at £10 or £8 and under, or whatever it is over the whole burgh, you will be better able to judge whether 25 per cent. was a reasonable allowance or not?—But we are not in the position to realise any of the loss made, because the proprietors are responsible up to £8, where the premises are let for less than a year, and we regard this proposal for reform just as an extension of that same principle to a larger amount.

Mr J. W. Bennett. 3 Jan. 1907.

4420. I follow that?—You see, the proprietors will see what they lose; I don't. We get all the money for premises let for less than a year.

4421. (*Mr Binnie.*) You have, as a Corporation, 256 houses of your own. How do you let these?—I have not got the numbers as to how they are let, but they are mostly let monthly.

4422. You don't know how many?—Well, there are 130 mentioned here on which we pay the rates. Those 130 are let under £8 and for periods of less than a year.

4423. But above that?—There is a difference between the 130 and the total number.

4424. How are they let?—They will be let for a year.

4425. Why, when you were so anxious for short lets?—We just follow the principle of other proprietors in towns.

4426. But you were showing the lead in this case and should show an example, I think?—We wish to support a measure that proposes a reform.

4427. You can do that yourself without the Bill?—It has never yet been proposed.

4428. But if it had been a very pressing question—I am just wishing to know how pressing the question has been—why you, as a Corporation, have not introduced the letting of these houses for short periods, when you could have done so any day?—We have not gone out of our way to make any alteration on the existing principle of letting of houses.

4429. Although you had power to do so?—Yes, but we have done it under £8.

4430. (*Chairman.*) Have you selected tenants in any way like Glasgow Corporation?—Our factor just exercises the greatest possible discretion.

4431. You have no caretakers?—No.

4432. (*Mr Howden.*) What is the difference between the valuation of a house, say in 1886 and 1896? Probably your memory does not take you so far back, but so far back as you can go, what is the difference?—I do not quite understand you; what do you mean by valuation?

4433. A house is rented at the present time at £10. As far back as you can go, what do you think it would be rented for?—I could not say. I consider there has been a considerable appreciation in the rental of houses within the last twenty or thirty years, but as to what proportion I am not prepared to say.

4434. How much freedom of contract do tenants at the present time enjoy in Scotland in taking their houses?—Do you mean under the missive system?

4435. Yes?—It is very limited. They are compelled to sigh or run the risk of losing their houses. It is considered a very great hardship on the tenants.

4436. You say in your precis that the whole town required a remedy proposed in the Bill, with the exception of a small portion of the 8th ward?—I pointed out that there are only some 2000 odd houses over the £16 rental in Greenock, and that is the meaning of that phrase.

4437. You have told us that you were in favour of abolition of 28th May as Removal Term. Do you apply that all over—business premises also included?—I am quite prepared to do that.

4438. What is the rent at present usually charged for a three apartment house in Greenock?—It very much depends on the locality. Two room and kitchen houses in some localities are considerably under £20 and others over £20.

Mr J. W. Bennett. 3 Jan. 1907.

4439. (*Chairman.*) From what Mr Howden asks, if £5 was the rate fixed that the owners were to pay in 1877, and if that principle were sound, probably it would be nearer £7 now?—I see; I did not understand the drift of his remark, but I understand there has be an appreciation in the value of house property in that time, and I have not been able to discover the history of the making of owners responsible for the small amounts.

4440. (*Mr Binnie.*) There is a double risk for the tenants in rent in Greenock as in other places, newer houses are much better class, larger apartments, higher ceilings, and different sanitary arrangements?—Undoubtedly you have insisted upon legislation in many directions that has increased the cost of property, and the feu duties are also higher and streets are wider, a great many restrictions have gone to increase the cost.

4441. The houses are better?—Yes.

4442. If that were a two room and kitchen house, let at £20 now, is it not quite a different house from the two room and kitchen house let at, say, £15, twenty years ago? That is so.

4443. (*Mr Howden.*) But is it not the same class of tenant that occupies the one as the other?—That is so.

4444. (*Mr Dobbie.*) With reference to the houses belonging to the Corporation of Greenock, they are let yearly?—Over £8.

4445. Is that in consequence of the fact that there is no universal system of short letting in the burgh?—That is so. We follow the custom of house letting.

4446. If you or any proprietor did go in for short lets in the absence of a larger custom, your tenants would be unable between terms to get the necessary accommodation?—If shorter lets were gone in for, we would adopt it.

4447. But pending a general change, your tenants would be inconvenienced if you did go in for short lets?—Surely, because they would have no facilities for removing.

4448. (*Mr Binnie.*) They could continue to sit in their present house till they got another to suit them; that would not be inconvenience?—If they wished to remove, they would be, because, if you adopt this Bill for example in one town, and not in another, the fact of your having adopted the Bill in Greenock, giving the operatives the privilege of shorter lets there, is not going to benefit them, unless they can get the benefits in the town they are going to remove to.

4449. How? Are they to be put into a worse position than they are? That is the meaning of inconvenience?—What I understand is that the inconvenience would be being compelled to remain where they are, because of not being able to procure accommodation where they were going.

4450. That might be?—That is what I mean.

4451. (*Mr Esslemont.*) They would have all the other benefits of paying their rent in instalments?—That is so.

4452. Along with their rates?—Yes. I consider that would be a great benefit to them, although it might be considered by them a hardship to begin with.

Mr J. W. Hodgson.

Mr J. W. Hodgson, called and examined.

Mr J. W Hodgson

4453. (*Chairman.*) You appear representing the Independent Labour Party, Kingston Branch?—Yes.

4454. You yourself live in Glasgow?—Yes.

4455. When did Kingston Branch originate?—About 20 months ago.

4456. Are your members all skilled workmen?—Not all.

4457. Both skilled and unskilled?—Yes.

4458. You have about 80 members altogether?—Yes.

4459. And you considered the matter, and it was your unanimous opinion that there should be a change in the present house letting system. What do you consider that change would amount to?—It would abolish the missive system entirely and assimilate the Scotch system to the English system.

4460. Have you yourself an experience of the English system?—Yes, all my life.

4461. To what extent are your members Englishmen? How many Englishmen have you among your ranks?—Two.

4462. It has been suggested that the movement in favour of a change has been originated by Englishmen rather than Scotch. What do you say to that?—Probably.

4463. Have you found that, in addition to English working men in Scotland, there have been Scotch working men who have gone to England and have returned to Scotland, and known the two systems?—Yes, I have found them; and if you took a plebiscite of the men who have lived across the Border and come back, you would find them entirely in favour of the English system.

4464. You know a number of such men?—Yes.

4465. You say that they have had a chance of trying both systems. They are all in favour of the English system?—Yes.

4466. Does that apply both to the question of short lets and to the paying of rates along with the rents?—Yes.

4467. Do you not find some men, who, while they approved of the short lets, would rather pay their rates direct?—No, I have not found them.

4468. Have you ever heard of complaints that in England the landlords are apt to put too much on to the rents to cover the rates?—I have heard murmurs in that direction; but, at the same time, the tenants, by reading the returns of the Council, know what rate has been assessed.

4469. They know the rate per £, and can calculate it for themselves?—Yes.

4470. But in England we are told they don't get a note showing what their rates will be?—No, they don't get the note.

4471. Do you think it would be an advantage if they did get a note and see exactly what they were paying?—Yes, I fancy it would be an advantage in that way.

4472. We are told that while there are working men in favour of this change, like members of your Independent Labour Party, there are a very large number who want no change?—No.

Mr J. W. Hodgson.
3 Jan. 1907.

4473. Have you come in contact with working men outside of your own branch?—Yes. I am in works containing 800 hands, men in every department, and I have talked to several of them, and the opinion is always the same.

4474. What are you yourself?—I am clerk in the works.

4475. Have you any reason to believe that their opinion is different from any other working men in similar works?—No, I fancy it is the general opinion.

4476. In regard to the rate at present, the rate is paid once a year and rents are paid frequently?—Yes.

4477. Is it your experience that there is a practical difficulty with working men having to pay the whole rate at once?—I find the difficulty myself, and I am a little over the average.

4478. Is it the difficulty of laying by periodically?—Of laying by, and having such a large sum to pay at one time. If they were paid with the rents they would pay the rates more readily, and would not feel it to the same extent.

4479. And the more frequently the better?—Yes.

4480. It would not matter to the working man if he had frequent payment of rates by experiments whether it was to the landlord or to the rating authority?—No, but I find the fewer persons you can get working men to pay to the better it is. Instead of paying to all the different collectors and the landlord, if there were less collectors, it would be better for the working men.

4481. If he made just the one payment?—Yes.

4482. In point of practice, how do the working men pay their rates? They go up to the office, do they?—Yes.

4483. Who does it, the wife generally?—Yes.

4484. May she sometimes have to go a considerable distance?—A 1d. tramfare, say.

4485. If she goes when everybody else is going she may have to wait some time?—Yes.

4486. If everything was paid to the one man in the tenant's own house at frequent intervals, it would be a very substantial benefit?—It would.

4487. What about the amount of rent that the ordinary working man, as distinct from the foreman, pays in your experience. The limit fixed by Mr Cross's Bill is £20; what do you say to that as representing the highest rent of an ordinary working man's house?—I don't think more than £15.

4488. You think £15 is about the ordinary?—Yes.

4489. If a man has wage-earning children, he may be in a higher house?—That is true.

4490. And able to pay?—Yes.

4491 (*Mr Cox.*) You are an Englishman?—Yes.

4492. Where do you come from?—Oldham.

4493. Have you been in many places in England?—Accrington, that is all. I have not lived in many towns; but, of course, when you are working in Lancashire in various towns you can easily get home.

4494. What do you say about the various rents in Scotland as compared with England?—They are higher here.

4495. Much higher?—In England I had a six-roomed house, self-contained. Including the rent, rates, everything but gas, water and poor rate and burgh rate were included. I paid 7s. a week, which I paid weekly. Here I have a two-roomed house, which I pay £21 a year for, and the rates besides.

4496. How do you account for there being higher rents here?—I do not know; I have been making some inquiry about the ground rent, and in a general way I am told the ground rent is much higher, but I believe it is only higher where there are tenement dwellings. In villa property I believe the ground rent outside the city is somewhat similar to that in England.

4497. Are they better built houses here as compared with England. Are they mostly of brick there?—The finished appearance is better; but really I do not think the buildings themselves are any better. Of course, an outside wall of stone looks better than an outside wall of brick, but the inside is somewhat similar. I do not think the plaster work and that sort of thing is any better.

4498. Are they not less draughty and warmer here than in England?—It is colder here, in fact, as I think the closes make them draughtier.

4499. What is your experience as to the rates in England as compared with Scotch rates?—Of course, we are assessed on two-thirds of the rent, not on the full rent, which would be 4s. in the £ instead of 6s. in the £ of two-thirds, and I think the rates in Oldham are somewhat similar to the rates in Glasgow.

4500. That is allowing for an abatement of rent; the rates are about the same?—Yes, the rents here are slightly higher and the difference makes the rates lower, but in the £ they are about the same.

4501. (*Mr Binnie.*) What is the size of the apartments in this six-apartment house? Are they not small?—No, I could put two beds into the bedroom very comfortably.

4502. Can you give us the size of the house over all?—About 75 square yards. That is absolutely absorbed independent of the yard and the front.

4503. What is the thickness of the walls?—Nine inches.

4504. And the height of the ceilings?—9 or 10 feet.

4505. So much as that?—Yes; somewhere about that. I will not say 10; 9 or 10; 9 feet I feel certain.

4506. I think that would be it?—Yes, 10 is rather high.

4507. And brick walls?—Yes.

4508. They are all wooden stairs?—Yes.

4509. Is there no deafening in any of the floors?—No.

4510. (*Mr Cox.*) Is this rent you speak of quite a common one? Can you easily get a six-roomed house for 7s. a week, or is that one you speak of an exception?—No; it was not exceptional. Next to me there were four more at 2d. a week less. 7s. and 7s. 6d. a week down to 3s. 9d. you can get good houses, and you can get them even cheaper in other localities.

4511. (*Chairman.*) How many years have you been here?—Three years.

4512. Some people say that if short lets were introduced in Scotland there would be many more removals during the year. Other people say the total number of removals would not be increased, but they would be spread more over the year. In your experience are there more removals in England under ordinary circumstances, or are they spread over the year?—I should think that there are less removals in the Lancashire towns than in Glasgow.

4513. How do you account for that?—I daresay one thing is that the work is not so changeable in Lancashire; situations in the cotton towns are pretty stationary. If you get out of work in one town you get into another and you have no need to remove.

4514. So you think short lets would be more desirable here than in Lancashire?—Yes.

4515. (*Mr Dobbie.*) Did you pay any sum in name of rates and in name of rent, or just a fixed sum?—It was a fixed sum paid to the landlord, and he paid all the rates with the exception of gas.

4516. Did you know from week to week, or from year to year, how much you were paying for rates?—In my case I did, because the rates came to me, although it was not the usual thing. I handed it to the landlord.

4517. What was the usual practice?—To send it direct to the landlord.

4518. Each rate?—Yes.

4519. How does he allocate the rate?—The houses were let at so much per week, say 5s. 3d. for an ordinary workman's dwelling, and 5s. 10d. for five rooms, three down and two up.

4520. Did that rent vary with the increase or decrease of the local rates?—The increase or decrease did not alter the rent.

4521. They did not affect the sum you paid?—No.

4522. Do you think it is a wise principle that working men should pay a slump sum and have no means of knowing how much they pay to Municipal government, for example?—I think the idea of sending out each rate to each individual person, and the landlord collecting the rates from the tenant and paying them afterwards, would inform the tenant of what portion he was paying.

4523. The difficulty is, on taking a house to expect you to bargain with the landlord at a fixed sum per week?—Yes.

4524. At that time the year's assessments were not positively fixed, and he could not have the actual allowance of rates on each house when he made the bargain?—That is so.

4525. Has the landlord to take the risk of the rates which he estimates either being increased or decreased during the currency of the year of occupancy?—Yes. Besides, he gets 25 per cent. of reduction if paid before a certain time.

4526. But do you think that it would be expedient, if that were possible, to acquaint each ratepayer with the amount he is paying in name of rates as distinguished from the amount of rent proper?—Yes, I think that would be proper.

Mr J. W. Hodgson.
3 Jan. 1907.

Mr Henry S. Keith.

3 Jan. 1907.

HENRY S. KEITH, called and examined.

Mr Henry S. Keith.

3 Jan. 1907.

4527. (*Chairman.*) You are Provost of the burgh of Hamilton?—I am.

4528. How long have you been so?—For nearly seven years.

4529. What is your own business?—I am a Wholesale Grocer and Wine Merchant.

4530. In Hamilton?—Yes.

4531. Your population is 37,000, and contains many workmen's houses, which will be affected by the proposed Bill?—Yes.

4532. What is the general industry in Hamilton?—Mining.

4533. Anything else?—There is no general industry other than mining.

4534. When was Mr Cross's Bill before your Council?—In June and December of last year.

4535. And, apart from certain specialities, you approve of the general lines of it?—As regards the abolition of the missive system we approve of that, and as regards Clause 4, dealing with short lets, we approve of that; but we disapprove of other points.

4536. By the missive system you mean the taking of a house so long ahead of entry?—Yes.

4537. Now, just take it in regard to Clause 3 The definition of dwellings, and the rate in reference to different towns, what do you suggest about that?—We suggested that there should be no differentiation at all. That whatever the Act is, it ought to deal with general principles under these and be applicable to the whole of the country.

4538. Do you think it should be limited to burghs?—No, I think not on the question of house tenure, because there are now a large number of urban areas under County Councils, and it would be absolutely necessary that any alteration in the system of house-letting should be equally applicable to those urban areas which are outside the burghs. In fact, much more necessary, because there is a continuous interflow of population between the burgh and the outskirts.

4539. If there was any alteration with regard to burghs, is it the view of your Council that there should be no differentiation between burghs?—No.

4540. Now, supposing there was any differentiation, which class do you think Hamilton—which is not named—would come under?—The second class, £16.

4541. In with Aberdeen, Dundee, etc.?—Yes, Govan and so on.

4542. Are rents lower than in Edinburgh or Glasgow?—I think that might be expected.

4543. Under Clause 7, the clause dealing with the exceptions from provisions of the Act, the first sentence runs thus: "This Act shall not apply to any dwelling-'house which is let along with land for agricultural pur-'poses, or with a fruit or vegetable garden, nor to any 'dwelling-house let in connection with a shop, workhouse, 'stable, byre, or the like." Do you suggest any addition there?—Yes. "Nor shall it apply to houses in the occu-'pancy of employees of any owner or leaseholder of house 'property."

4544. Why do you propose that?—In our district there are a large number of properties owned by mine-owners, occupied by their employees, and we consider, in these circumstances, if they are to be dealt with at all, that they should be dealt with by separate legislation.

4545. In the direction of giving security of tenure?—Yes.

4546. Whatever the nominal let may be?—Not necessarily; you would probably have to come under general statute; and what we pointed out was that this Bill would really bring them under a form of tenure which would not be a secure tenure, and that it would make statutory what they at the present time complain of as a grievance, because it is a voluntary tenure.

4547. Of course, there is no provision in the Bill as drafted against contracting out?—No; but I expect they themselves would not like to be put into a position of having to contract out, because they would regard it as a compulsitor to contract out. I fancy you will get evidence from the miners' representatives themselves; and while they, as we, wish short lets, we at the same time wish not to be in a peculiar position, especially during strikes or labour disputes.

4548. You think that is reasonable?—I would not like to express an opinion as to whether they should have security of tenure during a strike; but at the present time, of course, they have not that. Whatever is the law, I am afraid, would have to apply all round.

4549. That is a separate question?—Yes, and that is the reason why—a large and difficult question—houses which are held under that tenure should not be covered by this Bill.

4550. So that, as you say, not to make statutory what at present is a merely voluntary difficulty?—Yes.

4551. In regard to Section 10, which is the optional section, what do you say about that?—We say any Act dealing with house tenure should not be optional.

4552. Why not?—Because it would be entirely against the public interest that there should be one system of house tenure in one burgh and a different system in a neighbouring burgh or in the outskirts of it.

4553. We are familiar with the Burgh Police Act, and, on the other hand, it contains optional clauses?—That is, optional as regards application; but I think, on the whole, that is a wrong principle, if it could be possibly avoided. If it cannot be avoided, it should be minimised.

4554. What do you say to what we were told by Bailie Bennett about such cases as Rothesay?—I don't think the difficulty you suggested there really exists. If you wish to take a house for three months, why shouldn't you? I don't see that that should be altered. You are taking it as a lodging; it is not a question of house tenure, but a question of furnished lodgings.

4555. (*Mr Binnie.*) But people there early in the year take their houses for, say, August?—You are dealing with the missive system.

4556. No; people who intend to go to the coast don't go down just a few days before their holidays and take their houses, but very often they go in April or March even, and take a house for August and September. What security would the person letting them have, that he would be able to give them the house in August or September, that is the difficulty?—It seems to me that no person who has furnished lodgings for August and September, and lets them, is going to let them to any other body.

4557. No; but the landlord could come to that person at any time and put them out?—Yes. Very well, I suggest that there should be security of tenure for six months at least; that instead of having statutory annual lets which are statutory under custom, that is to say, under a system of house-letting, if you take a house in May you are held to it for a year—that that should be limited to six months.

4558. You object to the three months?—I say there should be security of tenure for the occupant for at least six months, and that might meet the case.

4559. (*Chairman.*) To sum up your views under Clause 10, if that clause was retained contrary to your view, you have an observation to make on the passage that says: "Such resolutions shall be reported to the Sheriff of the 'county in which such burgh is situated in the case of the 'city of Glasgow, in the County of Lanark, who shall pro-'nounce a deliverance thereon, declaring such section or 'sections of this Act specified in the resolution to have 'been adopted, and shall cause such resolution and deliver-'ance to be recorded in the Sheriff Court books." That seems to give no option to the Sheriff, but simply record the decision?—Yes, but it compels everyone to go to the Sheriff of the county. We suggest an amendment which would leave it to the Sheriff-Substitute. Take our own district. We have a Sheriff Court in Hamilton. Under this Bill we would require to go to Glasgow and register it with Sheriff Guthrie. Airdrie is in the same position.

4560. Then, lastly, to sum up your views on details, you propose to omit the schedule containing different rates of compounding, and you will explain immediately the views on which you go?—Yes.

4561. In your view, can a measure be passed, such as is proposed by Mr Cross, without affecting certain other statutes?—No, it is not possible. There are a large number of statutes that cluster round the question of house tenure, and these would all have to be amended consequently.

4562. In the first place, I see you point out the question under the Sheriff Courts Act, 1 & 2 Vict. cap. 119?—Yes.

4563. You point out that, with reference to complaints of ejection during disputes between employers and employees?—It is that section which gives the powers so frequently put into operation, and which are the cause of grievance in our district.

4564. You point out that the proposal of Mr Cross does not modify in any way the difficulties that are said to arise?—No, on the contrary that it accentuates these difficulties.

4565. Instead of Mr Cross's proposal for assimilating the period of let to the period of payment, what view do you present of the statutory period of let for urban subjects?—That failing a lease, instead of being yearly, as is usual from May to May, it should be half-yearly from May to November, and from November to May, subject to the provisions of Clause 4 of Mr Cross's Bill, which would require amendment accordingly by the addition of the words—I

Mr Henry S. Keith.

3 Jan. 1907.

have further considered that, and I would suggest that Clause 4 should read: "The term of let for any dwelling-'house of which the rent is payable more frequently than 'quarterly shall be the term fixed for the periodic payment 'of the rent thereof, whether such terms of payment be 'weekly, fortnightly, monthly, or otherwise."

4566. The result would be to make a maximum let of what?—Six months. That is dealing with dwelling-houses under £20. We are taking £20 as a basis.

4567. In the case of a house under £20, to prevent a let for longer than six months?—Yes, except under special contract. If two parties agree, whether this house is to be taken for twelve months or two years, I don't see we can limit the right of contract, but I am assuming no special contract is being entered into, and therefore the custom of house tenure would come to be a six-monthly custom.

4568. If it were proposed to add to Mr Cross's Bill a clause prohibiting contracting out, would you object to that?—Yes, in so far as it would be a compulsitor on a working man who does not wish to contract out but wishes to get all the benefits of the Bill. We wish to protect the position of the working man householder.

4569. If you protect the position of the working man, would you only give the option to him. Wouldn't you equally be enabling a landlord to secure a yearly lease, the working man wanting a monthly?—If the working man wants a monthly let, I say the law must provide that he shall get it, and under no circumstances has he to be deprived of his right to get a monthly let if he wishes it.

4570. I don't quite follow that. Suppose you don't have in a Bill, such as Mr Cross's, a clause against contracting out, things would just remain as they are. The landlord would say, I only give you this house, provided you take it for a year, and you must contract out of the Bill by an express contract. That would leave things as they are?—Oh, certainly. If that ought to be avoided, and if that could only be done by a clause prohibiting contracting out, such a clause would be necessary.

4571. Do you think working men have a substantial interest to have short lets against yearly lets under £20?—Undoubtedly.

4572. You agree with the general evidence given as to the grievance of the present system?—There are grievances.

4573. Suppose the maximum were six months, do you think this grievance would be substantially modified?—It would be. I propose that security of tenure to the working man should be six months security; but that under the provisions of the Bill, if it is necessary for him to leave, by having the house for a month he will have that option, but the landlord cannot put him out except on three definite grounds:—(1) That he is not paying his rent monthly; (2) that he is damaging the property; (3) that the obligation, whatever it is, that he enters into, is not being observed.

4574. That would give an absolute right to the working man to remove at a month's notice, but only modifies the right of the landlord to put him out?—Yes.

4575. The three conditions being—failure to pay the rent, failure to fulfil the conditions of the let, or abuse of the property?—Yes.

4576. What about the length of the period between the taking of a house and the entry?—That is the missive system. I say that may be got over by materially reducing the period within which it is lawful to exact a missive of let. I suggested, in the case of houses let for six months or more, it should be lawful to exact a missive within forty days of the removal terms. I say removal terms, because I say again, if we make this statutory, they could avoid it by adopting the Candlemas and Lammas terms, so we say removal terms, "whatever they may be."

4577. How early in the year are missives signed?—As early as 2nd February in some cases.

4578. You suggest that section 4 should be modified to read "in all cases in which warning is required." That would be before any term?—Yes, before the term of removal.

4579. From premises let for six months or more such warning shall be given at least forty days before the term of removal?—I find it necessary to modify that. I say at least thirty days before the ish: "And it shall not be 'lawful to contract to let for a period of six months or 'more premises occupied by a tenant or tenants earlier 'than forty days before said term, provided that (as pro-'posed by section 4 of the House-Letting Bill) the term of 'let for any dwelling of which the rent is payable more 'frequently than quarterly shall be held to be the term 'fixed for the periodic payment of the rent thereof, whether 'such term of payment be weekly, monthly, or otherwise."

4580. That would be forty days?—One is the missive and the other the notice of removal. These two must not coincide, because if they did, if the landlord lost his option of ordering a man out, assuming he refused to accept the missive, he might not do so till night, and on the following day it would be too late to warn him out. We suggest that there should be an interval of ten days between the date on which it is lawful to take the missive and the date on which it is lawful to warn out. Consequently, if you would allow me to alter the first forty, "such warning shall 'be given at least thirty days before the ish, and it shall 'not be lawful to contract to let for a let of six months or 'more premises occupied by tenant or tenants earlier than 'forty days before the aforesaid terms, provided that (as 'proposed by section 4 of the House-Letting Bill) the term 'of let for any dwelling-house of which the rent is payable 'more frequently than quarterly, shall be held to be the 'term fixed for the periodic payment of the rent thereof, 'whether such term of payment be weekly, monthly, 'quarterly, or otherwise."

4581. You point out that the clause of the Bill would require to be read with section 345 of the Burgh Police (Scotland) Act, providing that "owners who shall let for 'rent or hire land or premises for less than a year, shall 'themselves be responsible for these assessments, and the 'same may be recovered from such owners." In Hamilton, how do you proceed under that? You have no local Act?—No; we are under the Burgh Police Act.

4582. How do you proceed under that section?—The assessor in issuing the valuation under Clause 7, I think it is, puts in a column, "Period of Let." That, however, is not statutory, and therefore there is no penalty attached to a false entry, and the factors and landlords have all discovered that; and, as a matter of fact, all they put in is the word "annual."

4583. Just as a matter of form?—Yes. While the let is annual they are collecting the rent monthly, and they are practically evading the Act, and we are getting no benefit.

4584. You think it would be necessary to amend that?—Yes, so as to limit the statutory responsibility of landlords by provision that a person who has paid his rates monthly to a landlord shall not be disqualified in respect of the landlord's failure to pay the rates for which he is liable *quoad* occupancy before the statutory date, and which would involve a change in our practice of collecting the rates annually. We would have to collect them half-yearly if you go in for six months' tenure statutorily.

4585. Would that involve in any way additional staff or expenditure?—I am not sure it would—not very much more. At the present time our Parish Council are practically collecting the parish rates, if the tenants desire it, half-yearly or in three sums, but that is an optional thing. Our Demand Note says so. I have it here. "Ratepayers 'who desire to pay their assessments by instalments may 'do so in two or not more than three instalments."

4586. There is no statutory warrant for that?—No.

4587. It is availed of?—This is the first year it has been tried.

4588. Have other burghs tried it?—I have not heard of them.

4589. What led to that?—The complaint of working men of the large sum they had to pay at once, which was a grievance. We have a large number of working men both on the Parish Council and the Town Council, and they raised the question of getting their Councils to adopt this idea. We cannot say how it is going to work, but I think it is a most desirable thing that assessments should be collected more frequently than once a year.

4590. (*Mr Cox.*) Would twice a year meet the case?—I think twice a year would be a considerable assistance.

4591. (*Mr Howden.*) Was one of the reasons urged not that it was at the worst time of the year that these taxes fell due?—It is a bad time of the year that simply aggravates the grievance. The great grievance is that the parish and town rates have to be paid in one sum.

4592. (*Chairman.*) Who should pay to you and other rate authorities the whole taxes, both occupiers and owners?—As far as possible, each should pay their own; but where the rents are going to be collected more frequently than half-yearly, and where there is a considerable temptation to remove from house to house, and as our rate just now is based on the Assessment Roll which again is based on the Valuation Roll, only made up once a year, there is only one occupier appears as responsible for the rates of a given house. That occupier probably leaves, and this system will aggravate the possibilities of his leaving, and, when the Demand Note is issued, he is not there.

4593. What do you think that all points to?—To making the owner responsible for the rates on smaller houses.

4594. And by smaller houses do you mean those under £20?—Yes, I would fix it at £20.

4595. Whatever the period of let may be?—No; if the period of let is six months, I say the occupier presumably is a permanent resident, and should be called upon twice in the year.

4596. With a let under six months, the owner should pay?—I don't call it a let under six months if the rent is collected more frequently than quarterly.

Mr Henry S. Keith.

3 Jan. 1907.

4597. If the rent is collected quarterly?—I would still make the occupier liable. I would shift the onus from the owner on to the occupier, and let the local authority take the risk.

4598. If more frequently than quarterly, then the amount of rent up to £20 you say the owner should be liable?—Yes, I am reducing the statutory limit to six months, and applying it to the newer conditions of house tenure we are proposing to introduce.

4599. If that be a sound principle, there are two ways of doing it: either the landlord shall get no allowance and be left to adjust the matter in his total charge on the tenant, or get an allowance, as is done in cases under £4. In your view, which is the right method to follow?—I think the right method is the first one you spoke of, that the matter should be allowed to adjust itself.

4600. That has not been the method followed hitherto in regard to municipal assessments, because, in the case of those whose rents are under £4, there is an allowance, isn't there?—That is so. Ten per cent. Then that is based upon statute. We have to go away back to the Valuation Act of 1854, section 31, and you find there that the house rents of £4 are declared to be assessable to the landlord.

4601. But I think in all the municipal cases where owners pay occupiers rates, they always get an allowance?—No; not except in the case of £4 or £5 rents, as the case may be.

4602. In what cases do owners pay and get no allowance?—Houses let for less than a year.

4603. There is no statutory allowance?—No.

4604. And no allowance is given?—No.

4605. So that you have both principles in operation?—Yes, and I say that we should not extend this principle of exemption. It is an old practice based upon the Valuation Act, "That in all cases where lands or heritages shall be 'separately let at a rent not amounting to £4 per annum, 'and the names of the occupiers thereof shall not have 'been inserted in the Valuation Roll, the proprietor of such 'lands and heritages shall be charged with, and have to pay, 'the whole of the assessments of such lands and heritages 'separately let as aforesaid; but every such proprietor 'charged with and paying such assessments shall have relief 'against the tenants and occupiers of such lands and heritages 'for reimbursement thereof, if and in so far as such assess-'ments may by law be properly chargeable upon such 'tenants or occupiers."

4606. That has been carried out under local Acts such as the Greenock one?—Yes, necessarily. Local Acts must conform to the general practice.

4607. But in your view the question is an open one?—Yes. The statute meanwhile is against the extension of the principle that a house being let for less than a year implies compounding because of the landlord's responsibility for rates.

4608. (*Mr Esslemont.*) You are aware that it has been extended under local Acts?—Yes, only under local Acts, not under a general statute.

4609. (*Chairman.*) You think it would much simplify the whole system if the landlords were left to adjust the matter in the total charge they make?—Yes.

4610. And take away a most difficult question, namely, the exact amount of allowance to be given, whether a fixed one or a differentiating one?—Yes. I have here two rent books dealing with the same house. In the one case the occupier was told that the factor was going to pay the rates. In the other case, the tenant was told that he must pay the rates himself. The book speaks for itself. The one tenant is charged 12s. a month; the other tenant is charged 10s. 5d. a month. 1s. 7d. a month, therefore, is the figure which this factor took in name of rates. The only rate chargeable for the house was 16s. 7d., and the factor took 19s., or at the rate of 19s. He did not get the whole twelve months. He had only some eight months of the one tenant; but when he passes in the other tenant he alters it, and he says: "Will you pay the rate?" then your rent is 10s. 5d. As a matter of fact, this person is a pauper. He knows perfectly well this pauper had no rates to pay, because we relieve all paupers.

4611. What do you deduce from that?—The fact that the factor looks after himself, and that he does not need a bonus of 2½ or 7 or 10 per cent. He would get that in addition to this 15 per cent. which he has taken. He has actually taken 15 per cent. of a profit on the rates, and I say to introduce a system of giving anybody a profit on the rates is a vicious system which we should be rather afraid of instead of making it statutory.

4612. (*Mr Dobbie.*) Why did the factor make a change?—Because this tenant wanted a larger house.

4613. Why did he make a change in the system?—Perhaps he had difficulty in getting a tenant, and made it cheaper.

4614. (*Mr Esslemont.*) Do these books refer to the same house?—Yes, I will show it to you.

4615. (*Chairman.*) It is the same house, not the same tenant?—The same house.

4616. Which was first?—The 12s. rate.

4617. (*Mr Cox.*) You say he only got eight months out of the year?—The one finishes in September and the other begins in November.

4618. He lost two months of it?—There is an apparent interval between.

4619. That would account for his wanting to make a little profit?—Oh yes; but I suggest that, apart from that, they look after themselves, and I think that an equitable consideration has to be shown to the landlord, and I propose consequently a different form of treating the landlord. This is a proposed new clause to meet the case.

4620. (*Chairman.*) You propose this clause: "For 'every three continuous months in any year from Whit-'sunday to Whitsunday during which a dwelling-house 'of the value of £20 or under is unlet and unoccu-'pied, an owner shall be entitled to claim exemption 'to the extent of one-fourth from all or any rates for the 'year chargeable against an owner or an occupier in respect 'of such dwelling-house, provided that, if any claim for such 'exemption be proved to be knowingly erroneous, the owner 'or occupier making the claim shall be liable to a penalty 'not exceeding £20, which shall be payable to the Local 'Authority upon whom the claim for exemption was made, 'and failing payment to imprisonment for a period not 'exceeding two months, and such penalties may be imposed 'by the Sheriff, the magistrates of any burgh, or any one 'of them, or by two Justices of the Peace of any county." Under this clause the landlord would pay the occupier's rates; and then, if the dwelling-house turned out to be entirely unlet——?—For the twelve months?

4621. For the twelve months?—He would be charged no rate at all.

4622. As far as during the twelve months it was unlet, he would get a deduction?—If it amounted to a quarter he would get a reduction of a quarter. If it amounted to six months he would get a reduction of a half. The new principle introduced here is that the owner is to be relieved of owner's as well as occupier's rates for unlet property. That seems to me to be an equitable consideration which should be extended to owners whose houses are unlet.

4623. If it was unlet for six months, he would get a reduction of a half?—Yes, both for owner's and occupier's rates. Some say why should not he get it for a month. That is a matter for further consideration. I limit it to three months' occupancy.

4624. Would not it be similar to give to the owner the right to the extent of which his property is unlet?—It might not be unfair or inequitable, but the only difficulty is, judging from the facts I have before me, that there are vacant periods which do not amount to a whole month, and we must draw the line.

4625. That would be a question of detail?—Yes.

4626. You are enunciating a general principle?—Yes; what seems to me fair and just is that if you were going to put a burden on landlords of small houses there must be an equitable *quid pro quo* that is not a vicious one. To my mind this is a sound principle and thoroughly equitable, whereas the other system is a vicious one.

4627. Namely, the one of compounding?—Yes.

4628. Is not there an intermediate view. The compounding view, then there is your view of no allowance at all, leaving an adjustment to be made in a total charge. But is not there an intermediate view that an allowance should be made for the trouble of collection and for losses of unpaid rates, leaving to the landlord the right for unlets to claim such a deduction as you propose here? In short, to limit his allowance to an allowance for: firstly, trouble, and, secondly, losses?—Yes; well, I don't think an addition to the farming of the rates at all is one that we should countenance, and we should certainly avoid it if it is possible to avoid it. I suggest that as a feasible and a proper remedy.

4629. And as simplifying the system?—Yes.

4630. Do you think you have some authority in what took place prior to 1889?—I say that prior to 1889, in county areas, owners were liable for all rates, and that we are not introducing any new principle when we are making owners of small houses liable for owner's rates.

4631. When was that change?—Under the Local Government Act of 1889. The owner's rates were then stereotyped, and any increases since are just charged half on occupier and half on owner.

4632. So far as the owner's goes, if he collects the rates, say from May to December, he has the interest of that money before he has to pay the rating authority?—That is so. He might, in fact, keep it on till the month of March before he requires to pay it.

4633. So far as the franchise goes, you have an observation there, what do you say to that part of the question?

Mr Henry S. Keith. 3 Jan. 1907.

Mr Henry S. Keith.

3 Jan. 1907.

Take the municipal franchise?—In the meantime it depends on payment of municipal rates.

4634. Suppose the landlord pays them all, and then fails in certain cases to get payment of what would represent the amount of rate from the occupier? Do you think it is fair that that occupier should still have a vote if his rate, in point of fact, has been paid?—If his rate has been paid he should certainly get a vote.

4635. You would say it is no concern of the country that he has not, in point of fact, paid what represents the rate to the landlord?—Yes; of course, I cannot assume that that man has not paid his rate if he has paid his rent.

4636. Suppose he has paid nothing at all?—Then he must only have had a month's occupancy, and is not qualified. Our experience is the opposite of that, that men in our burgh have been disfranchised because the landlords failed to account for the rates.

4637. Has that happened?—That has happened in our case. A great number of working men lost their votes because their landlord, who was in difficulties, would not pay the rates he had collected from them.

4638. You cannot collect that?—There is no collection from monthly tenants. We have no statutory power.

4639. That would arise in the case you were contemplating in Mr Cross's Bill?—It might arise, and therefore we have to provide for it.

4640. How do you propose to deal with that?—That we should have an amendment to the effect that the occupier who could show that he had paid his rates was not disfranchised through the failure of his landlord to account for them.

4641. That is to say, that, if the tenant could show that he has paid a slump sum to his landlord, he was not to be disfranchised?—Yes, that would be necessary, because you are going to make here the occupier's municipal franchise depend on the owner's collection of the rates monthly.

4642. I understand you don't approve of what is suggested in Clause 9 of Mr Cross's Bill, the making a distinction between imperial taxes and poor rates and other school registration and special parish rates levied by parish councils on the one hand, and burgh assessments on the other?—No; imperial taxes certainly should be excepted, but poor and school rates should be in the same position as municipal rates. If the landlord is to collect the one, he should collect the others; and, as a matter of fact, that is what they are doing. It is monthly lets in Hamilton now.

4643. You say there is no practical difficulty in doing it?—No.

4644. You think any perpetuation of different systems, if it can be avoided, is undesirable?—Yes, it would be exceedingly confusing to have one system applicable to the tenant and the other to the landlord.

4645. What about the difficulty that has been suggested to us that in May you don't know what the rates are going to be, because they are not fixed till the end of the year?—That is so.

4646. And therefore the landlord would just have to speculate in fixing the proportion of the total payment of his rate as distinguished from the rent. What do you say to that?—I say the assessment chargeable as against the owner should be as from November to November, and it would be necessary to stipulate that the rates chargeable against the owner, except all monthly lets, should be up to November of each year, the rates authorised by the local authority in the year preceding.

4647. Do you see any practical difficulty in doing that?—No difficulty at all.

4648. It would remedy the difficulty that has been suggested?—It remedies that difficulty.

4649. What about the other difficulty, namely, that Mr Cross's Bill would take away the right to people who get relief on the ground of poverty? What do you say to that?—That is under section 343 of the Burgh Police Act. I say we would require a clause enabling us to relieve these persons of responsibility for rates.

4650. How is it to be worked out? The landlord pays the rate?—Yes.

4651. Then the person comes forward and gets relief, let us say. Well, the landlord has paid the rate, what would you do then?—He has paid the rate to the landlord before he gets relief. Well, of course, that just proves again the necessity for making the rate which the landlord has to collect run from November to November, or from January to January, because the Appeal Court is always held in January. I think it is always held in January under statute, consequently we don't know until January who are to be relieved of the rates. The landlord may have collected a number of monthly rates from that person before he was relieved. He may have insisted upon his paying it, so that the whole system has to be modified in order to meet that difficulty. I suggest, of course, that a poor person who is relieved of his rates must have some means to show the landlord that he has been relieved, and the landlord cannot legally charge that person with his rates.

Mr Henry S. Keith.

3 Jan. 1907.

4652. What means do you suggest?—What I have suggested is something in the nature of an adhesive stamp, which might be supplied by the local authority, and that on being produced to the landlord, is a claim to his right of exemption, and it must be produced by the landlord when he is paying his rates, to show that he has in good faith relieved a poor person.

4653. Therefore, that he is entitled——?—To be relieved of the occupier's rates.

4654. (*Mr Esslemont.*) How do you do in Hamilton in cases where the rent is under £4? Do you relieve in cases of that kind?—Yes, we relieve irrespective of the rent they are paying. Of course, these £4 rents are chargeable against the owner too. When you put the question about that there are a number of cases where we refused to relieve the owner of the obligation, although we do relieve the occupier.

4655. We in Aberdeen deal with a large number of appeals, but the landlord is responsible for the rates on all the rentals of £5 and under?—Then you don't relieve there at all.

4656. I cannot recall cases?—My Town Clerk informs me that we have never relieved in that case; we are in the same position as yourself.

4657. (*Mr Dobbie.*) Where the people are on the poor roll are they charged taxes?—That is why I reply in the affirmative to start with. We lay down the principle that whoever is on the poor roll is not to be charged with rates. If that poor person happens to be occupying a £4 house, the landlord there apparently does not collect rates. Here is a house on which the rent is entered £3, 12s. This person charges no rates against his tenant.

4658. (*Chairman.*) Is this a pauper?—I don't know; I only know that there is a case of a house less than £4—£3, 12s—which appears in the Valuation Roll. He is paying 6s. a month.

4659. (*Mr Esslemont.*) Why do you assume that that is not on the rates?—Because £3, 12s. is the value at which it appears on the Roll.

4660. (*Mr Dobbie.*) Does not the collector have some plenary power in cases of paupers who let the factor know that that rate is not to be exacted on them, and that, therefore, he will only get the net rent from a particular tenant?—We have no such system with us, but that would be a most desirable thing, and that is exactly what we want to get at. If we adopt the method of relieving the poor person, which apparently you have in Aberdeen in £4 houses, it would apply to people living in £8 houses.

4661. In Hamilton the rates of paupers occupying houses under £4 are paid by proprietors?—All rates chargeable on £4 houses are paid by proprietors.

4662. But in the case of paupers?—We don't know what they may be.

4663. Does the Town Clerk happen to know of such a case where the landlord has a pauper tenant getting relief and the house is under £4? Does he pay anything in the shape of rates?—The Town Clerk informs me that the owner is certainly responsible for the rates to the Town Council; whether he charges the tenant we cannot say, but we hold the owner responsible.

4664. Even though the tenant is a pauper?—Yes.

4665. You have had no case of the owner coming forward and objecting?—There was one case where there was a question, but it was more in connection with unlet property at that time.

4666. (*Chairman.*) You may have no statutory power?—I think it really works out in practice like what we have here, that the owners of these small houses pay the rates, and it is a charge upon them. It is one of the burdens of that kind of property.

4667. Look at the end of your precis, at the bottom of page 9. Is that what you have dealt with already about the separate return or something new? You say in view of the terms of section 4 of the proposed House-Letting Bill, another modification of existing statutory enactment would be requisite. Section 350 of the Burgh Police Act of 1892 provides for a return from owners of houses of period of lets and amount of rental. Then you think that section 350 quoted would require amendment to the effect that owners should furnish a return of the periodic payments of rent subject to the penalty provided by that section? Why?—Because our claim has to be based upon the periodic payment of rent; and if it is the term of let, although the periodic payment of rent was monthly, the owner may say, "my house is let for six months," and we have to get rid of that difficulty. We must provide that it is not a term of let but a periodic payment of rent that is to determine his liability.

4668. And you produce, do you, a copy of the form used by your collector of assessments?—Yes. Dealing with that section.

Mr Henry S. Keith.

3 Jan. 1907.

4669. You might just put that in?—It is as follows:—

BURGH OF HAMILTON.

THE BURGH POLICE (SCOTLAND) ACT, 1892.

COLLECTOR'S OFFICE,
5 HOLMES STREET,
HAMILTON, 189 .

SIR,—In consequence of the large number of tenants removing during the currency of the year, I have been instructed by the Police Commissioners to draw your attention to section 350 of "The Burgh Police (Scotland) Act, 1892," which provides,

"It shall be lawful for the Commissioners to require an 'owner to furnish a written statement of the period or 'periods for which the land and premises of which he is 'owner are let to the respective tenants or occupiers 'thereof, and of the rents for which the same are let, all 'which the said owner shall be bound to furnish within 'seven days of his being required in writing so to do: and 'if such owner shall fail, without reasonable excuse, to 'furnish such written statement, he shall be liable to a 'penalty not exceeding £10; and if such owner shall 'present, or cause to be presented, any false statement of 'the period or periods, or the rents for which any lands or 'premises belonging to him are let, knowing the same to 'be false, he shall be liable to a penalty of £20."

In terms of the said section, I have to require you to furnish me with a written statement, as therein prescribed, within seven days from this date.

To enable you to furnish the required particulars I annex a form, which you will please fill up, sign, and return to me.—I am, sir, your obedient servant,

Collector.

Mr Henry S. Keith.

3 Jan. 1907.

to cases of houses belonging to employers. Is that a frequent method of tenure in mining districts?—Yes, the houses in many mining houses are the property of the owners.

4673. Do they pay rent, or is it part of their remuneration?—They pay rent very often in the office, but the subject will be spoken to by the representatives of the miners. They are better able to give you first-hand information than I.

4674. You indicated that you thought that there should be an exemption from the operations of the Bill of tenants of such houses?—Yes; I say that type of occupancy must be dwelt with by special legislation.

4675. May I take it that in the case of such houses where there are rents payable this Bill would apply and would therefore give fixity of tenure depending upon the period for the periodic payment of rent?—Yes, in all probability fortnightly.

4676. In cases of fortnightly payments?—Yes, that would be the statutory effect of the Bill if it were to pass.

4677. All a fortnight?—Yes.

4678. Of course, the clause preventing the operation of the fortnightly ejection, in the event of disputes, would remedy it?—Yes.

4679. That might be part of some measure?—It could. Of course, the question would arise whether that is a proper thing or not.

4680. As a matter of policy?—Yes.

4681. I do not know myself, but do you know whether there are any cases of employers' houses occupied by employees as part of their services without paying rent?—There may be isolated cases of a foreman or some one of that kind having a free house.

4682. I mean a free house?—That man would then enjoy the service franchise.

4683. And be open to ejection?—Summarily.

4684. Within forty-eight hours?—I think so.

4685. This Bill would not apply to an instance like that?—I think that is a special contract.

4686. Have you any views in regard to a modification if any were needed in regard to hypothec. Assuming that shorter lets were prevailing, would it affect any of the hypothec

STATEMENT BY.....

FOR YEAR FROM 15TH MAY 189 , TO 15TH MAY 189 .

Property, Street, and Number.	Name of Tenants or Occupiers.	Period or Periods for which Premises Let.	Period for which Premises occupied by each Tenant if more than one.		Rent.		
			From	To	£	s.	d.

Signature,_____

4670. May we sum up your views under three heads at the end of your precognition?—I have five heads.

4671. Just read them?—(1) The missive system complained of might be remedied by the amendment of section 4 of the Removal Terms (Scotland) Act, declaring it illegal to contract to let premises in the occupation of tenants earlier than forty days before the removal term. (2) An alteration in the present laws regulating house tenure would involve a number of consequential amendments in the Burgh Police (Scotland) Acts, the Lands Valuation Acts, and possibly the Representation of the People Act, and would also necessitate a revision of our Rating System generally. (3) The necessities of the working classes demand greater flexibility in the condition of house tenure, and the proposals of Clause IV. of the House-Letting Bill form a suitable media for the evolution of a system which would provide greater facilities for changes of occupancy. (4) Whatever system of house tenure is legalised should be general and not local. Statutory and not adoptive. (5) The extension of the system of compounding rates is against sound public policy. If owners are to be made liable for rates under the provisions of the House-Letting Bill the equities of the case can be best met by relieving owners from all rates on unlet and unoccupied houses for the period they are empty.

4672. (*Mr Dobbie.*) In regard to the evictions, you refer

Acts?—I think it would. I think that probably, if we were going to introduce the system of short lets and make the owners responsible for rates, that we should not abolish the law of hypothec yet, only we are to see how it is going to work. I think they are bound to give some kind of security to start with, and they have that security now.

4687. Do you think that short lets would result in more frequent removals?—Undoubtedly.

4688. In that case, of course, the present law of hypothec which gives to the one proprietor a preference for three months after the expiry of the let would lead to applications with subsequent landlords?—Undoubtedly.

4689. The question would be, who has the hypothec, and who is entitled to bring back?—Yes.

4690. Coming to the view which you expressed in regard to yearly missives, I take it that you would make yearly missives illegal?—These would be half-yearly in my proposal.

4691. But you would make it unlawful for the landlord and tenant to make a yearly missive?—No, I would not personally. That point was raised by the Chairman earlier. Of course, the Chairman pointed out the difficulty, but I would not say it should be illegal, because it seems to me it would be a matter of contract.

4692. Of course, I want to be quite fair to you. As the Chairman very properly pointed out to you any reservation

Mr Henry S. Keith.

3 Jan. 1907.

of the right to make a contract would merely mean that the missive for a year would become universal in spite of the law?—Yes. I must say that what I want to reconcile is my view as to the right of a free citizen to make a contract for myself; but I think I said that, if that right would impose a hardship upon the tenant whom we wish to keep right, then it would have to go overboard.

4693. It would be all the same trouble, of course. Assume for a moment that we do not know that there is a hardship under the present system, and if, as a matter of policy, shorter lets are introduced, in order to arrive at that result, would you go as far as to make it in your view right to prevent the landlord and tenant entering into a yearly let?—For houses below a certain value.

4694. £20?—If it needs statutory enactment, I think that might certainly prevent a grievance; and if it will have that effect, I would certainly support it.

4695. Coming to the question of assessment, you have given us quite a valuable opinion upon that. You point out that the assessment roll necessarily only contains the name of the tenant at the date of making up the roll and that is the tenant for the whole year?—It is the nominal tenant for the twelve months.

4696. Can you suggest how, assuming that there is to be a yearly collection only as at present, that the system could be modified so as to enable collectors to collect from the successors of the principal tenants whose name is on the roll?—Yes, I provide a proviso to section 346 of the Burgh Police (Scotland) Act, which covers the point, "Provided that if the owner of a dwelling-house let for six 'months shall notify in writing to the collector of muni- 'cipal assessments, at least twenty days before the November 'removal term, that a change of occupant is being made 'at that term, he shall be entitled to exemption from the 'liability imposed by this section; and in the event of his 'failure to give such notice, and the occupiers' rates for 'the six months ending 28th November are unpaid, the 'owner shall, in terms of this section, be liable for the said 'rates."

There is a section of the Burgh Police Act upon owners which would come to be a very onerous one if this Bill were passed "When any lands or premises in respect of which 'the said assessment might be imposed upon the occupier, 'not being premises usually let for any period shorter than 'one year, shall not be occupied by the same occupier for 'the whole year from the term of Whitsunday in any year 'till the term of Whitsunday in the year following, but 'shall be occupied for part of such year by a new occupier, 'it shall be lawful to the Commissioners to impose and 'levy on and from such new occupier who occupies the 'same for any part of such year, whether his name appear 'in the Valuation Roll or not, a proportion of such assess- 'ment for that year, corresponding with the period of his 'occupacy, and on and from the owner of such lands or 'premises the proportion of such assessment, if any, 'corresponding with the period during which such lands 'or premises were occupied during the said year by any 'other occupier." Therefore, the owner just now, in the event of changes of occupacy, is liable for the rates for the first half or first three quarters or first third of a year, whichever the case may be. That hardship would be very much increased, consequently we have to provide a remedy for it; and I suggest that if he, before the November term, intimates that there is to be a change of occupancy, that allows the Local Authority to put the powers they have in operation. They can immediately poind if they know that there is to be a removal by a person who cannot pay his rates. The authority just now can step in and immediately poind his effects. I say if the landlord or the factor gives the Local Authority that opportunity he should be relieved of the obligation which the law puts upon him just now to pay the rates for a man who has run away.

4697. Then you have laid down the three conditions subject to which you think a tenant should be entitled to sit—payment of rent, fulfilment of conditions of let, and abuse of property. So long as these conditions occur, do you think the tenant should have the option to remove at the end of six months' let?—Yes.

4698. And the landlord should not be entitled to eject at the end of six months'?—Yes.

4699. What is the loss in Hamilton on the collection of municipal rates?—Our loss upon the gross collection last year did not amount to 2 per cent.

4700. What was the loss on the gross collection under £20?—It was nearly all upon that form of tenure.

4701. But what would the percentage of loss be?—I could not speak so definitely. I do not think our collector has ever made that up.

4702. Can you send that in?—I will be delighted.

4703. And also under £16, seeing that that is the limit you indicate for Hamilton?—Yes.

4704. That affects the question of compounding very much. We have had other views on that, and the question is a very practical one, as to what rate, if any, should be allowed to proprietors. In Glasgow, for example, we were told that the loss under £10 is 26 per cent.?—Yes, but that is because the Local Authority does not get at the occupier who has left his house. He may have occupied the house for five months, he can have paid his landlord his rent and taxes, but if he has gone away in five or seven or eight months the Local Authority does not get a penny. He has gone to another house, and that is the reason why the Local Authorities are losing very much more than what the landlords would.

Mr Henry S. Keith.

3 Jan. 1907.

4705. Either more frequent collections of rates by Corporations, or a collecting from proprietors who would collect monthly from the tenant, would make a great difference in favour of the authorities?—Enormously; that is why I specially think the landlord should be held responsible for small house rates.

4706. I would not think it a proper deduction to make from the fact that the Glasgow Corporation lose 26 per cent. of their low rented rates?—Certainly not, because the one is no criterion of the other. The loss to the Local Authority is no criterion of the loss to the landlord.

4707. I assume you do have some loss on collecting rates on houses under £20?—Yes. We have very often to put that into the hands of a messenger-at-arms for collection.

4708. If you collect only from the proprietor you would have very much less difficulty?—It would simplify it, undoubtedly.

4709. Could you not afford to make some concession to the proprietors or the factors, seeing you were to be relieved of this trouble?—I would not be disposed to make a concession of a financial kind, such as is suggested, but to relieve him of rates of unlet property, it would be a very important concession indeed.

4710. But the general law in regard to evictions, assuming that short lets became prevalent, have you anything to say as to remedying the present law under which a proprietor gets the tenant removed?—No, I could not make any suggestion as to that. We would like to avoid evictions as much as possible.

4711. (*Mr Howden.*) In connection with your new clause you say you favour exemption of owners for all unlet property, but you also add from both the owners' and occupiers' rate; I think that is correct?—Yes.

4712. Do you collect police assessments in Hamilton?—Yes.

4713. Does it not strike you that at least the police rate of unlet property, as far as the owner is concerned, is as essential as if the property was occupied?—Yes.

4714. That in effect the police rate is a rate for services rendered?—Yes, both on the owner and occupier.

4715. And would have to be performed whether the property was let or unlet?—It would.

4716. Consequently it would not altogether be just to exempt the owner in rates and property which had to be protected?—If you were putting another burden on him which would be a fair equivalent, for that exemption, then it would be fair. I say that is an equitable way of giving a *quid pro quo* which would not establish a vicious principle, and you are not applying the exemption of owners from rating to any but the dwelling-houses below £20, and you are applying it to him only because of the burden. Assuming that one house out of every ten is unlet, you are giving him exemption of rates on this one house in respect of the work he is doing for you as a local authority on the other nine. That is not an unreasonable thing. It is certainly true that a policeman has to watch the one empty house as well as the nine full ones, but what are you going to give the landlord or the factor for the work he is doing?

4717. Suppose the whole ten houses were occupied, what do you give him then?—Nothing.

4718. He would have more work?—He would have a full and complete revenue from the ten houses.

4719. (*Mr Binnie.*) You propose that missives should not be legal if they are signed nearer than forty days before the removing term, and then that the warning away should be thirty days before. Do you think that ten days is enough before a busy term of removal, such as there will be, to adjust the lets of all houses?—No; I do not think it would be possible to adjust the letting of all houses, but you have only got to deal with one or two or half a dozen particular cases who have refused to sign the missive.

4720. But factors have in Glasgow, for instance, 5500 houses, particularly of this class. Do you think it would be possible within ten days to adjust such a number of lets?—I do not think it would be possible to adjust all these in ten days.

4721. You have told us what your loss is, and have to send us more particulars. Can you tell us the cost of collection also?—Yes, I will get you that.

4722. In this clause you say that you propose to give exemption where for three continuous months in any year a house shall be unoccupied?—Yes.

Mr Henry S. Keith.

3 Jan. 1907.

4723. Why take continuous months? Is the loss to the landlord not as much if the three months are not continuous?—Yes; of course, I think I said, when I was giving that in, that that was subject to a further amendment. My conclusion is that the equities of the case may be met by relieving owners from all rates of unlets and unoccupied houses for the period they are empty. I do not stick rigidly to the three months. We must lay down something of a definite kind that we are going to legislate upon.

4724. (*Mr Esslemont.*) Will the return you have to give us show the loss of houses let at £10 and under, £15 and under, and £20 and under? Do you understand we would like it in that form?—Yes, the loss upon graded rents.

4725. The £10, £15, and £20, that is the form in which we have it from other authorities?—I will send it in to the secretary.

Mr Henry S. Keith.

3 Jan. 1907.

4726. (*Chairman.*) You have said a Bill would lead to more frequent removals, or that they would be spread over the whole year?—Spread over the whole year. There would be a larger number of removals.

4727. That is ambiguous. Do you mean the net number at the end of the year would be greater, or, instead of being practically all at Whitsunday, they would be spread over the year?—I would go the length of saying it would increase the net number, while at the same time it would spread it over a much longer period.

Mr Robert Smillie, Mr D. Gilmour, and Mr J. Murdoch.

Mr Robert Smillie, Mr David Gilmour, and Mr James Murdoch, called and examined.

Mr Robert Smillie, Mr D. Gilmour, and Mr J. Murdoch.

4728. (*Chairman to Mr Smillie.*) Your association is the Lanarkshire Miners' County Union?—That is so.

4729. What are the respective positions of the gentlemen here?—I am President of the Lanarkshire Miners' County Union, Mr Gilmour is General Secretary, and Mr Murdoch is one of the Agents, devoting his whole time to the work.

4730. How old is the Union?—On its present lines, about eight years.

4731. About how many miners will it represent?—We have about 26,000 organised workers, and we represent fully 30,000 miners, some of whom are not connected with the association, but are under our advice, and with the members of the association.

4732. Are the miners coal and iron miners?—Coal entirely.

4733. Are there miners who are not in connection with your Union in Lanarkshire?—We embrace them all, practically.

4734. I understand you appear on behalf of the Union. The question has never been before any general meeting, I suppose?—It has been before our county delegates, representing 100 branches of our association, and it has been before the branches of the association.

4735. Is the name Lanarkshire accurate, or do you embrace some outside Lanarkshire?—Lanarkshire only.

4736. What has been the subject, if you will define, that has been before the association?—The question of the tenure of houses and the missive system, the length of the lets of houses.

4737. And the length of time between the date of taking the house and the date of entering?—Yes. Mr Chairman informs me that in advantage to that the outstanding question was that of evictions and evictions also?—Yes.

4738. You have considered, in connection with this question, the question of how the rates and local taxes are to be paid?—We have.

4739. Are your members unanimous or divided?—So far as we have been able to gather they are unanimous. I have never heard anyone speaking in favour of the present system so far as we know.

4740. Are the Lanarkshire miners different in any essential matters, so far as the conditions of work are concerned, from Ayrshire miners or Fife miners?—I think the position in all the mining counties of Scotland is pretty much the same. As far as I can gather from the leaders of the men in other counties, the feelings of the men are pretty much the same.

4741. Lanarkshire, Fifeshire, and Ayrshire, these are the chief?—Ayrshire, Fifeshire, Lanarkshire, Mid and East Lothians, West Lothian, and Stirlingshire. I am president of the Scottish Miners Federation, which embraces all these counties.

4742. As far as you have been able to learn, the view all over is the same?—Yes.

4743. First of all take the long lets, to what extent are your men under yearly tenure?—I think that fully 50 per cent. of our men are under yearly tenure. Nearly the whole of the other 50 per cent. are living in houses owned by the employers, and they have them as a condition of employment from week to week.

4744. Is there any considerable number not in employers' houses of that kind on short lets?—Very few.

4745. Where our miners are not in employers' houses, and living in burghs and small towns and rural districts, they take their houses from year to year, sometimes they require to take their houses three or four months before the date of entry.

4746. To what extent do you consider miners are shifting, compared with men in shipbuilding yards, for instance, or masons?—I think they will shift from district to district more frequently than men in shipbuilding yards, but not so much as masons. I mean from district to district.

4747. In the same county?—In the same county and sometimes to other counties.

4748. Has there been any change in respect of more or less shifting within recent years?—There is more shifting now. I think Lanarkshire, to some extent, has become exhausted, and men require to shift to other districts and sometimes to other counties where the coal is developing.

4749. When men shift, do they shift permanently or temporarily?—I think in the majority of cases they shift permanently.

4750. Or, at all events, for such a length of job that they would want to shift their houses?—Yes. Very often they shift, and they go into lodgings themselves, leaving their families behind, because they cannot go into the houses, and they perhaps go home at the end of a fortnight or a month until the let of their house is finished.

4751. To what extent is the opinion of your Union been influenced by the English members of the Union:—We have never discussed the question, and I do not think the opinion of the English members of the British Federation has in any way influenced our people.

4752. Are not all your officials Englishmen?—No.

4753. Have you any number of Cornishmen?—We have a number who came nearly forty years ago, but to all intents and purposes their children are naturalised, and in our districts they don't think of the matter much further than that they know the system is different in England.

4754. I suppose, to some extent, the belief that the short let system works well in England has influenced the Scotch opinion?—I think so.

4755. As against the present system of yearly let, what does your Union propose?—We think that monthly lets should be quite sufficient.

4756. Does that mean that lets beyond a month should be prohibited?—Well, we think that in all workmen's house, or houses under a certain rental, perhaps £20, there should be monthly rents, and that others should be left to an agreement between the landlord and the tenant.

4757. That is what I want to know. Does your proposal go to making illegal a let beyond a month?—I do not think that our association has expressed any opinion on the question of whether or not it should be allowable to have longer lets than monthly above £20. Under £20 we think it should not be allowed.

4758. Were short lets to meet your view, a clause would need to be added to any bill prohibiting contracting out?—Yes.

4759. Mr Cross's Bill has no clause prohibiting contracting out?—I notice that.

4760. What do you say to quarterly lets?—It has been suggested to us by some representatives of working men that as a compromise they would be quite willing to have quarterly lets?—We are strongly in favour of monthly lets.

4761. That is not because the payment is monthly. What is the payment?—That would be a matter, I think, of agreement.

4762. How are miners paid wages?—Fortnightly, usually; almost universally.

4763. And monthly payments of rents is quite common, I suppose, with yearly tenures?—No, it is not. It is very uncommon.

4764. Just tell us about that?—In a number of cases they pay quarterly; in the vast majority of cases they pay half-yearly in the mining districts; but there are cases in Hamilton and Motherwell, I believe, where they pay the rent monthly.

4765. These are in non-employers' houses?—Yes; of course, in employers' houses the rent is deducted from the wages weekly or fortnightly.

4766. The working man does not finger the money?—No.

4767. What would be the great advantage, in your view, of monthly lets as against yearly?—Well, the present position ties up the working-man pretty largely to the district in which he is living, for the time being. I myself have had to shift ten or fifteen miles to get employment, and had to keep my house on for nine months. I would have

given it up, if I had been free to do so. A large number of our people have been in the same position.

4768. Can no sub-let in that particular case be got?—Of course, you were held responsible for the rent, and you would require to look for a tenant, and when you found a tenant your landlord could object to the tenant you sub-let to.

4769. In your case did it absolutely happen?—In view of the fact that I had the house taken for a certain period I had to endeavour to get a sub-let.

4770. Do you think it is fair to judge merely by the actual number of sub-lets and the question of removal, or is it fair to say there are many cases where a miner, for instance, would like to remove, but does not run the risk, and so he never goes to the factor or tries to get a sub-let?—I think there are a good many cases in which they do not try to get a sub-let, where they would shift if they had the power to do so.

4771. In addition, is it merely change of employment from one district to another that involves the need to remove, or may that arise from illness or from loss of employment, making it necessary to get a cheaper house, for instance?—I have known a large number of cases where wages came down very rapidly, as they do in the mining trade. They had taken houses when times were good, and had to shift into small houses, but had to hold the higher houses until the lease was up.

4772. It will happen the other way too?—Yes, men will like to shift to a better house, and do not do so because they are bound to the house they are in.

4773. Miners' wages will vary more than any other class of work?—Yes, they fluctuate more and to a greater extent than wages in any other class of work.

4774. What are the rents that are usually paid for the different classes of one room and kitchen, two rooms and kitchen houses, and so on?—They run from £4, 10s. for a single apartment up to £10, £12, and as high as £14 for a room and kitchen, and perhaps a little closet.

4775. And for two rooms and kitchen?—Up to £15.

4776. What do you say as to the limit of £20 indicated in Mr Cross's Bill as the limit for the ordinary working man's house. Do you think that is a reasonable sum?—I think so. There is not a very large number of our people living in houses of £20.

4777. It has been suggested, for instance, in the case of a miner who has two or three sons wage earners that he might live in a more costly house, say £25 or £30. Are there many such cases?—I think there are a few, not a very large number.

4778. If there is to be a limit of £20, is that a reasonable one?—I think so. Of course, the committee are aware that rents vary very much. In one mining district you might get a very good house for £20; and in another, because of the demand for houses in the district or the fact of its being near the city, you might have to pay £25 for the same class of house.

4779. The Bill is proposed to be limited; at all events, it has been suggested that no measure should be limited to houses in burghs?—We do not think it should be limited to houses in burghs.

4780. Why not?—People who are not in burghs are affected in the very same way as people who are.

4781. You have many large mining villages which are not burghs in any sense?—Yes. The town in which I live at the present time has 12,000 inhabitants, and is not a burgh.

4782. Which is that?—Larkhall.

4783. (*To Mr Gilmour.*) Where do you live, Mr Gilmour?—In Hamilton. Mr Murdoch lives in Hamilton also.

4784. (*To Mr Smillie.*) You take Larkhall as an illustration of a different place?—Yes, one-third of the people there live in their own houses, which is a very good thing for them. They have less shifting than they would have in other circumstances.

4785. You have told us the advantage of monthly lets, are there any drawbacks?—I think the only drawback would be the chance of a person being turned out at the end of a month unless he had security that he would not; and we propose that, if monthly lets were fixed, a landlord should not be allowed to turn out a tenant unless for non-payment of rent or deliberate damage to the property. The only disadvantage would be the liberty of a landlord to turn a person out at the end of a month, a man well pleased with the house and his work.

4786. Does it come to this, that in your proposal the miner would have an absolute right to leave at the end of a month on due notice, while the landlord's right to turn him out would be qualified by failure to pay the rent or the improper use of the house?—That is so.

4787. That is a pretty large order?—I think it is a fair order.

4788. (*Mr Dobbie.*) When would a landlord's right emerge—yearly?—I do not know that he should have any right to turn a person out of his house, provided he was paying the rent.

4789. Fixity of tenure?—Practically.

4790. (*Chairman.*) Just as good as a feu?—Yes.

4791. Suppose that was so, would the landlord be entitled to raise the rent. Suppose the landlord proposed to raise the rent, and the tenant objected, would you give him the right to turn out men?—I do not see how you could prevent the landlord by any Bill we are now considering. Of course, we have a further proposal that there should be a fair rent court to which a tenant could appeal, but if we say that a tenant must have practically fixity of tenure we cannot say that he must have fixity of tenure at a certain rent.

4792. Your proposal would really involve a corollary to add a fair rent court?—Yes.

4793. I think that is all you have to say about monthly lets?—I think so.

4794. We come next to the question, what is the view of your Union about the payment of rates and taxes?—The view of our Union is that all rates and taxes should be paid by the landlord, and that they should be charged by him to the tenant in his monthly let.

4795. Coupled, however, with the qualification that the tenant should know what he is paying under each head?—Quite; I may say that at the present time the County Councils and the Parish Councils charge directly the rates on employer's houses to the employer. At one time the workmen in the employer's houses paid their rates direct yearly; now they have been charged direct through the employer. In certain cases the proprietor has deducted from 2d. to 4d. a week, an amount to meet the rates at the end of the let, paying back to the tenant the amount he has overcharged.

4796. Is the employer entitled to such a sum as will not only cover the rate but cover the trouble?—No, he is not entitled.

4797. Why should he not be entitled to that?—There is practically no trouble. He is collecting the rents at the time, and it is 2d. or 4d. per week.

4798. If the rate were collected in that way along with the rent, monthly, would more rate be got on the whole than is got now?—Undoubtedly.

4799. Many who cannot pay a large slump sum, say £5, would be better able to pay the same sums spread over twelve months?—Yes, it would be easier on them; and many of them who don't care much about paying rates would have to pay them.

4800. It would be to the benefit of both the tenant and the rating authority?—I think so.

4801. If the landlord got a fair allowance it would not matter to him one way or another?—About the allowance, we don't think any allowance is necessary for collecting the rates from the tenant.

4802. Suppose the landlord was to pay you the whole rate, and ultimately got neither rate nor rent for a certain part of the time, from the tenant being unable to pay, he would need some allowance for that?—He would have his rates collected before he paid it over to the rating authority.

4803. Would you think it fair, that if he could show to the rating authority that he had been unable to get the rate, he should be allowed an allowance?—I don't know if it would be fair to charge the landlord with the whole of the rates if he was not getting it from the tenant.

4804. Either from the tenant failing to pay, or the house not being let?—Or the house not being let.

4805. If he was protected against losses and unlets, he should get no allowance in your view?—No.

4806. We will take No. 3. That is where a garden is part of a let of any house where the tenant has been removed at the instance of the landlord. That follows from the ejectment. That is an incident of the ejectment?—This is in houses not owned by the employer. There are a large number of houses taken from year to year at the present time, and there is a little garden attached out in country districts. We consider it would be unfair, if a party is going to be removed at the instance of the landlord, that he should not be compensated for any loss he might have on his garden. But in No. 2 here, if he got fixity of tenure he would not require to remove. If he requires to remove because he was going to work elsewhere, he should be entitled to sell his garden to the incoming tenant.

4807. According to No. 2, the tenant cannot be ejected without a just and reasonable cause, and so on; that is what you have spoken to?—Yes.

4808. That only leaves the important question No. 5, namely, that workmen occupying houses owned by their employers shall have the same security of tenure as other tenants under ordinary circumstances, and such employer shall, etc. Is not that large general question just a little

Mr Robert Smillie, Mr D. Gilmour, and Mr J. Murdoch.

3 Jan. 1907.

aside from our limited inquiry?—It is connected with the tenure of houses in Scotland.

4809. But it would involve, would it not, houses of rents not limited to £20?—There are no houses occupied by workmen and owned by employers that are beyond £20, unless those of managers and officials of that kind.

4810. Of course, we are talking of ordinary miners. The highest rent will probably be £15. What would be your exact proposal there? Would it be limited in time, or would it be during the existence of a trade dispute, however long it may last?—We say houses owned by employers and occupied by workmen should continue to be held as a condition of employment not to come under monthly lets, but to be held as they are at present, as a condition of employment from week to week or fortnight to fortnight; but in the event of a dispute, strike, or lock out, the employer should not have the right to turn out the workmen if the rents were paid and there was no wilful destruction.

4811. But if either of those conditions were not fulfilled, the landlord should have the ordinary rates?—Yes, we don't want in any way to take advantage of the employers.

4812. But you don't want the employers to have the weapon of owning the miners' houses?—They are in a different position from the private landlords. They dismiss workmen if they have empty houses, and they don't go to these houses. They could always have their houses filled. There is no risk of loss of rates or rent.

4813. You think the circumstances between the two parties should not be affected in that way?—We understand that a recommendation from this Committee would be of considerable advantage to us in securing a matter of this kind.

4814. That is a general question affecting the workmen all over the kingdom?—Yes.

4815. Is there a larger proportion of miners' houses owned by employers than in any other trade?—The miners and the railwaymen are the chief. These are the only two where evictions on a general scale have taken place.

4816. How does it come about that houses are owned by employers for the miners?—Because mines are often sunk in a locality where there are no houses, and they erect houses for the workmen, and it is a very good investment. That is another reason.

4817. (*Mr Cox.*) Are rents likely to be paid through a prolonged strike?—They are either paid by the tenant while the strike goes on, or recovered by the owner after the strike. There is an arrangement between the workman and the employer that he takes off double rent until he recovers his full rent.

4818. (*Chairman.*) Is there anything occurs to you to be added?—We think that all tenants should have protection against the landlord having the right to sell them out for non-payment of rent, that their household goods up to a certain amount should be protected against the right of a landlord or any creditor. At the present time the working people of this country have absolutely no protection. I have seen them sold out again and again, their household goods carried out and sold in case they did not pay anything because they were not able.

4819. You would limit that to a reasonable amount?—£30 or £40 worth of furniture.

4820. What was reasonably necessary for the carrying on of a household?—Yes; I do not think any person should have the power to sell out the furniture.

4821. You would place this in the same position as wearing apparel and tools?—Yes.

4822. (*Mr Gilmour.*) On the question of evictions I think I have had almost more experience than most people, and I have been in several disputes where the employers claimed the right to evict working people and got, through the courts, power to turn out 16,000 people to the roadside within five days. That is a sickening state of affairs. We think workmen ought to have some protection against that.

4823. Do you say independent of the question of payment of rent?—Yes. The workmen would have been willing to agree that the rent should be paid at the end of the dispute; but under the existing law the Sheriff has a rule, in our district, I know, that only gives five days for removal. One case is fresh in my memory. Power was given to turn out of the district half a mile round a thousand people, and there was not a dwelling-house to be got. That is dealing with the subject collectively. Individually, it applies almost in the same way. If a workman does something in connection with his work that displeases his employer, without giving any reason, he will be served with a notice to leave his house. I had personal experience of that myself. Six weeks after an individual dispute was ended, after everything was settled down, I got notice to leave the house, and was turned out within a week or two. We are specially interested in the subject of evictions. People have been turned to the roadsides in weather such as we are experiencing just now. We say that no employer should have any further advantage over his tenant than an ordinary landlord. We agree that he should get payment of rent, and that there should be no wilful destruction of property, but that he should not have power to turn out people in a summary fashion of that kind.

4824. Do you think there might be a difference between a strike and an individual dispute with a single workman?—Yes, there is a difference I admit.

4825. But in your view it goes the whole length?—Undoubtedly.

4826. That would really mean what Mr Smillie said, fixity of tenure?—It practically comes to that. On the other matter of the landlord paying rates, I had an experience of that kind which has wrought very smoothly. At a very large Colliery Company's place, belonging to James Dunlop & Company, Newton, about two years ago, that matter was under consideration on the posting up of a notice that a deduction would be made in respect of all rates and taxes chargeable. That lead to negotiations being gone into, and we came to an agreement that an amount was to be taken off fortnightly as nearly as possible, and an arrangement made at the end of the year. If the workmen had to pay a little more, it would be paid back. That has worked very smoothly, and the rates are paid just the same as rent.

4827. The house belonging to the employer up to what rent?—From £6 to £8.

4828. Have they tried it in any other place?—It is generally understood that in letting houses the employer, where he pays the rates, is to add to the rental such a sum as will cover the rates.

4829. In this case you don't know what you are paying?—No, we don't.

4830. You think it would be proper that that should be known?—The two things should be detailed separately.

4831. (*Chairman to Mr Murdoch*). Does anything occur to you?—I generally concur in what has been said. There is just one point, the power of the employer to put their men out. I know of a case where the men were on strike. They had 500 or 600 men, representing 1600 or 1700 people, and the company used that power. The men remained on strike; and when the company got the power of putting them out of their houses, rather than be put out, they accepted the conditions, which they would otherwise have refused.

4832. (*Mr Esslemont to Mr Gilmour.*) In connection with this eviction of 1600 souls, were their rents paid?—The rents were offered. There was no question of rent involved.

4833. But, as a matter of fact, were the rents paid?—The rents were not even due. The people were taken into a court within five days of the time the stoppage began, and the Sheriff, as a rule, always gives the five days.

4834. (*Mr Smillie.*) When a strike takes place the employers hold in their hands the whole of the wages due to the workmen who live in their houses. It may be £1, £2, or £3. That is set off against the rent, and they refuse to pay any wages until the strike is ended, in order to secure them. In the case Mr Gilmour speaks of, most of the workmen had their wages lying in the hands of their employers, and when we went to court we offered to pay the rents of any who were behind.

4835. (*Mr Murdoch.*) In the case I refer to the company did not pay the money.

4836. (*To Mr Smillie.*) What you want is that the conditions of the employer should be fair, and that the employer should not have an unfair advantage over the workmen. Of course, you would recognise, would you not, that if the workmen had security of tenure in houses provided for these workmen by their employers, that would give the employee an unfair advantage over the employer, would it not?—We don't see where it would.

4837. (*Mr Gilmour.*) I have an experience in that direction too. I remember at Glenboig Fire Clay Works there was a dispute, and they applied for eviction warrants. They gave as an excuse that they needed the house for other workmen. As a matter of fact, they introduced foreigners, crowded them out in a very few houses, and it was only an excuse. Our experience is that very, very seldom does it happen that any workmen from the outside would apply for houses during the continuance of a trade dispute, and it is not a fair argument to say that they would require the house for others ready to take the place of those on strike. Very seldom does it happen that an employer will have an application from the outsiders wanting to work where a dispute is going on.

4838. (*To Mr Smillie.*) But if an employee is entitled to sit on, would not that absolutely prevent the employer securing any outside labour?—No; outside labour does not necessarily mean that they would require to put up their houses.

4839. But, Mr Smillie, you admitted that a reason for these workmen being in these houses was the fact that

they were not otherwise provided in the district. You said they sank shafts in a district where there were no houses, and therefore had to erect houses?—That was in answer to a question why there were miners in such houses.

4840. That establishes the fact that it is unnecessary to do so; and therefore, unless these houses were favourable for people willing to get employment, the employer could not carry on his business?—Your theory is quite correct on that.

4841. We all want to see what is fair and right done between employer and employee, and would not that place the employee in a stronger position than the employer?—I don't think it would. We all admit that, at the present time, the employer is placed in a stronger position; but you say if you give fixity of tenure during a dispute, it will reverse the thing, and put the workmen into a stronger position than the employer would occupy. I don't think it would; because there is this difference, the employer has in his hands the right to settle a dispute, to come to an understanding. One half of the disputes which continue from week to week would be settled if it were not for the power to evict.

4842. (*Chairman.*) Is the answer not that you propose to place employers on the same footing as those in other houses?—Yes, the employers would not be in a worse position than any landlord in the locality.

4843. (*Mr Esslemont.*) It is this, that he would not be any worse off than an employer whose employees occupy houses provided by others?—Both might be attended with disputes with workmen. One of the employers might have no employees in his house, the other might have several hundreds. They would both be placed on the same footing.

4844. (*Mr Binnie.*) You propose that there should be practically security of tenure?—Practically.

4845. Well, suppose an employer puts up a number of houses to accommodate his own working people, and that some of these people go and take employment in some neighbouring work, would it not be a disadvantage to the employer to have to go and build additional houses in order to accommodate the number of people that he requires for his own work?—We do not propose that workmen living in employers' houses should be entitled to go and work with another employer and continue in his house.

4846. Then you don't wish fixity of tenure?—Not in cases of that kind. That overcomes the difficulty in this particular case.

4847. (*Mr Murdoch.*) There is a habit becoming common with various employers of taking the rent off anyone and paying it over to another employer. A man living in the first colliery goes to work at the second and lives at No. 1. No. 2 takes off his rent and pays it over to No. 1 employer.

4848. (*Mr Binnie to Mr Smillie.*) That is because the employee prefers to pay rent some place rather than have the holding up of wages?—Yes, the Truck Act provides for that.

4849. (*Mr Gilmour.*) No, not for holding up the wages at the beginning of a dispute.

4850. (*Mr Smillie.*) Yes, an employer is entitled to keep the whole of the wages until you turn out of a house.

4851. Making it clear that you don't intend to make the tenure absolutely fixed?—No, we are all clear on that, that we don't want to lay it down that a man is entitled to stay in one man's house while working for another.

4852. (*Mr Cox.*) Your idea is that a tenant should be allowed to sit as long as he pays his rent?—Yes.

4853. And in the case of a prolonged strike should the tenant go on paying his rent, if not, the landlord would be entitled to turn him out?—Yes, I think so.

4854. It is during a dispute?—Yes. We don't mean that he should go on for a longer period, because that would place the employer in a worse position than a private landlord.

4855. Do you say the miners are more shifting than other classes of workmen?—They are more shifting than the men engaged in the shipbuilding industry.

4856. How is that?—Well, I really can give no account of it; they are paid by results. Coal getters are paid by results; they have no fixed wages. Their places very often get more difficult to work; and if they cannot get an improvement on their price, they simply leave and shift to another colliery, where they will get better employment, and it is nothing unusual for ten or fifteen men to go elsewhere.

4857. Unmarried men mostly?—No.

4858. (*Mr Howden to Mr Smillie.*) You spoke in connection with the law of hypothec. Do you favour a Homestead Act on the lines of the American Act, which would protect the tenant's goods and chattels up to a certain extent against all comers?—That is what I had in my mind. I think working men's furniture should not at any time be in the hands of an individual. Besides protecting the tenant, that would go a long way towards abolishing the present pernicious system of credit giving.

4859. (*Mr Dobbie.*) In England the limit of the value of goods exempted is £5, would that meet the views of your association?—No, it would not.

4860. Is it your opinion that the landlord and ordinary creditors alike should be excluded from attaching tools and clothing?—I think the furniture and tools and clothing should be absolutely free from danger of destraint by any creditor.

4861. Coming to the question of employers' houses, I take it that, apart from the ideal policy of fixity of tenure, you think there is substantial grievance which might be remedied, short of fixity of tenure in the direction of altering the present law in regard to tenure of employers' houses?—I do.

4862. I think you said that you did not want the present Bill to apply to houses occupied by employers. We would be content to allow the present system to remain, provided we had protection during the strikes and lock-outs holding the houses as a condition of employment.

4863. So that, apart from suspending the right to remove during disputes, you would be content to let the law remain as at present?—As far as the houses owned by the employers are concerned.

4864. (*To Mr Gilmour.*) You said that you think workmen occupying houses owned by their employers should have the same security as other tenants under ordinary conditions?—Yes.

4865. You differ from Mr Smillie on that point?—Not that I know of.

4866. (*To Mr Smillie.*) At present the intention is to give security of tenure depending on the period of let. I take it from you that the rent runs fortnightly?—Yes.

4867. He would have a fortnightly tenure?—He has it now. He holds the house as a condition of employment. He cannot be turned out without being evicted before the Sheriff, and he generally gets five days.

4868. But the moment the employment terminates the employer has a right to give notice of removal?—Yes.

4869. In the ordinary case there would be a fortnight's notice before that attempt to evict could be taken. This proposed Bill does deal with all small houses; and as it stands it would give the employee, who occupies an employer's house, a fortnight's tenacy in the case of paying the rent fortnightly?—And we would fully expect that that should be extended to employers' houses occupied by this class of workmen.

4870. You want that?—Yes.

4871. Because the Act as it stands wants that?—That is right.

4872. You would not put them in a worse position?—No.

4873. It is under ordinary conditions?—Yes.

4874. Coming to the question of trade disputes, I take it, apart from the fixity of tenure, you think the law might be changed, in order to suspend the employer's right to evict during the continuance of a trade dispute?—I do.

4875. Conditionally, of course, upon the rent being paid and no damage being done?—Yes.

4876. I suppose the grievance is a long standing one?—It is twenty-seven years since I was first evicted from my house, since we had to lie in the fields, and during the whole of that time we have been addressing Parliament for a measure of that kind.

4877. There was a Bill introduced by Mr John Colville?—Mr Donald Crawford in the first place, and Mr John Colville on two or three occasions. It is now in the hands of Mr Caldwell. It has been introduced again and again, and we have had considerable sympathy from the members of the Government.

4878. Has the question been before any of the great bodies of organised labour?—The Scottish Trades Congress has had it before them for the last seven years, and every year it has been unanimously passed by them. They have several circulars to the members of Parliament, and appeals to the Cabinet again and again that it might be taken up as a Government Bill.

4879. Have the Scottish miners, as a body, expressed any view?—Yes, in every part of every district, and the Conference has passed resolutions again and again. At the last Conference they had in Edinburgh last week the matter was under discussion, and the matter was unanimously agreed to ask legislation.

4880. What Conference was that?—The Scottish Miners Confederation. There were 100 delegates representing 70,000 miners.

4881. That is a grievance felt by the mining community?—It is one of the most serious grievances we have to face.

4882. Are there any houses in burghs owned by employers?—In Hamilton there is a considerable number.

4883. So that these would come under the Bill, even if it was confined to burghs?—That is so.

Mr Robert Smillie, Mr D. Gilmour, and Mr J. Murdoch.

3 Jan. 1907.

4884. Do you see no reason why it should be limited to burghs?—No.

4885. In the same way may I take it that you get all the option against the one burgh as against the other adopting the Bill?—Yes, we are strongly opposed to that.

4886. Dealing with the Truck Act, I think the position there is this, that the Truck Act, while it strikes at the employer making deductions, permits the employer to make a deduction for rent?—By mutual agreement.

4887. It does not make it criminal?—No, it permits by agreement. It is just a foregone conclusion, because the employer presents a ticket and makes the workman sign his name.

4888. The cause of eviction by the employer is not being in arrears of rent, but the termination of the occupancy in consequence of the employment coming to an end?—Yes, it is only fair to say that our complaints regarding evictions are by no means general. The vast majority of employers never think of evicting their employees.

4889. Come to gardens. I take it that if short tenancies were more frequent, instead of leaving at Whitsunday, you think the removals would be spread all over the year?—Yes, I think so. It is very inconvenient at the present time to have a general removal in the district. Hundreds of people are flitting about the same day, and some of them lay there goods out on the streets. When rain comes down the goods of the people are destroyed.

4890. At any rate, removing between terms, a man might find that he had spent money on his garden, and that he was quite unable, on account of his leaving for work, to get any return from the ground?—That is so.

4891. Your suggestion is that the landlord should make compensation to him, or allow him to make a bargain with the incoming tenant?—Yes.

4892. You limit that very materially to removals at the instance of the landlord?—Yes. We wanted to be very moderate in our claim, so that, where a tenant leaves of his own accord, he should be allowed to make an agreement; but where he is forced to leave by the landlord, the landlord should compensate him.

4893. Assuming the landlord gets rid of the tenant, the tenant in that case ought to get compensation?—Yes, we want to be fair to the landlord; and if a person leaves his house voluntary, we don't want the landlord to be held bound to compensate him.

4894. A practical difficulty occurs in regard to compounding of rents in regard to rating. At the present time a large number of poor ratepayers get exemption on the ground of poverty. If your view was given effect to, and the landlord paid the whole of the rates, have you considered how that privilege would still be preserved?—I don't think they would require exemption on the ground of poverty in that case. As a member of the Parish Council dealing again and again with appeals, I find it is because it goes up to a certain amount that the person is not able to pay, say 6s. or 7s., but they would be able, I think, to pay it with their rent.

4895. But say a person was not able to pay these, do you think it would be practical to get some machinery laid down, in which the landlord would be obliged either to repay the proportion of rate, or that the Corporation should repay it?—If a person got exemption on the ground of poverty, then the landlord should be exempted, and pay it back to the person who got exemption, if he charged them with their rents, and then find that, on the ground of poverty, exemption had been got.

Mr Robert Smillie, Mr D. Gilmour, and Mr J. Murdoch.

3 Jan. 1907.

4896. That is, you would not like anything done which would alter against the present poor tenant the right to get exemption?—No.

4897. You leave that to the Committee?—That is so.

4898. In the Bill there are various limits. In Glasgow, one sum, £20, and different rents in other towns up to which the Bill is proposed to be applied. Would you have a fluctuating scale like that, or would you prefer a fixed one?—I would prefer a fixed amount, £20.

4899. Coming back to the fixity of tenure, I think that may be a kind of gospel of perfection, but we had a witness here to-day who gave us what may be a compromise on that point. A witness suggested that while the tenant could have the right, at the expiry of each month, to leave, the landlord should not have the right to eject, except, of course, in the case of arrears of rent or damage to property, until the expiry of six months, or it might be twelve months. These don't have fixity of tenure under the present system as regards the landlord giving the tenant the right to remove on each monthly notice. How does that appeal to to you?—Twelve months' notice if the landlord wanted to turn out, that would be reasonable and fair, I think.

4900. This witness suggested that a let from the landlord's point of view might be six months, and from the tenant's point of view, one month?—I think it should be monthly lets, but protecting the tenant from being turned out without, say, twelve months, provided he paid his rent and did not damage the property.

4901. Assuming you were not able to persuade Parliament to give you an Act giving the landlord the right only to evict on twelve months' notice, as a reasonable man, you would think a six months' ticket, at the instance of the landlord, and a monthly one for the tenant, would be, at all events, a step in the right direction?—Yes. I think, of course, if my idea were adopted, there would be less difficulty in a person securing a house than at present.

(*Mr Gilmour.*) It is proposed to limit a Bill of this kind to burghs. May I point out, in regard to employers' houses, that where I live just now we have several employers who own houses inside the burgh of Hamilton. 100 yards over the boundary we have employers outside owning their own houses. To apply the law only inside the burgh might be only 100 yards from where another owner existed. It might prejudice one employer very much as compared with another. I think it is a very strong argument in favour of the placing of employers on an equal footing.

Mr John Mann, jun., and Mr John M'Laren Biggar.

Mr John Mann, jun., and Mr John M'Laren Biggar, called and examined.

Mr John Mann, jun., and Mr John M'Laren Biggar.

4902. (*Chairman.*) You, Mr Mann, are an M.A. and C.A., and secretary of the Workmen's Dwellings Coy., Ltd.?—Yes.

4903. You, Mr Biggar, are assistant secretary?—Yes.

4904. (*To Mr Mann.*) The company was formed sixteen years ago, and I think its objects are explained in a pamphlet, called *Some Experiments in Housing*, issued some little time ago?—That is so.

4905. You have also yourself published the important and valuable evidence which was submitted by you to the Glasgow Municipal Commission on the housing of the poor in April 1903, when you explained the working of the company?—That is so.

4906. Has anything occurred since to affect your view expressed in these documents?—No; there are no changes, except, it may be, that the circumstances of the company have been affected by the depression which has been prevailing latterly on all property in the city.

4907. The dividend of the company was restricted to 5 per cent., and I believe till the past year 4 per cent. was paid, after which it was reduced, owing to the depression you have spoken about, to 3½ per cent.?—That is so.

4908. And you have on your Board of Directors members of the Town Council, the city treasurer, and other prominent citizens?—Yes.

4909. You are not submitting evidence as representing these gentlemen directly, but you are going to give us some evidence of what you have derived from your personal experience in connection with the company?—The facts are official, but any matter of opinion must necessarily be personal.

4910. Although you admit there are special circumstances connected with the working of your company which don't, in all details, apply to ordinary workmen's dwellings, you think your results are instructive?—I think they are; more particularly, of course, with regard to the smaller class of houses.

4911. Always keeping in view that in respect, for instance, of your having caretakers, and other details which have to be kept in view?—Yes.

4912. Your company has expended over £54,000 both in building new houses and improving old houses?—Yes.

4913. Your object was to have dwellings which would be at least within the reach of the lower class?—Yes.

4914. Are your people generally skilled or unskilled workmen?—We have endeavoured to ascertain that in a definite way; and we find, taking it roughly, that two-thirds of them are unskilled or not in employment, one-third are what one might call skilled.

4915. You have six large blocks of new buildings built on two sites, one in the north and one in the east of Glasgow?—Yes.

4916. And twenty-six tenements that have been converted from neglected houses into decent houses?—That is correct.

4917. Thirty-two tenements in all, containing 663 houses, with an annual rent roll of about £4700, and, when fully let, housing about 2000 people?—Yes, at present 1772.

4918. None of the houses for tenants consist of more than two rooms?—That is correct.

4919. You have two new places, Cathedral Court and Greenhead Court, with a total of 247 houses altogether?—Yes.

4920. And you have renovations which are in four places, George Court, Ardgowan Place, Dundas Court, and Provanhill Street, with a total of 410 houses, being altogether 657 houses, one room and two rooms?—Yes.

4921. The rents vary slightly; but over all the net average weekly rents, after deducting a bonus, which you will speak to later on, are—one-roomed houses, 2s. 0½d. a week, say £5, 6s. 2d. per annum; two-roomed houses, 2s. 10½d. a week, say £7, 9s. 6d. per annum?—That is correct.

4922. The earnings of your tenants you have ascertained, and the one-roomed people at present average 17s. 2½d. per week, and the two-roomed 24s. per week. I see you have found that five years ago those now earning 17s. 2½d. were earning 19s. 5d., and those now earning 24s. on an average were earning 25s. 0½d.?—That is so.

4923. How is that?—It is somewhat difficult to understand, unless it is due to the general depression which seems to have existed more particularly in the lower grades of the working classes. It may also be that the more highly paid tenants have been going further afield. We take those censuses from time to time, and endeavour to take the wages of the family as a whole. Many statistics consist of the wages of the father of the family, but we find out the wages of all those who are earning anything.

4924. In the case of your tenants there is a proportion of what would be called the well-to-do thrifty artisan class?—Very small.

4925. When they get into that class they will move off from you?—Yes; our idea is that our houses are stepping-stones from the slums to other classes of houses.

4926. The wives don't often work?—Yes, they do.

4927. And the children are in every case earning something.

(*Mr Biggar.*) No; but as soon as they are able to, they are out.

4928. (*To Mr Mann.*) One special thing is that you have resident caretakers. How do you do about collecting your rent?—In every case the rents are weekly.

4929. And forehand?—Weekly, in advance.

4930. Is that insisted on? Because we were told that there were many cases with nominal forehand rent in Glasgow?—In our case it is absolutely insisted upon. The tenant may fall a little behind, but I think we are paid forehand on the whole. Some people think we are too harsh; personally, I think we are only reasonably interpreting our regulations.

4931. In addition to the forehand rent for the first week they have also to provide four weeks' rent?—We carefully refrain from calling that rent; it is a deposit.

4932. But it is equal in amount. It is calculated so that a new tenant has to pay a sum equal to five weeks' rent?—Yes.

4933. You give a bonus to tenants who pay regularly and behave well?—Yes; we find that very important. Although we say it is a bonus, we simply don't call for certain rent from the tenant, and thus very largely insure prompt payment.

4934. What led to your having weekly collections?—Generally it was that the class of tenants we had to cater for are paid weekly, and it seemed to us that our experiments would be more successful if we minimised the difficulty that tenants would have in paying our rents.

4935. What day do you collect rents?—On Mondays.

4936. So that the wages they get on Saturday you secure your proportion of at once?—Yes; and a very large proportion of the tenants leave the rents with the caretaker on the Saturday, and the collector on the Monday finds a list ready of the tenants who have already paid their rent.

4937. So that they have no temptation to use the money?—We have minimised the risk.

4938. Is that appreciated or resented?—Some of our tenants at first thought it was *infra dig.* to pay their rents every week, but now, almost without exception, they appreciate it.

4939. Was that by comparison with other people who paid monthly?—Yes; the houses are generally graded as to periods of letting. You have the daily house, that is, the farmed out house, the weekly rent, the monthly, the quarterly, and the half-yearly rent. There is a social stratum at each point.

4940. Do you think that, suppose yearly rents which are looked upon as top sawyer as at present were abolished, that feeling of social disadvantage, due to their existence, would necessarily disappear?—We know that sentiment dies hard, but if economic advantages were attached, it would die very quickly. The trouble in collecting the rent is undoubtedly very great; but you have to consider that, in many houses which are let nominally at a monthly let, the tenants get so much and so frequently in arrears that the housefactor's clerk is rarely out of the property.

Mr John Mann, jun., and Mr John M'Laren Biggar.

3 Jan. 1907.

4941. In your case one call gets the rent?—No, not always.

4942. To a large extent, compared with what it was if it was monthly?—Yes. We could not handle our properties as we do on a monthly system. I think the results in that respect, as regards bad debts, are unusual. The last two years are absolutely unusual.

4943. In 1899 the percentage of rental written off as bad debts was 0·133; in 1900, 0·147; in 1901, 0·154; in 1902, 0·141; in 1903, 0·131; in 1904, 0·172; in 1905, 0·405; and in 1906, 0·555. So that it has risen from one-tenth per cent. to a half per cent.?—That is so.

4944. You say that is exceptional?—Almost entirely arising in one group of tenements known as Provanhill Street.

4945. Is that a renovation?—Yes. We have thirteen tenements in that street, and they have proved an exceedingly difficult problem, and they are the first to suffer when depression comes.

4946. Why?—The district is so disorderly.

4947. (*Mr Binnie.*) Was that formerly Middleton Place?—Yes.

4948. (*Chairman.*) If you eliminate that, your average would not be much up, would it?—I can work it out.

4949. (*To Mr Biggar.*) How much would that be?—The average would be quite as small as in any year.

4950. (*To Mr Mann.*) Suppose at the present moment you were to offer your tenants, instead of your present system of yearly let, with, say quarterly collection, what would they say?—It is very difficult to imagine that.

4951. Suppose you were to offer them the yearly let, still continuing the payments weekly, would they attach any value to being able to stay there for a year?—Not at all.

4952. Of course, they would all like to pay their rents as infrequently as ever, the improvident?—They would. If you agreed to have the rents paid at the end of the quarter, they would not be there when the rent was due.

4953. But the provident working man values the frequent payment; the improvident as seldom as possible?—That is generally correct.

4954. In regard to the changes of tenants, how do your tenants compare, from a shifting point of view, with the ordinary working men tenants?—I can hardly claim to speak with much authority as to the ordinary working men; but our tenants as a whole are distinctly migratory, with the exception of one property.

4955. In Cathedral Court new premises, what have you found?—They are wonderfully stable there. We found, on testing the period of tenure, that one half of the tenants have been there for four years and longer; while in all the other properties taken together, out of 500 tenants we had, at the date we made the inquiry, only 58 had remained for four years or longer.

4956. And these include Greenhead Court also, which is a new building?—That is so. You may take Greenhead Court as more typical of what the ordinary artisan would occupy. I should explain that the houses in Cathedral Court are considered to be specially attractive, the rents are not by any means high. The property is central, at the corner of Rotten Row, more central than any other we have.

4957. You will not have the more respectable well-to-do people living there?—They consider themselves even now a people apart. The houses are very much prized.

4958. There will be no stigma or reflection on tenants occupying these houses?—On the other hand, it would be a testimonal for good character.

4959. In Provanhill Street it is not quite the same?—If not quite, yet if a tenant explained that he was in a Workmen's Dwellings Company's house, it would go a long way.

4960. Other than Cathedral Court, how do you stand in regard to the changes? In Provanhill Street it is as high as 118 per cent.?—That is 118 changes in each 100 houses on the average of the last four years.

4961. In Greenhead Court 100 per cent.; in Ardgowan Place 114 per cent.; in George Court 76 per cent.; and in Dundas Court 72 per cent.?—Yes. I may explain that some of these changes are from one house to another in the same property. We take a tenant who may be anxious to get into our property and give him perhaps one of the less desirable houses, and if he qualifies by good conduct he gets changed into the better houses. That will explain a large proportion.

4962. And it is in some ways desirable that there may be many changes in that class of property, because the houses before occupation get a thorough cleaning?—We try to insist on that. It may mean the loss of a week's rent, but otherwise the opportunities for a thorough cleaning out are very few.

4963. Perhaps you can tell us about a disputed point. We have been told that the present system of ejectment is both slow and costly, both in actual outlay and loss of rent. What is your experience?—Speaking about the procedure in the Burgh Court, which is the ejectment court for small houses, I corroborate that.

4964. Could it be made quicker or less costly?—I think it could.

4965. About the speed, have you any knowledge?—The actual speed of the procedure itself is fairly satisfactory; but it is more, I am afraid, in the administration of the law that the grievances are felt, more especially in this way:—When a landlord does incur trouble and expense in instituting ejectment procedure his patience has generally been exhausted, and he has generally very good reason to require the keys of his house. The tenants in that case, by paying 6d. on lodging answers, get a block put upon the procedure. They appear in Court, and almost as a matter of course we have found the presiding magistrate grants a further period of delay, nominally to find a new house, regardless altogether of the reason the landlord may allege. In fact, it is very difficult for the landlord's representative to get any hearing at all.

4966. (*To Mr Biggar.*) Isn't the delay caused by the length of time given to put in answers? Have you, Mr Biggar, had personal experience of this?—Yes.

4967. You are confining your observations now to the Burgh Court?—Yes.

4968. Have you anything to say about the Sheriff Court?—No, we don't use the Sheriff Court for evictions at all. We only use the Burgh Court, because we believe in the end it works out more speedily.

4969. How is that, because there is going to be a question of that. In the case of the Sheriff Court, what delay is there? Is there any delay that can be avoided?—I have not tried the Sheriff Court for many years.

4970. We will stick to the Burgh Court. Where in the Burgh Court does the delay occur?—Between the lodging of the answers and the granting of the warrant. We collect on the Monday. Tuesday is the first day on which we can serve the notice. The tenant gets forty-eight hours to lodge answers, so that the first Court is Friday.

4971. That is reasonable enough?—It would be reasonable if the magistrate accepted our notice of having terminated the agreement on the Monday. The week's notice had expired on the Monday. If you recognised the receipt of a registered letter, and give summary ejection, there would be little time lost.

4972. Suppose answers were put in within forty-eight hours, if these answers were considered in the Burgh Court, and, they being sent by a frivolous lessee, ejectment was granted at once, that would be all right?—Yes.

4973. And so it will arise when answers are put in before you get your warrant to eject. How does that occur?—Because the process is gone about automatically, not judicially. The tenant and landlord are supposed to appear at the bar. In some cases decree is given in any case. Very often the landlord does not appear for that reason. As a matter of fact, the Assessor of Court, as a rule, for monthly tenants, will give a week, and weekly tenants three days' further grace from the date of the Court.

4974. Of that week forty-eight hours are taken up in lodging answers?—No, this is after the Court.

4975. Suppose you come up after the forty-eight hours and ask for a warrant, you will get it?—No.

4976. Why not?—Out of grace to the tenant.

4977. Suppose the tenant does not appear? He has put in answers, and does not appear to support them. Do you mean to say, if the landlord goes up and demands a warrant, he would not get it?—I believe in that case we would, but they are generally dealt with in batches. One or two men turn up, but the others cannot, and the warrant is dealt with as one.

4978. That is the landlord's doing. Take a single case. The forty-eight hours being out and the tenant not appearing, if the landlord demanded a warrant he would get it?—I believe I would in that case, but there have been cases in which I have not got it then.

4979. Supposing you got it, then you could turn him out at once?—Yes.

4980. In an ordinary case you don't have to resort to a sheriff's officer? You find the tenant walks out an hour or two before you turn him out?—Not always.

4981. Isn't it a rare thing that the sheriff's officer's fees have to be paid?—Not rare.

4982. What do you suggest in the way of improvement in that procedure?—I suggest that the Court should be of a more judicial character, and if it was of a judicial character, it would go without saying that in the bulk of cases the proprietor would get summary ejectment.

4983. But according to you it is not a non-judicial Court that does it. The Burgh Magistrate does not do it at all. It is the official who acts in his place. That is not soft-hearted at all?—Yes, but he has been so influenced by the soft-hearted magistrate that he has become an automaton giving a soft-hearted judgment.

Mr John Mann, jun., and Mr John M'Laren Biggar.

3 Jan. 1907.

4984. Supposing you get your warrant right off, you would be satisfied?—Yes, quite.

4985. You talked about expense, could that be reduced?—I don't know that it can very well be reduced, if one considers the labour. Of course, we have a further suggestion which Mr Mann will probably speak to, that just as the tenant gives us notice that he will leave at the end of a week and lifts his bag and baggage, when we give notice to him that his tenancy will end at the end of the week, if he does not turn out, we should have power to remove his goods.

4986. Unless he could show a *prima facie* case that it was a six months' tenancy?—In that case he could have damages.

4987. Do you suggest that in this case you should have power to put his goods out on the street?—Yes.

4988. (*To Mr Mann.*) I see you say that procedure has been adopted in some parts of London?—Yes, we found some years ago on inquiry that this was adopted, or very nearly so, by some of the large London companies, parallel with our own. They adopted proceedings of this description and found it worked without any difficulty. But it seems to vary in different parts of London, according to the different Police Courts, and I am not prepared to say it is a legal proceeding.

4989. In point of fact, you find this is a very considerable difficulty?—It is.

4990. And the bad class of tenants take advantage of it?—They do, most thoroughly. In fact, it is the outstanding difficulty in the management of small houses.

4991. Under any administration?—Yes,—the want of proper power of ejectment of an unsatisfactory tenant, not merely a tenant who fails to pay; it is sometimes the most immoral tenants who pay their rents freely, but they are undesirable tenants. The landlord, I contend, should have expeditious and inexpensive means of getting rid of them, and, as Mr Biggar has just explained, it seems to us fair and reasonable that just as a tenant has power to say to the landlord, "I am going to leave your house on Monday week," the landlord should similarly have power to say, "I want the keys on Monday week."

4992. (*Mr Howden.*) Whether he had good and sufficient reason or not?—If the landlord is exercising that power in an illegal way, by breaking any contract, for instance, he is a man who is always to be found, and is worth sueing and will readily be sued. On the other hand, the landlord has no similar recourse against the tenant, who disappears after, perhaps, destroying the house. For instance, why should a working man not have the right to say to his milkman or grocer, "I have been getting my milk or my groceries from you; I want you to continue it." Without payment the grocer may say, "No, you won't get any more supplied." The landlord should have a similar right.

4993. You have special difficulty with his furniture?—He is in physical possession of your property.

4994. *The Chairman.* — You find that the practice of asking to be allowed to lodge answers is largely abused?—Yes, there are certain lawyers, or hardly lawyers, who make a practice of prevailing upon tenants to pay the sixpence instead of paying a week's rent.

4995. Where no answers are lodged and where the answers are merely formal?—Yes. We found on inquiry in connection with the Housing Commission, that twenty years ago, one petition in forty was objected to, whereas now, out of every three petitions one is obstructed.

4996. It has been found to pay, in short?—Yes.

4997. I suppose, even if they lodged answers, if they were made to consign a week's rent, you would not object?—That would overcome the difficulty.

4998. Supposing, as a condition of lodging answers, they had to lodge a week's rent?—But at the same time it might be a very undesirable tenant.

4999. Still, if the answers are found good, they would get back the rent?—Yes; the consignation of rent during the period of waiting seems quite good. They should perhaps deposit a sum to meet the almost inevitable destruction of the house during this period of waiting, but, taking it fairly, the consignation of rent for that period would meet the case.

5000. On the question of landlords' hypothec we have heard various views here, some people thinking that hypothec is not merely in favour of the landlord but in many cases in favour of the tenant. What is your view about the landlords' hypothec?—Generally, I have come to the opinion that it should be abolished, and particularly in regard to the small houses, where I really don't think it is effective.

5001. Because the game is not worth the candle?—Not

worth the expense and trouble. It has a certain disciplinary effect, but we simply disregard it altogether.

5002. In point of fact, what happens is that decent bidders don't go and it falls into the hands of brokers at a nominal price?—The brokers make the sale so disagreeable that no right-minded people will go near it. The people buy in the goods, and redistribute them among themselves.

5003. Are there any other cases where, through the existence of the hypothec, the landlord is able to give indulgence in the event of illness?—Oh yes; I am speaking more of small houses. It is more debatable the higher you go in the scale of rental. I speak of houses up to £12 rental.

5004. If you go up to £20 the conditions there are different, are they not?—Yes, of course one gets into a very debatable question. The landlord's right may be protected, but, on the other hand, the tenants, relying upon their furniture being immune from the claims of outside creditors, are more often tempted to incur debt, and, taken broadly, it is not a wholesome practice. There may be cases where, through illness, a landlord is enabled to be more lenient.

5005. An intermediate suggestion has been made, that the right of the landlord to sell furniture should at all events only arise beyond a certain reasonable amount, say £20, and that to the extent of the furniture as necessary for the family to exist, just like tools?—It is very difficult to draw the line. One would exempt the tools and clothing.

5006. What about furniture?—It is difficult to say what is the limit.

5007. About the collection of taxes with rent, you made experiments that have not always been on the same line. What is your experiment and what have you derived from it?—Well, after working with the present system for a few years, the directors resolved to try the experiment of collecting the tenants' taxes along with the rents, in all the houses—we then had three properties—the reason being the burden of the taxes on these tenants came on in the dead of winter, when employment was scarce and ill-health not unusual: the taxes were really a nightmare to them. We found that some of our very good tenants simply disappeared when the tax collector became pressing, and we lost good tenants on that account.

5008. Good tenants?—They paid their rent at any rate, and we had no objection to them. But they found by disappearing they could evade their obligations to the city. On that ground, and on the ground of convenience to the city, we tried collecting, and it still goes on in two properties, Cathedral Court and George Court in the east end, one being a new building and the other a renovated property.

5009. Cathedral Court having sixty-one houses and George Court also sixty-one?—Yes, they are exactly the same size.

5010. What are the rents in these, maximum and minimum?—I have only the averages here.

5011. That will do?—The average of Cathedral Court is, per annum, £4, 10s., and George Court £5, 3s.

5012. What is your highest average?—Greenhead Court, £5, 11s. I am speaking of one-roomed houses now.

5013. What other rents have you?—Turn to two-roomed houses in Cathedral Court, we have £6, 11s. per annum, and in George Court £6, 19s. 9d.

5014. Is that your highest average?—No, Greenhead Court averages £8, 13s. for two rooms. There is a much smaller number there.

5015. You tried it also in Ardgowan Place?—Yes, at the same time.

5016. What is the average there?—One-roomed houses average per annum £5, 4s., and the two-roomed houses £7, 8s. 5d.

5017. You still continue it in Cathedral and George Courts, but you have given it up in Ardgowan Place?—Yes.

5018. Why?—In Ardgowan Place, which is occupied by a more migratory class and generally, perhaps, a humbler class, we found that our tenants had scarcely ever been accustomed to pay taxes at all, and when we asked them to pay 3d. or 4d. a week in respect of taxes, they simply regarded it as an addition to the rent, and they said, "We can get another house in the next block without this extra charge." They began to leave us.

5019. Do you think you are bound to inform the tenants of the proportion of what you are getting as for the rates?—I think that is only fair.

5020. Do they ask it themselves?—They want to know the reason of any rise of rent.

5021. You would always charge a lump sum?—Yes, but I think they are really indifferent.

5022. Have you not found the same trouble in Cathedral and George Courts?—No, they regarded it as a distinct advantage.

5023. And they know what they are about?—Yes.

5024. Is any part of what you charge them for cost of collection?—No, we charge the taxes as nearly as possible to the nearest fraction. Of course, with a weekly collection we cannot go into fractions lower than a halfpenny a week. On the whole, we simply collect from the tenants what the assessing authority puts upon us.

Mr John Mann, jun., and Mr John M'Laren Biggar.

3 Jan. 1907.

5025. You are putting nothing on them in respect either of cost of collection or of loss from other tenants?—No, there is no loading. I cannot hit it exactly, because the taxes are varying from time to time, rising unfortunately.

5026. Are you not, in this case, paying to the rating authorities money that you don't recover from the tenants?—Yes, more particularly in Ardgowan Place, and this was another reason why we had to abandon it. So many of our houses became empty, and as we had contracted at the beginning of the year to pay taxes for all the houses entered on the Valuation Roll as occupied at the date of the survey, we found we were paying taxes on a great deal of property that was empty, and it became a very serious loss to us in that property.

5027. Suppose you have a house which, when the survey is made, is occupied, and then within a month becomes unoccupied, and remains unoccupied for eleven months, you don't pay rates on that?—Unfortunately we do. The magistrates say we must go by the Valuation Roll at the beginning of the year.

5028. Is the 7½ per cent. you get from the city authorities understood to cover unlets?—Not unlets which are entered on the Valuation Roll as unlets.

5029. But partial unlets?—We don't get any relief.

5030. It is understood to cover losses and partial unlets?—Yes.

5031. (*Mr Howden to Mr Biggar.*) Is it not sufficient to do so?—No, not to meet the collection.

5032. How much would you put the figure at that you would need?—Personally, I think the truest and most just plan is to allow a reclamation of over-payments just as you do on the income tax now.

5033. (*Chairman.*) Overpaid in respect of unlets?—Yes.

5034. And in respect of loss also?—Yes. I would give the landlord allowance for collection.

5035. (*To Mr Mann*). That allowance, Mr Mann, should only be for the cost of collection, and the other two items, namely, loss and partial unlets, should be a matter of adjustment?—Yes, at the end of the financial year.

5036. That seems not an unreasonable idea at all. What do you think is the result of your dealing in Cathedral Court and George Court?—It works out quite satisfactorily, with the exception that we certainly should have some abatement on unlets and for cost of collection, but the principle is absolutely sound, and, were it made universal, our difficulty in Ardgowan Place, which has caused us to suspend this work there, would disappear, because the other landlords would be compelled to increase their rents or charge the tenant to cover the taxes, and the invidious distinction under which we labour would disappear.

5037. There are three possible ways of doing it. The first is to give no allowance at all and let the landlord adjust it; the second is to give an allowance which would cover everything, the three items, cost of collection, loss, and partial unlets; the third way is what you state, to give an allowance only to cover the cost of collection and leave the rest to be adjusted between the rating authorities and the owner. Why do you reject the first, leaving the owner to charge as found necessary?—The owner is made the tax-collector without any remuneration.

5038. He would make the tenant pay?—It would work round to that.

5039. There is a charming simplicity about it?—That is so. On the other hand, we have precedents in every other case for making a deduction, and the difficulty about the second method is that the loss varies on the class of house, whereas 20 per cent. might not be unfair to cover cost of collection and unlets, when you come to the well-to-do citizen, 7½ per cent. or 5 per cent. would meet it quite well.

5040. Have you fixed a rate of your own for cost of collection? Isn't it much greater in some cases?—That is so. There is the commission which the factors' charge. It varies with the frequency of collection.

(*Mr Biggar.*) In the first proposal, if you leave it to the factor to charge a sum to the tenant for having collected his taxes,—if you leave it open for him to do that,—you would open up a means of practically bleeding a tenant of a good property for a good house. He might charge him 15 per cent. Another man might do it for 5 per cent., and we don't think for a moment that the authorities wish the landlords to collect their taxes without paying them for their trouble.

(*Mr Binnie.*) The greatest increase of taxation would be on persons least able to pay.

5040*a*. (*Chairman to Mr Mann.*) You said precedents were all one way. The County Councils don't give you any allowance, I understand, in cases where you collect occupiers' rates?—I did not indicate that all the precedents were one

way, but those I know best are certainly in favour of discount.

5041. But you are agreed, aren't you, that a great deal in the shape of rates would be paid by frequent collections, not got under the present system, when the amount has to be collected once a year?—There is no doubt about that, in this class of property particularly.

5042. How it is to work out is quite a different question?—Yes, we have found that the tenants don't grudge—that is, apart from the exceptional conditions in Ardgowan Place—the 3d. or 4d. a week for taxes, and they are able to pay it. They don't seem to be able to keep a week ahead of the world.

5043. Is it the fact also that there are people getting relief on the ground of poverty just now, who would be able, if the thing was collected monthly, to pay their rates?—Yes, we found in the properties where we do collect the rates with the rent, that there is no exemption on the ground of poverty or inability to pay. Some of our tenants who are paupers on the roll actually manage to pay their taxes along with their rents, and in these cases, at the end of the year we succeed in getting back from the parochial authorities the poor rates and other taxes they have paid. Mr Biggar says these exemptions indicate the ability of the tenant to evade collection rather than inability to pay.

5044. In regard to poor and school rates, these are the Parish Council rates?—Yes.

5045. In the case of Cathedral Court and George Court, these are collected by you?—Yes.

5046. And 100 per cent. is the result?—That is so; there is no loss.

5047. The authorities collect in the other four places, and is the result this, that on the average of the four together, instead of 100 per cent., the authorities get 28·1? (*Mr Biggar.*) That is so, ranging from 7·7 per cent. in Provanhill Street to 49·5 in Dundas Court.

5048. (*Chairman to Mr Mann.*) So that even the maximum is very striking by comparison?—That is so. It is the power that the landlord has of ejectment that enables him to get his rent to within the small fraction I showed you had been lost, as compared with the ordinary tax collector, who has no power at all except selling off goods. In the case of rates collected by the authorities, (putting aside the tenants who are in receipt of poor relief), the percentages of the amount levied on tenants not in receipt of poor relief, which remained unpaid, are found to be:—Dundas Court 50 per cent., Greenhead Court 60 per cent; Ardgowan Place, 81 per cent; Provanhill Street, 92 per cent; overhead, 72 per cent.

5049. You say you have asked the municipal authorities for similar information regarding your properties, but have not yet received it?—I have a letter to-day stating that the matter is before the Committee.

5051. You can hand it in afterwards?—I think it will be valuable, because it will be a very useful table, and if my Company has no objection to showing their details, the rating authorities should have no objection to showing their success or non-success.

5052. If you get a deduction of 7½ per cent. from the Police Department, do you see any reason why you should get none from the Parish Council people?—No, there is no distinction.

(*Mr Biggar.*) The one has legal power and the other has not.

5053. (*Chairman to Mr Mann.*) I mean in principle?—No.

5054. In regard to water rates, in houses under £10 you collect the water rates—all landlords do?—Yes, that is, the domestic water rate.

5055. Is it under the local Glasgow Act?—Yes.

5056. Not under the Burgh Police Act?—No, a special Act.

5057. In houses under £7 the allowance is 25 per cent., and between £7 and £10, 20 per cent.? Is there any means of accounting for all these differences—no allowance at all from the Parish Council people; 7½ from the Police Department for ordinary rates; and in the case of water rates, from 20 to 25 per cent.?—There is no underlying principle at all. I cannot suggest any reason except that, in the case of the water rates, the matter must have been very specially considered, probably on some representation.

5058. Have you any material for forming an opinion as to which would be the proper allowance?—In the case of water rates, this does cover the rates on unlet properties. It is a special hardship met by the higher rate. They go on the previous year's roll, and many a time come on premises as occupied, which are not occupied.

5059. But if partial unlets are to enter into the allowance, then the percentage will be quite different?—Quite so, 20 per cent. would be too high for collection merely. It should be, broadly, the same rate of commission that a house-factor would charge for a house of that particular type. Mr Biggar states, with regard to the reason for saying the rates of the Water Department are fair, that he tested it in connection with Provanhill Street. We had an abnormal unlet, and the test showed that we paid water rates on £75 more than we had collected. We were really out of pocket in spite of this large allowance.

Mr John Mann, jun., and Mr John M'Laren Biggar.

3 Jan. 1907.

5060. (*To Mr Biggar.*) Was it 20 or 25 per cent.?—Twenty-five. In spite of that large allowance, we were still out of pocket. We had paid more than we had been able to collect, but on the average I believe it is perfectly fair.

5061. You could not give us any idea, if you had got an arrangement for unlets, what allowance you would then need for the two elements, the cost of collection and losses?—Of course, it could be deduced from our losses on the annual rental. Our loss would be merely the cost of collection, which would come in Provanhill Street to from 7½ to 10 per cent.

5062. For pure collection? So that something like 12 per cent. would cover the two elements?—Yes.

5063. (*Mr Binnie.*) The landlords in Glasgow, I think, at the same time as they got this large allowance for collecting the water rate, had a special rate put on themselves, a public water rate of a penny per £ on every owner?—There is such a rate. I do not know whether it was proposed at the same time originally.

5064. There was a special water rate put on, called the public water rates, and that is still paid, a very much larger portion of the water rate than anyone would imagine, and there was an additional allowance made?—Practically a *quid pro quo* for the water rate.

5065. (*Chairman to Mr Mann.*) In London the rating authorities formerly allowed the large dwellings companies and other landlords allowances ranging up to 25 per cent. Recently these have been curtailed, haven't they?—Yes.

5066. What was the result?—Many of the large companies suspended that privilege to their tenants, of collecting the taxes, and allowed the ordinary tax collectors to do their best. I have not had any communication within the last two years upon the subject.

5067. (*Mr Binnie to Mr Biggar.*) What has it been reduced to?—It was formerly 25 per cent.?—I think they wanted to halve it.

5068. (*Chairman to Mr Mann.*) So that I understand the result of the London arrangement is that, while you think an allowance should be made, that allowance should merely cover the cost of collection and the other two items; unlets and rent not collected should be adjusted with the authorities at the close of the year?—When the factor ascertains his results.

5069. You say the cost of collection would be met very fairly by 7½ or 10 per cent.?—Yes.

5070. That is overhead?—Taken overhead, it should not be less than 7½ per cent.

5071. Do you think it would be better to have a fixed sum for houses differing in valuation, or differentiations between houses of from £5 to £15?—It would be very difficult. It would adjust itself in the rents. It might overcome some objections if a differentiation were possible.

5072. Do you see any difficulty, if it is thought desirable, that tenants should know what they are paying for rent and rates, in distinguishing the amounts?—I think it is very important that they should know.

5073. It is already done in connection with payments for stair gas and water rates?—Yes.

5074. The tenants know?—Yes.

5075. Have you got copies of these pamphlets?—Yes, we shall have great pleasure in submitting them to any of the members of the Committee who wish to have them.

5076. (*Mr Dobbie.*) Can you tell us, Mr Mann, in regard to the poor rates, under what Act you get repayment in the event of the tenants being on the Poor Roll. We have some difficulty in understanding the present practice on that point?—You see, in nearly every case in which our tenants get poor relief, they pay their poors rates and other taxes, and when we get repayment, the money is refunded to them every half year. I do not know that there is any matter of legal enactment at all, because the condition is probably not contemplated in any Act of Parliament. The money has been paid, as it were by mistake, paid by us on behalf of a pauper.

5077. Provost Keith, Hamilton, seemed to think there was no legal duty or right on the part of the burgh to repay?—It is quite possible that he was right on that, the money having been once paid. That has not come under my notice. I am inclined to believe that the collector in Glasgow who takes a strict view of his duties would not refund anything unless it was necessary to do so.

5078. I put that to the Provost, but he repudiated that as being wholly illegal?

(*Mr Biggar.*) I understood exemptions were illegal, but not to paupers.

5079. Provost Keith also dealt with another question as

to the case of a tenant whose name was on the Assessment Roll, but who left very shortly afterwards. The question was put whether the burgh could recover any part of that tenant's tax or rate from the successor in the house, and Provost Keith indicated that there were clauses in some of the Municipal Acts entitling the Corporation to come against the new tenant for rates assessed against the occupant at the date of making up the roll?—That is quite clear in the case of police rates in the city here, a well-known difficulty having arisen in cases of tenants changing houses between terms. Unless they arrange with the landlord or previous occupier they become responsible for the whole year's police rates, and probably the poor rates are in the same position. That is another strong reason for spreading them over the year.

5080. If the house is relet and the new tenant leaves shortly after, Provost Keith seemed to indicate that there was provision for giving a rebate in cases where the landlord paid?—I am not aware of that.

5081. You have told us that while your bad debts are very trifling, 8s. 4d. per £100 during the last two years of depression, where the rates were collected by the authorities the bad debts amounted overhead to 72 per cent. As matter of fact, I have been followed and preceded by the tax-gatherer to get his collections, and he is turned at a shut door where I could get in. I attribute it to the power of dealing with the tenant by ejectment.

5082. And probably the taking of the rate in small instalments?—Yes.

5083. I note in your *précis* of evidence that you use these words—"The enforcement of hypothec in a small house is the enactment of a tragedy." Explain what you mean by these words?—It is a pretty graphic expression this, but I remember once, perhaps a quarter of a century ago, when I was not so experienced as I am now, being very much dissatisfied with a small tenant and resolving, as an example to the other tenants, to enforce the law to the uttermost, that I carried out the action, sale and all, in that house, and I made a mental vow that I would never do it again. It really was barbarous and absolutely unproductive.

5084. What is the reason of that?—Well, the whole household goods are so restricted and small, and they are everything to the people. You feel you are taking away their life's blood to some extent.

5085. As a matter of fact, the price of the goods is out of all proportion?—That is quite true. The value to them is quite out of proportion to the proceeds. Mr Biggar says it is the broker that reaps the harvest. Of course, I always supplement it by this, that when the landlord has the power of ejectment, he does not need to exercise the rights of hypothec.

5086. (*Mr Howden.*) Do you still keep to your statement that you wish the right of ejectment without a sheriff's decree?—I do not think it is necessary. I do not think any magistrate or sheriff — I am speaking of the small house—is able to apply his mind to the detail. I know by experience of the very specious excuses and lies that are produced. It is not an uncommon thing for a sick child to be bartered about from house to house and a medical certificate got that a child is lying ill in a house to prevent the enforcement of a warrant of ejectment. The child is borrowed for the purpose.

5087. You would not object to anybody who had legal ejectment putting it into force?—I think if they are able to satisfy the landlord, there would be probably no execution levied.

5088. There is no such thing as poverty, where they could not meet the landlord's claim?—There is, but is that a reason why the landlord should pay for delay with them, any more than other tenants?

5089. No; but probably a reason for reasonable time?—If he pays his rent after that opportunity it may. I say he has no right to be in that house, any more than he has a right to get another week's milk supply. It looks harsh, but you must be consistent. Mr Biggar says that Mr Howden forgets that a landlord is not always absolutely unfeeling, and probably knows the tenant, by close connection, far better than any magistrate.

5090. As I understand your position, you are going to take away for all tenants the right of lodging answers as to why they should not be ejected?

(*Mr Biggar.*) Yes, that is quite true. They can get legal notice.

(*Mr Mann.*) I think in real cases of hardship the tenant would be able to find the money if the tenant wished to pay. It is generally my experience, that the more humble the tenants are, the more help they get from their neighbours, and if there is any real case of hardship, I am persuaded that help will be forthcoming to prevent hardship. The poor are much more helpful to each other than almost any other class we can come across. I am speaking in the interests of the tenants, because it is the unruly and disorderly tenants that bring into discredit all the tenants.

Mr John Mann, jun., and Mr John M'Laren Biggar.

3 Jan. 1907.

5091. Don't misunderstand my position. I want to protect tenants, who have, upon grounds of poverty, some reason why they may not be able to pay at the time?—My answer is distinct. I do not see why mere poverty should entitle tenants to get credit for rent any more than for groceries.

5092. (*Mr Cox.*) The 100 per cent. to the rating authorities, I don't suppose you collect all that?—In that property I think we do.

5093. (*Chairman.*) You show your loss, don't you?—In Cathedral Court for the last year there has not been a penny of bad debt.

5094. (*Mr Cox.*) Suppose the landlords were to collect the rates all over, you in that case would not have the disadvantage of making your rent appear to be higher. Do you think in that case you would get nearly the 100 per cent. of rates?—It would vary according to our success on the general collection.

5095. (*To Mr Biggar.*) Take Provanhill Street here. Do you think you would nearly collect the whole there?—Yes, we suggest that we should get a rebate for what we do not collect.

(*Mr Mann.*) But that is not the point. The success of our collection of taxes would vary with our collection of rents.

5096. (*Mr Binnie to Mr Mann.*) What is your loss in Provanhill Street?—The bad debts last year were £12, out of a rental of £1287.

5097. In that particular property?—Yes.

5098. (*Chairman.*) What is the percentage?—One per cent.

5099. (*Mr Howden.*) Is that a bad property?—That is the worst. The year before it was £8, three-fourths of 1 per cent.

5100. (*Mr Cox.*) If you were able to collect within 1 per cent of rents, any other factor would be able?—If he takes the same precautions. Our caretaker is an important element.

5101. Do you think you would get the rates to the same extent, if not entirely, as you get the rents?—We would, but our experience is exceptional. As a rule, on houses let to monthly tenants and on monthly lets there is a fairly heavy loss.

5102. That shows the advantage to the tenant?—They can pay quite well. It comes off the weekly budget.

5103. (*Mr Howden.*) It is when it runs up?—Yes, they are not, as I said, a week ahead of the world. That is shown by their devious ways of raising a slump sum, menages, weekly pawning, general pawns, and such-like. There is no capital.

5104. You tried to get certain information there. This is perhaps not quite within the scope of the inquiry, but have you ever tried to make up the budget you propose with earnings of 17s. 2½d. a week and 2s. 0½d. of rent?—After a fashion. It is difficult to see how it can be done.

5105. But it has to be done in the city of Glasgow?—Yes.

5106. (*Chairman.*) They live from hand to mouth, so that if the 17s. is there it will go in rate or rent or anything?—Yes.

5107. Where with a big sum it can only be done by all sorts of devices?—There are menages.

5108. (*To Mr Biggar.*) What does that mean?—20 or 21 women club together and pool each Monday 1s. They agree to do this for 20 weeks. The first Monday they draw lots as to who will get the first turn of the use of the pool-money, and the one who gets it pays it up 1s. a week right off.

5109. What is the money for?—There are various things, but it largely goes in clothing, and the woman who manages the menage gets the odd shilling per week for her trouble, while the draper also pays her. It is a very ready means of getting into debt. Mr Mann adds that the woman who runs the menage is in league with the draper, and that it is a vile system.

5110. (*Mr Binnie to Mr Biggar.*) You can send an answer to this. In connection with the very great success in collecting both rents and taxes, I would like you to give us the percentage that the cost of collection amounts to, and the cost of collection such as a factor would do. You would have to put down the caretakers and the rent collectors and the keeping of the accounts and everything?—An analysis of our rental.

5111. No, the cost of collection. I just wish you to put all these things together. You have the caretakers; you have the collectors going round every week; you have the ordinary work of a factor in writing up his books. I see all the items here.—You mean for the properties as a whole. I can give it you individually.

(*Chairman.*) You can just hand in a table.

5112. (*Mr Cox to Mr Mann.*) Is this 3½ per cent. of

dividend after depreciation is written off?—Yes, we run the accounts in this way. Since the outset we have deducted from the rental 12½ per cent. to cover repairs and depreciation, and charged the actual cost of repairs against that, and to-day we have a surplus on that account of £2200—that is a provision for the inevitable depreciation and extraordinary repairs and over-hauling that periodically occur. So far we have found it more than sufficient.

5113. (*Mr Binnie.*) But you have never had to face depreciation, because you have never sold any property?—It is not to provide for fluctuations on the property market.

5114. (*Chairman to Mr Biggar.*) Mr Cox points out to me that in the examination of Mr Borthwick, the treasurer, he is asked about the 7½ per cent. allowance, and it is put to him: "You allow 7½ per cent. off that. Do you allow any further abatement if any part of the property should become unlet during the course of the year? *Answer.* Yes, we allow that. *Question.* Say in every six months of the year some of the property is unlet, you allow on that? *Answer.* Yes, we only charge rates on the period for which the house is let. Suppose it was let for six months, and he got three months' let only, we charge for six months, so that the landlord would lose the rates on three months. *Question.* His risk of loss is only a risk of not getting the rates from his tenants? *Answer.* The rent or the rates from his tenant?"—That applies to houses which are let by the year and which may not be let at May but become let at November. It does not apply to our weekly lets. We let from week to week. Probably the following Monday we are unlet. In some of the houses we have probably three changes in one half-year.

5115. You get no deduction?—No, they go by the Valuation Roll.

Mr John Mann, jun., and Mr John M'Laren Biggar.
3 Jan. 1907.

Bailie M'Kerrell, David More, Robert Dunlop Tannahill, and John Haggo, called and examined.

Bailie M'Kerrell, Mr D. More, Mr R. D. Tannahill, and Mr J. Haggo.

5116. (*Chairman.*) You are a councillor and magistrate of Kilmarnock, Mr M'Kerrell?—Yes.

5117. How long?—Two years.

5118. Your own business is that you are employed as a miners' check-weigher, and you were elected to the position by a ballot vote. When was that?—I have been five years check-weigher.

5119. You are also a member of the Local Miners' Executive and attend the meetings of your local societies?—Yes.

5120. You come largely into contact with workmen and have a large experience of workmen's organisations?—Yes.

5121. Do you concur with the views that have been expressed to us, that the overwhelming majority of the working classes desire the abolition of the missive system, meaning the lengthened period between the date of taking a house and the date of entry?—That is so.

5122. Secondly, they desire shorter lets of houses, and, thirdly, payments of rates by instalments?—Yes.

5123. You say these are desired by an overwhelming majority. Have you yourself, standing for the Council or afterwards, found any number of working men who differed in these matters?—I have never found a working man who expressed himself favourable to the present system of letting.

5124. Or against shorter lets?—No, I never heard one.

5125. Or who preferred to pay the rates in one sum rather than by instalments?—Anyone I have discussed it with, favoured instalments. We brought a motion before the Council for the purpose of having the rates paid by instalments. Our chamberlain agreed to take the rates by instalments if people desired it.

5126. When you were having ward meetings, was the subject of house letting ever brought under your notice by hecklers or otherwise?—Yes, by hecklers.

5127. Often?—Several times.

5128. With what object?—Asking me if I would be prepared to support any movement to secure the abolition of the missive system.

5129. Was it that only that seemed to be in their minds, or was the question of shorter lets brought up?—The one implied the other. The abolition of the missive system implied the shorter lets.

5130. Was the prominent thing the abolition of the missives?—That was the most prominent thing.

5131. You were convener of the Parliamentary Bills Committee, and, on the recommendation of that Committee, the Council unanimously passed a resolution in favour of Mr Cross's Bill?—Yes.

5132. That was on the general principle?—We had a discussion on the details in Committee. There were one or two proposals made that, along with this Bill, there should be a method for ejecting defaulting tenants more speedily.

5133. What was the result?—That, with that amendment, the Town Council unanimously passed a resolution asking our Burgh Member to support Mr Cross's Bill.

5134. Have you any house-factors in the Council?—Yes, several.

5135. And on the Parliamentary Bills Committee?—One.

5136. What attitude did he take?—He warmly supported the Bill.

5137. So that, as far as Kilmarnock goes, both tenants and property owners there seem favourable to it?—That is so.

5138. Nobody would exactly bind himself to mere details?—No.

5139. What about the Ayrshire Trades Council?—They passed a resolution supporting the general principle of the Bill.

5140. Have you yourself known cases where the alleged hardship did exist?—I have known many cases where hardship did exist, of working men having to leave the town and being compelled to pay rent up to the May afterwards.

5141. Have you known cases where they had to pay double rent?—Yes, I know a case where they went to Glasgow and had to pay rent for the time they were in Glasgow and paying rent also for the house they left in Kilmarnock.

5142. Were these cases where they thought they would not trouble going to the factor, or where they had gone to the factor and used their best endeavour to get a sub-let and failed?—I have known cases where the factor refused to allow them to sub-let their houses.

5143. The sub-tenant not being in his case suitable?—I don't know the reason. I know cases of men who were victimised in certain employment owing to disputes. That took place and the factors held them responsible for the rent, and would not allow them to sub-let their houses.

5144. Were these employers' houses?—No.

5145. What are the industries in Kilmarnock?—Engineering is the principal.

5146. Anything else?—There are a number of weaving factories, cotton and carpets, but engineering is the principal. There are very few miners, probably two or three hundred altogether.

5147. The mines are some distance away?—Yes, the mines in the immediate locality have been worked done within recent years.

5148. On the other hand, you think that the proposed changes, while a benefit to tenants, would affect property owners in the end, and that on the whole, therefore, they are favourable?—I think it would affect them beneficially in respect that their rent would be more secure.

5149. By being paid in more frequent instalments?—Yes.

5150. Would that also apply to the question of rates?—Yes, I think there would be practically no arrears if they were collected in instalments.

5151. You think a large amount of rates now lost owing to the system of one payment annually, would be got if the collection was by frequent instalments?—I think that is so.

5152. And even if, suppose it were collected by landlords and substantial allowance had to be made to landlords for so doing, still in the end the amount of rates recovered would be substantially larger?—Our burgh assessor will probably be dealing with that very point. I think that what was gained in diminution of arrears would more than make up for cost of collection.

5153. What is your view, as representing the people you do, as between monthly and quarterly lets?—In my opinion what is laid down in the Bill is the best plan, to allow the people themselves to select the term they want to take their houses for, and by paying the rent accordingly. If a tenant wants his let to be monthly, he will just pay his rent monthly; if quarterly, he will pay it quarterly, or even yearly.

5154. The latter need not be considered. Nobody pays yearly. It will kill yearly lets under £20?—Still, it leaves it open.

5155. Would you be satisfied with the Bill as it stands and not be disposed to insist on monthly lets merely?—No; I would rather have it that way. I would not insist on the Bill as it stands. I would support the Bill as it stands, because it would be more drastic.

5156. Do you contemplate that if the Bill were passed it would be possible to contract out of it?—That would be rendered impossible.

5157. I am afraid there are possibilities of contracting out of it. For instance, under the present system you require a certain amount of notice to be removed from your

house?—In the colliery where I am employed, the miners are being compelled at any rate. It is supposed to be a free contract, but every miner knows that if he does not sign it he will have to look for work elsewhere. It is ejection for miners at twenty-four hours' notice. Miners are signing to allow them to deduct their rent from their wages and to be ejected at twenty-four hours' notice.

5158. That would not be affected by the Bill as it stands?—If they can do that with workmen already——

5159. Factors could not do so as well. That is just the question of ejection of workmen in connection with disputes?—No; but they can eject them even though there is no dispute.

5160. But if this Bill is to prevent yearly lets, do you contemplate that people are to be entitled to contract out, or that the Bill would involve no contracting out?—I would support no contracting out of it.

5161. (*Mr Dobbie.*) Did you hear Mr Smillie giving evidence?—Yes.

5162. Do you concur in regard to what he said about trades disputes?—Yes, that is the experience almost everywhere.

5163. Do the miners at the mine you refer to get paid fortnightly?—Yes.

5164. And the rents are kept off their wages?—Yes, in this Bill it would be an advantage to them in this respect, that as their rents are being paid fortnightly, instead of being ejected at twenty-four hours' notice, there would have to be a fortnight's notice.

5165. (*Mr Howden.*) Do you agree with the opinion expressed by Mr Smillie in connection with the Homestead Act, the same as in America?—I did not exactly take up that point.

5166. Do you favour the principle that, in regard to the right of hypothec, the landlord should have no preference over other creditors?—That is so. I think the landlord should take the same risks for the debt as an ordinary trader takes and should have no more privileges in that respect.

5167. Do you agree that the working class should be protected up to a certain amount of household goods against all creditors?—That is so. I don't think that his furniture, which is necessary for existence, should be poinded by any creditors.

5168. (*Chairman to Mr More.*) You are a solicitor and a member of the Parliamentary Bills Committee of the Town Council of Kilmarnock?—Yes.

5169. Since Mr Cross's Bill was considered in May last year by the Committee?—Yes.

5170. Was it unanimously agreed to ask the member for the Kilmarnock burghs to support the Bill?—That is so.

5171. At the same time was Dr Rainy instructed to ask that three things should be made clear in the Bill: firstly, that the owner was not to be liable for the occupiers' rates when the house was not occupied; secondly, summary ejectment, and also whether the landlord should not have the right of hypothec for the rates paid by him?—Yes, the minutes bore that.

5172. Otherwise there was general approval unanimously?—Yes.

5173. Was there any discussion?—It was passed without discussion.

5174. You brought up the question of evidence being tendered to us here, and the Committee unanimously approved of that?—That is so.

5175. And you are here in consequence to-day?—Yes.

5176. Did the minute of the Committee come before the Town Council on 12th December last, and was an amendment moved that no action be taken?—That is so.

5177. By a majority of one the minute was carried?—Yes.

5178. What was the view of those who moved that no action should be taken?—The view was that, while they approved of reform generally, they did not wish to be committed to details, and the Bill not having been discussed in the Council, they felt they could not give a proper mandate to members of Council to appear here.

5179. Was there any view in favour of the system being maintained as at present?—No.

5180. Or any cure for any grievance that exists, merely by reducing the amount of time between the date of taking and the date of entry?—I have not heard such a view expressed.

5181. You yourself, Mr More, have seen cases, have you, illustrating the alleged hardship in the course of your business as a solicitor?—Yes.

5182. In regard to what?—In regard to yearly tenants forced to leave their houses between terms, who had, of course, been served with notice to pay a year's rates.

5183. Was that in Kilmarnock?—Yes.

5184. You agree with what the Bailie said in regard to the industrial population?—I do.

5185. Are they especially shifting more than in other places?—I don't think so. There is a large proportion of the working men settled, employed all the year round.

5186. Last September did you give notice of a motion in the Town Council that it be remitted to the Finance Committee to consider and report on the powers conferred on the Town Council by Section 346 of the Burgh Police (Scotland) Act 1892?—Yes, I thought it worth while raising that point.

5187. The purport of the Act being to give power to assess owners in what cases?—I have the clause here. The object is to assess the owner.

5188. It is in cases of houses occupied for a shorter period than a year?—Yes.

5189. Apart from the value?—Yes.

5190. You have not adopted that?—The report from the Committee has not yet come to the Council.

5191. But in Kilmarnock you never adopted it before?—No.

5192. And that is under consideration?—Yes.

5193. Have you had occasion in meetings to have the subject brought before you?—The subject was not brought before me when I addressed the ward meetings. It is really a Parliamentary question.

5194. Do you think it is such an urgent question in a place like Kilmarnock as it is said to be in Glasgow?—Not quite so urgent, I should say; still, the Act, if adopted with the qualifications I have mentioned, would effect a great improvement. I think there are cases of great hardship, although they don't exist on such a large scale as in Glasgow.

5195. There may be other places with fewer cases of hardship, and more settled than in Kilmarnock?—There may be.

5196. What is your view in these circumstances about the Bill being optional?—I have the view, from what I have heard to-day, that it would be better not to be optional.

5197. That has not been discussed in the Council?—No.

5198. In Kilmarnock you have a great many removals. Can you give us a notion of how many annually?—I calculate about 900.

5199. Out of a population of?—About 35,000.

5200. What is the number of houses?—I think 8300 is a good estimate.

5201. The removals are not all of people leaving the town?—No.

5202. In between terms how many removals are there?—I calculate about 400.

5203. The greater proportion of them dealing with rentals of £10 and under?—Yes.

5204. What do you say about the limit of £20 in the Bill?—I think £16 is too high for Kilmarnock.

5205. Do you approve of a differentiation?—Yes, I think £10 would be a reasonable sum to start with. If it proved beneficial it could be extended.

5206. You would rather take the view that Mr Henry put forward of Glasgow?—Yes.

5207. Can you tell me what number of your total householders would be affected, suppose the limit was £10?—There are 4468 tenants whose rents are £10 and under out of 8300.

5208. To sum up your views, they are as follows:—

First, that the class of houses coming within the scope of a reform of the nature of Mr Cross's Bill should be those of a rental under £10?—Yes.

Second, that Clause 4 of that Bill should be altered to read as follows:—"The term of let for any dwelling-house within a Burgh shall be held to be the term fixed for the periodic payment of the rent thereof; Provided that where such rent is paid at shorter periods than quarterly, the term of let shall be held to be quarterly, unless otherwise agreed upon in writing for a shorter term." Why is that?—I think quarterly lets would meet the case, leaving freedom of contract for shorter periods.

Third, that in the case of houses of a rental of £10 and over, the date at which missives shall be signed should be not earlier than 15th March in each year. That you would propose without alteration upwards?—Yes.

5209. To apply to all houses above £10?—Yes, I would not bring it nearer than forty days.

5210. Would not that apply to all houses, whether above £10 or not?—It would. The question is not so urgent with houses under £10 if the reform in Clause 4 of the Bill as amended were carried out.

5211. There would be no harm in making it a general provision?—No.

5212. (*Mr Binnie.*) It would hardly apply, because you see you could not let houses that were to be let quarterly under the preceding provision before the 15th March. You must be able to let them all over the year. Some of them must be let before 15th March?—The date 15th March would not apply. It would only apply to yearly lets.

5213. *Fourth*, that the rates be collected by the landlord in the case of houses rented under £10, the landlord being allowed a commission as provided in Mr Cross's Bill. You have not applied your minds, have you, to the allowances under Mr Cross's Bill?—They were approved of by the Committee.

5214. Had you any investigation?—No.

5215. Generally approved?—Yes.

5216. Fifth, that the landlord should not be liable for the tenant's rates where the house is unoccupied? That would be either totally or partially?—Yes.

5217. He should not be liable to the extent to which it is unoccupied?—No.

5218. Sixth, that the right of hypothec should cover the rates?—Yes.

5219. Seventh, the tenants of houses of £10 and over should have the privilege of paying rates by instalments. Paying direct to the rating authority?—Yes.

5220. You agree with the general evidence we have had that there would be indirect benefits from shorter lets—absence of pressure of work, and not the same number of removals at one period of the year?—Yes.

5221. You think that under some provision or another the system of many tenants found entitled to relief should be preserved?—I think that should be preserved.

5222. Is it your view that whatever system is adopted the tenants should know what they are paying as rates?—Decidedly.

5223. (*Mr Esslemont.*) In connection with No. 7—"that 'tenants of houses of £10 and upwards should have the 'privilege of paying rates by instalments," do you think legislation is necessary to secure that?—Well, at the present time it can only be done as an act of grace by the Corporation. I would allow them the privilege by Act of Parliament

5224. You think it is not sufficient to leave that to the discretion of the Local Authority?—No, because I think the Local Authority in some cases is not favourable to it. In Kilmarnock we have agreed to allow that privilege; still that would not affect the case in other towns.

5225. (*Mr Howden.*) How do you arrive at the figure of £10 as sufficient as to rental?—Because it includes 50 per cent. of the inhabitants of dwelling-houses. Another reason is that the water rate is paid by the landlord on houses of £10 and under. Another reason might be stated, that as the landlord does not know in May what the rates are going to be, the larger the rent the greater the loss in the event of the rates being raised. Putting it at £10, any loss in the event of an increase of rates would be infinitesmal.

5226. What class of house does the artisan usually reside in in Kilmarnock. What rent do they usually pay?—I think £10 to £15.

5227. You would exclude all these men from the benefit?—No. I mean that is the maximum.

5228. But you exclude all these according to your information?—Necessarily I exclude those over £10, but you must draw the line somewhere. The migratory classes are to be found in houses of smaller rent.

5229. You told us something about the water rate being collected on rentals of £10 and under by the owner. How long is it since that enactment?—Since the water was introduced into Kilmarnock about 1850. They got this clause in their own Act of 1892 when the Corporation purchased the concern.

5230. Have rents risen considerably in Kilmarnock during the last twenty years?—No, not considerably; but the class of house the working man now lives in has improved. The same class that paid £10 are now paying £15. I draw the line between £10 and £15, as the tenants are more stationary than under £10.

5231. Have you any figures to prove it? It happens to be the reverse here?

(*Mr Haggo.*) I can prove it in this way: As will be seen in his *precis*, the amount of rates written off in Kilmarnock last year was £172. Sixty-seven per cent. of that was attributable to loss on rents of from £4, 1s. to £10.

5232. (*To Mr Haggo.*) Apart from the question of rates, it is on the point of people shifting I would like information. Could you get that information for us?—I do not see how I could. Mr More says he has given you that information in his *precis*.

5233. (*To Mr More.*) Can you give us the total?—Well, I can state that twice as many remove between terms who reside in houses of £10 and under as in houses of over £10.

5234. That is the position in Kilmarnock?—Yes.

5235. It is an exceptional position.

5236. (*Mr Dobbie.*) What is the present custom in regard to the payment of rents between £10 and £15?—I believe in many cases it is collected monthly, and weekly too. But the let is an annual let, as a rule.

5237. In these cases if this Bill was passed as it stands, these lets would be reduced to weekly and monthly lets?—They would be.

5238. I see one suggestion you make is that hypothec should cover the rates. Do you think hypothec is an effective weapon to a landlord in the case of houses under £10?—I do not think so. I am against the abolition of hypothec in the interests of the tenant, because I think ejections would be more frequent if the landlord had not the knowledge that to keep a tenant in hand he has the furniture as security for rent. If he had no security in the shape of his right of hypothec, he would more readily eject a tenant.

5239. That is not the argument available for the view that hypothec should cover rates as well?—I think that if the landlord pays the rates it should extend to them.

5240. In his interest this time?—Yes.

5241. But as regards the rent, you only view hypothec from the point of view of the tenant?—Yes; because it is a remedy, I believe, landlords are very chary in using. It is not often used.

5242. You may agree with Mr Mann that in smaller houses the hypothec is not a successful means of recovering rent?—That is so. I cannot speak from a very lengthy experience on that subject.

5243. At all events, the view of your Council is that the hypothec should extend to whatever sums the landlord gets from the tenant for rates or rent?—Yes.

5244. (*Chairman to Mr Tannahill.*) You are the Assessor under the Income Tax, Lands Valuation, and Registration of Voters Acts, and you are a Fellow of the Surveyors' Institution?—Yes.

5245. Your assessorship applies to north Ayrshire and the burgh of Kilmarnock?—Yes.

5246. And you are speaking here of the burgh of Kilmarnock?—Yes.

5247. The total number of houses occupied and unoccupied in Kilmarnock for 1906-07 was 8364?—Yes.

5248. At £4 and under, 5 per cent. of the whole; £4, 1s. to £7, 24 per cent.; £7 to £10, 24·25 per cent.; £10 to £15, 27 per cent.; £15 to £20, 7 per cent; £20 to £50, 12 per cent.; and £50 and upwards, ·75 per cent.?—That is so.

5249. The number of dwelling-houses in Kilmarnock that would be affected by Mr Cross's proposed Bill, which makes the maximum applicable to Kilmarnock £16, would be 7016 out of the total of 8364, fully 83 per cent.?—That is so. The number of dwelling-houses over £16 rent is 1348, nearly 17 per cent.?—Yes.

5250. Do you agree that up to a limit of £10 fully 50 per cent. would be affected?—Yes.

5251. Exactly; it would be 53·25 per cent?—Yes, the addition of these percentages.

5252. How do you stand for empty houses? Last year you had an abnormal number, had you, 457?—Yes, that is so.

5253. In 1901 you had only 75?—Yes.

5254. Due to overbuilding and slackness of trade?—Yes.

5255. The number of houses under actual short lets is not large, you say. By short lets, what do you mean?—That is on actual monthly missives.

5256. About 500?—At the outside, yes; about 6 per cent. of the whole.

5257. On the other hand, the tenants pay rents quarterly, monthly, or even fortnightly?—That is so, between 3000 and 4000.

5258. These would become fortnightly, or monthly, or quarterly tenants?—Yes.

5259. Suppose the Bill passed, would the result be that in order to make a let longer the period of payment would be made less frequent?—I do not think it would affect the period of payment much.

5260. If the period of payment was made the same as the let, and the landlord wanted to get as long a period of let as he could, he could make the period of payment in certain cases less frequent?—He might.

5261. What is your view about the usual date for issuing missives—a little later, I see?—February 3rd.

5262. In some cases they may be issued a little earlier than that?—That may be taken as the general date.

5263. Do you agree that the period is too long between the period of taking and the period of entry?—I think that is generally felt.

5264. It seems to be universally felt from all points of view?—Yes.

5265. Are missives sent out once a year to tenants up to £10?—Yes, generally to all tenants.

5266. Whether yearly or not?—Yes.

5267. When the rent is over £10 the missive is only signed at the start?—The stamp duty comes in there, having to pay the extra 1s. 6d.

5268. If the rent is under £10, and it is paid monthly?—The missive is only signed once, at the taking of the house.

5269. Have you any cases of forehand rent in Kilmarnock?—I say in my *précis* here it practically hardly exists.

5270. Except for undesirable tenants?—Yes, aliens and other undesirables

Bailie M'Kerrell, Mr D. More, Mr R. D. Tannahill, and Mr J. Haggo.

3 Jan. 1907.

5271. There is a question about the application of the word "dwelling-house," where it should include "shop." Have you some cases in Kilmarnock where the subject really is a house although there are some articles in some of the windows?—A good many; and it would be difficult to define what is a shop. It is often a house, with a few articles displayed.

5272. If the privileges given by the proposed Bill were extended to Kilmarnock, you think it would be hard to deprive people of that privilege merely because they put a few articles in their front window?—I think it would.

5273. You have the actual number of removals. Last year, as shown by the Valuation Roll, the number was about a thousand?—Round about 1000.

5274. You concur with the evidence we have heard from Bailie M'Kerrell as to short lets applicable to the smaller class of houses?—Yes.

5275. Have you any views yourself as to whether it should be £10 or £16?—I think £16 for Kilmarnock is rather high. I don't think that direct taxation should be unduly tampered with, but only where the shoe pinches.

5276. You think the shoe chiefly pinches under £10?—After the fullest consideration I think it does in Kilmarnock.

5277. That class is more of a shifting class?—Yes, they are. Their circumstances are perhaps the worst in regard to facing a big payment for either rent or taxes.

5278. That would be the limit. If a landlord wished to pay the rates direct, the same limit would apply?—Yes.

5279. Do you concur with the view that it would be a clear benefit that the rates should be paid by frequent instalments?—The same as the rent is at present.

5280. On the general question about the congestion at one general removal term you agree with the evidence we have had?—I think it would help to alleviate that.

5281. In regard to the rating authorities, you are clear that the gain to them, at all events, is indisputable?—Yes. Of course, in estimating what the annual cost must be, it will be more or less problematical until we have had some experience; but as I said in my *precis*, I have attempted a calculation, and it is easily calculated what the cost is to be, giving the large percentage of 10 per cent. under £4, 7½ per cent. at £4, 1s. and under £7, and then the 5 per cent. and 2½ per cent. Of course the question is, how much of that might be saved on what is now lost in the shape of reliefs and irrecoverables. I put the cost in Kilmarnock, leaving out what is exempted in the shape of empties and public institutions between the burgh and parish rates round about £700. I think it is a fair assumption that if the rates were uplifted in easy instalments a large proportion of that £700 or £800 would be saved to the rating authorities.

5282. Do you think, in the case of relief being granted, a great deal of that would never be granted?—A tenant by an easy method of payment of his rates would find that he could pay them, and I have mentioned further down what I consider would be perhaps the most practical way of granting relief by way of refunding. I do not think that refunding would be applied for in a great many cases where they would find a capability of paying the rate by the easy method.

5283. Do you think that would make a substantial difference?—I have no doubt it would.

5284. In regard to the limit I see you indicate something like £12, but then you return to the £10 on the view that it would make the other tenants' rates analogous to the water rate?—I do so very much. It is in the way of an experiment; and with a limit of £10 to £12, the margin is not very great, and considering it would make all the tenants' rates analogous to the water rate, I think the £10 would cover, to begin with, the large percentage that the Bill seeks to ameliorate.

5285. You say, to begin with, you don't keep out of view the bond Mr Howden made with the £10 applied to that period long ago when rents were lower?—No, I keep that in view; but 50 per cent. covered by the limit up to £10 is largely including, if it does not wholly include, where the shoe pinches worst in regard to rent and taxes.

5286. You think the effect would be, of any such proposal as Mr Cross's, that forehand rent would come to be prevailing?—I don't think so, unless in the case of the most undesirable tenants; that is, always providing the present law in regard to hypothec was not interfered with.

5287. Do you agree with the evidence we have had here, as to its being desirable to simplify the practical law of ejectment?—Yes, I think that would be fair.

5288. In regard to disfranchisement: you have figures showing how it stood in the burgh of Kilmarnock last year for the parliamentary and municipal vote in respect of relief, exemptions from or failure to pay poor rates on or before the statutory date 20th June. There were 366 disfranchised?—That was the number.

5288*a*. The details being 79 in receipt of relief, 115 exempted, and 172 failed to pay?—Yes.

5289. Then the two items that would be affected there would be the 115 and the 172. Of the 115 exempted, a great many would not be exempted or would not apply for exemption, and of those under the 172 who failed to pay a great number would find themselves able to pay?—Yes, by an easier method of collection.

5290. You think any legislation should make it distinctly clear that it is actual rent minus the taxes which is to be returned to the assessor annually, otherwise great confusion will take place. Is there any risk of that?—We find at present very often that the proprietor returns the rent plus the taxes, and we have often to amend the entry, perhaps on complaint by the tenant, after the notice goes out. It gives rise to trouble afterwards.

5291. Your only other observation is, considering the extra work which will be involved on the assessor in tracing tenants, you would also advocate that it should be made a statutory obligation on landlords or their factors to give the dates of entry of all tenants when making valuation returns. That is not done now?—No.

5292. What would be the effect of that?—Just now it very often happens, when making inquiry at the registration season, that the date of entry is 28th May, but I can quite see, under any alteration of the law of lets, that that would get to be a very complicated matter. The tenants would be making entry of their houses at various periods, and we would have great difficulty in getting at the date of entry; and in making the return it would be a simple matter for the landlords in a column perhaps of the valuation schedule to state the dates of entry.

5293. (*Mr Howden.*) In your evidence you give here, you complain very much of the congestion due to Scotland having only one general removal term day; and further over you favor a general missive day being fixed for Scotland to be brought as near the 28th May as from the evidence on this point might appear practical. It seems to me in the one case you are condemning a removal term on the 28th May, and in the other you are upholding it?—The general missive question would be greatly minimised if the system of short lets obtained in Kilmarnock up to £16, and in Glasgow up to £20, and it follows that the general removal term day congestion would get much less.

5294. Did you say up to £16 in Kilmarnock? Are you in favour of that?—No; I am merely referring to Mr Cross's Bill.

5295. You are not referring to your own opinion?—I adhere to my own opinion as regards £10. I am putting it generally. If over Scotland, in certain groups of burghs, Edinburgh, Glasgow, etc., the limit is to be £20, under the second grading the limit is to be £16, and in Police Burghs £12, I say that if a system of short lets is brought about by legislation to the extent of these limits the congestion will be greatly removed on any general removal term day.

5296. You don't think Kilmarnock should have exceptional treatment from neighbouring burghs?—Do you mean in regard to the general missive day?

5297. No, in regard to the amount of the rental?—I think the limit we have spoken to will greatly relieve the condition of the tenant whose condition it is meant to ameliorate.

5298. The point is that the group you are put in with under Mr Cross's Bill is a reasonable group as regards how they should be classed as to rental?—I should not think so. If you go beyond £10 or £12 in Kilmarnock there is no desire to be treated otherwise than by direct taxation. The desire, probably, if you go beyond the limit we mentioned is to have a restriction of the time, to bring the time of signing the missive nearer the term.

5299. (*Mr Dobbie.*) To deal with the practical point you mentioned about the house and shop, are there many premises occupied as shops alone under £16?—Oh yes, a good many in Kilmarnock under £16.

5300. And under £10?—Not a great many under £10. If you come near the limit of £10 you very often come to the kind that I say will be difficult to define, house and shop.

5301. But this Bill, assuming it was to be limited to dwelling-houses or dwelling-houses and shops, would there be a class of shop solely, of shop under £10, that would require to be specially dealt with?—I should think not.

5302. Some of our expert witnesses have mentioned earlier in the inquiry that there might be two assessment rolls made up, and that there might be six-monthly collections?—I think that is quite impracticable.

5303. Supposing there were just more frequent collections, isn't that merely a case of collecting the present rate by instalments?—Yes, but you have neither the machinery nor the power at present to collect before the time of fixing the assessments. You see from the beginning of May the assessor is busy in connection with the Valuation Roll. That is not a completed ducument until after the Valuation Appeal Court, say the middle of September. After that, where the roll is not a printed one, or whether printed or

not, the Assessment Roll has to be written from it. It means that the earliest time the rating authorities can put the Roll into execution is presumably the first or second week in October. So that the rating authorities have not the machinery to collect assessments before the middle or end of October.

5304. When does your assessment year end?—The Valuation Roll is a document from 15th May to 15th May.

5305. In regard to the question of franchise, I listened with interest to your view about the exemption on the ground of poverty, and you suggest there the production of a relief certificate at the close of the assessment year.

5306. That is at the end of the assessment year?—Yes.

5307. What date would that be?—Any time after 15th May. That is when the burgh rates apply to. It could only be, I think, by way of a refund, as I have submitted, without causing great complications.

5308. Would that be practical?—I don't suggest that it would not.

5309. In dealing with the poor rates, which are, I believe, up to 20th June, is it practical at the end of the assessment year to have either the rate paid or the certificate in the hands of the assessor who makes up the voters' roll. You see, it is for the franchise. How are you going to get these men to disqualify?—I must take the view that if short lets are to obtain, and the rates are to be collected by the landlord, we must hold that disqualification practically ceases.

5310. Even although ultimately the tenant, the voter that is, has to get this certificate, and get re-payment of his money?—Yes, that is in cases of those really deserving to be exempted. In any circumstances we cannot deal with the able-bodied man however much we don't want to see him going on to the voters' roll. He will be a very small quantity. The facility for payment of rates will do away with the number shown as having failed to pay. The other class really entitled to exemption, I think, can best be dealt with by way of refund.

5311. Still, it is a criticism of your scheme of reliefs that it would result in ratepayers being entitled to vote who might afterwards claim exemption under this proposal?—You see, we have at present two officials, the official collecting the burgh rates, and the official collecting the Parish Council rates, who is generally the inspector as well. From the Parish Council clerk we get a list of all paupers, of all who have been exempted from the poor rates, or failed to pay poor rates on or before 20th June. The only list I see that can now be available with short lets will be the list of defaulters from the Parish Council Clerk. We could deal with that, but we could never get from each individual proprietor a list of those who had defaulted in payment to him; and suppose we assume that it was practicable to get such a list from proprietors in the burgh of Kilmarnock, it would be open to the serious objection that it puts too much power into the hands of the proprietors.

5312. (*To Mr Haggo.*) You are Town Chamberlain and Collector of rates for the burgh of Kilmarnock?—Yes.

5313. How long have you been so?—Twenty years.

5314. We want an explanation from you about the water rates. You are under the general Burgh Police Act?—Not for water.

5315. Is it a local Act?—Yes.

5316. Of what year?—1892.

5317. The water rates up to £10 are imposed on owners?—That is so.

5318. Are the owners paid any allowance?—None whatever.

5319. Do you mean that they have to pay both the occupiers' proportion and their own proportion, or is the whole rate, as imposed, on the occupier?—The whole rate is imposed on the occupier, and there is a provision under the local Act that if the domestic rate exceeds 11d. in the pound, it is competent for the Corporation to impose a penny per £ on owners. Our domestic rate is 1s., therefore we have the right of imposing a penny on owners; but all occupiers' domestic rates, where rents don't exceed £10, are imposed on the owner.

5320. So that he pays the 12d. of the occupier, and his own penny, and gets no allowance?—Yes.

5321. Have you had any complaints about that?—None.

5322. All the other rates are charged to tenants, whose rents are above £4, and on owners where the rents are £4 and under, who receive 10 per cent. for collection in terms of Clause 344 of the Act of 1892?—Yes.

5323. (*Mr Esslemont.*) Does this section 344 fix the commission of 10 per cent.?—Yes.

5324. (*Chairman.*) Do you agree with what has been said that if there are short lets, as proposed in Mr Cross's Bill, it will follow that the assessments on all lets affected must be imposed on owners?—Necessarily so.

5325. You agree with Mr Tannahill's view that it would not be possible to collect by frequent instalments?—No, you could not.

5326. About the amount written off the burgh rates as irrecoverable, if allocated according to landlords?—Last year the sum written off our burgh rates as irrecoverable, if allocated according to rentals, would be as follows:—

Rents of £4, 1s. to £10 . .	67·3 per cent.
Rents of £10 to £16 . . .	14·2 per cent.
Rents above £16	18·5 per cent.

Over a series of years an analysis of this kind would bring out the percentage of loss on rent over £16 as the lowest of all.

5327. Previously what was it, roughly?—I did not make the calculation.

5328. But if the Bill was limited to £10, the irrecoverables would be affected to the extent of 67 per cent.?—Yes.

5329. Would you expect a very large amount at present considered irrecoverable under a system where you have one annual payment only would be recoverable under a system where the landlord collected by frequent instalments?—I think so, although I don't quite understand it; but it is quite the case that many ratepayers object to one payment. They seem to find that a grievance; it is a big sum of money, sometimes. I might explain that, as you have heard, our Corporation agreed to accept instalments. That is a practice I have followed ever since I became Chamberlain. There are not many who ask it, but I always grant it where it is asked.

5330. Do you think a provision ought to be retained for dealing with cases of relief on the ground of poverty?—I think it follows

5331. Although you agree in thinking they would be less numerous?—They would be minimised. A great many people just now are allowed off, on the ground of poverty, who ought not to be, and would not. Many who now apply would not apply; and some who now apply, and are let off, would not apply.

5332. (*Mr Binnie.*) We have got in Mr Tannahill's statement the number of houses that are under certain rents, but you have not given anything, so far as I can see, comparing the amount of rental up to £16?—No, that has not been gone into.

5333. It would be very valuable from some points of view that we had that?—I will make a table of that and send it in—houses up to £16, analogous to the table that Mr Tannahill has drawn up as to rent.

5334. The gross rental in these cases answers very well.

5335. (*Mr Tannahill.*)—Averaging out a case in the way of rentals, I estimate that under £10 they represent £32,000?—Yes, about £32,000.

5336. Isn't that a very large sum on which to lose 67 per cent.?—But it is 67 per cent. of the sum lost. I take the same loss, and I say we lose on rentals up to £10, 67 per cent. of it there.

5337. But what we want is the percentage of the assessment that you have lost?—Yes, I follow.

5338. I could not understand these figures, because of the others who have given any details of this kind have given us a percentage of assessment that was lost?—Yes, I took the total sum.

5339. You are dividing the total loss into different percentages?—Yes.

5340. But what we want is the percentage of loss you make of the assessment under that limit. About relief of poor tenants, I am rather anxious about them. The proposal as I understand from Kilmarnock is something like this: that the landlords should levy the taxes for the year from the tenants along with the rents, and then at the end of the year the tenant should apply to the rating authorities to be relieved, and they should then get a notice of relief, and the money would some way or other be returned?—Yes, it would be difficult; but that is the general line: it is difficult to draw out a scheme.

5341. But were a person going to an assessing body, and saying, "We are so poor we cannot pay the rates; we must get relief," would not a complete answer be, "You have already paid for part of them"?—Yes.

5342. And so the poor people would not get relief at all?—Yes, that is the difficulty you are met with.

5343. Your proposal would prevent the poor people from getting relief?—We put that in because there is no proposal in the Bill.

5344. But you are making a proposal to us that appears to be no proposal at all?—What would be a practical proposal?

5345. We are here to ask you?—Considering it from that point of view, I hardly see how you are going to accomplish relief in a direct way to the tenant except by refunding.

5346. I have not thought it out, because it was not my

Bailie M'Kerrell, Mr D. More, Mr R. D. Tannahill, and Mr J. Haggo.

3 Jan. 1907.

business to think it out, but would it not be a much simpler way to let the tenants come at the very beginning of the assessment year, and say, "We will not be able to pay; give us a line to the landlord to show that he is not to charge us"?—I don't think that would work.

5347. (*Mr Dobbie.*) Why is exemption got? Is it on the ground of poverty?—Considered on the ground of poverty, out-door relief carries relief with it.

5348. (*Chairman.*) Suppose a lady who let lodgings comes forward in the end, and says that she has not had a single lodger the whole time, and has only been able by selling off some of her furniture to pay the little she had to pay: she would still be in a position to claim that she ought to get relief.

(*Mr Binnie.*) But the poorer people of the pauper class could not be relieved, because the answer would be that they have already paid.

5349. (*Mr Dobbie.*) But it is not inability to pay the rate, it is poverty—being so poor as to deserve exemption?—It is on the ground of poverty; these are the words of the Act. A person may be in dire poverty and still find money to pay the rate, and if he can show that he is so poor as to be entitled to exemption, I presume he would be entitled, even although he had raised the money.

5350. (*Mr Tannahill.*) Any system that could be devised to give relief to the poor party is very desirable, but you have to keep in view the position of the proprietor. The tenant comes and says, "I am in poor circumstances; relieve me of my rates." That tenant is sent to the landlord, and the landlord discharges the rates on the understanding that he will be recouped by the rating authorities. The proprietor perhaps the next week lets to a tenant who is not impecunious, and straightway goes on to charge his monthly uplift of rent and taxes.

Bailie M'Kerrell, Mr D. More, Mr R. D. Tannahill, and Mr J. Haggo.

3 Jan. 1907.

Mr J. Ewart and Mr W. Tait.

Mr John Ewart and Mr William Tait, called and examined.

Mr J. Ewart and Mr W. Tait.

5351. (*Chairman to Mr Tait.*) You, Mr Tait, are President of the Airdrie and District Landlords Association?—Yes.

5352. (*To Mr Ewart.*) And you, Mr Ewart, are Vice-President of the same Association?—That is so.

5353. You are an ex-magistrate of the burgh, and an owner of considerable heritable property there.

5354. Have you two gentlemen been authorised by the Association to appear on their behalf?—We have.

5355. Is it representative of all classes of proprietors in Airdrie and district?—Yes.

5356. Does the district embrace any town?—No, wholly within the burgh. We are quite convenient to Coatbridge, which has an association of its own.

5357. One of the aims of the Association is to resist all attempts at unequal or unjust taxation of house property, to endeavour to remove the burdens by which it is at present unfairly oppressed, to give mutual advice and counsel in cases of difficulty, to protect its members from any unjust infringements to their rights, and against bad tenants, and generally to take cognisance of all legislation affecting house property. Has the Association considered Mr Cross's present Bill?—They have.

5358. At a meeting of the Association?—They did.

5359. How many members are there in the Association?—About 100, I think.

5360. In your view, would the Bill, if passed, have a serious effect on the district with which you are concerned?—It would.

5361. Yours is an industrial district. What are the workers there?—Mostly iron-workers in the vicinity of Coatbridge, residing in Airdrie.

5362. You have a large number of low-rented houses?—Yes, the large majority of houses are let at a low rental.

5363. What is the population?—Municipal burghs, 22,288; Parliamentary burghs, 16,288.

5364. What is the number of tenants and occupiers below £16?—4565.

5365. And your valuation is £81,945?—Yes.

5366. The total assessments leviable for municipal burghs for the present year, payable by occupiers, are 2s. per £, and by owners, 7d. per £. These are the municipal assessments?—Yes.

5367. Poor and school rates are 1s. 2d. per £ on owners, and 1s. 3d. on tenants and occupiers?—Yes, I see I have empties there, but the landlord is assessed for water rates up to £10.

5368. In the burgh you have at present 274 empty houses?—Yes.

5369. Isn't that large?—It is very large at present.

5370. Of your houses you have 234 lets under a £4 rental; 1982 from £4 to £7; 326 from £7 to £8; 780 from £8 to £10, and 969 from £10 to £16?—Yes.

5371. Under £10 what is your total?—3596.

5372. What percentage is that, Mr Binnie, out of 4565? (*Mr Binnie.*) About 75 per cent. roughly.

5373. (*To Mr Ewart.*) If anything like this Bill were passed with a limit of £10, it would affect 75 per cent.?—It would.

5374. From £8 to £16, there are 1749 houses practically. Are all these yearly lets?—From £7 to £9 and from £8 to £16 practically all yearly lets.

5375. What is the rent a working man engaged at iron-works comes up to?—£8 to £10.

5376. Above that, are there foremen, and so forth?—Mostly that and small shopkeepers.

5377. How far is Coatbridge from Airdrie?—From centre to centre two miles, but they adjoin one another.

5378. Have you a number living in Airdrie who work in Coatbridge?—The bulk of our population work in Coatbridge.

5379. For what period are the lets under £8?—They are mostly monthly lets.

5380. Have you any notion of what they are between £8 and £10?—Mostly yearly lets, and there are a number, of course, under £8 which are yearly.

5381. But to a large extent this Bill would chiefly affect up to from £8 to £10?—Yes.

5382. What do you find in regard to people paying £8. Can you tell us what their view is about a yearly term as against shorter terms?—I do not find any crying out in our neighbourhood for shorter lets.

5383. Has it been up in connection with municipal elections?—It was not.

5384. At Parliamentary candidates' meetings was it brought up?—It was spoken about, but not greatly taken up.

5385. Who is your member of Parliament?—Mr Murray Macdonald. It was mostly on the missive question.

5386. As far as you have seen, do you think there is any demand for shorter lets apart from the missive question?—I don't think so.

5387. What is the view on short lets? On what ground do you find that a longer period is a failure?—Well, for a longer period you will find that the tenants in Airdrie invariably stay on. In fact, some of that population I know to have stayed on as long as thirty years in one house.

5388. Is that dependent on the length of let? Is it not that a case of the superior class that they are moral and otherwise?—Yes.

5389. Would that be affected, do you think?—They would resent it coming round to getting monthly lets.

5390. Because it would rather get them into the position of those who have already monthly lets?—Yes.

5391. But if they were all made monthly lets, would that disappear?—The same thing applies to the Scotch drapery trade, with its instalment system, which has taken a hold. The good class of tenants resent people coming about their houses.

5392. Do you mean that there are places in Scotland where that applies?—It is becoming applied to Scotland.

5393. Have you considered that question, if the short lets are found to act in England, why they should not act in Scotland?—I have not studied the English question.

5394. On page 5 you make some observations about that, and point out that you think the comparison cannot fairly be made because you think the habits and characteristics of the people in Scotland are different?—Yes, I think so.

5395. You think it is not an accidental but a natural difference?—Yes.

5396. Have you any view about the necessity for speedier and cheaper ejectments?—Yes, I have mentioned that.

5397. You say you have not even as good facilities as Glasgow?—By no means. We have to go to the Sheriff.

5398. I hope you don't say the Sheriff is worse than a magistrate?—It happens during the holidays, and you are off in the holidays.

5399. Have you not a Burgh Court in Airdrie?—No, there are no facilities in the Burgh Court for ejectments.

5400. You have a Burgh Court?—We have, but it has never been done.

5401. Is the question of expense also one that has emerged?—It costs from 10s. to 12s. to take them before the Sheriff Court.

5402. Have you any suggestions as to simplifications and more speedy carrying out of the law? Of course, if the Bill is adopted we have a fortnight to do it; but it is a loss of this 10s., and perhaps two months' rent. It is generally two or three months before I go that length.

5403. You agree with the evidence that there is a grievance there on the part of the landlords?—Yes.

Mr J. Ewart and Mr W. Tait.

3 Jan. 1907.

5404. How do your rents compare with those in Glasgow?—They are much below them. There are two-room and kitchen houses. I have one myself standing empty: the two rooms and kitchen and the W.C. at £12, 10s. to £13.

5405. What would that be in Glasgow?—I hear them talking here of £14 to £20.

5406. If there was to be a distinction in the maximum, as Mr Cross proposes, you think it would be reasonable that Airdrie should be lower than Glasgow?—I don't think the working classes of Airdrie stay in houses above £12.

5407. Do you find any cases of hardship from a working man who has taken his house for a year finding, say in June, that he requires to change his residence. Have you had experience of that?—I have had no experience personally as landlord. It may be more so within the last two years, more difficult to get a re-let.

5408. (*To Mr Tait.*) You say you have not found it difficult. You have found cases of that kind where a man wanted to change and asked you to sublet?—Well, a few.

5409. What have you done?—In general cases most of the landlords either exempt them or let them go.

5410. If you have a lot of houses empty, as just now, it would be more difficult to get a sublet?—Yes, I have had two this half year already, and I have let them go.

5411. (*To Mr Ewart.*) In Airdrie there are 700 tennants exempted from the payment of rates on the ground of poverty, or other causes, out of 22,000. Is that about usual?—Yes, about the average.

5412. Do you think it is right that the power to exempt should be continued in the case of poverty?—Yes.

5413. Are you careful about seeing that they are not taken in in these cases?—Well, we are taken in: we are not free from that.

5414. You are sometimes pretty easy, I suppose. It is proposed that suppose the Bill was passed in substance an allowance should be given of 7½ per cent. on landlords of £4 to £7. Do you think that would cover your necessary outlay?—I don't think so. I have some houses from £4 to £6, but the whole give 10 per cent. for collection alone.

5415. Apart from losses or unlets?—If they will guarantee my rental I will give them 10 per cent. for collection. I would give that if I could get them to guarantee that I would get my rent. I don't receive it within 10 per cent.

(*Mr Tait.*) I have a number also.

(*Mr Ewart.*) Above that we are fairly let. In low rented houses from £8 to £10 the law of hypothec is not of any use to us, because there is nothing to take.

5416. (*Chairman to Mr Ewart.*) You referred to the universal feeling that there was something wrong in the missive system. What date would you have?—I mentioned the 1st of April.

5417. You say you would suggest that the issue of early missives about the 1st of April and the warning away on or about the 28th of April, would meet the situation?—Yes.

5417*a*. Is it your view that but for this missive difficulty we should never have heard about the short let difficulty?—Not in our district.

5418. That is really the substantial grievance into which the other has emerged?—It has emerged into it.

5419. Is it your view that if this missive term you suggest were made compulsory on all, it would be accepted by everybody as reasonable?—I think so.

5420. At present there is a difficulty in one factor doing it if the others don't?—That is the difficulty. The tenant wants a desirable house, and may look for one at the beginning of the year, and the landlords come in and he gets his house taken away or left on his hands.

5421. As to the limit of £16 rental, you think that three-quarters of the houses let in Airdrie are £10 and under, and £16 is quite too high?—Quite too high for the working classes.

5422. For Motherwell and Coatbridge, how do the landlords in Hamilton compare with Motherwell and Coatbridge?—From the evidence I heard to-day they are not to be compared.

Mr J. Ewart and Mr W. Tait.

3 Jan. 1907.

5423. You think Airdrie is lower?—Very much lower.

5424. You think Coatbridge people cannot afford the rents, so that the limit should rather be the other way?—Yes.

5425. (*Mr Dobbie to Mr Ewart.*) How many houses are there in Airdrie altogether?—I only took statistics from £16 downwards: I didn't go above that. From the Valuation Roll that number, 4565, was taken by Mr Tait.

5426. You cannot give us what percentage of the total houses are under £10?—From the whole inhabitants—well, take it on the average of four per house, you have 4565, that represents somewhere about 18,000 people.

5427. You have 22,000 inhabitants. I rather think there is some misunderstanding. You indicate in the notes that 75 per cent. of the houses were under £10. Make that clear. You were talking of the total under £16?—Yes.

5428. Then you don't think the hypothec is of very much value?—No.

5429. Provided there should be a more drastic method of ejectment?—Yes, that is what is wanted.

5430. Would you go as far as to suggest that there should be no warrant of any court at all required?—No, I would not.

5431. Perhaps your view is that any frivolous or obstructive defence should be brushed aside?—Yes, I do think so, because most of them are mere frivolous objections. I know of a woman who was to be put out, and she went and got a baby from some one, and said she had had a baby two days ago, and got liberty for other ten days longer.

5432. You are against the proposal to compound the rates. Is that because it would not pay the proprietor?—I do not see how it would, under the proposal Provost Keith made here. I was enlightened out. If the losses on recovery and unlets got taken off, I would favour it.

5433. Supposing for a moment, as a condition of the landlord paying the rates, say under £10, the landlord was to get repayment of the proportion of the rates for empty houses, for a proportion of the year, and, secondly, that the present practice of exemption on the ground of poverty was to continue, so that the landlord would not pay in any case where the tenant did not pay?—We are on a different footing from what I have heard here. Our Relief Court is in October, so before the half-yearly rent is paid they have got exemption of rates, and in the case of the landlord collecting rates, they would have that from the October Court, an Appeal Court, on the ground of poverty.

5434. Before the November term?—Yes.

5435. And if it were monthly?—It would be the same thing, before October.

5436. Not the month of May?—No.

5437. Nor even quarterly?—No.

5438. If there was this exemption practice continued, if the landlord got a rebate proportionate to the empty houses or the part empty, and, thirdly, if he got a fair allowance for the trouble of collecting, I should think any material objection on the part of the proprietor would disappear?—To a great extent it would.

5439. (*Mr Howden to Mr Tait.*) You told me that during the currency of the present six months you had two persons who came to you and wanted relief of their houses and to grant them relief?—Yes.

5440. What were your powers in regard to these, to keep your hold on them?—If I had wanted to.

5441. If it had been a less sympathetic factor than yourself he might have done that?—He might.

5442. And have put these people to considerable trouble and inconvenience?—He might.

5443. Were they wanting to remove from Airdrie?—No.

5444. Just wanting to shift?—To a better house.

5445. You agreed to let them go on that condition?—Yes.

[ADJOURNED.]

SIXTH DAY.

FRIDAY, 4TH JANUARY 1907.

At the Municipal Buildings, Glasgow.

Present:

SHERIFF CHARLES J. GUTHRIE, K.C., *Chairman.*

MR THOMAS BINNIE.
MR EDWARD COX.
MR JOSEPH DOBBIE, S.S.C.
MR GEORGE B. ESSLEMONT.
MR JOHN T. HOWDEN.

MR STAIR AGNEW GILLON, *Secretary.*

Mr Robert Renwick.

4 Jan. 1907.

MR ROBERT RENWICK, called and examined.

Mr Robert. Renwick

4 Jan. 1907.

5446. (*Chairman.*) You are a Depute Town Clerk in Glasgow?—Yes.

5447. You have acted as Assessor in the Burgh Court since 1885?—Yes.

5448. There are some explanations that we want from you as to the work in that Court. We have been having some evidence about it, and we want to know the exact facts. You hand in a report, dated 21st December 1904, being a report by the Town Clerk as to the procedure in cases of ejectment brought before the Burgh Court?—Yes. (*Hands in Report.*)

5449. How did that report come to be prepared?—The magistrates are always varying, new ones being appointed each year, and I thought it would be a good thing to have information before them which they generally inquire for when they are appointed. This was just to supply information to them.

5450. In addition to the memorandum which is prefixed to the report, you have in the appendix given excerpts from different documents?—Yes.

5451. Showing the practice and the statute law on the subject?—Yes.

5452. I suppose we may take it that that report is correct?—Yes.

5453. Ejectment we have been told may be applied for either in the Burgh Court or in the Sheriff Court?—Yes. I can only speak for the Burgh Court.

5454. Your experience is confined to that Court?—Yes.

5455. Is it the case that it may be applied for on account of three things,—First, on account of the expiry of the period of let; second, on account of insufficient security for the rent; and third, on account of the rent falling into arrear and a conventional irritancy being thereby incurred in terms of the conditions of let?—That is so.

5456. As regards the first case, namely, expiry of the period of let, there are two cases, in the absence of express stipulation you may have the case of forty days' notice before a Whitsunday or Martinmas term, which is required in the case of yearly lets?—Yes.

5457. In the case of houses let for any period not exceeding four months, you have, under the terms of the Removal Terms (Scotland) Act of 1886, as many days' notice as are equivalent to one-third of the period of let?—Yes.

5458. Is there a large number of applications under the first head, the expiry of the period of let?—There are not many cases.

5459. In such cases is warrant of ejectment given at any time after the expiry of the period of let?—Yes, but the tenant is usually allowed at least a couple of days to remove. We have two courts in the week. If a case comes up at the Tuesday Court, then the tenant is allowed till Friday; if the case comes up at the Friday Court, then the tenant is usually allowed till the Tuesday.

5460. When there is insufficient security for rent, the landlord is entitled to insist that his tenant either have sufficient plenishing to secure the rent or find security for payment?—Yes.

5461. You find that petitions coming before you have hitherto been confined to yearly lets and are comparatively rare?—Yes.

5462. There were only 98 last year in which about 200 individual cases were involved?—Yes.

5463. The third head is the important one, namely, rent falling into arrear. Now in that case, we will take first your figures for the year ending 31st October 1906. There were 5369 petitions under that head lodged in the Burgh Court?—Yes.

5464. Each petition included the names of six tenants or under, making 20,687 individuals affected?—Yes. Perhaps I should explain that although there are 20,687 cases included in that number, there are tenants who come before the Court more than once, so that there are not so many individuals as 20,687.

5465. You can give no idea how many individuals there are?—No, that information can be better supplied by the factors.

5466. Have you persons coming several times before the Court in the course of the year?—I understand that to be the case from statements made.

5467. Out of these 20,687 cases, 12,951 did not lodge any answers or intimate a desire to have an extension of time beyond the forty-eight hours?—That is so.

5468. After a petition has been lodged, is there always a period of forty-eight hours allowed after service has been affected?—Yes, always.

5469. In the case of the 12,951, what length of time intervened between the obtaining of the order of service from the magistrates and the warrant of ejectment? What is the smallest amount of time, and what is the longest?—After the expiry of the forty-eight hours, without any answers being lodged, the petitioner is entitled to go and extract his decree and to put it in force at once,—there is no delay.

5470. He gets an order on the Tuesday, and he serves it at once; he comes back on the Friday, and he gets his warrant, and he can then eject within what time?—At once.

5471. So that having applied on the Tuesday he can have the tenant out on the Friday afternoon?—Yes.

5472. Either by the tenant voluntarily going, or by getting the Burgh Officer to put him out?—Yes.

5473. That leaves 7736 cases, and it is only in regard to these that you know that there has been some complaint made. These are the ones we have to deal with?—So far as complaints are concerned, we have complaints on both sides. The petitioners complain that the tenants get too much time, and the tenants on the other hand almost invariably complain that they get too little.

5474. Are the 7736 cases, cases in which the tenants ask and get delay?—In a few cases formal answers are lodged,—perhaps about twenty cases.

5475. Does that mean cases or petitions?—Cases, individuals, because there may be half a dozen in one petition and only one out of the six, so it is twenty individual cases. Of course, that is only an approximation.

5476. They lodge written answers?—Yes.

5477. The others request delay?—They ask for more than the forty-eight hours.

5478. Is that done when the petition having been served the warrant for ejectment is asked for, and they come up and ask additional delay?—Within the forty-eight hours they come to the clerk's office and hand in their paper.

5479. Or make a verbal request?—They just hand in the paper that has been served upon them, and they are told to appear at the following Court, either on the Tuesday or the Friday, as the case may be.

5480. Suppose the order for service was got on the Tuesday, and they appeared on the Thursday and asked delay, to which Court would they be ordered to go?—On the following day, the Friday.

Mr Robert Renwick.

4 Jan. 1907.

5481. Suppose the order has been got on the Friday, and they appear on the Saturday or the Monday, to which Court would they be ordered to go?—The Tuesday Court.

5482. Are there other cases where request for delay is not made till the warrant for ejectment is asked?—The warrant for ejection cannot be asked till the expiry of the forty-eight hours, and any request coming from a tenant after that is disregarded.

5483. Let us understand. Suppose an order for service is got on the Tuesday, and the warrant for ejectment is applied for on the Friday. Suppose the tenant takes no notice till the Friday and comes up on the Friday and then asks delay, is it granted to him?—No, it is too late. We do not take them in after the forty-eight hours.

5484. Suppose the warrant has been got on the Tuesday and he asks delay on the Thursday, and he comes up on the Friday, does he get further delay?—When the case is called in court, the date of service of the petition is looked at. If it is a monthly let, then he gets delay till the eleventh day from the date of service if the rent is in arrear more than the current month. The period of eleven days is fixed in this way: we take the precedent of the one-third of the period of let as indicating a reasonable time, although it is not exactly what is referred to in the Removal Terms Act. Monthly tenants who are in arrear with no more than the forehanded or advance rent for the month then current are allowed either (1) to the eleventh day from the date of service, in cases where the month expires within that time; or (2) to the end of such current month if that period extends beyond the eleventh day.

5485. But why, because a man does come up and ask delay, why does he get more delay than a man who does not go up? Does he get it whatever his reason is?—In the case of those who don't come up it is to be assumed that they do not want any more than the forty-eight hours,—they either are leaving voluntarily, or are making a new arrangement.

5486. And the warrant in their case is granted straight off if they don't come up?—Yes, that is so.

5487. If they do come up, are any reasons considered, or is the delay granted as a matter of course?—The magistrates have considered the thing from time to time, and they think that possibly a landlord might, in some circumstances, be entitled to get a warrant earlier, but they consider that eleven days from the date of service is a reasonable time.

5488. Even although the man has no reasonable reason to assign?—The tenants generally ask this time to gather money wherewith to settle the matter.

5489. It comes to this, that whatever reason the tenant chooses to put forward, if he chooses to turn up, he gets eleven days' delay from the date of service?—Yes.

5490. Do you think that is convenient? Why does not the magistrate consider the reason assigned and apply his mind to whether it is sufficient to warrant delay or not?—The almost invariable statement made by a tenant is this, "If you give me time I will be able to settle."

5491. That is what we all say?—The magistrate thinks that it is rather unreasonable just to put out a tenant on forty-eight hours' notice if he has no other house to go to.

5492. Why does not the magistrate think the same in the case of the tenants who do not turn up?—Because their cases are not brought under his consideration. On that point you will observe the recommendation of the Municipal Housing Commission. They recommend that the allowance of that time should be granted to tenants whether they ask it or not.

5493. We will just take that. In reporting on the practice followed in ejectment cases before the Burgh Court, the Glasgow Municipal Commission on the Housing of the Poor in 1904 recommended that tenants, without being required to lodge answers, should be allowed one-third of the period of let, except in the case of weekly tenants, who should be allowed not less than four days. Have you got that report?—You will find it in the statement that I have put in.

5494. When the eleventh day falls on a Saturday it is usual to extend the time of ejectment till the following Monday, I understand?—Yes.

5495. Take the case of weekly tenants, one-third of the period of let having already expired before the cases are called in Court, it is the practice to give such tenants whose cases are called at the Tuesday Court till the following Friday, and those whose cases are called at the Friday Court till the following Tuesday?—Yes.

5496. Does one of the magistrates specially take this business, or may it be any magistrate who happens to sit?—They take the Court by rotation. The dates are fixed at the beginning of the year, and each magistrate has his day on which he has to attend.

5497. How many magistrates are there in Glasgow?—Fourteen.

Mr Robert Renwick.

4 Jan. 1907.

5498. Is there a magistrate always on the bench both when the order for service is granted and when the warrant for ejectment is applied for?—The application for service is lodged with the Clerk of Court who writes out the warrant of service, and it is then taken to a magistrate for signature. At the time for holding the court for granting ejectments a magistrate may have another appointment; he may be at the Licensing Court or he may be from home, and in such cases we do our best to get a substitute.

5499. Who do you get?—Another bailie. Then of course, if we cannot get a magistrate, no Court can be held; but we have a great many people present, the factors attending on one side and the tenants on another,—we sometimes have 100 persons present.

5500. When no magistrate can be got, is the Court not held?—It cannot be called a court, but the people are there, and what we do is this, we call the names and announce the date on which, according to the practice of the Court, warrant of ejectment would fall to be granted. That is to save both parties the trouble of coming up again. Then, if no objection is made and both parties are agreeable, the time so announced is adopted by the magistrate who signs the warrant. The warrant is made out by the Clerk of Court. If an objection is stated, then the case must just be reserved until it is heard personally by a bailie.

5501. How often does it happen that that is done without a magistrate being present?—It happens every now and again. For instance at last Municipal Election the bailies were otherwise engaged, and we had one or two court days, but I do not think we have had one since without a magistrate.

5502. To sum up your figures, in the year ending 31st October 1906:—

The number of ejectments applied for was . .	20,887
Of these about 200 were yearly lets . . .	200
The remainder being monthly or weekly lets . .	20,687
There were answers by monthly and weekly tenants and applications for extension of time, numbering	7,736
There were no answers for the remainder . .	12,951
There were nine cases dismissed	9
The result being that warrants of ejectment were authorised against monthly and weekly tenants to the number of	20,678
The warrants extracted were	9,917
The remainder either leaving voluntarily or arranging with landlords	10,761

That is correct?—Yes.

5503. How long have you been in the service?—You mean as regards the Burgh Court?

5504. Yes?—Since 1885.

5505. Is it the case that at one time the practice was for very few requests to be made to lodge answers?—They have always been growing. At one time there were no regular courts held, but the practice, mainly at the request of the factors, came into operation by which regular courts were held, and they seem to have increased ever since.

5506. We have been told that at one time very few people asked delay, and when it became known that people could get delay, the number who came forward enormously increased. Is that so?—I think for a few years before 1885 there were no formal Courts held.

5507. But you say that the number of people who asked delay has been growing?—Yes.

5508. Why is that, do you think?—I do not know. I suppose there will be more applications, for one thing.

5509. (*Mr Binnie.*) We were told that some lawyers made a point of going to people and advising them that by lodging answers they were certain to get delay, and that ever since that class of lawyers had been in existence the number had largely increased?—Yes, one tells another.

5510. (*Chairman.*) The only other thing we want to know about is as to expense. You have given in your precognition a note of the table of fees?—It is as follows:—

BURGH COURTS EJECTMENTS.

	s.	d.
(*a*) *Lets of not more than One Month.*		
Warrant of Service—1 or 2 Respondents . .	1	6
„ „ —More than 2 Respondents .	2	0
Warrant to Eject—1 or 2 Respondents . .	0	6
„ „ —More than 2 Respondents .	1	6
Lodging Answers for each Respondent entering appearance	0	6
(*b*) *Lets of more than One Month.*		
Warrant of Service	2	0
Warrant to Replenish	1	6
Warrant to open Lockfast Doors	1	0
Warrant to Eject	1	0
Lodging Answers for each Respondent entering appearance	0	6

Mr Robert Renwick.
4 Jan. 1907.

5511. That does not of course include the expense for the burgh officer if he requires to be employed?—No.

5512. Do you know how much is paid if the burgh officer requires to be employed?—I cannot tell. The factors pay that.

5513. (*Mr Howden.*) I did not grasp your statement as to how long you allowed a yearly tenant in the warning away. You told us there were 200 yearly tenants before your Court. How long do you allow in those cases? You told us it was eleven days with a monthly let?—In the case of yearly lets there is an order given to either have sufficient furniture in the house to secure the rent, or otherwise to find security within forty-eight hours. Then there is nothing done until we get a report as to whether the order has been implemented or not. If the order is not implemented, then a warrant is forthwith given for ejectment. Some two or three days are given. Very few of these cases come back to us; the parties seem either to leave voluntarily or else to have arranged the matter by finding security.

5514. You have no set number of days, as you have with a monthly let?—No, if they failed to fulfil the order they would just get two or three days more.

5515. They are summarily ejected?—Yes.

5516. (*Chairman.*) I should have asked you this as to the expense,—the gross amount of fees collected by the clerk for the year ending 31st October 1906 amounted to £857, 11s. 6d., being an average of slightly under 10d. for each of the 20,887 cases?—Yes.

5517. Suppose in lets of not more than one month the full fees claimable by you are exacted, they would be as follows:—Warrant of service, 1s. 6d.; warrant to eject, 6d.; making 2s. That would be all, if no answers were lodged?—Yes.

5518. Then, in lets of more than one month, you have the warrant of service, 2s.; the warrant of replenishing, 1s. 6d.; the warrant to open lockfast doors, 1s.; and the warrant to eject, 1s.; making 5s. 6d. That would be the utmost, if no answers were lodged?—Yes, that is in the case of yearly tenants.

5519. Suppose it were the law that before delay could be got the rent due should be consigned, what effect do you think that would have?—If they had money to consign the rent, they would have money to pay it. The usual cause is just the want of money.

5520. Do you think that any such regulation would involve real hardship in a certain number of cases?—I do not think it would be workable amongst that class of tenants. There is a large number, and it is just pure want of money. There is never any unwillingness to pay rent as a rule—it is very seldom that that is the cause.

Mr Robert Renwick.
4 Jan. 1907.

5521. But suppose people had a good defence to the action?—If they had a good defence it would be given effect to at once in a summary way.

5522. How? I understand that when the tenant asks delay he gets delay. It is not a case of his asking delay and the magistrate applying his mind to whether he has a good reason for delay and giving effect or not to the request as he thinks proper after applying his mind to what ought to be done. The defence is never given effect to straight off?—If a defence is given that the money is not owing, then the magistrate can inquire into that and settle it right off, and then the case is dismissed.

5523. Does he ever do that?—Sometimes, but very seldom. There are only nine dismissals.

5524. These were cases where the magistrate applied his mind judicially on the spot?—Yes.

5525. And dismissed the cases?—Yes. If there is any special defence, it is always considered, but, as a rule, it is merely a statement that they are unable to pay and that they hope to be able to pay if they are allowed a little time.

5526. (*Mr Esslemont.*) It is just asking for time?—Yes. There are so many cases that the magistrates act on a general rule, and they think the eleventh day is a reasonable time.

5527. If any special defence is stated it is inquired into?—Yes.

5528. (*Chairman.*) Have you cases where the ground is bad conduct on the part of the tenant, disorderliness, or destruction of the landlord's property?—These are not grounds of complaint before this Court. The only grounds are arrears of rent, insufficient security, or expiry of the period of let.

5529. Cases on the other grounds would go to the Sheriff Court?—Yes.

5530. (*Mr Howden.*) They must go to the Sheriff Court?—Yes. We have not dealt with such cases in the Burgh Court.

Mr W. J. Wood.

Mr William James Wood, recalled and examined.

Mr W. J. Wood.

5531. (*Chairman.*) I think you have some explanation to make?—Yes. My first duty is in reference to that memorandum of which you have all got copies.

5532. That is the memorandum on behalf of the Parish Councils of Glasgow, Govan, and Edinburgh?—Yes. A question was put to Mr Cochran, who was with me in the box at the time, as to whether that memorandum had received the formal approval of the Council——

5533. Which Council?—The Parish Council of Glasgow, and Mr Cochran said that it had not been formally approved of by them, but it was understood that they generally approved of it. I am asked to-day to submit the fact that in the minute of the meeting of the Law and Finance Committee of the Glasgow Parish Council on 28th November last there appears this entry,—"Glasgow, House-'Letting (Scotland) Bill. In view of the evidence now 'being taken by the Departmental Committee, it was 'unanimously agreed to recommend the Council to affirm 'the principle of the Bill and formally to adopt the 'memorandum already issued and authorised by this 'Committee in May last." Then, following upon that, in the minute of the meeting of the Council itself on 4th December there appears this entry, "Law and Finance 'minutes of 28th ulto. read, and, on the motion of Mr Baird 'seconded by Dr Maclachlan, approved of." I think that is all you wish in regard to that. Then there were two statements which I was asked to send in on matters about which I had not got the explanation at the time I was in the box. I sent that information to your Secretary on 27th November in the following letter:—

PARISH COUNCIL CHAMBERS,
COLLECTOR'S OFFICE, 266 GEORGE STREET,
GLASGOW, 27*th November* 1906.

Departmental Committee—House Letting (Scotland) Bill.

DEAR SIR,—I now annex the two statements I promised at my examination yesterday.

No. 1 is in reference to the comparison of the £295,121 at foot of page 1 of my precognitions with the £78,265 in paragraph 3 of page 2. You will observe that the first figure is the *total* levied for poor rate for 1905–06, while the second is the amount levied on *tenants* only for 1902–03. I now give also the rates and amounts assessed for the intervening years.

No. 2 is in response to Mr Binnie's request, and gives, for the year 1904–05, the total number assessed and the total amount assessed (both owner and tenant), also shows the number and amount exempt for unlet property (occupiers' proportion), statutory, etc. exemptions and irrecoverables, with the percentage that each is to the total. I am sorry I cannot give this information for 1905–06, as the collection for that year is not yet completed.—Yours truly, (Signed) WM. JAS. WOOD.

STAIR A. GILLON, Esq., Advocate,
116 Hanover Street, Edinburgh.

No. 1.

TOTAL POOR RATE ASSESSMENT LEVIED.

Year.	Rate per £1.			Assessment Levied.		
	Owner.	Tenant.	Total.	Owner.	Tenant.	Total.
	d.	*d.*	*s. d.*	£ *s. d.*	£ *s. d.*	£ *s. d.*
1902–03.	$5\frac{22}{32}$	$6\frac{2}{32}$	0 $11\frac{24}{32}$	73,043 14 3	78,265 3 7	151,308 17 10
1903–04.	7	$7\frac{14}{32}$	1 $2\frac{14}{32}$	94,200 0 11	100,574 14 7	194,774 15 6
1904–05.	$8\frac{3}{32}$	$8\frac{28}{32}$	1 $4\frac{31}{32}$	112,016 2 10	123,667 4 8	235,683 7 6
1905–06.	10	$10\frac{24}{32}$	1 $8\frac{25}{32}$	140,666 16 7	154,454 4 3	295,121 0 10

Mr W. J. Wood. 4 Jan. 1907.

No. 2.

Mr W. J. Wood. 4 Jan. 1907.

STATEMENT giving for 1904–05 the Total Number Assessed and the Total Amount Assessed (both Owner and Tenant), also showing the Number and Amount exempt for Unlet Property (Occupiers' Proportion), Statutory, etc. Exemptions and Irrecoverables, with the Percentage that each is to the Total:—

Details.	Number.	Per cent. of Total Number Assessed.	Amount.	Per. cent. of Total Amount Assessed.
Unlet (Occupiers' Proportion), . . .	10,139	5·784	£9,846 9 0	2·361
Statutory Exemptions, ...	946	0·539	4,814 11 7	1·154
Paupers, ...	3,314	1·890	1,271 7 5	0·304
Inability, ...	12,248	6·976	3,807 8 11	0·912
Irrecoverables, ...	12,710	7·251	5,058 16 8	1·213
Totals, ...	39,357	22·440	£24,798 13 7	5·944
Paid, ...	135,914	77·560	392,205 18 8	94·056
Total Entries on Roll and Total Assessment,	175,271	100·000	£417,004 12 3	100·000

Note.—The total number of receipts involved in the £5058, 16s. 8d. irrecoverable was 15,063. Of these, 12,710 were wholly irrecoverable, and 2353 partially irrecoverable. The *amount* of these 2353 receipts, so far as irrecoverable, is included in the £5058, 16s. 8d., but the *number* of them is not included in the 12,710, because they are already included in the 135,914 paid, for the portion so paid.

5534. (*Mr Binnie.*) You give the amount that is not recovered in Table No. 2. Does any of that apply to the owners' proportion?—No.

5535. So it is all tenants'?—Yes.

5536. And the percentage of loss will be approximately just double the percentage that you show here, if we are dealing only with the tenants?—I don't quite follow you.

5537. You give here the percentage of the total amount assessed that was irrecoverable?—Yes, and that is wholly tenants.'

5538. 2·361 per cent.—the tenants' proportion—is only a half of the whole, so that on that the loss——?—I follow, yes.

5539. We just double this?—Yes. The owners' proportion is included in the assessment. That is your point?

5540. Yes?—Yes, that is so.

5541. Is there anything else?—Yes. I took the liberty of writing to the Secretary the following letter of 26th December:—

PARISH COUNCIL CHAMBERS,
COLLECTOR'S OFFICE, 266 GEORGE STREET,
GLASGOW, 26*th December* 1906.

House Letting (Scotland) Bill.

DEAR SIR,—I intended submitting the enclosed summary of the attitude of this Council to the above Bill at the close of my evidence, but the questions put to me by the various members of the Committee caused me to omit doing so. I send it on now in the hope that you may be able to bring it before the Committee at the proper time, and that it may be of service.—Yours truly,

(Signed) WM. JAS. WOOD, Collector.

STAIR A. GILLON, Esq., Advocate,
116 Hanover Street, Edinburgh.

House Letting (Scotland) Bill.

The Bill will increase enormously the facilities for removing.

It is based on the assumption that these increased facilities are called for, and will be taken advantage of.

It leaves the poor, etc., rates of the houses to which it applies still to be collected from the tenant under the present law.

The present law is founded on the lines of the terms of let then and still in force, and is quite inappropriate and inadequate to meet the circumstances the Bill will create.

Under the Bill, therefore, the collection of poor, etc. rates in burghs from tenants to which it applies will be jeopardised, and Parish Councils in burghs will suffer a serious monetary loss.

Concurrently, therefore, with the passing of this Bill in its present form, appropriate and adequate powers must be granted Parish Councils to obviate this loss.

The simpler and more effective way, so far as the Parish Councils' interest is concerned, would no doubt be to enact that the poor, etc. rates of the houses to which the Bill applies should also be payable by the landlord, but that would nullify the provisions of Section 19[2] of the Franchise Act of 1868, and Parliament would not sanction such a result being brought about by a House Letting Bill. The only alternative to this would be such concurrent amendment of the Franchise Act as would ensure the continued disfranchisement of those at present disfranchised, and this would be difficult to obtain.

5542. (*Mr Esslemont.*) The Bill you refer to is Mr Cross's Bill?—Yes, as presented to Parliament in the last session.

5543. (*Chairman.*) There is just one thing I would like you to explain, namely, the two first figures. Do you understand that it is contemplated that the total number of removals in a year will be increased or merely that the removals will be spread over the year? Which assumption are you going on?—On the assumption that they will be spread over the year, and that they will also be more in number. For instance, one tenant might, with a monthly or weekly tenure, remove several times in the year.

5544. Apart from the total number of individuals removing, the cases may be more?—Yes. I think the total number of persons removing would be more, otherwise there is no real ground for Mr Cross bringing forward his Bill, if it is not that a great many people want to remove who at present are prevented from doing so.

5545. (*Mr Binnie.*) Not necessarily. Mr Cross says that a good many people who change their employment are obliged to remain until the following Whitsunday and then remove, but facilities should be given to these people to remove in the course of the year preceding Whitsunday. It is not, as I understand it, that there would be more removals, but that the removals should be made at the time most convenient for the tenants and not at the fixed term of 28th May?—I think that is met by the question that the chairman has put to me, that a person removing, say in June or August, would now have a facility for removing again, if circumstances demanded it, and so in that way he might remove three times in the year, whereas he can only remove once now. That is one of the points.

5546. (*Mr Esslemont.*) Those who are occupying houses at present on weekly or monthly lets have the facilities?—Yes, there is no doubt about that.

5547. (*Mr Howden.*) Do you not think that there is something in the contention that has been spoken to repeatedly by witnesses before us, including the housefactors, that the house-letting fever which takes place about this season of the year has a good deal to do with the amount of the removals?—I would not think so.

5548. We have had it from a good few of the rest of the witnesses?—I have not heard what they have said, but I would not think so. I believe a great many would like to remove at some other time than 28th May, but they are at present prevented by the present law.

5549. You don't think there is anything in the statement that the house-letting fever takes possession of people at such a time as this and they go hunting for houses?—I do not think there is much in that. If that takes place at this time, then it would take place at any time the removal might be.

5550. Not if there was a greater facility for removing in the course of the year?—They would not all be looking for houses at the same time, but the fever would be spread over the number of removal terms. My only point is to point out the position in which we, as a Parish Council, and I, as Collector, would be placed under the Bill in its present shape and the difficulties that would require to be met in some way.

Mr W. C. M'Bain. 4 Jan. 1907.

Mr William Cross M'Bain, called and examined.

Mr W. C. M'Bain. 4 Jan. 1907.

5551. (*Chairman.*) You are President of the Glasgow Landlords' Association, Limited, and you have been authorised by the directors thereof to express the views of the Association?—Yes.

5552. You yourself are a property agent and heritable proprietor in Glasgow, and you have been President of the Association for six years?—Yes.

5553. That Association was incorporated in the year 1897, but it came into existence in the form of an unincorporated Association in the year 1862?—Yes.

5554. May we take it as representative of different classes of proprietors in the City of Glasgow?—I think so.

5555. How many members do you have?—They fluctuate. I should say that at present we have between 300 and 400, but of course many of those represent trusts which have large amounts of property. When any special agitation is on we are recognised as representing the property owners, and funds come to us, and appeals are recognised by even non-members.

5556. You do not include any factors who are not proprietors or agents for proprietors?—No, all the factors included are proprietors to my knowledge.

5557. The objects as set forth are the usual objects?—Yes, to look after the interests of the members.

5558. Has the Association taken a particular interest in the question now before us?—Yes.

5559. Namely, the letting of small houses?—Yes.

5560. When did it first take up the question?—I think in 1887.

5561. At your annual meeting?—Yes. It was brought up by a member; he brought up the missive question, not the question of short lets. He brought up the early issue of missives and that was considered by us.

5562. In what view did he bring that up?—He brought it up in this way, that there was some writing in the newspapers about it, and he thought the date was a little too early. He was not a housefactor, and he did not profess to know much about it. He asked the Chairman why it was that this was done, and he was told that it had grown up through use and wont, and that the real difficulty was that the warning period was so long, that you required to begin pretty early although it might be later if the warning away period was shortened. Generally, there was a little conversation, and it was remitted to the directors to consider. It was the missive question purely.

5563. At that time was the larger question before you, viz., yearly lets as against short lets?—Not at that time.

5564. Nor any question as to compounding the rates?—No, not at that time.

5565. So far as the minutes are concerned, the matter does not appear again till 1894, when the annual report bears as follows:—

"A letter was received early in the year from one of the District Liberal Associations, suggesting that the present legal warning-out day and fixed removal term be done away with, and the law so made that a let might be entered on at any time and for any period which might be agreed on by landlord and tenant: where no definite period is agreed on, or where a tenant has been in possession for a longer term than the original agreement, forty days' notice to be required from either party to terminate the occupancy. That Association also offered to draft such a proposal for legislative purposes as might be satisfactory to both parties. Your Board replied, pointing out that amongst proprietors and factors throughout the city they had failed to trace the existence, to any appreciable extent, of a demand for a change in terms of let; that there are a large number of houses let by the month, and that tenants generally of better-class houses would resent the request for monthly and quarterly rents or lets. The matter, however, was taken up by the Trades Defence Council, who stirred up the question in different wards of the city, many of which, it is to be feared, expressed sympathy with the movement without due consideration. A deputation from the Council waited on Sir Geo. O. Trevelyan, Bart., M.P., Home Secretary for Scotland, and in consequence thereof your directors forwarded memorial, and waited upon him in support thereof."

5565*a*. Did you understand that the District Liberal Association brought before you anything more than had already been under consideration in 1887?—I think so: I think that would be the beginning of the question entering into the larger phase of shorter lets.

5566. Observe this, you see the Liberal Association proposed that a let might be entered on for any period which might be agreed on between the landlord and the tenant—they did not propose that there should be a restriction on the period?—No, but that introduced the question of a different letting system apart from the missive system altogether. The agitation or movement—give it any name that will describe it—has always been called the missive question, although it has largely drifted away from the mere issuing of missives.

5567. Was that both on the part of the District Liberal Association and also on the part of the Trades Defence Council—in both cases it was the larger question?—We can only assume what they sent to us. We took it up to mean that.

5568. Who are the Trades Defence Council?—The Trades Council, I think it is. That is the wrong name.

5569. (*Mr Howden.*) The Glasgow United Trades Council?—Yes, it is wrongly named here. Probably it is not an inaccurate way to call it the Trades Defence Association.

5570. (*Chairman.*) You have a copy of the memorial that was presented by the Association at that date to Sir George Trevelyan?—Yes, I can hand it in if it is of any use.

5571. You have referred to the question having been always called the missive question and still called that. I suppose even that has never been an accurate expression,—the mere granting of missives in itself, as distinguished from a verbal contract, has not been objected to?—I think the "missive question" originally did describe it accurately enough in so far as it meant that the period was to be altered.

5572. But it did not describe it accurately, if it meant that there was an objection to missives as distinguished from verbal contracts?—No, we always understood it to mean the missive question.

5573. That is to say, the way and the time at which missives are executed?—I follow the point now. There is the other system, the arles system, but that goes along with the missive question.

5574. It was not the custom of having written contracts that was objected to: it was the period at which the written contract was entered into?—The period at which you were asked to sign it. That was the missive question as we understood it.

5575. When Mr Provand's Bill was introduced in 1890, was it considered by your Association?—Yes, I think so; but we had no special mention of it. We talked about it at our meetings, but we did not forward any special memorial about it.

5576. Then in 1894 we know that Mr Cross introduced his Bill for the first time, and he introduced subsequent Bills altered to some extent. You have had these before you from time to time?—Yes.

5577. And in particular the principle of the present Bill, viz., to substitute for the present custom of letting houses by the year, a system whereby the duration of the lease should be corresponding with the term fixed for the payment of the rent?—Yes, we have considered that. I think it has been three times before Parliament.

5578. And you have had in view the differentiation in rent between the different classes of property?—Yes.

5579. You have kept before you Clause 4, the main clause as to the term of let?—Yes.

5580. What does your Association say about that proposal?—We think, in the class of house dealt with, it would be impossible or very difficult for people to enter into a contract for a year if they desired it, as many do desire, for reasons which I think have been stated, and which I might emphasise. It is a superior class of houses, even of the smaller houses, of £12 and under that are let by the year, and the large number of houses which are let by the month are older houses and not such a good class of house. There are undoubtedly working men who want the better class of houses, and they are quite prepared to take them by the year. Now this would prevent that being done.

5581. In the first place, it would, of course, interfere with freedom of contract?—Yes.

5582. Is that because of this,—although the Bill seems not to interfere with freedom of contract, it does so,—it allows people to enter into any term of let corresponding with the term of payment, but practically there are no payments once a year?—That is so; no rents are paid by the year, but if you wished to take a house by the year, then under this Bill you would require to pay by the year, and to pay in advance.

5583. Therefore the practical result would be to kill yearly lets?—Yes.

5584. In regard to yearly lets, to what extent are there payments for houses under £20 half-yearly?—Houses taken by the year and the rent paid half-yearly?

5585. Yes, are there any number?—Yes, there is a small proportion, although the tendency nowadays is to make the payment quarterly. I could not give the exact figure.

5586. It is a small number?—Yes, it is getting smaller. The tendency is to collect rents quarterly.

5587. Will there be 10 per cent. that will pay half-yearly?—It depends to some extent on the locality. Take Pollokshields: I don't know of any quarterly payments there, although there are rents of under £20 there. It depends on the district.

5588. That must be so, because some witnesses say that they know of none paid half-yearly, and in other districts we have had witnesses who say that they are quite familiar with half-yearly payments?—That is so.

5589. You cannot tell what it is all over?—It is largely a question of locality, and it also is largely a question of the position of the tenant. Some tenants have sons at sea, or they get their money from a distance, and even in a house of £10 they prefer to pay their rent half-yearly. Perhaps they have a pension,—a woman, for instance, gets a pension from the police fund; it is paid to her half-yearly, and she pays her rent half-yearly.

5590. Take the ordinary working man getting paid weekly,—is there any considerable proportion of such men in houses under £20 a year at yearly lets that pay half-yearly?—I would say that there are very few working men who pay half-yearly.

5591. That is the point. What we want to get at is this,—it is quite clear that this Bill would kill yearly lets: would it also kill half-yearly lets for the ordinary working man getting paid weekly or fortnightly?—There are very few of these paid half-yearly.

5592. (*Mr Esslemont.*) I understood Mr M'Bain to say that there were no half-yearly lets?—That is so, but I am now speaking of half-yearly payments.

5593. (*Chairman.*) We want to get at the effect of this Bill. Does it come to this, that in the case of working men getting paid in the ordinary way, weekly or fortnightly, in houses under £20, very few of them who have a yearly let pay half-yearly?—That is so.

5594. They pay quarterly or monthly?—Yes, the better class pay quarterly, and the class who are not considered quite so good pay monthly.

5595. When you say the better class, would that also come to this, that the nearer you come to the £20 the proportion will be larger of those who pay quarterly?—The nearer you come to £20, the larger will be the proportion of those who pay half-yearly.

5596. But as between quarterly and monthly, the nearer you come to £20 the larger will be the proportion of quarterly payments?—Yes, the higher the rental the longer the term of payment.

5597. Does that also vary with the district?—It varies with the district and with the kind of property. I don't know any proprietor who would put monthly tenants into a new property of room and kitchen and single-apartment houses,—which is a very common property in Glasgow. He wants yearly tenants with quarterly payments, because there would be more fixity about it.

5598. And less trouble of collection?—Yes.

5599. Have you any notion what would be the comparative number paying quarterly and monthly with annual lets of houses between £15 and £20?—In regard to houses over £15, there would be none paying monthly unless in rare cases, cases of men who draw their salaries once a month, and who say that they would rather pay monthly; but that is a very exceptional thing.

5600. Take houses between £10 and £15; what would be the proportions paying quarterly and monthly?—The proportion paying monthly would be very small; the larger proportion will be quarterly payments.

5601. And between £5 and £10?—They are all monthly.

5602. They are just the other way?—Yes, unless in a case of single-apartment houses in the newer kind of property, where there is just one single-apartment house in the middle, and a room and kitchen on either side. A superior tenant is wanted who will take that house by the year and pay quarterly.

5603. Under £10 the immense proportion are monthly payments, and above £10 the immense proportion are quarterly payments?—Yes.

5604. And when you come to the £20 houses?—They become half-yearly. It varies with the district.

5605. I thought you told us that there were practically no half-yearly payments in the case of ordinary working men?—That is so.

5606. It is only working men that we are dealing with here?—I have very little experience of working men occupying houses of £20 or near that. These are cases where they have families grown up, and they have sources of income other than their own wages.

5607. You are now talking of Glasgow?—Yes.

5608. Take the case of a working man, not a foreman, who has no wage-earning children. What would you say was a fair limit to place on the rent that he would pay?—You have them just now in the newest up-to-date room and kitchen houses with a range at £16, but these are very superior working men, men you can depend upon to devote their wages to the best use and have some aim in life.

Mr W. C. M'Bain. 4 Jan. 1907.

5609. Would you say £15 in the ordinary case?—Yes, but, of course, there are exceptions the other way.

5610. You told us that the practical effect of this Bill was to interfere with freedom of contract. You said there was a large number of working men who valued the security afforded by a yearly tenure?—Yes, that is my experience.

5611. What do you derive that view from? We have had a very large representation from working men and their associations who have all said the opposite?—I think my view is derived from the very clear and, I think, natural way of looking at it. You have got to take the experience of other cities besides Glasgow. We had a strike on the Clyde lately which affected not only the men on strike but also the allied trades. We had to wait for the men in yearly houses, and we were content to wait till the strike was over and then take the rents in instalments. In the case of monthly tenants, very many of them were ejected. I find that working men do value the security of tenure. They may have illness or they may be out of work, or there may be a strike, but they can hold on to their houses and the factor will be content, if he is otherwise satisfied with their character, to wait, and he does wait. That is one thing that operates very greatly in the fixity of tenure. Then there is the character of the house. There is still a large number of men who take some pride in their houses. They get a house to their mind in a certain locality and they like to keep it in a clean, tidy condition. But I think what operates with them is this, that they are liable to be out of work, they are liable to sickness, and there are occasional strikes, and being a yearly let they have a security that they would not otherwise possess if what they had was a monthly let.

5612. Are these the better class of working men as distinguished from the shifting and improvident class?—Yes.

5613. Your observations apply to them?—They apply to working men who are anxious to pay their way.

5614. They are the better class?—Yes.

5615. Have they, to your knowledge, given any public utterance at ward meetings or parliamentary meetings by passing any resolution in favour of this Bill,—have they given utterance to these views anywhere?—I think indirectly they have. They have done so here. Reading from the newspapers, I gather that they have said that they are very anxious to have fixity of tenure, but they add a proviso that they want to be able to quit on a month's notice. That is wanting to eat their cake and have it.

5616. But they have added that they think that by respectable conduct and punctual payment they achieve security of tenure even although the let be for a month or a quarter?—But if they do not take their houses by the year and they are unable to pay through causes beyond their reach, then they have no security of tenure; they are liable to be ejected. I understand that at all the public meetings there has been some little confusion. I find from my experience that they all think that this is a question of shortening the missives. All these working men, Mr Smillie and the others, want fixity of tenure, but they want to be able to quit on a month's notice. What about the hardship on the man who is left with his house empty

5617. You think there is confusion in many cases between two questions, the missive question and the question of short lets, which, as you say, are separate questions?—Yes.

5618. In addition, do you think that those who are in favour of short lets are proceeding on the assumption that there will be no rise in rents consequent thereon?—Yes, they never seem to think of that.

5619. That, in your view, is a very important question?—Yes.

5620. That is to say, many people might be in favour of short lets if the rents were not to be raised, but they would not be in favour if it was to involve a raising of the rent?—I am afraid a great many people never seem to think that housing is a business and a form of investment. House owners want a wage from it; they want something after everything is paid, and they find it increasingly difficult to get it.

5621. What do you say about the grievances? Take first the missive question. Do you agree with the view that has been generally expressed, that the period might fairly be shortened before 28th May?—I think so, very materially shortened.

5622. Will you give us your views on that and tell us what you understand is the practice in Glasgow?—The practice in Glasgow for several years past has been to issue them early in January. All the missives for working men's houses will be out about the middle of January. That

Mr W. C. M'Bain.
4 Jan. 1907.

proceeding is based on this, that you require to know the market before the warning-away period comes on.

5623. How far back do you go in your experience?—About twenty-two years.

5624. Has there been any alteration in that procedure?—Four or five years ago missives were sent out a little earlier, because at that time the property market was booming and there were more tenants wanting houses than there were houses for tenants. Now it is the other way; it is difficult to get houses let, there are so many empty houses. There is no difficulty as regards tenants getting houses, and therefore it has cured itself. There is no use sending out missives just now. It has come back again to the old system, but it is not quite so early.

5625. In point of fact, what is about the last date that the tenants have to say whether they are going to remain or not?—I believe I said four or five years ago, when the property market was booming, missives were asked to be returned as early as 21st January—I think that was about the date. I personally never asked them to be returned any earlier than Candlemas.

5626. How is it now?—They are put out later now. I cannot speak for all the factors of Glasgow, but I think in many cases they will be wanting the missives back when they go round for the quarter's rent at Candlemas.

5627. I suppose there is no doubt that there are inconveniencies and drawbacks connected with that system?—While on that subject I would say that we drafted a one clause Bill. We were quite willing to have the missives put back; it would have suited us very much better. It would be better to have the Candlemas collection of rents over before the re-arrangement came on, and for that purpose we thought that this absurd system of requiring to tell a man who had already given up his house that he had to go away forty days before 15th May or fifty-three days before the removal term should be done away with. That system was framed in the interest of fixity of security. We thought an alteration must be made, and we framed a Bill which would result in the issuing of missives being materially altered. The following is the Bill:—

A Bill to Amend the Law relating to Removal from Houses in Scotland.

Be it enacted, etc.:—

I. This Act may be cited as the Removal Notices (Scotland) Act 1906, and shall extend to Scotland only.

II. In this Act, the expressions "lease" and "burgh" shall have the same meanings respectively as in Section 3 of the Removal Terms (Scotland) Act 1886, and the expression "house" shall mean a dwelling-house, shop, or other building and their appurtenances.

III. In the case of a house within burgh, a lease of which for a period of not less than one year and not more than two years having a Whitsunday ish shall have been entered into after the passing of this Act, notice of warning away shall be valid and effectual if given not later than twenty-one days before the date of removal, and law, custom, or bargain to the contrary notwithstanding.

IV. This Act shall not apply to a dwelling-house let along with land for agricultural or other purposes.

Our Association had further arranged that if this Bill could have been pushed through we would have acted hand in hand with the Corporation of Glasgow in issuing a recommendation to the citizens that the missives should not be issued earlier than a certain date. We thought that a recommendation coming from the Corporation of Glasgow, as it came in previous years from the Corporation of Edinburgh, would have acted as well in Glasgow as in Edinburgh.

5628. Did you consider the other proposal that has been made to us by certain persons, namely, that there should be a restriction on the period within which it should be illegal to take a house before 28th May?—Yes, but our Association has never approved of making it a crime for a man to take a house or for another man to let a house.

5629. Your idea is that there might be a recommendation issued to that effect?—Yes, as was done in Edinburgh. There was a recommendation from the Corporation which was a very prominent factor in influencing public opinion. Our Association would have got its members to do it also, to put back the date of issuing much later if the warning away was altered.

5630. You think that the passing of a Bill such as you have handed in, coupled with a recommendation by the Corporation, would have removed the admitted inconvenience arising from the present system?—That is our opinion.

5631. Your view is that if the missive grievance was removed, then practically in substance this agitation would be met?—That is my opinion. It floated in on the missives, and it is called the missive question.

Mr W. C. M'Bain.
4 Jan. 1907.

5632. Now we come to the question as to the short lets and the alleged inconvenience. What is your experience in regard to houses under £20, owing to the fact that there is practically only one removal term in the year?—Do you mean the number of cases of people who find they have to remove and find this stand in their way?

5633. Yes?—That is a matter that our Association have had under their consideration for quite a number of years. Personally, I have made inquiry of members who are large property owners—the largest in the city—and I have had my own experience. I find that the number of *bona fide* cases of people actually wanting to leave the city for work elsewhere, in contra-distinction to people who say they want to leave the city and simply go to the next street, is a very small percentage,—I would not put it higher than 3 per cent. I want to qualify that by this: I should say that this 3 per cent. of people who want to remove, or who do remove, during the yearly let is divided into two classes,—a small percentage of the 3 per cent. who honestly come forward and give you notice; and a larger percentage of the 3 per cent. who go away and say nothing about it,—that simply remove and give you no notice; you find the house is locked up, and the keys away, and you have some little trouble. The door is locked, and the neighbours tell you that the furniture has been taken away by train, but still you have no legal right to enter that house, and a considerable time has to elapse. You have then to get a joiner to open the door. So I am not inclined to put the number of cases where changes are made during the year any higher than 3 per cent., and I divide that 3 per cent. into two classes, a small number who honestly come forward and say that they want to go, and with whom arrangements fall to be made, and a larger number who go away without letting you know, what are commonly called moonlight flittings.

5634. Do you make any distinction between the low rented houses and the higher rented houses in this way that the greater number who want to move would be under the £10 limit?—Those who are under the £10 limit are mostly monthly lets, and there is no trouble with them; they go at the end of the month. I should say that two-thirds of the people under £10 are monthly tenants.

5635. There is a large number coming on to £10, who are yearly tenants?—Do you mean under £10?

5636. Yes, between £8 and £10?—I am not inclined to put it higher than one-third.

5637. Well, take one-third. Is it in that class that you would find the largest number of persons who wish to move as compared with those who are above £10?—Yes, probably that is so. Certainly the largest number of moonlight flittings are about that rental.

5638. Suppose people want to leave, is it your view that there is no hardship in their case at all, and that their desire to move is met by sublets?—I think so. I have been surprised to hear it put otherwise. There is a greater hardship on the landlord of the house,—he is left with the house on his hands, and he is liable for the rates. He has to pay the rates for the year all the same, whether he has got a tenant or not. If there is a hardship on the one side, then there is just as great hardship on the other. The one man has his capital at stake, and has to pay the year's taxes, and if the other man goes away, then the landlord is left with his empty house.

5639. Is the point that you are making this, that the landlord's interest is to get a sub-tenant?—Yes, undoubtedly. It is his interest to get a tenant into the house.

5640. But if he has a tenant already, has he a direct interest to get the house sublet?—He has an interest to get a tenant.

5641. But he has one already?—Yes; but, as a matter of fact, he is quite willing to oblige him. I never knew of a case where a man was unwilling to put up a sublet board. Probably the best way to put it is that landlords are traders, and they have to please their customers as much as they can, especially as it must be recognised that there are now 14,000 empty houses in Glasgow. The hardship is no greater on the man that wishes to leave than on the man who has his house left on his hands and has to pay all the taxes.

5642. Can you give an idea of the number of cases in your experience where the principal tenant removing has had to pay, not only the rent of the house he is going to, but the rent of the house he is leaving between terms?—It is extremely small.

5643. You have no figures?—No. I have been over twenty years in business, and I have not known of one case but where, if it came to that, the tenant took care that he put it right. If the tenant went to England, the legal difficulties were too great for me to attempt to recover anything, and he simply got away. As a lawyer, you must know that I would require to cite him in England, and it would not pay me in the case of a small house. The legal cost of recovering rents in England or in Ireland, after a

Mr W. C. M'Bain. 4 Jan. 1907.

certain number of days, more than swallows up what can be recovered.

5644. Have you got the figures of the number of people who already have monthly lets in Glasgow?—Yes, I have the figures of Mr Henry

5645. They are admitted figures?—Yes, I think Mr Stewart put these in. I have only to say that I agree with them.

5646. What do you say to the point that is made that when a workman gets employment elsewhere, it may not be very far away, he necessarily wants to move his family? Is that so?—No, not necessarily. He may have his family employed in the town, or he may be anxious to keep them in the town, because, as his children grow up, there are better chances of getting work in the city than in the suburbs. Besides, I make this statement quite confidently, —I have experienced the fact that there are large numbers of workmen who, having got into different districts in Glasgow, become connected with ward committees or other associations, and they won't leave those districts. They have got a certain status and influence in their particular district and they don't want to leave it.

5647. You have other cases where a man may have several children at work, and his object is not merely to have his house near his work, but to have a central house that will meet the wants of the wage-earners?—Yes.

5648. At Clydebank you have enormous numbers of men who travel regularly?—Yes, to and from Glasgow. They prefer to live in Glasgow.

5649. Clydebank is not the only place. What other places are there round Glasgow where men travel from the centre of Glasgow?—They travel all round about, to Renfrew, Clydebank, and Yoker, all up the two sides of the Clyde. Glasgow is distinctly growing westward.

5650. (*Mr Binnie.*) There are workmen's trains to Newton?—Yes, to the steel works there. The Steel Company of Scotland's employees travel daily.

5651. (*Chairman.*) And there are greatly increased facilities in the way of tram-cars?—Yes. The whole question has been materially altered.

5652. Do you find that there is a distinct sentiment—we know how the world is ruled by sentiment—in favour of the yearly tenure as distinguished from the monthly tenure?—I think so. I find people beginning to talk about yearly tenures, but they give up the yearly tenure, because they want to quit at a month's notice, but still they want the house by the year.

5653. They look upon it as having a certain social advantage?—Yes. If a man has his house by the month, his rent is payable by the month, and he has rent collectors calling on him more frequently for rent. Now, no one likes to see people calling for debts. In that way a difference of status does arise.

5654. Suppose you were to offer monthly lets to your yearly tenants at the present moment, what in your view would be done by the most of them?—Monthly lets and monthly payments go hand in hand.

5655. But a monthly let, as distinguished from a yearly let?—My impression is that it would not be popular.

5656. Even though the rent was to remain the same?—In amount?

5657. Yes?—Yes.

5658. And if the rent was to be raised in consequence, do you think it would not be taken advantage off?—I do not think it would be taken advantage of. There is one point which I don't know has been mentioned, and that is, the cost of factorage commission has to be raised on monthly lets. The factorage commission on half-yearly lets is smaller than it is on quarterly lets. On monthly lets you have a higher factorage commission, because there is more labour; the factorage commission becomes a distinct item in a proprietor's budget; it runs up to as high as 6 per cent. on monthly lets.

5659. Take that head now. Your view is that monthly lets would involve higher rents?—Yes.

5660. You have given us one head, viz., the factorage commission?—Yes.

5661. Would the higher rent be next accounted for by this, that there would be an increase in the cost of repairs to the property?—That is so; the water fittings, plastering, plumber work, paper and painting, would all require to be done on a larger scale than now. When a man goes into a house, if it is for the year, whatever is required to be done is done; a man going into a house generally stipulates for what he wants to get done. My experience is that they write it on the back of the missive, and there is no dispute about it.

5662. Are these the two heads that would involve higher rents in your case, viz., the greater cost of repairs and the increased factorage commission?—Yes.

5663. Would these be substantial?—Yes.

5664. What is the factor's commission in the different kinds of collection, viz., half yearly, quarterly, and monthly?—It ranges from 2½ per cent. upwards.

Mr W. C. M'Bain. 4 Jan. 1907.

5665. In which case?—It depends on the rental and on the collection. The higher the rental, then the smaller the commission. Under £20 the lowest commission that I know is 2½ per cent.

5666. What does it go up to?—I would say that it is 2½ per cent. in the case of rents of £15 to £20, and 3 to 3½ per cent. in the case of rents between £10 and £15, but these are very keenly cut rates. When you come to smaller rents in the case of monthly lets, then I do not know anywhere it is less than 4 or 5 per cent.

5667. What does it go up to?—I have been told of one or two cases where they are paying 8 per cent. You may take it that the factorage commission on monthy lets is nearly double what it is on the ordinary lets.

5668. On the quarterly collection?—On the quarterly and half yearly collections.

5669. That is to say, if the collection be altered from quarterly or half yearly to monthly, then the factorage commission will be practically doubled?—Yes. The factor has to keep a tenants' book and get payments by the week and fortnight, and there is a great deal of trouble.

5670. Can you give any idea of the increased cost in the way of repairs?—There again it is very difficult, because the tenants vary so much. There are tenants who, when removing, leave the water running and flood the house.

5671. You cannot give any idea, but you say that it would be substantial?—Yes. An experienced property man will be able to tell you by the outside of the property whether it is a monthly or a yearly tenure property. If he cannot do that, then he is not a very experienced property man.

5672. What do you say to the answer that the difficulties you apprehend are not found in England with monthly lets? What is the view of your Association about that?—I think it is all the other way. The difficulties that we say would be experienced here are experienced there. We are talking of similar houses for working people. Take the London burghs for instance: our Association has made very extensive inquiries from the Town clerks in the London burghs and other burghs in England about the letting of houses, and we are in touch with the Property Owners Associations in England. I was an office-bearer in the United Property Owners Association of England. One of our statements here about Glasgow is that, if monthly lets were to come into operation, the benefit that working men get now in the way of fixity of tenure when there is a strike or illness or a raising of rents would be lost and they would be liable to be ejected and would suffer considerable inconvenience. That is a complaint that we have found in the London burghs.

5673. Have you any evidence of it in the way of newspaper reports or otherwise?—I have seen it, but, you will excuse me, I have not finished my sentence. In these burghs where houses are let on monthly lets, we find that when a large number of, say, Polish labourers or foreign immigrants come in there is a demand for houses, and up go the rents. If the present occupants of the houses won't pay these rents, then they can be put out, and they are put out on short notice, and in come the immigrants. I find from the property people themselves and from paragraphs which I have seen in connection with the great annual gathering that complaints are made——

5674. What gathering are you referring to?—The gathering of the United Property Owners Association of England. That is an owners' and occupiers' society, because, as you are aware, in England a great many people there are both owners and occupiers. In addition to the people who let out houses as we do in Glasgow, there are a very large number of men who occupy their own houses and their interests are the same as occupiers and owners. I find from the reports of these associations that the monthly system is not considered to be a satisfactory system when there is a demand for houses; the tenant feels that he can be screwed for more rent in a way that he cannot be here.

5675. If you have got any of these we would like to see them?—Yes, I will take a note of that.

5676. Anything you can submit to us in the way of evidence, to the effect that in England there are grievances which may be greater even than the grievance under the Scottish system we shall be glad to see. We have perfectly open minds on it, and we want to know how the facts stand?—Quite so.

5677. (*Mr Dobbie.*) Are there any rent-paying tenants, members of your English associations?—Yes, there are tenants and occupiers.

5678. Proprietors who occupy?—Yes.

5679. But are there any tenants who pay rents who are members?—Yes, I think so. The English system is so different from the Scottish system.

5680. Is the Association that you refer to an Association

Mr W. C. M'Bain.
4 Jan. 1907.

of owners or an Association of owners and tenants who pay rent?—That is so, the United Property Owners Association of England.

5681. You gave me the impression that it was confined to owners?—I was endeavouring to show you how there could be tenants in an association of that kind. In addition to there being the ordinary tenants we have here, there are men who occupy their own houses. There are more of that kind in England than there are in Scotland.

5682. It is not confined to proprietors?—No.

5683. (*Chairman.*) So far as the question of the amount of rent is concerned, it is said that in England the effect is not to raise the rent, because the English rents are much cheaper than in Scotland. What do you say to that?—It is very much the other way about, considering the cost of the structures here, and having regard to the workmanship and the style and the cost of building, the ground burden and other things; I think the rents in London are no cheaper than they are here.

5684. You mean if you look to the value given?—Yes.

5685. But the actual amount paid apparently by an ordinary working man in England, with say £1 a week, seems to be less than it is in Scotland?—That I could not say, but the opinion of practical men is that for value given the rents are not cheaper. I never heard anyone say that they were cheaper for the value given. The point, of course, is, that in London there is a distinct grievance about short lets.

5686. We want that proved, you know?—Yes, I shall take a note of that. Our opinion, and my opinion as an office-bearer in the United Property Owners Association of England, is that the grievance is very keenly felt.

5687. You might also note that we are going to meet later in Edinburgh and possibly elsewhere, and we will be glad to have any English witness or witnesses you choose to bring before us to speak practically as the result of actual experience?—I understood that you were going to summon English witnesses?

5688. That is quite true, but at the same time we would be very glad to hear any other witnesses besides those that we might summon?—I shall keep that in mind and endeavour to have some witnesses who will speak to these points.

5689. Now, on the bottom of page 8 of your *précis* you say that you think that short lets will tend to discourage the free investment of capital by investors in that class of property. Will you kindly explain that?—Our view is that houses let by the month distinctly tend to become an inferior class of property. At present there is no practical man but would say that houses let under £10, let by the month, are of a decidedly more or less inferior character. They tend to become so by the constant changes that are going on. No man would advise his clients to invest their money in new property that was to be handed over at once to monthly tenants. I would not advise anyone to do it, and no one would do it who knows what it really means in the way of upkeep, wear, and tear.

5690. You cannot say that there is a difference in the percentage charged, that there is a higher rate for loans over monthly property than over yearly property?—In some cases there is.

5691. You have actually found that?—Yes, I have found in the course of time, where monthly lets had left their mark on the buildings, the bondholder's agents came and had a valuation, and a higher rate was asked.

5692. Are you talking both of old and new property?—I am talking more or less of older property, because people won't let new property on monthly lets. No one would advise his client to give a new modern building with all the modern sanitary requirements to monthly tenants.

5693. We are talking of houses let under £20?—I understand.

5694. I suppose that necessarily is on the footing that monthly lets lead to more frequent removals?—That is so.

5695. Of course, if removals were not more numerous, then it would not affect the property whether it was let for a month or for a year?—No, but the people who take by the month seem to get into the habit of shifting about.

5696. Will you kindly explain that?—The tenants we find—and this applies to a large number of tenants—if they find a house that they think is a little better and they can get into it, then they are apt to go away and take advantage of it. Certainly the experience in Glasgow is that there are a great many changes with monthly lets. It is rare to find tenants who stay on from year to year.

5697. Is that not because monthly lets are at present applicable to cheaper houses? Suppose the better houses, the £10 to £20 houses, were let on monthly lets, would there be more removals?—Yes, I think the tendency would be to use the power given to them.

5698. It is said, on the other hand, that with the yearly lets, there being one period in the year when removals take place, there is a kind of removal fever on then which brings about many removals that would not take place otherwise and would not take place if you had monthly lets?—There again the people who say that do not have regard to the fact that the owning of property is a form of trading, and, like other forms of trade, it is regulated by the supply and demand. Within the last two or three years houses have been in excess of the number of tenants, and there has been this effect, that we have a large number of new empty houses. Tenants who have houses just now go about and take these new houses because they are empty, and they get the papering and painting done before the term comes on. There were as many removals as usual this last Whitsunday, and the great bulk of the people removed because there were empty houses that they could get into. There will be variations according to the supply and demand like what there are in any kind of trade.

5699. Then we come to the question of the rating. Is it your view that, if short lets were substituted for the longer lets, there would necessarily follow some provision in regard to making the tenants' rates collectable by the landlord?—We object to that.

5700. But that is not the point. I know that you object to it. First of all, is it your view that, if there are to be short lets, then compounding will be very apt at least to follow?—It might, but I would put it the other way.

5701. Suppose that the legislature, contrary to your view, thought that short lets should be inaugurated, do you see any necessity why that should lead to compounding; or even if short lets were inaugurated, is there any reason why the rating authorities should not themselves collect more frequently?—That is our opinion most decidedly, that if you are to have short lets you would require to have more frequent collection of rates. Our Association had that subject under consideration, and we communicated with all the leading burghs and cities of England and the town clerks and Property Owners Associations in these cities. I have a table here dealing with all the leading towns and cities in England, telling how they collect the rates, and I find that they are collected half-yearly, quarterly, and in some cases yearly. Glasgow stands in an isolated position in insisting on a yearly collection of rates. Barrow-in-Furness is quarterly and half-yearly. That is a very important table. There is a quarterly collection at Hackney South, half-yearly at Norwood, half-yearly at South Shields.

5702. Let us see this, because it might be very useful.—Yes, it is. (*Hands in.*) We spent a considerable amount of time and labour in getting these results from the various town clerks and Property Associations in England, and the result was that very interesting table showing how rates were dealt with in other cities.

5703. This deals entirely with towns in England and Ireland?—Yes.

5704. The towns in Ireland are Belfast and Dublin?—Yes. How the rates are collected is a very special feature of your inquiry.

5705. There is Liverpool, for instance, which is a somewhat similar town to Glasgow. The collection of rates there is yearly?—Yes. I should like to add that the Royal Commission on Local Taxation had this point under consideration, and they condemned it. Lord Balfour of Burleigh has written letters to the *Times* and other newspapers condemning the system. I want to state that emphatically, because Mr Cross writes repeatedly that no one has ever objected to compounding, and he does not seem to be aware that the Royal Commission and Lord Balfour of Burleigh objected to it.

5706. Yes, in principle, but the Royal Commission said that they did not see how it could be avoided?—Yes, but its principle was bad.

5707. I want to ask you this: do you see any reason why more frequent collection of rates should not be done by the rating authorities? You approve of that?—Yes.

5708. Subject to whatever arrangements might be necessary in the way of increased staff?—Yes.

5709. And you agree, I understand, that just as frequent collection of rent is a benefit to a working man, so would frequent collection of rates be also a benefit as distinguished from one collection in the year?—It may be more easily paid in that way. Then there is this point, the terms which they propose to allow.

5710. I am coming to that afterwards. What do you say in regard to whether it would not introduce a very awkward relation between the landlord and tenant if he were the rate-collector?—Undoubtedly. It would result in this, that you would have more money to collect from the tenants whether you called the thing rent or partly rent and partly taxes; the feeling that part of this was for outlays incurred by voters would get very weak, and the increased sum that fell to be collected by the landlords would be looked upon as a landlord's impost. On certain classes of property we pay the water and stair gas, and we

Mr W. C. M'Bain.
4 Jan. 1907.

recover it from the tenants. It is made a separate charge, but we find that it is very difficult to handle. The water rate is simply an ordinary debt and not very easily recovered. The stair gas may be recovered the same way as the rent, but it comes to this, that it is looked upon as a landlord's charge and sometimes it is left over,—you will ask it to be paid in November and you get it shunted over to February, and very often they say that they will pay everything at Whitsunday. If they do not pay it you cannot take their furniture for it. We find that the water and stair gas are not so easily collected as some have said. If we had a larger sum to deal with, it would simply be looked upon as a landlord's charge ; it would be forgotten that they themselves as voters were responsible for it.

5711. Have you any right of hypothec in your collection of the water rate and stair gas?—We have none for the water rate, but we have for the stair gas.

5712. Would it make any difference if, in regard to the water rate, you had a right of hypothec?—I do not think it would : in this way, it is a distinct and separate charge on the receipt. I have had cases, and I know that other factors also have had cases, where this part of the payment was postponed, and if it came to be a matter of sueing, it was no use, because it was too small a thing to enter into litigation about.

5713. If it was extended to a collection of the other rates, then the difficulty would be greater?—Yes, it would be looked upon as a mere affair of the landlord, and we know the sort of opinion that prevails about that.

5714. Is it also the case that in England, in addition to the objections you have mentioned, there is a feeling that the occupiers don't know about the municipal expenditure?—They know nothing about it; at least that is our information, that they know nothing about it, and it goes up, and the result is business people like Yarrow, leaving and coming to Scotland.

5715. Would that not be met if the tenants continued to get the notices from the authorities of what the rates were, even although the landlords paid them?—I think not. They know when they leave a house, they are away from that landlord, and it has cost a great deal of expense to hunt them up, and in many cases it would not be worth it.

5716. You do not think they would take the same interest as they do now, when they pay the rates themselves?—We find that in London.

5717. Suppose compounding were gone in for, and an allowance were to be fixed for the landlord, you have seen the proposed allowances in the schedule of Mr Cross's Bill. Confining yourself to Glasgow, what do you say about them?—They are totally inadequate.

5718. Do you say that in regard to all three?—Yes, they are totally inadequate.

5719. In each case?—It proceeds on entirely ignoring English experience. In England, where compounding prevails, there are two series of commissions: there is the first, the very necessary commission of 15 to 20 per cent on small rentals for the labour of collecting the rates, and there is next a commission, varying from 15 to 20 per cent., for guaranteeing them. The landlord there guarantees the rates just the same as he would be held liable for them here.

5720. Does the guarantee cover anything more than loss ; does it also cover unlets?—It guarantees the actual rates imposed.

5721. (*Mr Esslemont.*) Is that not optional?—Yes, and some burghs have not adopted it. The feeling in London is to get quit of it. Our information is that in these London burghs where compounding prevails, there is first a commission of 15 to 20 per cent. for actual collection, and, second, a commission of 15 to 20 per cent. for guaranteeing the rates imposed. These commissions run from 30 to 35 per cent., and there is now a feeling that this is too costly a system, and it would be better for the authorities to do the collecting themselves. I think that has been entirely lost sight of, and I was surprised that Mr Cross did not seem aware of that.

5722. (*Chairman.*) Do you also found an argument on the percentages that are allowed in Scotland in certain cases?—Yes.

5723. For instance, in certain cases it is as much as 20 and 25 per cent.?—Yes. I have not much actual experience of it, because I have never had anything to do with it. I based my objections to this on the actual English facts, where, in addition to paying percentage for actual collection, they pay a commission for guaranteeing the rates. These are two sets of commissions which run up from 30 to 35 per cent. Of course, it is a voluntary arrangement ; but, as you are aware, the feeling in these burghs in England is to get quit of it.

5724. (*Mr Esselmont.*) But is it not optional on the part of the proprietors to guarantee?—No.

5725. He gets his 15 per cent. for collection. If he is prepared to take the risk ——?—The second thing is optional.

5726. That is what I asked?—Yes, it is optional.

5727. But, as a matter of fact, they usually take the commission, because they make a good thing of it?—Yes ; the cry on the part of the municipalities is that it is too expensive. Of course, these are very different commissions from what Mr Cross proposes. I don't know any total commission less than 30 per cent. Now, that is a very different thing from 10 per cent.

5728. (*Chairman.*) Suppose the commission to be allowed where he recovers the cost of collection only, even in that case you think that the commissions suggested in the Bill are quite inadequate?—Yes ; even from the figures which have been supplied to you by Mr Borthwick I would say they are totally inadequate.

5729. We are talking of the cost of collection, first?—Yes.

5730. In addition to cost of collection, you have to add losses and also unlets?—Yes.

5731. Now, suppose an allowance were thought proper by Parliament, it has been suggested that the best way to do it would be that the allowance should only cover cost of collection, leaving the proprietor to show to the rating authority the amount of losses and the amount of unlets, and to get a deduction for that. If that system were agreed on you would suggest for the cost of collection something like 15 to 20 per cent.?—I object to compounding altogether.

5732. But that is not the question. If the legislature approves of it, and sanctions it, would it be your view that the cost of collection alone would warrant something like 15 to 20 per cent.?—Yes, quite.

5733. Would you not propose to differentiate between the higher rented property and the lower rented property?—Yes.

5734. On houses between £15 to £20 the cost of collection would not be so great?—No; not in half-yearly collection of rents. There is the tenure to be considered as well.

5735. Does it come to this, that the differentiation would rather depend on the length of tenure so far as the cost of collection is concerned?—Yes.

5736. So far as the amount of what was not recovered was concerned, that would depend not on the length of tenure, but on the amount of rent?—Yes.

5737. Is it the case that you would have as good remedies for recovering rates as the Corporation have?—No.

5738. Then you think that if the Corporation lose a certain percentage, you would lose more?—Yes ; no private individual would get the same powers as the Corporation have.

5739. So you think your case would be stronger than that of the Corporation, so far as incurring heavier losses is concerned?—Yes. We hear a great deal about the English system. The English system is much more favourable to the landlord. The law of distraint is much more favourable than the law of hypothec. The law of distraint puts man in possession, and he takes the things after a certain time.

5740. In your view would it introduce great complication, and in some cases even a tendency to dishonesty, if a lump charge were made against the tenant, not distinguishing between rent and rates? Would it put a premium on the factor who was not scrupulous, to charge more than he might actually be entitled to?—I could not express any opinion on that. I know that, unless special arrangements were made, factors would not be in a position to say what the taxes were to be when they let their houses.

5741. Would the position therefore not be this, that the tenant would not have the check that he now has, because he now knows exactly what he pays for rent and what he pays for rates?—Yes. It would be very difficult for the factor to tell what the rates were to be.

5742. It is said that while you would not have all the remedies that the Corporation have, you, by more frequent collection, would be able to get a larger amount in the shape of rates than is got at the present moment by the one collection by the Corporation?—I don't see that there is the slightest practical experience to warrant any such assertion. As I say, we have the practical experience of having to pay the water and the stair gas as separate charges for goods supplied by the municipality.

5743. Once a year?—Yes, and we have the experience of that in quarterly lets. The tenants in many cases recognising that they are a totally different thing from rent, and that they are something that they don't want to pay, delay the payment while they pay their rent.

(*Mr Esslemont.*) You have told us all that already.

5744. (*Chairman.*) But that is a single payment. What I put to you is, that it is said that you, collecting the rate periodically, would be able to get more than the Corporation

who only collect once a year?—I don't see that it would have that effect. The Corporation can do it themselves. I don't see that calling on a man frequently will make him pay if he does not want to pay.

5745. Is there also a point which in your view should be kept in mind by the committee, viz., the effect on enfranchisement by the proposals in the Bill?—Yes.

5746. And also the difficulty that would arise in continuing the very proper practice of giving relief?—Yes; the practice of giving relief to poor people unable to pay.

5747. Another point on which we want to hear you—although it is really rather incidental to our inquiry—is the question of the process in regard to ejectment. In your practice do you go to the Sheriff Court or to the Burgh Court?—Sometimes to the one and sometimes to the other, but mostly to the Burgh Court.

5748. Why?—I don't know. It is more a matter of practice.

5749. We have heard great complaints about the delay in the Burgh Court and very little at all in regard to delay in the Sheriff Court. If these complaints are serious, why does it not result in the Sheriff Court being gone to?—People go to the Burgh Court because being the Burgh Court it is cheaper than the Sheriff Court. The Sheriff Court is in the main—I don't say altogether—a better court, but it is more costly; the citations cost more.

5750. In the Burgh Court is the complaint a complaint with regard to the delay and also with regard to the expense, or is it chiefly with regard to the delay?—The charge against the Burgh Court is that they have no system that I can find out. We have from time to time endeavoured to make arrangements with them for, working the Court on a different basis, giving so many days' notice and getting tenants out without a warrant, but they won't hear of it. Our complaint is that the Court is often conducted by a magistrate who comes in and bows and hears the first case and then goes away. If you go up and state any particular reason why the tenant should be put away on so many days' notice from the date of *inducice*, the clerk cannot hear you, because the magistrate is not there. At one time there used to be very few appeals, but of recent years a system has grown up whereby a tenant simply comes in and pays sixpence, and that is an appeal. He may write nothing; he simply lodges his paper and pays sixpence, and that is an appeal.

5751. It is a request for delay?—Yes, it is called an appeal. If he did not lodge that sixpence, and his case came on, after ten days' notice had been given to him, a warrant to eject him would be given on short notice.

5752. At once?—Yes.

5753. Mr Renwick told us that where they don't pay their sixpence, and ask for delay, the warrant is granted at once?—Not in every case. They have latterly been falling into the system of dating the tenancy from the 28th of the month; and in many cases, no matter the date of the appearance, the tenant cannot be put out earlier than the end of the month. If the tenant pays this sixpence he does not require to appear, and he gets other eleven days.

5754. Whether he has plausible reasons or not. He is not asked to give any reason?—The case is called, and it is known that he has paid the sixpence, and whether he comes forward or not these eleven days are given.

5755. (*Mr Esslemont.*) That is from the date of serving the notice?—Yes. It is inaccurate to say that they have any fixed rule about giving days, because we have members who complain about tenants getting fourteen days.

5756. That might be in some special case.

Mr (Binnie.) If the eleven days expire on the Saturday they continue it to the Monday?—Yes, and the tenant has that longer period through paying the sixpence. He does not give any defence. If the landlord fails to appear, the case goes against him by default. Then they won't assist us in dealing with obstructive and immoral tenants.

5757. (*Chairman.*) You have to go to the Sheriff Court for that?—We cannot do that either. We have frequently asked the magistrates through the Town Clerk, if they would introduce some clause for enabling us to remove people keeping brothels, who are very objectionable tenants. If you go to the Burgh Court there is no consideration for that there; if they pay their sixpence then they get their time. I have gone down myself with a couple of policemen, to show that it was a brothel, but it does not matter; they pay their sixpenee, and get their time. We have frequently asked a clause to remedy that, but they have never done anything.

5758. The result is, that tenants knowing this, merely with the view of getting time and continuing to occupy the premises rent free, pay their sixpence, the magistrate never applying his mind to whether there are any reasons, or to whether they are good or bad?—That is so.

5759. Do you see any reason why tenants should get that indulgence while those who do not pay their sixpence do not get it?—No.

5760. You don't object to the magistrate, if reasons were assigned which he thought good reasons, granting such delay as he thought fit?—I would not object if he heard the case, but he never hears any case.

5761. Suppose the tenant alleges that the rent is already paid, and offers, if an opportunity is given him, to prove that, then that would be a reason?—Yes, and sometimes a case like that occurs. I have known tenants come forward and say that they had paid their rent. I have known the matter examined, and it has been found that the tenant was under a mistake. I don't object to that at all.

5762. Do you think that, without alteration of the procedure in these courts, the evils would be intensified if short lets were made statutory?—I think so.

5763. So if any measure like Mr Cross's Bill was to pass you think that a cheaper and more summary method of ejection against bad tenants ought to go along with it?—It not infrequently happens that factors get petitions from tenants on a stair saying that they cannot sleep at night for the unruly conduct of some other tenant.

5764. (*Mr Howden.*) Mr Renwick said that these cases were not dealt with in the Burgh Court at all?—They won't take up these cases, nor will they give you any special form of ejectment for these cases. I have gone to the Burgh Court with petitions signed by tenants wanting to get quit of some other tenant.

5765. (*Chairman.*) Your view as to a simplification and cheapening of the procedure has been approved of by the recent Commission on the Housing of the Poor in Glasgow and by the Commission appointed by the Presbytery in 1891?—Yes.

5766. Suppose that any measure such as is proposed were passed, do you think that it would involve fore-handed rents?—I think so, or security.

5767. We have heard a good deal about the question of hypothec. Do you see any reason for any alteration in the law of hypothec?—Personally—and I think I speak for our society—we have no objection, if you give us adequate control. It is not much of a right just now; it is a costly process.

5768. Take a larger house, say a £15 house?—It is more valuable there.

5769. Is it not the case there that very often it is really valuable in the interest of the tenant, because it enables the landlord to give him indulgences that he would not otherwise have?—Yes.

5770. It is said that it is very apt to encourage extravagance, your having this right and other suppliers not having it?—I thought their main grievance was that men could not be touched, that men stayed off their work for a certain number of days so as to come within the limit as to wages.

5771. It has been suggested that without abolition it might be modified to this extent, that the necessary furniture for the existence of a family should be made like tools and wearing apparel up to a small sum?—My answer is that in regard to small rentals, if you give the proprietor adequate control of his own property he does not care about the law of hypothec.

5772. Take higher rents, £15?—It becomes more valuable there.

5773. Up to £15, should the furniture be subject to the law of hypothec?—I do not think there would be any objection if he was covered for the rent. A landlord is dealing with goods quite different from other goods. Just now the landlord has only the right of hypothec for the amount of his debt, that is all.

5774. You say that he is not like an ordinary tradesman who stops his credit straight off?—That is so.

5775. A tenant, owing to the tenure, can stay on?—Yes.

5776. You say that Clause 6 of the Bill is badly framed?—Yes, I think Mr Stewart dealt with that.

5777. You are quite right. We will refer to his evidence about that?—Yes.

5778. Then I understand the net result is that you think the grievance, so far as it exists, would be met by an enactment that the period of warning-away for yearly lets should be reduced to twenty-one days prior to 28th May instead of as at present forty days prior to 15th May?—Yes, that is the missive question.

5779. And in your view that is really the substantial question?—Yes. That is what it is always designated, the missive question.

5780. You object, I think, to the optional clause if the Bill is passed as being liable to introduce great confusion between one burgh and another?—Yes.

5781. (*Mr Dobbie.*) With reference to the law of distraint to which you referred, would you be satisfied with a corresponding change in the law here?—Yes, I think so.

5782. Would you give to Scotch tenants the right to have furniture exempt up to, say, £5, as obtains in England?—Yes; if you give us the one thing we want,—if you give

us the proper eviction clauses. All we want is adequate control of our premises.

5783. The only proposal that you recommend is this one clause bill of yours restricting the period of notice to quit to twenty-one days?—That is so.

5784. That is, instead of the forty days which exist just now?—Instead of the fifty-three. It is twenty-one instead of fifty-three.

5785. Do you think that would automatically put forward the day for issuing missives?—I think so. I think it did so in Edinburgh. Our information was that when the Edinburgh and Leith Factors Association agreed to a certain date, and got the Corporation to give it their imprimatur, the public fell in with it. If we got the warning-away date forward, and agreed to put forward the missive date, and the Corporation gave their imprimatur, then the public would follow it.

5786. You think that the change would be desirable?—Yes, I think so, because you would be past the Candlemas collection of rents.

5787. To prevent the public falling away as they have done in Edinburgh, it would need to be done by Act of Parliament?—I don't want that.

5788. Why not?—I have just given my reasons for it.

5789. Do you think that shorter lets would increase the rents?—That is my view.

5790. Of course, that would not do your profession any injury?—As an investor it would hurt me very much. I am a property owner.

5791. But you would get extra rent?—Yes; and the property would be deteriorated by the class of tenants that would come in, by the shifting that was going on.

5792. You would get increased rents? And there would be increased outlays. Very probably the one would not balance the other. Our point is, that it would be more costly to the tenant and more costly to the landlord, and the increased rents would not be sufficient to make up for the extra outlays that we would be put to.

5793. The more important question to you would be how you were to get increased rent?—Yes, you cannot always get it.

5794. You take the best rent that you can get just now?—Yes.

5795. And there is no competition for houses at present?—Very little.

5796. Assuming that when your expenses are added to, you might have some trouble in getting the increased rent?—I understand you are assuming this to be done all over by Act of Parliament. That would alter the situation. If everybody had to bear this extra outlay, then everyone would have to act in the same way. If it was only here and there, then your point would hold.

5797. You think there would be a general increase as the result of short lets?—Yes, there is always a tendency to get increased money for increased cost of goods supplied.

5798. And you would get that, you think?—We would have to try to get it.

5799. You said that most houses up to £7 were let monthly at present?—Yes.

5800. What is your explanation of that? Why should that be the fact?—Houses of that kind are mostly not quite such a good class of property, and you cannot get into them men who are in a position to take houses by the year and pay quarterly.

5801. Why should such a man not take a house under £7 by the year?—I would not give it to him.

5802. Why not?—He would be much more troublesome to handle if he did not pay his rent. At present, it is bad enough at the end of a month to get him out, but it would be worse if I had to wait three months, and get no rent and then give him forty days' notice.

5803. So the short let is in favour of the proprietor?—In getting quit of a bad tenant.

5804. And in getting your rent?—No, you put the inferior bad-paying tenants into monthly houses. If they were good-paying tenants, they would get yearly houses. You cannot get these houses let to any other kind of tenants. If you offered to let them to yearly tenants you would not get them.

5805. You prefer to let monthly and get the rent monthly?—It is better than nothing at all.

5806. If you let yearly, you would have less chance of getting your rent?—You would have more chance of making a bigger bad debt.

5807. You, speaking as a proprietor, and for other proprietors, approve of the principle of fixity of tenure?—Yes, I approve of long lets in the interest both of the tenant and of the proprietor. It is better for both,—the tenant is clear from being put out if he is ill or on strike.

5808. You think that short lets would not be popular among the tenants?—My experience of the better class of working man who holds a yearly house is that he does not want collectors coming to his house once a month for his rent.

5809. If there were breaks in favour of the tenant either monthly or quarterly which he could take advantage of, assuming his work required it, would there be any objection to that, provided he paid the rent and maintained the property, the landlord not being entitled to take advantage of these breaks, while the tenant would be entitled to do so?—What the one gets the other should have also. The one has as much right to it as the other. You ask if I would be in favour of the tenants having fixity of tenure with power to break. That would not be a good system at all. It would be introducing monthly lets under another name. A man might take a house from me for a year, and then next day he might give me notice that he was going away at the end of the month.

5810. (*Mr Howden.*) Your Association places great stress on freedom of contract. That is one of your reasons against the Bill—you say that Mr Cross's Bill does away with freedom of contract?—Yes.

5811. How do you account for the fact that in 1894, when there was a very good agreement drafted by one of the local Liberal Associations that the period of let should be entered into as agreed between landlord and tenant, your Association objected to it?—Where is that stated?

5812. On page 4 of your precognition?—I see that. That is introducing monthly lets under another name.

5813. But this is giving absolute freedom of contract—at least that was the object of the letter, to produce freedom of contract?—Yes, but in reality it is monthly lets.

5814. On the other hand, what you call freedom of contract is yearly lets in reality?—No, it is yearly lets or monthly lets.

5815. No. Would you let a house erected in one of the more respectable working-class districts in Glasgow on a monthly tenure?—No, I would not do so in one of the better-class houses. If you go to a certain tailor for a suit of clothes he may charge you double the price that another tailor will charge you, but there is freedom of contract there.

5816. The question is whether you would let that particular house for a month?—Certainly not.

5817. There is no freedom of contract there, because you say that a yearly let is the only let that you will let that house for?—That is for the superior class of house. If you want a monthly let, then you must take an inferior house.

5818. And that is your idea of freedom of contract?—It is the same with any other trader; you must always differentiate between the good and the inferior.

5819. You referred to moonlight flittings and to the cases where you had to break open doors. Does it not occur to you that that is practically one of the results of yearly lets?—No.

5820. I put it in this way: the tenants who have these moonlight flittings carry them out with an object, and that object is the getting rid of the payment of the rent. If it was a small sum that was at stake, they would probably not go to that expense and inconvenience of having this method of removal?—You will find on making inquiry that all the change that many of these cases make is to go some two or three streets off.

5821. But it is not a matter in the meantime of where they are living: it is a matter of what causes these people to remove?—A change of house.

5822. No, that would not account for it. They run away without paying their rent?—Yes.

5823. If it was a small rent, then there would not be the same tendency to go away?—They would go away for any kind of rent. I have known people run away with a quarter's rent of £2. The amount has nothing to do with it.

5824. You told us that this agitation was the result of the early issue of missives, and it has gradually become a question of the tenancy of houses, *i.e.*, the monthly lets. If there is any truth in that contention, why did not the landlords take the root causes away and abolish this agitation altogether?—They did all they could to get the missives put later on, but they could do very little in view of the fact that they had this long period of warning away. They have deputationed members of Parliament to introduce Bills to alter that, and they drafted a Bill themselves.

5825. That is really your explanation, the long period of warning away?—Yes, entirely.

5826. This period of warning away has not altered for a considerable time?—At one time the house-letting in Scotland was in November.

5827. But for a considerable time it has been 28th May?—Yes, it will date from the time of the Removal Terms Act, viz., 1886.

5828. At that time you thought 2nd February was soon enough to get your missives?—Not very long before that, in country districts, houses were taken six months before

the term, so anxious were people to secure their house and garden. They took their houses at Martinmas.

5829. That would be where gardens were attached to the houses?—They generally gave notice in November.

5830. You told us that you would not object to the law of hypothec being done away with in regard to houses at £10 and under?—Provided you give us adequate control.

5831. Above £10 you said it acted differently?—Have you realised that the law of hypothec is a somewhat expensive thing to work, and unless there are adequate funds it resolves itself into a loss, so you require to go into a fairly well plenished house?

5832. Who values the goods that you poind for rent?—The sheriff officer.

5833. And he may over-value the goods or he may under-value them?—He has to take into account this factor, that the people who buy are mostly the neighbours.

5834. What is the net result, so far as finance is concerned, in connection with a house up to £15?—If you take them between £10 and £15, it works not quite so badly, but I would never use it with a house under £10 of rent. I have been obliged to use it sometimes to get quit of a tenant. In a small house at a rent of under £10 there may not be £1 worth of furniture, and to get them out you have to sell them out and then ask for a warrant.

5835. But the value of the furniture to the tenant would be greatly in excess of what you would get out of it?—The neighbours buy it and hand it back again.

5836. We were told that respectable neighbours stayed away from these sales and the furniture fell into the hands of brokers?—In some cases there are neighbours, and in other cases there are brokers, but I understand in many of these cases the neighbours buy them in.

5837. You don't agree that it is practically a tragedy in the lower-rented houses?—It is always a tragedy if people cannot pay their debts and you have to resort to that.

5838. You referred to a Bill being introduced to give workmen fixity of tenure during a strike. Do you approve of that principle?—Yes, if they are respectable men. During the last strike on the Clyde there were several thousands out of work. I had a fair proportion of such tenants, and I am prepared to state publicly that I allowed these men to stay on, and they are now paying up their rents by instalments. If a man is a decent man I am willing to trade with him in a fair way.

5839. You told us there were many ejections during that same strike. Can you give us any idea how many there were?—I had none myself.

5840. But many were ejected because they were on monthly lets instead of yearly lets?—Yes, that is so.

5841. I think you told us that?—Yes, and I can get it substantiated.

5842. As regards collection of rates, we had evidence yesterday to the effect that a landlord, as a matter of fact, had better facilities for collecting rents than what the Corporation have?—In what way could he have better facilities than trained officials who are accustomed to go round there with a sheriff's warrant?

5843. The result that was brought out yesterday was that there was less than 2 per cent. of a loss on the net rental and rates, and according to the Corporation they lost 26 per cent. on exactly the same class of house. These figures were brought out yesterday?—I should like to hear the property specified.

5844. It was property belonging to the Workmen's Dwellings Company. They attributed this to the fact, or partly to the fact, that their collections of rates and rents were made easier to the working class than if they had been made at longer periods?—The Workmen's Dwellings Company are the very last to object to take up the whole collection of rates, but I am not aware that they are in favour of it.

5845. In the properties where they have it in operation it has worked out in that fashion?—You miss out a very important element. The Workmen's Dwellings Company is a company of philanthropists who have banded themselves together, and they don't want more than a very small return on the money invested.

5846. Five per cent.?—Four per cent.

5847. Five per cent. is what their limit is?—Yes, but they have not been able to earn more than 4 per cent. It works out in this way: they take a certain class of tenants that no private trader could take in, and it is quite possible for them to make collections that we could not make.

5848. (*Mr Dobbie.*) They select their tenants?—Yes, and they can do things that we cannot do.

5849. They compound in the case of two tenements and they leave the other three to the Corporation?—Yes, they know better there.

5850. (*Mr Howden*) You told us that you had some difficulty in collecting the gas rates?—Yes, in the smaller houses.

5851. You have a right of hypothec for the gas rate?—Yes.

5852. And you are allowed to charge up to 10s. per burner, whereas in reality you only pay 7s. 6d. to the Corporation?—You get discount, which brings it down.

5853. To 7s. 6d.?—Yes.

5854. Do you not sometimes put on more than 10s.?—I never knew of it. I have heard that allegation made, but I have never heard name or date for anything of the kind.

5855. It happened in my own case. I objected to pay more than 10s. per burner. Was I not right?—It is allocated *pro rata* among the tenants.

5856. But the landlord has no right to claim more than 10s. per burner?—That is so.

5857. And if he was asking more, then the tenants would be entitled to object?—Yes.

5858. (*Chairman.*) There is just one question: suppose that there had been a large demand by the better class of working men for monthly lets, do you think that that would have been met on the law of supply and demand?—No, landlords or traders in houses are not disposed, if they can help it, to increase the monthly lets because of the taxes difficulty. That is a serious difficulty placed on houses.

5859. I don't think you are attending to the question. Confine yourself to the better class of working men. It is alleged that they have been wanting to get monthly lets instead of yearly lets. Now, suppose there had been in the past a large demand by such men for monthly lets, why should it not have been satisfied on the ordinary laws of supply and demand?—They can get plenty of monthly houses, but a superior working man will not take that kind of house.

5860. Suppose there had been that demand and the people wanting monthly lets, that better-class working men came to you in numbers, would it not be a mere question of the rent you would charge them?—No. My experience is this, that when men come to you for monthly houses and you give them your list of monthly houses they then say that they want better houses than these.

5861. But if you had a large class of decent working men insisting on having monthly houses, they would have got them?—Yes.

5862. I should have thought you would have maintained that that would have been so, and that the absence of such monthly houses suggested strongly that there had been no such demand?—You said if there was a demand; but there is no demand.

5863. That is what I want you to face. It might have been argued that if there had been such a demand it would have been met?—Yes.

5864. And if it has not been met, the reason is that there has been no such demand. Have you yourself ever had working men of the better class coming to you and saying, "I won't take that house for the year; you may charge me 'rather more rent if you like. I want a monthly let, and I 'am quite willing to pay whatever rent you think should 'be put on if you will convert it from a yearly let into a 'monthly one"?—No, I have never had such an application from a superior man. My experience is that they all object to the monthly collector going round.

5865. The circumstances have always been that they could not get monthly lets except of an inferior class. You have never known a person to put up a better class of tenement, and advertise the houses for monthly lets?—No.

5866. So the thing has never been submitted to actual experience?—You have them empty by the thousands.

5867. Of an inferior kind?—Relatively, but they are good enough houses.

5868. (*Mr Howden.*) Good modern houses?—Modern houses.

5869. The Glasgow Corporation have a considerable number of houses let on monthly lets?—I don't know; I cannot speak for them; they are in a different position.

5870. And they have no difficulty in getting respectable men to go into these houses. In fact, there is a great demand for them?—That may be, but I would not advise you to put your money into such houses.

5871. (*Mr Binnie.*) You said there was a likelihood that if monthly rents became common the rents would rise. Mr Dobbie put it to you that you were getting as much as you could just now, and that you could not raise the rents. Was your remark intended to apply to the ordinary case of a fair demand and a fair supply, and not to exceptional cases, where there is a very great over-supply of houses?—Undoubtedly, that is so.

5872. It was intended to apply to an ordinary demand?—Yes.

5873. To the normal state of matters?—Yes.

5874. Then there is another thing which I think Mr Dobbie misunderstood a little. You said there was a loss to the landlord in consequence of the great repairs on

Mr W. C. M'Bain.
4 Jan. 1907.

monthly lets, and Mr Dobbie put it to you that you would get, as you yourself said, additional rent against the additional repairs. Would a property of that kind sell at the same number of years' purchase of the rental as a property let to yearly tenants?—Certainly not.

5875. So there would be a loss to the landlord and there would be a greater amount of trouble connected with the management of the property, even although he got a rent to cover the extra repairs?—Yes.

5876. There would be a loss of capital because of the reduced capital value of the property?—That is so.

5877. (*Mr Dobbie.*) Are your views deduced from your present experience of monthly lets?—From twenty-two years of experience of all kinds of lets.

5878. You say that from your experience you find monthly houses are more expensive to keep up and are valued at less?—Yes, in a valuation.

Mr W. C. M'Bain.
4 Jan. 1907.

5879. And accordingly you think that the introduction of monthly lets of the better class of houses will be followed by the same effects in regard to disrepair and deterioration of value?—Yes.

You have no date to go on; you have only the experience of inferior houses. I should like to explain that I had experience of new property in the Gallowgate district, let on monthly tenure, but yearly tenure had to be resorted to, owing to the deterioration of property through frequent changes.

Mr William Hunter and Mr John Russell Thomson, called and examined.

Mr W. Hunter and Mr J. R. Thomson.

5880. (*Chairman to Mr Hunter.*) You are President of the Bute Landlords and Factors Association, Chairman of the Rothesay Burgh School Board, and a Justice of the Peace for Buteshire?—Yes.

5881. (*To Mr Thomson.*) You are an architect in Rothesay?—Yes.

5882. (*To Mr Hunter.*) You have been a house builder in Rothesay for the last thirty years?—Yes.

5883. And you have built 266 houses in Rothesay and Port Bannatyne, including a number of tenement houses at rents running from £5 to £17. You sold 109 of these from time to time, and previous to selling off you have always factored them yourself. You have had a long practical acquaintance with house letting in Rothesay and Bute generally?—Yes.

5884. As we know, Rothesay is a popular seaside resort, with a resident population of about 10,000. In the summer months that population will be trebled or quadrupled?—Yes, and even more.

5885. Have the resident population any industry except what you generally find in such places?—No. There is a large florist's business, but there is really no industry.

5886. Adding together the first three columns on page 2 of your *précis*, namely, the houses at rents up to £15, you get a total of 1692. Then adding to that the total number of houses up to £20, namely, the total of 495, you get 2187 houses under £20?—Yes.

5887. You have got a total number of 2980 houses?—Yes.

5888. 2187 of the total number are rented at £20 and below?—Yes.

5889. 56 per cent. are rented at £15, and under 73 per cent. are rented at £20 and under?—Yes.

5890. If you take the houses at £10 and under, they form about 35 per cent. of the whole?—Yes.

5891. You have, of course, a large number of houses which are used for summer visitors, either being let to them entirely, or they are cases in which people take in lodgers?—Yes.

5892. Rothesay depends very much on that business for its prosperity?—Almost exclusively.

5893. The shops as well as the lodging-house keepers?—Yes. Many of the shopkeepers would gladly close their shops in winter.

5894. Where do your visitors come from chiefly?—From all quarters, but mostly from Glasgow, Paisley, and Greenock.

5895. Do you find that very properly the number of visitors of what may be called the working class has increased very much?—Yes.

5896. And it is still increasing?—Yes.

5897. In regard to houses that are taken by those that are better off, do you have people who take houses unfurnished for the whole year and occupy them to a certain extent in summer?—Yes; part occupy them and part let them.

5898. These are yearly lets?—Yes.

5899. They are partly occupied by the tenant and partly sublet?—They are let very much as the other tenants do—they are let to visitors and not sublet in the ordinary sense.

5900. Suppose a house is taken for the year, and is let to visitors, what term do the visitors take it for?—Anything from days.

5901. Up to what?—Three months; but speaking of these smaller houses, there would not be many up to three months.

5902. There are not so many at £20 and under which are let to visitors for as long as three months?—No.

5903. If a person in Rothesay is a tenant of a house, when does the summer visitor take the house for the part of the year that he is to occupy it in?—It may begin in April, and with considerable variations it will extend on to the end of September.

5904. I know that is the case with regard to the occupation; but suppose a visitor is to occupy a house in June, how early in the year would he take that house?—It depends entirely on circumstances.

5905. When does the advertising of the houses begin?—Almost immediately after the New Year.

5906. And it goes straight on?—Yes. Some visitors may have taken their houses a year beforehand.

(*Mr Thomson.*) Furnished houses are taken about a month before occupation. If the visitor wants a house in June, then he will take it in April or May.

5907. (*Chairman to Mr Thomson.*) What is the busiest time in Rothesay?—July or August, and more or less from the end of June to the middle of September.

5908. (*To Mr Hunter.*) Suppose a Bill were passed making short lets compulsory and preventing any letting of houses under £20 beyond a quarter, what effect would that have on a place like Rothesay?—It would ruin the whole place.

5909. Why?—Because there is a large percentage of these houses let for summer occupation alone. At present the tenants occupy houses for odd weeks and odd week-ends, but that is because they have them for the year. If they could get their houses for three months, then they would take them for three months, and the houses would be unlettable during the other nine months.

5910. Is not the rent really paid for these three months, the other nine being thrown in?—That is so in a sense, but they occupy them during the whole time.

5911. The principal tenant does?—Yes, and in some cases with that class of house they don't take their house as a money-making business; they take it with the view of getting coast accommodation at a fairly cheap rate; they get cheaper and better accommodation than they could get by taking a house from another tenant. If they could get their house for three months then they would take it for three months, speaking as a general rule, and the house for all practical purposes would be entirely useless during the other nine months.

5912. Take the case of a person in Glasgow, who wants to be able to be at Rothesay as much as he wants in the summer time. He may take a house at Rothesay for the whole year?—Yes, and he does do that.

5913. And he does not occupy the house in the winter time?—That is true.

5914. Does he let it in the winter time?—Not as a rule. It is not lettable.

5915. In the summer months he either occupies it himself or he sublets it?—Yes, both.

5916. What difference would it make in his case. You say he would merely take it for the summer months?—Yes, if he could get it.

5917. Would the rent be in any way different?—We would have to ask a full rent for a three months' let; and I daresay you know it is often difficult to get a year's rent for a year's let, let alone for three months.

5918. But do you think the rent would be in any way different from what it is now?—Proportionately, they would expect it to be the same, but the owner would only get three months' rent instead of twelve.

5919. But if he got in the shape of three months' rent, the same as he gets now for the twelve months, there would be no difference to him?—No.

5920. Would that not be just what he would get?—No, I think not. From what we know of human nature and house-letting at the coast, it would be simply impossible. There have been instances where two-thirds of the rent has been got.

5921. For the shorter period?—Yes.

5922. But not the whole?—I never heard of more than two-thirds being got on any occasion. There may have been odd instances, but I don't know of them. At other times furnished houses are to be got at much less money than the unfurnished rent. There are any number of

Mr W. Hunter and Mr J. R. Thomson.

4 Jan. 1907.

furnished houses to be had at much less rent than even the unfurnished rents, when the letting season is over.

5923. Suppose, instead of three months, the Bill allowed six months' tenancy and prevented anything beyond that, would six months meet your view?—No.

5924. It requires to be a year?—Yes. As we view it, it would simply mean the ruin of the whole of that class of property; and in addition to that, they would require to enter on a different line of action altogether, and it would mean that a large number of outlying tenants at present would be entirely shut out from that.

5925. How?—Because they could not afford to let them for three or six months.

5926. But to a very large extent the property that is let for a year just now is only occupied for three or six months?—Yes, but the rent for the whole year is got for that house.

5927. You don't suggest that any substantial part of the rent paid is paid for the winter period, when the place is not occupied?—No, it is simply paid because they require to pay it in order to obtain the house.

5928. Is it not very like a grass field, where you pay the rent for the whole year, but the rent is really paid for the occupancy of the summer—and the law holds that the winter occupancy is simply thrown in? Is not your house occupancy like that?—I don't think so. The grass field is improving all the time, while that property is deteriorating immensely during the time it is shut up, namely, during the winter months of the year.

5929. That is quite so. You state in your *precis* that the property would deteriorate when not occupied, and neither aired nor fired in the winter months. Is that not the position just now with most of the houses—they are not occupied?—It is only partly true, because, seeing that the tenant has his house for the year, it is opened up frequently during the winter.

5930. By the principal tenant?—Yes.

5931. It would just throw that expense on the owner; he would have to air and fire the houses?—He might have to do so, and that would be an additional loss.

5932. You also note that the result would be that the building industry would be discouraged if the let was to be under such unfavourable conditions. That is to say, the building would not take place?—That is so. There are 700 or more houses of that class let to outside tenants.

5933. Non-resident?—Yes. The landlords would have to devise some means of letting these houses to some one else. These 700 would be shut out from the privilege of owning coast houses themselves. They go there with their own people, and they can get them for less money than they would pay for one month to a principal tenant.

5934. Do you not think that a great many people would not mind if they had no security of tenure; they would just trust to the renewal quarter by quarter?—Yes, but the landlords would not trust when they knew that it was a summer house.

5935. Would the landlord not get them to take the house except for the summer?—That is what we believe, and he would not give it to them.

5936. Unless for a whole year's rent?—Yes, which we deem impossible.

5937. (*Mr Thomson.*) I think that is the leading characteristic of it. For a three or a six months' let, you get so much rent, but it would be impossible to get a year's rent. Rothesay is different from a city where you have a steady population. We have no population to draw upon to fill up those 700 houses in winter time.

5938. (*Chairman to Mr Thomson.*) They would be either empty through non-occupacy, or they would be shut up and destruction would take place?—Yes, they would deteriorate.

5939. (*Chairman to Mr Hunter.*) You think it would make a great difficulty in the collection of rates because you would have this temporary occupation?—Yes, we think it would be very difficult.

5940. The assessor's rolls are not made up till September?—That is so. The first paper issued to us is about the beginning of November.

5941. By which time the summer visitors are all away?—Yes.

5942. Has there been in Rothesay, so far as you know, any demand for a change in the method or time of letting houses?—No, not so far as I know.

5943. The question has never been raised at any ward meetings?—No.

5944. Is there any complaint as to the missive question in Rothesay?—No. My experience is that people are anxious to get fixed as soon as ever they can when the New Year is fairly in.

5945. In short, whatever may be the interests of an industrial population, you think that you are in no respect in the same position; first, because you are not industrial, and second, because you have the special summer visitor element?—Yes.

5946. Would the result be that if the Bill were to pass with the optional clause, you would not expect Rothesay to adopt it?—That is so. There is no public representative body in the place which would adopt such a clause, because the Bill not only strikes against the landlords, but it strikes against the whole community. It would practically mean bankruptcy.

5947. Your views would be met if the optional clause remained?—Yes, we felt quite confident that the Bill would not be adopted.

5948. You are speaking for Rothesay. It might be suitable for other places,—you don't know, and you don't care?—We don't say that we don't care, but we are anxious to place before the Committee a view that has not been before them as yet.

5949. Rothesay does not stand alone in this matter. Other seaside resorts would be in the same position?—I should think so.

5950. Unless they are partly industrial and partly resort places?—I should fancy that Dunoon, Largs, and Millport would be in the same position. There is no industry in any of these places. Then there is Tighnabruaich, where there is a considerable population round about.

5951. In regard to lets for a year, of houses with gardens attached, you think these must continue to be arranged at Candlemas?—Yes.

5952. What do you say to the date for arranging lets for other houses without gardens attached? Do you think they might be postponed till the middle of March if it was made universally obligatory?—Personally, I feel that people anxious to take a house should be at liberty to take it.

5953. And freedom of contract should remain there?—Yes, in that respect. If they are prepared to fix with the landlord, then they should not be prevented. It would be an immense convenience to a number of tenants. A great difficulty with tenants is the difficulty with those who are hoping to get something better than they have, and are hunting round by every device they can think of to get a house, and are holding on to their house and won't give it up.

5954. Suppose the giving of this right to these few people involves all the others who don't want to take their house so early, and compels them to do so?—I would leave it optional on the part of the landlord and the tenant to fix if they wanted to.

5955. But suppose the result is that the great mass of tenants are, in point of fact, forced contrary to their desire to take their houses at a very early date, do you think the convenience of those few should be allowed to interfere with the benefit to the large majority?—No, not if I thought they were few, but I think they form the vast majority.

5956. Do you concur in the evidence put before us that if the landlord's hypothec is interfered with, greater facilities for ejections should be provided?—Yes. We should be placed on the same footing as other merchants who supply goods, and we should be able to stop the supply of a house, just as a baker can stop his supply of bread. All the same, I think it would be a positive hardship on the tenant who can go somewhere else and get a loaf, but who cannot go so readily somewhere else and get a house.

5957. Do you have any workmen in Rothesay who are working at other places?—Yes.

5958. You have workmen employed at Port Bannatyne, which is 2½ miles distant?—Yes.

5959. How do they travel?—On their feet, and then there are electric cars.

5960. If a man who has been previously working in Rothesay gets work in Port Bannatyne, he does not want to change his house?—No.

5961. What do they charge on the cars?—1d. each way.

5962. (*Mr Binnie.*) Would it be possible to arrange with any certain communities like Rothesay who elect to be outside of the Bill, and if so, would that satisfy you?—Yes, it would satisfy us. We don't want to interfere with the arrangements of other communities who may be convinced, and may be right in their opinion, that, on the whole, a change would be beneficial. We simply say that if the law is applied to us, it will mean practical bankruptcy.

5963. You are so satisfied with the weight of opinion being in your favour in Rothesay that you would be quite content with a clause that enabled a community to contract out of the Bill?—Yes, I think so. We don't want to bring any influence to bear in any direction. We think we are peculiar, and we want our peculiarity to be fairly faced. We don't think that this Committee or Parliament wish to do an injury to any body of people.

5964. (*Mr Dobbie.*) Can you tell us what reform you suggest in regard to getting rid of tenants?—I would suggest a ready and effective process in, say, the Sheriff Court. With us it is practically impossible to get rid of a tenant. I have tried for six months to get rid of most

Mr W. Hunter and Mr J. R. Thomson.

4 Jan. 1907.

Mr W. Hunter and Mr J. R. Thomson.

4 Jan. 1907.

objectionable tenants, and I have sold them up with a view to helping that on, but they sat in the empty house till 12 o'clock on the 28th of May.

5965. Would you be in favour of giving the magistrates power to deal with actions for removal?—Yes, if arrangements could be made. It certainly ought to be cheap; because, after all, the tenant, if it is possible, has to pay for all these burdens.

5966. Assuming there are to be short lets, you don't feel that hypothec is much of a remedy, and you think there should be a much more direct means of getting rid of tenants whose tenancy has expired?—Yes, I am clearly of that opinion. If we could stop the supply of a house as readily as a merchant can stop the supply of his goods.

5967. That might be done by giving that power to the magistrates of the burgh?—I fancy it could be done. It is more a question for a lawyer than for the like of me, but I think there should be some cheap court that could act promptly.

5968. You would not go so far as to suggest that the tenant should be removed without some judicial warrant, either a magistrate's or a Sheriff's warrant?—No; although I confess I have done it, as being the only way with a more obstreperous tenant. One does it at his own risk, and I think it should be left like that. A tenant ought to have redress against any arbitrary action on the part of a factor or landlord. I think it would be very irregular to leave it in the hands of the landlord or proprietor. I think the tenant is entitled to the same fair-play as the landlord.

Mr W. Hunter and Mr J. R. Thomson.

4 Jan. 1907.

Mr John Richardson.

Mr John Richardson, called and examined.

Mr John Richardson.

5969 (*Chairman.*) You are Chairman of the Fifth Ward in the burgh of Dumbarton?—Yes.

5970. You were appointed by the United Wards Committee of Dumbarton to attend here and give evidence before this Committee?—Yes.

5971. You are a joiner to trade, and you have been for long interested in friendly societies and in the Co-operative movement and other matters affecting the wellfare of the working people as well as in municipal matters in Dumbarton?—Yes.

5972. What is the chief trade in Dumbarton?—Shipbuilding and engineering.

5973. Are most of the Dumbarton houses let on yearly lets?—Yes.

5974. Any houses let for a shorter period are in the poorer districts?—Yes.

5975. What do you mean by the shorter period?—They may be let by the quarter, and in very poor districts they are let possibly by the week and fortnight and month, and the rents are collected in a like manner.

5976. Are there any let half-yearly?—I don't know of any.

5977. What figure do you put as the limit for short lets in Dumbarton; would you say £10?—I would put it up to £9.

5978. Substantially the houses above £9 are yearly lets, and below £9 they are mostly short lets?—Not mostly. There are only a few houses in Dumbarton that are let on short lets.

5979. Below £5 are they all shorts lets?—Yes.

5980. And between £5 and £9?—They are all yearly lets.

5981. Then the only short lets are below £5?—Very small and very inferior houses.

5982. Suppose, at the present moment, a working man in Dumbarton is willing to pay £10 or £15, and he prefers a short let, can he get it?—No.

5983. Have you yourself found any drawback from the present method of letting?—Personally I have.

5984. What rents have you paid at different periods?—I have paid £8 for two rooms and kitchen, and £10, 10s. and £11, 11s. I am in a house belonging to the co-operative movement, and there is possibly a little privilege attached, but nevertheless the let is yearly, with quarterly collections. The usual run of rents is up to £16.

5985. In your £8 house it was a yearly let like the others?—Yes.

5986. What is the limit for rents in Dumbarton in the case of an ordinary working man as distinguished from a foreman or a man who has a number of wage-earning children?—The accommodation for a man with a large family necessitates his taking three apartments. A foreman might be content with the same, namely, three apartments, and would pay a similar rent.

5987. But I am talking of ordinary working men. What would the ordinary working man with ordinary wages be able to pay?—I think £10, 10s. for a room and kitchen and £14 to £16 for a two-room and kitchen house.

5988. You think that the limit of £16 in Mr Cross's Bill for Dumbarton as distinguished from £20 for Glasgow is reasonable?—Yes.

5989. In that circumstance have you found inconvenience yourself?—Some two or three years ago I had to remove owing to my family growing up, and I had some difficulty in getting a three-apartment house.

5990. Was that a removal from one part of Dumbarton to another?—It was a removal from one of the same proprietor's houses to another, and yet I had difficulty. After I had signed the missive for the house, I discovered that the house I now occupy was offered to me, and then I made an offer to get rid of the house that I had signed for, and the difficulty arose then. They attempted to hold me responsible for the rent of the house that I had signed for. I was anxious to secure the house that I am at present in, and I suggested a sub-let. I suggested one individual and then another, a working man like myself and making a good wage; but the factor demurred. Latterly another man came to me and asked for a sub-let. I told him to go to the factor and get the let on his own account. Ultimately the factor gave the let to this other man, and relieved me of my contract, but it was not until I had been at some expense.

5991. You did not have to pay any rent?—No.

5992. What expense had you to pay?—I paid 7s. 6d. to the factor.

5993. Have you known cases where a tenant changing for one cause or another has had to pay double rent?—Yes. I know one case that happened last year.

5994. Do you remember if it came to much?—I could not say what the rent was.

5995. Is it the case in your view that there are many tenants who would like to remove, and who have good cause to remove, but who, on account of the risk, do not go to the factor at all, but stay on?—There are quite a host in Dumbarton.

5996. And about whom the factors don't hear?—The factors may be applied to by the tenants, but I am sorry to say that the tenants do not even get courtesy.

5997. And on that account there will be other cases where the people do not go to the factor at all, but just stay on?—Yes.

5998. To sum up, what are your suggestions to get rid of the present difficulties? First of all, you take the missive question, and you state that proprietors should be prohibited from sending missives out so soon as they do?—Yes.

5999. You now come to the short lets?—Yes. In my precognition, I have detailed it according to my own views and opinions. In all houses let on yearly lets of £9 and under, the period of let should be determined by the periodic payments of rent, that is to say, if the rent is paid weekly, the let shall be weekly, and if fortnightly, the rents shall be fortnightly, and so on. Then for houses let at a rent between £9 and £17, the period of let shall not exceed six months, with an option in favour of the proprietors to uplift the rents quarterly. In houses let at a yearly rent, in excess of £17, the proprietor is to be at liberty to let or lease for a period with power to uplift the rents as may be arranged between the proprietor and tenant.

6000. What leads you to alter Mr Cross's proposal and make a distinction between the £9 and the £17 houses?—I must admit I did not go carefully into that point, but I think the difference between £9 and £17 was practically what we might call houses that ought not to be let for more than six months.

6001. But you see, in regard to houses at and under £9, you just take Mr Cross's principle, that the period of payment is to determine the period of let?—Yes.

6002. Whatever the period of payment be, weekly, quarterly, half-yearly, or yearly?—Yes.

6003. Between £17 and £19 you limit it to six months?—Yes.

6004. That would meet the situation?—Yes.

6005. Of course under £9 there are no cases of payment of rent half-yearly,—they are all much shorter?—Yes.

6006. Do you think that any desire for security, apart from the security that flows from reasonable conduct, would be met by providing that between £9 and £17 they might have six months' tenure?—Yes, I think so.

6007. And above £17 you would leave parties just as they are now?—Yes.

6008. You are now talking, of course, in regard to Dumbarton?—Yes.

6009. Then you add, in regard to the notice of removal and the question of ejection, that you suggest that in the

Mr John Richardson.
4 Jan. 1907.

case of weekly lets, one day's notice to remove should be sufficient from the proprietor, and the like time from the tenant of his intention to remove. That is pretty summary?—Cases do arise where a man may have to shift his employment on very short notice, and possibly there are family conditions that necessitate the taking of his wife and family with him.

6010. But that would seem to imply that the landlord would be entitled to turn a tenant out on a day's notice?—I think so, if the tenant is not as he ought to be.

6011. Then, for fortnightly lets, you suggest three days' notice on either side; for a monthly let, one week's notice; for a six months' let, one month's notice; and lets for a longer period, you suggest the notice should be a matter for arrangement between the parties. You think that that would meet the situation also?—Yes.

6012. (*Mr Howden.*) You are a joiner?—Yes.

6013. In what class of houses do men working at your trade stay?—We get men who live anywhere, even in the joiner trade, but taking the average working man who likes to live in a respectable house, then he will take a room and kitchen house at £10, 10s. If he takes a two-room and kitchen house, then he will go as far as £16, 16s.

6014. That would also apply to the engineering and ship-building men?—Yes.

6015. Your reason, I think, for wishing the alteration in the present system of let is, that people might have to shift their employment?—Yes, we find they have to shift, and they do shift very often in the ship-building industry.

6016. Do you think you have covered the ship-building industry when you have limited the extent of your proposals to monthly lets of £9?—I don't look at shifting from one town to another only, but a man's income may fall and he may not care to run into extra debt with his rent, and he may desire to get into a smaller house.

6017. But assume he lost his employment and had to shift, you are still binding him down, a reasonable tradesman, by limiting the rent to £9, because, according to your own statement, they usually live in houses at rents above that?—Yes, but I have made the limit there six months.

6018. Does that meet it?—I think so.

6019. Why should it not be monthly in connection with these houses?—Most working men prepared to pay a rent above £9 have a nest-egg laid past to assist them to get out of a difficulty of that sort.

6020. And you would prefer to hand over the nest-egg to the landlord?—No, not necessarily.

6021. I do not understand why you should have departed from the principle which you admit is a just one up to £9, viz., that the period of payment of rent shall fix the period of tenure. You cannot give any reason for your alteration?—No.

6022. What effect has the present system of house letting on the building trade in Dumbarton?—I do not think it affects it very much. A great many of the people in Dumbarton are what you would call tenant proprietors; they are going in for houses of their own. There is a society called the Dumbarton Building Society, which builds tenements of superior dwelling-houses. The tenement will cost £1800—I do not know whether that is the value or not—and the upper houses will be so much, the middle flat will be a little more, and the ground flat a little less. Now there are quite a number of such houses in and round Dumbarton,—in fact, most of the tenements that are being built in Dumbarton are being put up by the Dumbarton Building Society, except in one case, where the speculative builder is coming in.

Mr John Richardson.
4 Jan. 1907.

6023. 28th May is the removal term in Dumbarton?—Yes.

6024. Most people want to get their houses ready for occupancy at that time. Does that not create an inflated demand for labour?—That has occurred, but not very often.

6025. It does not affect you in Dumbarton?—Not very much.

6026. (*Mr Dobbie.*) Is there much house building in Dumbarton?—Of late there has been a little in a new place up at the joint station. I don't know who the property belongs to.

6027. But there is not enough building to gauge whether or not the building trade is affected by any conditions of letting,—there is not sufficient building to enable you to make up your mind as to whether or not the amount of it is affected by the conditions of letting?—I should think so; there is sufficient building going up to enable me to make up my mind.

6028. Then it is affected adversely by the present system of letting?—It is this way: if houses have to be hurried up before 28th May, then they leave working men on the market afterwards that have to look for employment elsewhere.

6029. Do any of your tradesmen emigrate after the busy season is over?—No.

6030. They just go slack until the next spring?—We do not take it in rushes like that in Dumbarton.

6031. Are rents cheaper in Dumbarton than they are in Glasgow?—I don't know the rents in Glasgow.

6032. Taking the £9 limit, I suppose you have no very serious objection to all houses occupied by working men being put under the same rule in regard to short lets. Suppose the Committee thought that it was inexpedient to have different limits for different places, do you think there would be any prejudice done to Dumbarton by fixing £20 or £16?—No.

6033. You have no strong feeling in favour of £9 as against £15?—No, there is no strong feeling in favour of £9.

6034. You just took £9 as a standard of your own?—Yes.

6035. The arguments in favour of £9 operate equally favourably in regard to £16?—Yes.

6036. You would be prepared to apply the same principle up to £16?—Yes.

Mr J. W. Cleland.

Mr James W. Cleland, M.P., called and examined.

Mr J. W. Cleland.

6037. (*Chairman.*) You are Member of Parliament for the Bridgeton Division of Glasgow?—Yes.

6038. When did you enter Parliament?—At the last General Election.

6039. You reside in London?—Yes.

6040. What is the character of the population in Bridgeton?—I should say practically entirely industrial,—with the exception of one or two terraces on the Green it is absolutely industrial.

6041. And the industries are of a varied description?—Yes, very varied indeed.

6042. Some of them are probably more shifting than others?—Yes, that is so.

6043. Was the question that is now before us at all brought under your notice during the election?—Repeatedly.

6044. How?—At almost all my meetings, not merely the indoor meetings, but also the many meetings that one has to have in a constituency like that at the work gates, I was asked the question. It appeared to be perhaps next to the one or two very acutely controversial questions like Free Trade, one that very deeply interested all sections of the electorate. It was very marked.

6045. At the instance of completely different people, not merely a stage army?—That is so. It was quite different from many questions; the handwriting was different.

6046. Were you convinced that there was a general belief, right or wrong, in a real grievance?—Yes. No one could have passed through any similar experience without feeling that a very large number of the electors felt that they had a grievance.

6047. Had it anything to do with politics or political parties at all?—I would say no.

6048. Is it the case that candidates in different constituencies, belonging to different political parties, had the same experience to your knowledge?—Yes.

6049. What was the question or the questions?—The usual question that was put up to me was, "Are you in favour of the principles of Mr Cross's Missive Bill?" That was the gist of all the questions.

6050. It has been suggested that the real grievance is limited to what has been called the missive system, namely, the practice at a very early period before the date of entry to have a hard and fast contract entered into?—May I answer that in my own way? I am a Glasgow man, and I have had some slight previous knowledge of this. When I found the question coming up so frequently, I made some personal inquiries about it, and I found that the grievance was not so much as apparently it has been suggested—I am only speaking for my own constituents; but it lay in the fact that they thought they were tied for a long time previously, and their work might necessitate their leaving the district and having a house on their hands,—that, I think, was the real hardship.

6051. If, instead of being bound for twelve months, they were bound for sixteen months, then the hardship would be aggravated?—Yes.

6052. If it be the fact that there is a very large body of working class opinion in favour of the present system, do you see why that should not have had vocal expression?—I can see no reason at all.

6053. Did it have written expression in the way of letters to you, private or otherwise?—No. Among the many communications I received, I never received a single one in favour of the present system either directly or indirectly. It may be a coincidence, but that is the fact.

6054. The conclusion you draw is that the opinion is as you have found it expressed?—Yes.

6055. It is said that the body of opinion on the other side is founded partly on two things: first, that the present system gives security of tenure; and, second, that under the present system you have a social standing if you are a yearly tenant, which you have not if you are a short let tenant. Did you find these views given expression to?—Not at all.

6056. It has been suggested, in answer to the first point, that a respectable tenant has sufficient security of tenure in the way of the self-interest of the landlord to retain him?—I should have thought so, without professing to be an expert.

6057. And it is said that any social disability would, of course, disappear if lets became all of one complexion?—I should have thought so.

6058. Was the English practice founded on, or did you come across the question?—Incidentally the question arose as to what was the practice in England. I was asked it because, I suppose, I am a member of the London County Council, but I do not think they founded it on that; they founded it on the very real grievance that they felt in their everyday experience.

6059. It has been suggested that, while there may be advantages in the English system, there are counterbalancing drawbacks and grievances there. Have you come across these in your experience?—Of course, no system is perfect; but, without speaking as an expert, I think that, so far as London is concerned, the existing compounding system works pretty well.

6060. But it is the fact, I suppose, that the difficulty attending the question practically is the compounding part of it?—I should think so.

6061. Have you found in England there is any grievance or agitation from the short let system being the practice; have you found any grievance or agitation, apart from compounding altogether?—No. I think, generally speaking—so far as I can speak for London—there is no grievance at all.

6062. It is suggested that, apart from compounding, there is a grievance felt owing to the want of security there. You have not heard that?—No, not so far as regards London. If there had been such a grievance, I think I would have heard of it, because I have a constituency of over 20,000.

6063. Of what character?—It is very varied.

6064. Is it not Belgravia?—No, we have all sections of the community in it.

6065. You mentioned compounding. It has been suggested that, so far as the support that working men have got in this matter from the corporation is concerned, that is merely because it would pay them better to have the short let if it involved compounding?—I should think that the Corporation has two aspects with regard to that. Of course, a Corporation must represent the electors who send them there, otherwise the electors will change the complexion of the Corporation; but equally it is to the interest of both to get as much as they can in the shape of rates.

6066. Our Committee must have regard to all three interests: the interest of the landlord, of the tenant, and of the rating authorities?—I hope so.

6067. Is the alteration proposed put forward, in your understanding, in the interests of all three in the end?—I think if an alteration in the system, in the direction of shortening the lets, were brought about, it would operate to the interest of the community.

6068. It would be to the direct advantage of the tenant and the rating authorities, without doing substantial injury to the landlord?—That is my view.

6069. Of course, as a member of Parliament, so far as details go, you keep an open mind?—Certainly.

6070. And you have seen, I suppose, that there were previous Bills before Mr Cross's Bill?—Yes, and I believe previous editions of Mr Cross's Bill.

6071. In regard to differences in detail, that is all a matter for Parliament to adjust and for Committee?—Yes.

6072. Incidentally one or two questions have been introduced, which have no direct relation to the matter. First of all, there is the question of hypothec and its proposed abolition, absolute in one case and qualified in another. Was that brought up at all at any of your election meetings?—I have been asked at various times whether or not I was in favour of the abolition of the landlord's right of hypothec, but I may say that that question did not bulk anything like so largely as the question of the shortening of the term of lets.

6073. Was anything made, in your knowledge, of the present difficulty of a landlord getting rid of undesirable tenants or of non-paying tenants speedily and at small expense?—No, that did not crop up at all.

6074. Was anything made, further, of the great general question about the power of landlords, who have houses for their employees, to turn the employees out immediately during a strike?—Yes, that question was brought up, and I was asked about it.

Mr J. W. Cleland. 4 Jan. 1907.

6075. I suppose that is a great general question of a very much larger kind than some of the matters remitted to us?—I should imagine it was, but I should also imagine that it presses more acutely in the mining villages than it does in Glasgow.

6076. Are there in your constituency any cases of employees' houses owned by the masters?—To the best of my knowledge there are not. There may be some, but I do not think so.

6077. You notice that in Mr Cross's Bill there is an optional clause? I suppose the people that were interested in the question in Bridgeton were looking to the interests of Bridgeton?—Yes.

6078. And, so far as you saw, was there any disinclination, if the interests of other places were different from those of Glasgow, to allow these other places to take their own course?—Of course, I personally dislike all permissive legislation, but I think the feeling of my own constituents and, I think, of the bulk of the electorate of Glasgow is, that they feel this question so acutely, that they would be prepared to accept this optional clause.

6079. Did you find, in regard to the question of rating, that the view was entertained that it would be an advantage to a working man receiving his wages at short intervals, that he should be in a position to pay his rates to the rating authorities, or through the landlord, oftener, at all events, than once a year?—Yes, that view was pressed upon me, and it appeared to me to be reasonable that a man might be able with very little apparent sacrifice to himself to spend say 5s. once a quarter, who would have difficulty in paying 20s. at the end of twelve months.

6080. So far as your constituents were concerned, I suppose it would not matter to them whether they paid the rates to the rating authority with a more frequent collection or to the landlord?—I should imagine not at all.

6081. Is there anything else you want to add at this juncture?—No, except this significant fact, that the memorial to the Secretary for Scotland was signed by members of Parliament, representing all sections of the Imperial Parliament. It was signed by 53 members, and it would have been signed by more had we been able to get hold of some of the others. I mention that to show that it was not a party move.

6082. (*Mr Dobbie.*) Have you considered the effect that the Bill might have on the enfranchisement of people at present disqualified?—Yes.

6083. We have been told by the officials that something like 19,000 at present have no votes, and if the landlords of their houses were assessed there would be an addition of 19,000 voters to the Glasgow divisions?—I am very glad to hear it.

6084. Does that occur to you as a result that should be desiderated or otherwise?—In my own view it is entirely a desirable result.

6085. I think you live in London?—Yes.

6086. Could you tell us in detail the working of the London system in regard to compounding?—I could, but I am not an expert on the question, and I understand that you are possibly to have expert evidence on it. I think it would be better and clearer if you got the exact figures from the experts, as I might make a slip.

6087. (*Chairman.*) It would enable us to examine the experts better if we had any information beforehand?—All I can tell you is that the compounding system in London works so well that, up to the present, out of the 28 metropolitan burghs of London which make up the administrative County of London, there is only one which does not go in for compounding, and that has only stopped compounding within the last two years,—my own burgh. I have never realised the reasons for its stopping yet. They seem to think it was an advantage to the landlord to go on with the compounding system. That was their view.

6088. (*Mr Dobbie.*) Do you know what allowances were made in the different cases?—I think I can give the exact allowances. The percentage allowed varies from 16 per cent. to 25 per cent. It is 16 per cent. in Westminster, 17½ per cent. in Deptford, Hackney, and Stoke Newington, 17½ to 25 per cent. in Holborn (because it is split up into different rating parishes), 20 per cent. in Battersea and Hammersmith, and 25 per cent. in Hampstead, Poplar, and Wandsworth. That refers to the compounding under Section 4 of the Act. In Lewisham the average deduction amounted to about 18 per cent.

6089. You think that the authorities have considered that too generous to the landlord?—That was their view. I don't make any comment upon it.

6090. (*Mr Esslemont.*) What does this discount cover? We were told that there was a certain amount for collection and a further amount for risk?—Of course, I cannot say

Mr J. W. Cleland.
4 Jan. 1907.

what were the views in the minds of the local authorities in arriving at the percentage they allowed. They may have said 15 per cent. will cover it, being 10 per cent. for this and 5 for that, but I cannot say.

6091. These are the gross discounts allowed in any case?—Yes.

6092. I think we were told to-day that in some of the London burghs the commission amounted to 15 per cent. for cost of collection, and 15 per cent. for guaranteeing?—I think there must be some misconception there.

6093. You referred to a section of an Act. Which Act?—Compounding for rates in London comes under the Burgh Rates Assessment Act of 1869. There are two sections, Sections 3 and 4, which govern compounding in London. Section 3 provides for the case of owners of houses not exceeding £20 rateable value, and allows them to become liable for the rates instead of the occupiers. Section 4 empowers the authority to make an order that the proprietor shall be rated instead of the tenants. Certain of them are under Section 3, and others are under Section 4. I can put in the figures under both sections, which will give an exact picture of the state of things in the metropolis at present.

6094. (*Mr Howden.*) We have heard something about the law of hypothec. Do you favour the abolition of the landlord's right of hypothec?—I do.

6095. Why?—I think it places the landlord in a privileged position which I do not think he has any right to occupy.

6096. Do you not think that it presses heavily on the tenants too?—I think it works out in that way.

6097. Would you be prepared to extend it also to this, that there should be exemption up to a certain amount as regards tenants' goods being taken, for instance as regards furniture?—Personally, I should be disposed to agree, but I should not like off-hand to fix any amount.

6098. But you are favourable to any such system?—Yes.

6099. (*Mr Binnie.*) You say that you think hypothec should be abolished?—I think the landlord's right of hypothec should be abolished.

6100. Because?—Because I think it places him in a privileged position.

6101. Would you place him in all respects in the same position as other creditors?—I should be disposed to do so.

6102. Would you propose that a landlord should be able at once, without process of law of any kind, to cease giving credit to his tenant?—I do not quite follow that question.

6103. In Scotland, before a landlord can cease to allow a tenant to occupy a house, even if the rent is not paid, he must have a process of law which is expensive and causes delay. The tenant continues, in spite of the landlord, to occupy the house during that period. Since you wish to put the landlord in the same position as other creditors, are you prepared to abolish that right of a tenant?—I think the simple solution would be to simplify the process of law so far as regards the landlord, and not to put him to the needless expense he is put to at present. I have no desire to penalise the landlord.

Mr J. W. Cleland.
4 Jan. 1907.

6104. How could that be done if he has to go through any process of law before he can cease to give credit to a tenant?—I believe some processes of law are more expeditious than others.

6105. Is there any other creditor that you know that requires to go through a process of law before he ceases to give further credit to a person who is already in his debt, and is not paying?—To the best of my knowledge there is not.

6106. So you would propose to that extent to put the landlord in a worse position than any other creditor in existence?—No, pardon me.

6107. Yes, you would.—I suggested that it might be possible so to simplify the process of law as to remove what appears to be an injustice.

6108. But he would still require to go through a process of law?—And it might be very short and extremely cheap.

6109. But you would still require to go through a process of law?—It might be possible to obviate that by various arrangements.

6110. Will you suggest an arrangement that you think would be fair?—I am not prepared to do so off-hand.

6111. You see the position?—I see the point.

6112. And you have no solution to offer?—I do not say so.

6113. But at present?—I do not say so.

6114. Well, will you tell us what you have to offer?—I think it would be perfectly feasible to invent a simple process.

6115. But if there is any process, however simple, that a landlord requires to go through, to that extent he would be in a different position from another creditor?—It is a question of degree.

6116. Is there any degree between nothing and something?—I should have thought so.

Then I cannot go any further.

6117. (*Mr Dobbie.*) Suppose you contracted to give a supply of coal in six deliveries during the next twelve months, you would be bound to supply the coal even although you were dubious about your customer's credit?—I am afraid so.

6118. You would require to carry out your contract?—Yes.

6119. (*Mr Binnie.*) If your creditor did not pay you when he promised to pay you, would you require to continue delivery?—It would depend on the terms of my contract. I might have entered into a wise or an unwise contract.

Mr R. Kirk and Mr W. L. Kirkwood.

Mr Robert Kirk and Mr William L. Kirkwood, called and examined.

Mr R. Kirk and Mr W. L. Kirkwood.

6120. (*Chairman to Mr Kirk.*) You are President of the Paisley Property Association, and you have been so during the last six years?—Yes.

6121. (*To Mr Kirkwood.*) Are you one of the Directors of the same Association?—Yes.

6122. And you appear along with Mr Kirk to give evidence on behalf of the members of that Association?—Yes.

6123. (*To Mr Kirk.*) Are you interested as an owner or part owner of a considerable number of tenement properties in Paisley?—Yes.

6124. (*To Mr Kirkwood.*) And you have been for twenty-five years engaged in the management of house property, and ten years in business for yourself as senior partner of the firm of Kirdwood & Goudie, Paisley?—Yes.

6125. Your office has been established for over seventy years?—Yes.

6126. (*To Mr Kirk.*) How many members are there in your Association?—They are composed of all the proprietors of property in Paisley.

6127. Not all?—Most of them are members either through their factors or personally.

6128. So we may take your views as representing the views of the house proprietors of Paisley?—Yes.

6129. How long has your Association been in existence?—This present Association has been going on for ten or twelve years.

6130. Has it taken an interest in the different measures brought forward on the subject of house letting?—Yes.

6131. And has it considered them?—Yes.

6132. And among them the Bill recently brought in by Mr Cross?—Yes, and the previous Bills brought in by him.

6133. In your view, has any occasion arisen for passing any such measure?—Do you mean is there any special need so far as Paisley is concerned?

6134. Yes?—No, I do not think so.

6135. You notice that Paisley is specially dealt with in the schedule, as are other towns, the limit of which is to be £16?—Yes.

6136. How do the rents in Paisley compare with the rents in Glasgow?—They are somewhat under the rents in Glasgow, but in the newer properties they are pretty much the same.

6137. Has there been any agitation at ward meetings or otherwise in favour of short lets?—There have been a number of questions at ward meetings and at the General Election in regard to the missive question.

6138. What do you mean by the missive question?—I mean the issuing of missives so early in the year.

6139. Is your practice in Paisley as to that the same as in Glasgow?—No, it is usually about the middle of February before they are sent out, and they are returnable by the end of February, but for some years past we have entered into some arrangement with the recently formed Tenants Association to issue them at a certain date, and with their concurrence we have done so.

6140. Is it the case that there is a desire to have missives issued later?—Yes.

6141. Do you see any reason why that desire should not be given effect to?—No.

6142. Suppose the date of warning away were made, say, 8th May, instead of 4th April, as has been suggested, how late could you have your missives issued?—They would require to be issued about the middle of April and returnable by the end of the month.

6143. And that would not interfere with anyone's interests?—No, not if it was made universal.

6144. It is not a fair system, in your view, to have some factors not going in with an arrangement of that sort which others have agreed to as reasonable?—That is so, and we

suffer from that in Paisley. There are a few factors outside our Association, some two or three, and some large owners who have remained outside for no other reason than to benefit by the issuing of their missives at an earlier period than we issue them, and they thereby get an undue advantage.

6145. Any change of that kind would, I suppose, be one that would be naturally applicable all over Scotland without any optional clause at all?—That is so; and so far as I understand the Bill, it would require to refer both to counties and to burghs. I understand it only refers to burghs just now.

6146. Have you anything more to say on the missive question?—No.

6147. (*To Mr Kirkwood.*) Or you?—No, nothing special.

6148. (*To Mr Kirk.*) Now, in regard to the short lets, that is in your view quite a different question from the other?—Yes, it is outside the question of missives.

6149. Which do you think was really at the bottom of this whole business, the missive question or the short lets?—The missive question.

(*Mr Kirkwood.*) The sending out of the missives so early led up to it anyway.

6150. (*To Mr Kirk.*) What do you say about the short let business interfering with the right of a landlord and tenant to agree to a lease say for a year?—I consider that the question of short lets as under the Bill would interfere very greatly with the question of free contract: that is to say, you would be unable to agree with your tenant for a yearly let or lease, and you would thereby be debarred from taking into consideration the question of letting your heritable subjects for a longer period than the rent payable.

6151. Every one agrees that freedom of contract is desirable, but there is such a grievance that it is said that that principle must go to the wall. You are only speaking for Paisley?—Yes.

6152. Do you think that in Paisley there is any such grievance as would warrant the legislature interfering with the freedom of contract?—I don't think so. There is a large number of houses in Paisley which are monthly lets, and the class of people in these is not of the same status as those housed in yearly lets. I consider that if a person who at present is in a yearly let was to be asked to take his house by the month, he would be considerably hurt in his feelings.

6153. Do you find, in addition, that people with yearly lets attach importance to the security of tenure that they thereby have?—Yes; security of tenure is very desirable, because if they have a house that they are satisfied with, they wish to be free from interference in the way of raising the rent or disturbance of any kind.

6154. What are the industries of Paisley?—They are mixed. The principal industry is thread-making; then there are engineering, starch, flour, ship-building, and soap-making.

6155. Are there any of these industries that are specially shifting in their conditions?—No.

6156. The large number of employees there are permanently employed?—Yes.

6157. But there is a good deal of shifting in ship-building?—We have a very small amount of ship-building; it is not worth considering.

6158. If the difficulty arises from the shifting nature of the population, that would not apply to Paisley to the same extent as it applies to Glasgow?—No, because the employment is more permanent and more local.

6159. Looking to the variety of conditions that there are in different places in Scotland, you think, if the Bill does pass, the optional clause in it should be allowed to remain?—Yes.

6160. If it did pass, what would be your own idea as to what Paisley would do?—It would be likely to adopt it.

6161. Would they be likely, under the optional clause, to adopt the Bill if passed into an Act?—I think so, because the representatives on all Town Councils have very little sympathy with, or concern for, owners of heritages. We know well that we suffer from many grievances, and we never get very much given back. We are supposed to stand a good deal at the hands of a member of a Town Council. It is a very popular theme, "to go for the landlord," and I have no doubt that if this Bill became an Act of Parliament it would be adopted.

6162. If there is a large amount of working men's opinion in favour of longer lets, as we are told there is, why would not that opinion go against adopting the Act?—That may be so, but those folks who are at present secure in long lets are not always represented at ward meetings.

6163. Why should that be? If there is this opinion among the working men in favour of the present system, why should they not express it at ward meetings as well as the others?—I contend that the people who are crying out for this in Paisley are very limited in number. There is an association in Paisley, the Tenants Association, which does not extend to more than 200. I don't think the general householder is crying out.

Mr R. Kirk and Mr W. L. Kirkwood.

4 Jan. 1907.

6164. If that is so, the general ratepayer would vote in favour of the present system and refuse to adopt the Bill?—Yes. If a man was quite secure he might be willing and anxious to have a short let, but I don't see that he would benefit in any way by it, because security of tenure is a very important matter.

6165. I see the Paisley Tenants Association has about 620 members. That is more than you were thinking it had?—Possibly; I know it had a very small number at one time.

6166. Do you find that there is a great drawback from the one term of removal in Paisley, namely, 28th May, and removals not being spread over the year?—I am not aware of that.

6167. Does it not lead to a great over-pressure at that time and want of work at other times?—I cannot say that that is my experience.

6168. Does it not lead to a difficulty in getting houses into order and cleaned.

(*Mr Kirkwood.*) Not so much in Paisley, because there has been so much new building and improvement. People are able to shift before the term, and that enables them to shift easier.

6169. (*To Mr Kirk.*) Have you not had cases of men coming and saying that since they took their house they have got employment elsewhere and they want to remove and give up the house, and where you have told them that you would still have to hold them responsible?—There have been cases of that.

6170. Have you any idea what the percentage will be?—Very small indeed.

6171. What will be the percentage of those that did remove and were ultimately held liable from failure to get sublets?—Speaking for myself, I don't think it will be 1 per cent.

(*Mr Kirkwood.*) In my experience it is about the same. There is very little sub-letting in Paisley.

6172. (*To Mr Kirk.*) How many empty houses do you have in Paisley?—1565.

6173. What is the population of Paisley?—About 85,000. There are 95 shops empty and 259 stores, etc. The value of the unlets is £17,762.

6174. Have you any men resident in Paisley who work outside?—Yes, a number go to Govan.

6175. What do they pay for travelling?—1s. per week.

6176. What are they working at?—Various trades, the building trade.

6177. Have you people living in Glasgow who work in Paisley?—Not to the same degree, but we have a few.

6178. Why is it that those people living in Paisley and working in Glasgow do not remove to Glasgow?—Possibly their families may be employed in the mills. Ready employment is found by them at the mills, and the head of the house may have to find his work in Glasgow.

6179. These are voluntary cases?—Yes, they continue from year to year. I may say that there is a very large number of workmen's trains going from both stations night and morning.

6180. How many of the houses in Paisley are on monthly lets?—Fully 3000.

6181. What will be the maximum rents?—Anything up to £12.

6182. Between £8 and £12 will they be mostly yearly?—Monthly rents are common up to £7 and £8, and then there are yearly lets at £8, £9, and £10.

6183. May I take it that below £5 they are all monthly?—Yes.

6184. And between £5 and £10 you have both monthly and yearly lets?—Yes.

6185. And above £10 they are all yearly?—Yes.

6186. Do you think that short lets would have any effect on the value of the premises?—Yes, they would deteriorate the value of the subject very much.

6187. Why?—Because they bring in a different class of tenant, a less careful class.

6188. You are talking about things as they are at present. Suppose you got monthly lets for the better class of tenant and the better class of property, would it be deteriorated?—We have no experience, but still we can assume that a person who is only on a monthly tenure would hardly have the same consideration and care for his house that he would have for a house on a yearly tenure.

6189. Do you find that where a man has a house for a year he is inclined to do a little to it himself when he goes into it?—Yes.

6190. What kind of things will he do to it?—He may ask the owner or the factor to assist him in the way of painting and papering. He might supply the labour if you supplied the material.

6191. And he would not do that if it was only a monthly let?—That is so.

6192. Do you think that short lets would put up the rents?—Yes.

6193. On account of what?—The loss in rental would be greater, and then there is the question of repairs and maintenance.

6194. Would it be both that the factorage would be more costly and the repairs would be more costly?—Yes, and the collection would be more costly, the loss of rent between tenant and tenant would be greater. It would all tend to raise the rents.

6195. In regard to the question of ejectment of undesirable tenants, is it your view that if shorter lets were introduced there would require to be some corresponding provision to enable the landlord to get rid of undesirable tenants more cheaply and quickly?—Yes. We suffer very much from that in Paisley. We petitioned the magistrates to resuscitate the old Burgh Court, but they refused to do so We appealed to the Secretary for Scotland, but no further steps have been taken.

6196. At present you have to go before the Sheriff?—Yes. You have to give a notice of forty-eight hours, and then there is every possibility that the Sheriff in the case of non-appearance will give five days to remove.

6197. The forty-eight hours seems reasonable enough, if at the end of that time you can get a warrant to eject?—Yes, but you must warn them out and give ten days' notice.

6198. And then you get an order for service with forty-eight hours' notice?—Yes.

6199. If you got your ejectment straight off at that point, then you would be well enough off?—That would be a fortnight.

6200. Instead of getting your warrant straight off, if the tenant puts in an appearance you don't get a warrant?—Usually.

6201. In Glasgow it is said that in the Burgh Court the magistrates do not consider the tenant's reasons, or whether there are any reasons, but they give him the delay straight off, simply because he puts in an appearance. In the Sheriff Court the Sheriff considers the question?—Yes, and if the reasons are not sufficient he grants a warrant at the end of five days.

6202. Why five days?—It is to give the tenant time to remove and look out for other premises. My own opinion is that the burgh magistrates sit daily in Paisley, and possibly that Court could be made use of for the turning out of tenants on forty-eight hours' notice. You have always a sitting magistrate, but you have not always a sitting sheriff. We have in the Sheriff Court vacations of a month or five weeks, and these tenants are quite as well aware of the vacations as you are. So there is a loss there of two months, not to speak of the former loss.

6203. You are assuming that you have a burgh magistrate every day. In Glasgow they only sit twice a week?—But I am taking the ordinary court.

6204. That would involve a statute?—Yes. I am taking advantage of the sitting magistrate.

6205. Do you think that the five days is reasonable or not?—Somewhere between three and five.

6206. Is the expense serious?—Between four and five shillings.

6207. Then what do you say to the compounding?—I am quite against that. I may say that Paisley has instituted a provisional order this session, and they are asking for the compounding of rates. Now, there is no reason for it so far as Paisley is concerned. My objection is that it is a very odious and disagreeable duty to impose on any owner of heritage.

6208. Do you not do it already to any extent?—Under £4 only.

6209. Are you under the general Police Act?—Yes. As I have already stated, it is a very nasty duty to perform. In Paisley and in other burghs the Corporation have considerable power for collecting the rates. In Paisley we have an outside collector whose duty it is to keep at the people who are bad payers. They have the benefit of not being under the Wages Limit Arrestment Act of 1870, and they can imprison a man. Now, that power is not proposed to be conferred on the owners either in this Bill or in the provisional order of Paisley, and that would make it impossible to collect the rates.

6210. You don't object to the proposal that the rates should be collected more frequently than once a year?—Not at all.

6211. You object to their being collected by the landlord?—Yes.

6212. The proposal seems reasonable that a working man would be in a better position to pay his rates if he had not to pay them all at once.

(*Mr Kirk.*) That is adopted to a certain extent already in Paisley. The collector takes payments to account.

6213. (*To Mr Kirkwood.*) You have no objection to Parliament ordering the rating authority to collect four times a year?—No. The overlapping that exists with regard to the rating authorities could be done away with by having one rating authority for all the rates.

Mr R. Kirk and Mr W. L. Kirkwood.

4 Jan 1907.

6214. What benefit would that be?—It would do away with one set of rating authorities. Under the Poor Law Act you have the School Board Assessment levied by the parish authorities who assesses on behalf of the School Board. Now, an attempt is made to bring School Board matters and unify them under the Town Council. I do not see why there should not be a unification of the rating authorities. There should be just the one rating authority. At present you are only putting the one against the other. You are drawing the money from the same sources. If there was just the one rating authority then the expense would be reduced to a minimum, which is a proper thing to do.

6214*a*. The other suggestion is that there should be unification by making the landlord collect the whole lot?—He can hardly collect his rent at present. There is a very great loss. Under £4, where we have to collect the rates, there is a loss of something like 50 per cent. Now, that should not be extended, because, if it were, then property would become a very serious burden.

6214*b*. Where is the 50 per cent. loss?—Under £4 owners have to lift and pay all the rates, and there is a loss there of about 50 per cent.

6214*c*. Have you arrived at that by any investigation?—By experience.

(*Mr Kirk.*) That is the case. We have about 250 houses under £5, and the loss works out at about 50 per cent.

6215. (*To Mr Kirk.*) That is both on rates and rents?—No, just on the rates.

6216. You don't get your rents?—They will pay their rents but not their rates.

6217. You are attributing the loss just to the rates?—Yes.

(*Mr Kirkwood.*) In many cases it would be a loss of both.

(*Mr Kirk.*) In many cases the people are poor and they won't pay any more.

6218. (*To Mr Kirk.*) You would not expect a loss like that with the better class?—At present the landlord lifts the water rates, and I think the loss is about 20 per cent.

6219. Under £4 the landlord lifts the whole rates?—Yes.

6220. And the loss is about 50 per cent.?—Yes.

6221. What other rate does he lift?—The water rates.

6222. Up to what?—Up to any rent.

6223. And what else?—The burgh roads and improvement rate.

6224. Is that all?—Yes.

6225. What is his loss in these?—15 to 20 per cent.

6226. You are spreading that all over?—Yes.

6227. Of course when you go to the higher rents it is less, and when you go to the lower rents it is more?—Yes, the loss is 15 to 20 per cent.

6228. (*To Mr Kirkwood.*) Under £4 you get no allowance?—Yes, we get 10 per cent.

6229. And the water?—10 per cent.

6230. And the roads and improvements?—I think it is about 25 per cent.

6231. Why is there that difference?—I could not say.

6232. Do you know anything to justify why you should not get 25 per cent. under £4?—Would not the loss be greater in connection with rents under £4 than the loss on rates like water, which apply to all rents? One would expect a bigger allowance on the rents under £4?—It is just the same. It used to be £3, but they altered it to £4 some years ago.

6233. Have rents been rising in Paisley?—No.

(*Mr Kirk.*) Rents have not been rising. The large numbers of unlet houses has made it impossible to raise the rents.

6234. (*To Mr Kirk.*) Do you think that the optional clause would lead to confusion?—Yes. There would be confusion in removing from one particular district to another, if the Bill was permissive.

6235. (*To Mr Kirkwood.*) In your office you have fully 700 monthly lets?—Yes.

6236. What is the biggest rent?—We have them paying monthly up to £15.

6237. That must be exceptional?—It does not happen in many cases.

6238. What is it due to?—The class of property—old properties.

6239. Is the proportion of the monthly lets going down?—No.

6240. You say that some years ago you had more?—Yes, when there were more old properties, but with the rebuilding the monthly lets have decreased.

6241. You have about 250 houses at £5 and under?—Yes.

6242. In Glasgow we are told that houses at £4 and under are rapidly decreasing in number. Is it the same in Paisley?—Yes.

6243. You say that in the ten years you have been in business you have not had more than three cases where tenants had to pay the rents of two dwelling-houses. How had these arisen?—The people took their houses first and then wanted better houses, and said that they would take the risk.

6244. They were warned?—Yes, they were warned that they were liable.

6245. Do you agree that short lets would cause the rents to go up?—Yes.

6246. Do you think that it would be a substantial increase?—Not very great, but still it would always be something; we would require to put something on for the extra tear and wear.

6247. (*Mr Binnie to Mr Kirk.*) What number of houses have you charge of?—I have belonged to a family of property-owning people for the last sixty years, with about 500 tenants.

(*Mr Kirkwood.*) I have about 400 properties and 2400 tenants. Of course, a good many of the properties are old and small.

6248. (*To Mr Kirkwood.*) Are there many houses in Paisley that are owned by the employers of labour?—Not very many—just Messrs Coats', and these are mostly self-contained.

(*Mr Kirk.*) They have a small village with houses for foremen in a district called Meikleriggs.

6249. (*To Mr Kirk.*) But for ordinary working people are there any of the employers of labour that have houses for their employees?—Not that I am aware of. There is a mining village, but it is outside the burgh and has nothing to do with the burgh.

6250. (*Mr Howden to Mr Kirk.*) I notice you say that factors have a considerable amount of work to do at one time in the shape of preparing for the term. What do you mean by that?—I mean to say that there is a considerable amount of preparatory work in the way of preparing for the term and incoming tenants and rent collecting.

6251. Would it not be better if it was spread over the year?—You would require a larger staff if we collected more frequently.

6252. What is your staff doing when they are not doing this work at the term time?—I mean by preparing for the term that we have to balance at the term and prepare statements.

6253. The fact is that all this work comes on at the one season of the year.

(*Mr Kirkwood.*) It comes on twice in the year.

6254. (*To Mr Kirkwood.*) If it was spread over the year, would it not be much more convenient for you?—No. You get time to work up the laggards in the quiet season. We are collecting every week.

6255. You told us that rents would go up if you had monthly lets?—Yes, because monthly tenants are sorer on the houses.

6256. The factors would not object to that, as they would be paid commission on that?—I don't think so. Our commission is going down, and we have to work harder for less money.

6257. If there was more money taken out of the property, whatever the percentage was, the factor would get more?—Yes.

6258. (*To Mr Kirk.*) You told us there would be a loss, on the rents principally, from a house standing empty if we had monthly lets. Did you mean in individual cases?—I meant all over. If there were monthly lets and there was a tenant going out, you could hardly expect to have a tenant ready to come in. With the monthly lets that we have now we frequently lose a month before we get a new tenant in.

6259. They will be taking houses elsewhere and paying rent?—Yes, but the loss to the owner is not made good.

6260. In the gross the amount of rent you would extract from the tenants would be the same?—I don't think so.

6261. How would you take an increase of rent out of them?—The rent would require to be increased to make good the loss.

6262. What effect has the 28th of May on the building trade?—Very little in Paisley. The building trade has subsided in Paisley.

6263. But there is a rush for the term time?—There may be a rush during the few days previous to the term, but as a rule a building which is started early in the year should be in quite good readiness for May, and there should be very little rush required.

6264. Does that apply to the painters?—To painters, plasterers, and joiners.

6265. What do you do with the painters when they come in to do up houses at that time of the year? The tenants have usually to wait a considerable time to get their houses done up?—At that time of the year most housewives get their cleaning done, and that is the reason of the rush.

Mr R. Kirk and Mr W. L. Kirkwood. 4 Jan. 1907.

6266. Is the reason not this, that people are shifting at that time?—There is not much painting done at that time.

6267. Is it not the case that some factors promise to do up houses when new tenants take them?

(*Mr Kirkwood.*) Yes, that is the case. Before the New Year there is a rush to get houses done up for the New Year.

6268. (*To Mr Kirkwood.*) It does not extend only to that one period in your experience?—No.

6269. (*Mr Dobbie to Mr Kirk.*) Do you know anything about the old Burgh Courts?—No, not beyond the fact that there was a Burgh Court. Provost Brown has written a history of Paisley, and in that he tells about the Burgh Courts. We had a deputation before the magistrates and pointed out the usefulness of this court. They gave us no reason for their refusal. We then appealed to the Secretary for Scotland, and he sent for further information from the Town Clerk, and he left us at the point that he was about to see the Lord Advocate and see if anything could be done. The only solution that the magistrates gave was that there should be more frequent Sheriff Courts. That is not practicable, because they are fixed by statute.

6270. It would meet your views if there was some machinery by which the magistrates would be able to grant ejection warrants?—Yes. That is an objection to Mr Cross's Bill,—there is no machinery in it at all. Without any machinery you are simply at the mercy of the tenant.

6271. You suggested that something might be done to prevent the overlapping of the rates?—Yes, by making one authority for the collection of all the rates.

6272. Would that not result in one large sum being demanded from tenants annually?—Yes, but if it was made payable four times a year.

6273. But in the absence of any change of the frequency of collections, it would aggravate the grievance that we have had before us?—That may be so, but, while it is not statutory, arrangements can be made in the way of part payment in cases either of distress or want of work.

6274. Are you in favour of a more frequent collection of rates by the Corporation?—Yes, four times a year.

6275. Do you think they would make less loss?—Yes, because there would be more frequent and smaller payments. The larger the sum, the greater the difficulty to pay.

6276. If the factors collected monthly or quarterly, they would not expect to make as much loss as the burgh makes just now?—Are you referring to rates?

6277. Yes?—I think the loss would be greater then, because we have no power conferred upon us. We are limited under the Wages Arrestment Act of 1870, and there is no imprisonment. The rating authority can arrest the whole of your wages and can imprison you for non-payment of rates.

6278. Is your position this, that the threat of the enforcement of these penalties impels the ratepayer to pay his rates?—Yes.

6279. As a matter of fact, you know that it is only very rarely that a man is imprisoned?—There is a large number of people in Paisley that have not paid rates. There are 2700 who failed to pay their rates, and 1273 got exempted.

6280. If these means of recovery were so efficient as you indicate, there would not be about 3000 who did not pay.

(*Mr Kirkwood.*) There would be more, because they are not to give us the power to recover the rates.

6281. (*To Mr Kirkwood.*) It does not speak much for the efficiency if there are about 3000 whose rates are not recovered?—That is the case.

6282. It looks like this, that tenants pay who are willing to pay and the rest are allowed to slip?—Over and above the exempted there are 2700 who take exemption.

6283. They would pay more regularly to the landlord?—I don't think so.

(*Mr Kirk.*) I may say that in the provisional order that is being promoted, the compounding clause is just a copy of what is contained in Mr Cross's Bill, and we are going to oppose it. At a deputation we pressed the Town Council to drop it in view of the fact that your Committee was considering this question, and if it was thought fair, then they could get the benefit of it under this Act; but they are still pressing the clause, and so we will go on with our opposition.

6284. (*To Mr Kirk.*) Have you found the right of hypothec to be of any practical use?—Yes, frequently. It is only right that you should have some little security.

6285. In what class of house?—In the smaller houses there is no hypothec—you have nothing to sequestrate—but in the higher-rented houses, I think it is only fair that the owner should have some preference over an ordinary creditor, because he cannot cease giving credit at a moment's notice, and he must go through this process, which is very

Mr R. Kirk and Mr W. L. Kirkwood.

4 Jan. 1907.

difficult and long before he can apply it and measures are taken to evict. I would have a sitting magistrate.

6286. You would not put so much stress on your hypothec? —No, because with a sitting magistrate we would have the use of the Court daily.

6287. (*Chairman to Mr Kirk.*) Take a working man with a £10 house in Paisley. First of all, what may his furniture have cost him?—£20 to £30.

6288. What would it bring if it was sold under hypothec? —Very little in some cases.

6289. But, roughly, would it bring £5?—About one-third of the value.

6290. If it cost £30, then it would bring about £10?—Yes, the sale has so little publicity.

6291. Is it worth while to sell under your hypothec? Suppose the furniture had cost £10, would it pay you to sell it?—Yes, you might get about a quarter's rent out of it.

6292. (*Mr Dobbie.*) What is the expense of a sale?—20s. to 25s.

6293. If you got £3 for the value of the £10 worth of furniture, you would pay away 25s. at least?—Yes.

6294. (*Mr Howden.*) You would really get 35s. out of what cost the tenant £10?—Yes.

Mr R. Kirk and Mr W. L Kirkwood.

4 Jan. 1907.

Mr George Pringle.

Mr George Pringle, called and examined.

Mr George Pringle.

6295. (*Chairman.*) You are President of the St Rollox Co-operative Society?—Yes.

6296. How long have you held that position?—About eight years.

6297. How long has your Society existed?—Over forty years.

6298. It is composed of over 4000 householders resident in the northern district of Glasgow, the great majority of whom occupy houses, the rents of which are between £10 and £20?—Yes.

6299. I think your members are regular, steady working men?—Yes.

6300. You don't have many of the improvident?—Not very many.

6301. Has the question we are now dealing with been considered by the Society or by a Committee?—It was considered by the Society at the last meeting. It appeared in the minutes that I had been appointed to come here and give evidence, and I was questioned as to the attitude I purposed to take. I explained the lines on which I was to go, and they unanimously approved.

6302. May we take it that your members are fairly representative of the best class of working people?—Yes.

6303. And what would be their views would be the views of the best class of working people?—Yes, their views represent the views of the respectable working classes in Glasgow.

6304. What, in the view of the Society, was the question that we had to consider?—There are two questions involved, the first being the having to bind oneself so early in the year, and the second being the difficulty in being relieved of the contract.

6305. Which do you think bulks largest in the minds of your members?—I think the latter is the more serious grievance. The working people themselves contribute to the former to a certain extent, in this way,—there is a very large number of houses having objectionable characteristics. People who are unfortunate enough to occupy these, naturally wish to get a better house. Although the accommodation may not be better, still there will be advantages, such as better outlook, and they try to get the best house they can, and they contribute very largely themselves to the early demand for houses.

6306. Are there features about that class of property about which the better classes know very little, features such as dark rooms, damp rooms, etc., that you do not associate with west-end houses?—Yes. Take a house situated at the corner of a street. The probability is that there is a wall about 10 feet away from the window and that makes the room very dark. The accommodation is quite the same, but the outlook is very poor.

6307. And the health conditions are inferior?—Yes, whereas the house on the other side of the stair may have a fine open outlook.

6308. And it may be quite natural and proper in the interests of the family to make a change, although the cubic space may be the same?—Yes. I made a change myself in that identical circumstance, the rent being exactly the same, but the comfort and the health conditions were altogether different.

6309. You refer in your *précis* to changes that are necessary owing to the fluctuating conditions of employment. There are changes also desirable owing to such conditions as those you have just referred to which have nothing to do with employment?—Yes.

6310. Both ought to be taken into account?—Yes.

6311. The net result is that there are many occasions on which it is impossible for a working man to be able on short notice to change his residence?—Yes.

6312. Is it found that the present system interferes disadvantageously with that?—You cannot do it except at a very heavy premium under any circumstances, and more especially at the present time, when there is a sort of glut so far as house accommodation is concerned; it is almost impossible to get a house taken off your hands.

6313. The demand may vary and the supply?—Yes.

6314. Would it be sufficient, in your view, to remove the existing grievance if there was anything more done to shorten the period between taking the house and the period of entry?—No.

6315. That would be good so far as it went?—Yes, but it would simply make the congestion all the greater at the time of taking the house. If you shifted back two or three months, the rush would be all the greater when the letting time came. At the present time it is well to bear in mind that the month of January is practically the letting time, and it is about the worst possible time of the year for house-hunting. It would be better in that respect, but I believe the pressure and the anxiety to get a good house would be as great at any other part of the year.

6316. Suppose Parliament gives a remedy for that grievance and does not go any further, you think that the agitation would still continue?—Yes.

6317. You have yourself seen examples, and you are prepared to give illustrations of cases where rent had to be paid for more than one occupancy?—Yes.

6318. And other cases where, whether rent had actually to be paid in the end or not, the tenant was held responsible? —Yes.

6319. And he had the anxiety of the possibility of having two rents to pay?—Yes. The worst of the present system is that the tenant is absolutely at the mercy of the factor. Provided he is willing to oblige by the payment of a small fee, then he can do it, but if the factor wishes to be nasty he may make you pay double rent.

6320. In regard to the collection of taxes, however it is to be done, are your people strongly desirous of the taxes being collected more frequently than once a year?—Yes. As you can easily understand, it would be a decided advantage to people with small incomes. On 11th November you have £4 to pay; at the end of December you have £3, 10s. for taxes, and then perhaps a fortnight's holiday at the New Year, and on 2nd February you have other £4. Now, in the case of a man with 35s. a week—and that is above the average—it is a very large drain on his income during a comparatively small period of time.

6321. So there is the double element: first, the collection only once a year, and, second, the collection being at the worst time of the year?—Yes. At that time of the year there is more money required for lighting and fuel, and perhaps extra for clothing if it can be got. The whole expenses are most heavy at that particular time of the year.

6322. You calculated that the municipal rates, the poor, school, and water rates, in Glasgow amount to something like 22 per cent. of the actual rent?—Yes.

6323. Is that everything?—Yes.

6324. It does not include gas, however?—No.

6325. You know about the practice in England?—Yes.

6326. Are you yourself aware of any conditions in Scotland that would make that practice unworkable in Scotland?—I know of none. I understand that Glasgow Corporation in certain of their properties have worked very largely on these lines.

6327. But there there is the speciality of their selecting their tenants?—Every other landlord has the same privilege.

6328. But in England you have cases where there can be no specialities of that kind?—That is so.

6329. It is said that this agitation is the work of English workmen in Scotland. What is your experience of that?—My experience with respectable working men is that you will never have a substantial agitation without a substantial grievance.

6330. Whatever the remedy may be?—That is so.

6331. Of course you may have a real substantial grievance which it may be very difficult to remedy in certain cases without producing other grievances?—Yes.

6332. In this case you are not aware of any other grievance that would result through remedying this particular grievance?—The only grievance that might present itself to me would be that, in doing away with hypothec, you might be disposed to give the landlords too great

Mr George Pringle. 4 Jan. 1907.

powers of ejection which might be used injuriously. I think it may be done with a measure of restriction. If hypothec were done away with, I think that landlords should have a little more liberty than they have just now, but I am decidedly of opinion that the wish to do away with hypothec is not very strong among the class that are agitating this removal of the present grievance.

6333. How many Englishmen do you suppose you have among your 4000 householders?—It would be very difficult to estimate.

6334. (*Mr Howden.*) Are there any Englishmen on your Committee?—No. I think it would be a big estimate to say that there were 5 per cent. in the Society.

6335. (*Chairman.*) Are there any particular trades where there may be a special number of Englishmen?—No. The principal trades in the district are the publishing houses of Messrs Collins & Co. and Messrs Blackie and Sons, and then there are the Caledonian Railway Works.

6336. (*Mr Binnie.*) There will be a few in the gasworks?—Yes, but comparatively few.

6337. (*Mr Howden.*) What would you like done with such a law as the law of hypothec?—I think if the landlord had power to remove more speedily, then he should come in as an ordinary creditor.

6338. You have heard expressions of opinion as to the amount to be derived from the sale of a tenant's goods. Is there not a grievance that exists there that might be remedied as in America, viz., by protecting the tenant's goods up to a certain limited amount against all creditors?—The same as is done with tradesmen's tools?

6339. Yes?—It would be very good in the interest of the workers; but if people are deliberately taking things without an intention of paying for them, then I think some provision should be made for getting at them in some way.

6340. You belong to the co-operative movement?—Yes.

6341. You have nothing to do with bad debts?—We do find one or two.

6342. How does this system of letting in Glasgow affect the building trade?—There is no doubt there is always a slackness in the joiner trade after a term. One of the most keenly contested Trades Union fights was with the Builders Association to alter the date from before the May term till afterwards, with regard to their agreements.

6343. You think it would have a beneficial effect on the building trade if this season rush were done away with?—I think it would make it more even.

6344. (*Mr Dobbie.*) Can you tell me on what terms, as a rule, your householders pay their rents just now?—Mostly quarterly.

6345. So, assuming Mr Cross's Bill passed, it would reduce yearly lets to quarterly?—Practically.

6346. Would that meet with the approval generally of your Association?—I think so.

6347. You mentioned that the rents ranged generally from £10 to £20?—That is so.

6348. If Mr Cross's Bill was limited to rents of £10 and under £10, then it would not remedy the grievance as regards almost any of your members?—Comparatively few.

6349. So to grapple with this question any Bill would require to deal with rents up to £20?—Yes. Take houses of three apartments, I don't know of any under £14, and these are only in the older properties. In the more modern properties the rent runs up to £17; and for the very latest houses, with all modern improvements and conveniences, the rent goes up as high as £20, a very common rent being £19, 19s.

6350. You state that you are authorised to support the proposals contained in Mr Cross's Bill?—Yes.

6351. That is just a general approval?—Yes.

6352. You say you approve of rates and taxes being collected along with the rents?—Yes, or at least quarterly.

6353. Mr Cross's Bill does not deal either with Imperial taxes or with school rates or poor rates?—Having been reading the proceedings in connection with this, I saw that that was raised.

6354. Your view is that all taxes and rates should be treated alike and be collected by the landlord?—I consider it would be a decided convenience in the interests of the tenant.

6355. Have you any views on the optional clause in the Bill under which different burghs may in their option adopt the Bill?—So far as Glasgow is concerned, there would be no doubt as to its adoption. I had not given any consideration to it because of that.

6356. A Glasgow man requiring to go to Paisley or Partick might have trouble in getting a house between terms, if the Act was not in force?—The serious trouble is to get rid of the obligations that they have. The getting of a house is not the serious matter.

6357. At present?—Yes. I have been in Glasgow these twenty years, and I do not remember a time when it was not possible to get a house.

6358. (*Mr Dobbie.*) It might be argued that the difficulty was aggravated by the fact that tenants living in Paisley and elsewhere were not in the habit of leaving between terms, and therefore you would have a very small market if the Bill did not apply all round?—Take the case of Clydebank and district, for years and years thousands have had to be conveyed from Glasgow. Recently a very large number of working men's houses have been erected in that district, and the people have moved down, but I do not think any alteration in the tenure would affect these.

6359. You would get a more complete remedy if the Bill applied to Clydebank and Glasgow than you would get if it only applied to Glasgow alone?—I do not know that it would matter very much.

6360. You are quite content that it should be made optional?—Yes.

Mr W. S. Cochran.

Mr William Stevenson Cochran, called and examined.

Mr W. S. Cochran.

6361. (*Chairman.*) You are a solicitor in Glasgow, and a partner of the firm of William Cochran & Son?—Yes.

6362. For the last fifteen or sixteen years you have been engaged as election agent in elections, parliamentary, parochial, and municipal in Glasgow and North-West Lanarkshire?—Yes.

6363. The constituencies you have been working in are principally Bridgeton, Tradeston, and Tollcross, regarding parliamentary elections?—Yes. I have also been engaged in municipal elections in Bridgeton, Camlachie, and Springburn, and I have had to do with county council and parochial elections in Shettleston, Tollcross, and Millerston districts.

6364. These districts are all in and around the east end of Glasgow, with the exception of Tradeston, which is in the south side, and Springburn, which is in the north-eastern district of Glasgow?—Yes. A large number of the houses in these localities are room-and-kitchen houses and single apartments, and I would say that a large proportion of the tenants in these districts are occupants of houses ranging from £15 and under.

6365. Have you, in your experience in connection with these elections and otherwise, been able to draw certain conclusions with regard to removals?—Yes.

6366. Take Bridgeton?—I have the figures here. In 1900 the electorate in Bridgeton was 11,739, and there were 1762 circulars returned at the general election. These circulars were returned as "Not found," and that indicated that the tenants had removed.

6367. It does not include cases where the circulars were refused?—No; no one refuses election literature.

6368. These are actual removals?—Yes; and in canvassing we traced a great number of these people that had removed. In Bridgeton, in 1906, the removals numbered 728. I account for the difference in these two figures in Bridgeton by this, that in 1900 the election was fought in July, while in 1906 the election was in January; and therefore in the 1900 election we had included all the removals that took place at the May term. I would say that the figures for the whole of Glasgow generally include the average removals that take place in the first six months of the year. The roll is made up on 31st July, so that the figures I am giving are the removals from 31st July until November or December.

	Electorate.	Returned Circulars.
Bridgeton (1900) . .	11,739	1762

With regard to St Rollox, I would say that two-thirds were in the Garngad district, where there is the largest

Mr W. S. Cochran.
4 Jan. 1907.

proportion of the smaller rented houses, viz., room-and-kitchen houses.

6369. You have not worked out the percentages?—No. I have checked these figures with my political opponents, and they agree that my figures are correct.

6370. In addition to the ordinary causes for removal, do you find that from certain causes that you can speak to, there is a necessity for working men to remove from one district to another, owing to the formation of large works, for instance?—Yes. We have had recent examples of that; for instance, the motor works down in Alexandria and other works in Clydebank. A number of houses were put up in Clydebank after the Singers' Works were built there a number of years ago, and, of course, tenants going down there to houses built in the locality could not get in until the May terms. From the fact that these houses were practically filled at the May terms, I concluded that if tenants had been able to leave earlier they would have gone down, because it would have been a great saving to these men in travelling.

6371. Would you say the same with regard to Alexandria?—Yes. There is a hardship there at present because the Argyll Motor Works had a work in Bridgeton which was shut up for working purposes in September.

6372. Employing about 300 men?—Yes; and these men had to travel to Alexandria for their work, and I do not presume that they got any more wages. Then Messrs Beardmore had a work in Govan last year, and in the middle of the year it was transferred to Dalmuir, and the men had to go there, back and forward, to their work. They would have the extra expense of travelling without any extra compensation in the way of extra wages.

6373. At the same time, it is the case that you find men, year after year, voluntarily travelling from Glasgow to Clydebank and other places?—Yes.

6374. Why is that?—I suppose it is through their women folk having employment in Glasgow in some cases.

6375. And it is also because of the shopping facilities?—Yes.

6376. And the amusements?—No doubt that will have something to do with it. Of course, there are works going up for women in these localities. There is work for women at Clydebank.

6377. Do you find the number of these men decreasing? Are there not as many travelling still as there used to be?—I would say that about ten years ago there would be about five or six trains coming up from Clydebank, and I do not think there are so many now.

6378. Of course, you have the cars now?—Yes, but the workmen all travel by train, because they get cheaper facilities, and they can travel more quickly.

6379. Is that Singers' people?—Yes; I would say that all the men working down there travel back and forward to Glasgow by train. I do not know of any cases of workmen travelling from Clydebank by the cars.

6380. Are the cars dearer?—Yes, the workmen's tickets by the train are cheaper than the car fares.

6381. How is it that the railways make so much complaint about opposition?—That is as regards the ordinary travelling facilities. I am dealing with special workmen's trains that go down in the morning and come back at night.

6382. And give special rates?—Yes. Of course you cannot get a car further down than Dalmuir just now.

6383. Is it your view that the working classes through necessity for removal from different causes have urgent need to obtain some remedy that would enable them to change at shorter periods than they can do now?—Yes, I think so, and I have heard that at all the elections I have been engaged in during the last fifteen years.

6384. You have come in contact with working men with all kinds of views. It is said that there is a large body of feeling in favour of the continuance of the present system?—I would not say that. I would say that the majority of the respectable working men are in favour of shorter lets.

6385. Are there a certain number who are in favour of the present system?—I cannot say I ever knew of a man expressing that opinion.

6386. If they do exist, you have not come in contact with them?—That is so.

6387. Do you see any reason why you should not have come in contact with them?—I would be surprised if I had not, because I am mixing with the working men in these localities and I would be bound to hear it.

6388. (*Mr Howden.*) You referred to the facilities for travelling, and you went as far as Alexandria. What does it cost to travel there?—I cannot tell.

6389. Have you any idea how early in the morning workmen must leave in order to go down to their work at Alexandria?—I think the workmen's train is at five o'clock.

6390. The fact is they have to leave at five o'clock in the morning and they are not back till seven?—Yes, I know that the train comes in about 6.30 or 7.

6391. So far as Alexandria is concerned, the men would go down there to stay if they could?—Yes.

6392. (*Mr Binnie.*) On what do you found your opinion that there are fewer travelling to Singers' Works now than formerly? The work has been enormously increased?—Yes. There are not so many trains coming up at night with workmen as formerly.

6393. Are the trains not better filled?—I do not think so. I would also say that a large number of the working men in Bridgeton are now staying in Clydebank. I know of a great many men employed in Singers' Works who used to live in Bridgeton and who are now down in Clydebank. Then there is the question about confining the Act to burghs. There are large places round about Glasgow, like Shettleston, Cambuslang, and Alexandria, that are not burghs, but are under the County Council. I certainly think that any proposals dealing with house letting should apply to these populous places, because in the majority of cases there is tenement property there. The great proportion of Shettleston is tenement property.

6394. (*Chairman.*) Is there any technical expression that would cover these? Are they "populous places" in the sense of the Act?—Yes, we have 3500 voters in Shettleston and Tollcross.

6395. What is a "populous place" in the sense of the statutes?—I think it is 2000.

6396. So that would cover all the places you refer to?—Yes.

6397. (*Mr Binnie.*) But would there be a local authority that could exercise the option?—Do you mean if it is to be optional?

6398. (*Mr Dobbie.*) There is the Parish Council?—So far as the local authority is concerned, you have the landward part of the Glasgow Parish Council. That is the most direct local authority.

6399. (*Mr Binnie.*) But is it a local authority to which it would be at all a usual thing to refer such a question? Parish Councils have never taken up a question of this kind?—Personally I am not in favour of making the Act optional.

6400. We had a very strong objection from Rothesay, because their position is very peculiar. Would you approve of giving such a place as Rothesay the right to exercise an option to be outwith the Act?—I could not express an opinion about Rothesay. Then there is that matter of compounding. At the present time the poor law authorities collect the whole of the school rates and hand them over to the School Board; the police authorities collect the lunacy rate and hand it over to the Parochial Board. I heard Mr Kirk of Paisley advocate a central authority. Personally, I think it would be a good idea; it would be cheaper, and it would be better for the working men to know that there is so much money to pay in rates. It would be cheaper in collection, because at the present time we have two sets of men, one for the police and one for the poor law, going after the same people to collect their proportion of the rates. If we had them all in the one sum, I think it would be cheaper.

6401. (*Mr Binnie.*) In that case would you advocate more frequent collection, because it would be more difficult to pay the larger sum?—I think if there is any change, the collection of these rates would need to be put on to the landlords.

6402. (*Chairman.*) You answer Mr Binnie's question in the affirmative, that the collection should be more frequent?—Yes, I have frequently heard working men express an opinion in that direction.

[ADJOURNED.]

SEVENTH DAY.

MONDAY, 7TH JANUARY 1907.

In the New Court, Parliament House, Edinburgh.

Present:

SHERIFF CHARLES J. GUTHRIE, K.C., *Chairman.*

MR THOMAS BINNIE.
MR EDWARD COX.
MR JOSEPH DOBBIE, S.S.C.
MR GEORGE B. ESSLEMONT.
MR JOHN T. HOWDEN.

MR STAIR AGNEW GILLON, *Secretary.*

Mr W. S. Brown. Jan. 1907.

MR WILLIAM SLATER BROWN, examined.

Mr W. S. Brown. 7 Jan. 1907.

6403. (*Chairman.*) You have been a member of the Town Council of Edinburgh for about seventeen years, and you were for a number of years a member of the Improvements Committee of the Town Council, which included the question of the housing of the working classes, and for three years, up till November last, you were Treasurer of the City?—Yes.

6404. In connection with the work in the Improvements Committee, you had occasion to obtain information regarding the housing question at various times, and as treasurer you had also occasion to become acquainted with the rates, and in that way you are in a position to give us evidence as to certain points which may be of value?—So far as I can.

6405. I understand that you do not in any way represent the Town Council, which have not as a body dealt with this question at all?—That is so.

6406. Neither in regard to the Bill called Mr Cross's Bill nor any of the measures previously passed?—That is so. Once and again in Committee, when the Bills would be sent to the Town Clerk, there might be a general conversation, but there has been nothing minuted and nothing before the Town Council.

6407. Has there been any petition presented to the Town Council on the matter?—The only petition was some years ago, on the action, I think—if I remember aright—of the Secretary of the House Agents Association desiring a change in the period of taking houses on yearly lets, and as the result of that petition the Town Council recommended—because that was all the power they had—that for the future, instead of houses being let as from the 15th of February, they should be let as from the 15th of March. A few weeks ago the Town Council in that connection were again approached by the House Agents Association, asking the Town Council to recommend the going back to that prior date, because they found that certain owners and agents were not adhering to the honourable understanding that there was, but the Town Council up to the present time have not recommended that that change should be made.

6408. Has the question of house letting, so far as you know, been up at any of the ward meetings in connection with recent Edinburgh Town Council elections?—I am not aware of a single ward in the city where the question has been raised. I believe that some years ago—perhaps eight or ten years ago—there was a discussion in the Trades Council. I am not aware even from that date that there has been any public discussion in the Trades Council; there may have been, but I do not recollect it.

6409. About two years ago, had you, as treasurer, occasion to refer in the Town Council to the question of power being asked from Parliament to levy both the owners' and the occupiers' rates upon the owner?—Yes, I had, and that was because of the great loss which the city collector year by year had to write off under two heads,—first, where relief was granted on the ground of poverty; and, second, where the collector failed to recover. I may mention that in that year, 1903–04, the loss of assessment under those two heads was £4829.

6410. Being appeals for relief on the ground of poverty, £2975; and irrecoverable, £1854?—That is so. I should say also under that head that £450 was loss of assessment imposed upon rentals above £20. I gather that your inquiry is more regarding houses with rents at £20 and under.

6411. You produce a table which we will call Table A. That is applicable to 1903–04?—Yes. (*Hands in.*)

6412. In the second column, you have a number of charges; what is that?—That is the number of individual properties for which there was a charge made, and you will find that the number is 51,008.

6413. Up to £20?—Yes. You will find that the amount of rentals is entered in the first column.

6414. And those above £20, 27,795, being 78,803 properties altogether?—Yes.

6415. You have a later table, Table 1. Would you kindly look at it? That is titled "Table showing the number of occupied and unoccupied houses within the burgh as at Whitsunday in each year from 1887 to 1906 inclusive, arranged in the following order of rental." On page 2 of that the total number of properties in 1906–07 is 74,870, whereas in Table A you have 78,803 in 1903–04, three years before. How does that discrepancy come about?—This second table which you have referred to, Table No. 1, not only deals with dwelling-houses and shops with dwelling-houses attached, but it also deals with business premises. That is the entire properties in the city.

6416. No, because that would make it the other way. That is the later table, and it has 4000 fewer than the earlier table, which has 78,000?—Table A represents the business premises.

6417. Quite. Then, to revert to Table A, is Edinburgh under the General Police Act, or has it special Acts of its own?—It has special Acts of its own.

6418. Under the special Act of its own, do owners pay the whole rates up to £4 as under the General Police Act, or what?—Under £5.

6419. It is £5 under the special Act?—Yes. That is, the owner pays that, but if the owner also occupies, then the occupier pays.

6420. He being the owner?—Yes, quite.

6421. Just look at Table A. If you take the rentals under £5, how much do the irrecoverables come to? Will you add together these five figures? It is £29, is it not?—Under £5?

6422. Yes, it is £29, isn't it?—Yes.

6423. So that out of the total rates irrecoverable, which is £4829, only £29 applied to the cases under £5?—That is so.

6424. And of that £20 was irrecoverable and £9 was relief?—That is so.

6425. Then I would like another figure, and I will tell you for what purpose. It has been suggested in Glasgow by certain of the Corporation witnesses that the proposed Bill might be limited, at all events at first, to rentals under £10. I would just like to know what of the irrecoverables was applicable to rentals under £10?—I have it specially prepared in Table B 2. From that you will find that over £4 and under £7——

6426. We will look at this immediately, but I would like my figure first of all. Take the figure abated by appeals and then irrecoverable, and then total, etc., add up these figures?—From £5 to £10?

6427. From £1 to £10?—£2769.

6428. £2769 of the irrecoverables was applicable to rentals at and under £10?—Yes.

6429. Then I also want this: how many of the charges,—that is to say, what properties were included under the rentals up to £10?—22,936.

6430. That is out of a total of 78,803?—Yes.

Mr W. S. Brown.
7 Jan. 1907.

6431. I may say that in Glasgow, if you took the latter calculation, it appears that about 50 per cent. of the charges in Glasgow are applicable to properties at and under £10. Here the proportion is what?—It is about 30 per cent.

6432. Does that point in itself to the conditions in Glasgow being somewhat different from Edinburgh?—Yes, it does, very considerably.

6433. Because, as you understand, we have to consider in this matter the conditions of different parts of the country?—There is this in common between Glasgow and Edinburgh, that within recent years there has been a great reduction in the number of very small houses, say houses under £5. I think that is in common with Glasgow.

6434. Evidently the number in proportion is very much larger in Glasgow than in Edinburgh?—Very much larger, and the proportion is very much in favour of Edinburgh as against Glasgow when you come to houses of £50 and upwards.

6435. In your view, is the population as shifting in Edinburgh as in Glasgow?—No.

6436. Why should there be that difference?—The condition of trade is so different.

6437. Is that connected specially with the river and shipping?—I am not sufficiently aware of the condition of things in Glasgow, but there is not the opportunity for the shifting about in Edinburgh for the people who live in £10 houses—Edinburgh is so comparatively small.

6438. I am told that the percentage is rather under 28 per cent.?—Yes, approximately.

6439. You have told us how the matter stands, and you refer to that table. That Table A has been made up from the regular statistics?—It was made up in 1903-04 for a different purpose altogether.

6440. From statistics?—Yes, in the hands of the collector.

6441. And I suppose, if we want any special statistics, we can have them readily available from the town officials?—I wish to say that if there is any information which the Corporation through the Town Clerk or any of its officials can give you, you have only to ask for it; they will give it with pleasure.

6442. That table shows a remarkable loss due to the two heads you told us about: appeals for relief on the ground of poverty, 2975; and irrecoverable, £1854?—Yes.

6443. Did you draw any conclusion from that table as to what would be the advantage of the rating authority?—I did.

6444. What was that?—There would be £4829 additional to the rating authority, less the amount that would be paid to the factors or owners under Mr Cross's Bill.

6445. That is to say, if the rate was exacted from the owner direct, there would be a gain of £4829, less whatever allowance was made to the factor, I suppose under the three heads: first, cost of collection; second, actual loss from unpaid; and third, from unlets?—Yes.

6446. And also, of course, exemptions?—Yes. I also drew this conclusion, which I think you must consider—the great hardship that it might be to many of the very deserving poor, who would require to pay under Mr Cross's Bill.

6447. Quite. I will ask you about that afterwards, but I will note it in the meantime. You have prepared a table showing what, on basis of the allowances contained in Mr Cross's Bill, would be net gain to the rating authority, and that table is Table B?—Yes.

6448. That is a statement showing the total amount of charges for burgh assessments on rentals: (*a*) over £4 and under £7; (*b*) £7 and under £10; (*c*) £10 and not exceeding £20; second, amount recovered; and, third, amount written off under each group of rentals applicable to the same year 1903-04; and, fourth, amount which would be allowed in deductions to owners under Mr Cross's Bill. You are working there on the same amount of £4829, are you?—Well, I should say that that includes the exemptions, and also the amounts written off on business premises as well as houses, but there are so very, very few of the business premises that are exempt, that you may take it as substantially correct.

6449. I see, but we are taking in the case of Table B the figure £4369, in place of the figure £4829, in Table A?—Yes.

6450. Taking £4369, how much do you consider would have to be allowed under Mr Cross's Bill to the factors? You think £1568?—Yes.

6451. Deducting £1568, the allowance, from £4369, the existing loss, that would give a net gain to the Corporation of £2801?—That is right.

6452. That allows nothing for exemptions. That is on the footing that there are no exemptions allowed?—That is so.

6453. If you turn to the other table, Table A, and suppose that some method were devised for allowing the exemptions, that would wipe out the gain to the Corporation?—That is so.

Mr W. S. Brown.
7 Jan. 1907.

6454. So that on the footing of exemptions remaining, there would be no gain?—No.

6455. But if exemptions ceased to be, there would be a gain of £2800?—Yes.

6456. Would there not be in the case of the Corporation this gain, that they would have a reduced cost of collection?—I don't know that the staff could be very much reduced.

6457. But suppose they got taken in a lump sum from each factor for all the properties that he factored, there would be a considerable saving, would there not, in the clerks that go round, and the book-keeping staff, and so on? You have no means for estimating that?—No. I did speak to the collector about it, but he would not admit that there would be any saving. Perhaps I should make this observation in case it does not occur to me afterwards—there are probably 3000 owners and occupiers of property under £20. I don't know whether you propose, in the case of an owner who was also the occupier, to deduct the percentage under Mr Cross's Bill.

6458. That would require to be kept in view?—There are 3000 of them. That is assuming the Bill were to become law.

6459. You cannot tell me what effect in figures that would have?—I would require to get it worked out under the various headings, and I can do it if you desire it.

6460. You might just do that. This calculation of yours in Table B is on the footing, I understand, of the landlords paying 100 per cent.?—Yes.

6461. Except what may be in the allowance in Mr Cross's Bill, you make no other allowance for unlets?—No.

6462. You take Mr Cross's Bill as covering everything?—Yes.

6463. In your view would it be fair to have a system under which, in order that the Corporation might benefit, the exemptions should be wiped out—on the ground of poverty, I mean?—Yes, but there must be some tribunal to try those cases.

6464. What I am asking you is this, would it be fair to abolish the exemptions altogether, as would be the result of Table B, in order to benefit the Corporation?—No, I do not think it would be fair.

6465. Do you think that the exemption clauses of the statutes are on the whole fairly worked?—I do think so.

6466. For the relief of real poverty, and not for the encouragement of improvidents?—I am quite satisfied, from one's own experience, and from the method by which every case is considered, that there is every desire to get from any person who can afford it or who ought to pay the full amount of rate.

6467. Suppose collections of rates were made at frequent intervals, for instance monthly, would not a number of people who obtain exemptions now from an exaction that comes all in a lump once a year be quite able to meet their rates at short periodic intervals?—Many of them I don't think it would be fair to take from. I have always held for many years, and this Town Council also, that assuming a man or woman is getting relief from the Parochial Board, and that their case is a good case, that is a class that should not be charged with monthly rates.

6468. But taking those who are not paupers, are there not a considerable number of people who would not require exemption if there was a periodic collection?—If the statements are to be relied upon that are presented to the Corporation as the result of an investigation by the assessor's assistants, there may be one or two who, from the kind-heartedness of the town councillor, may be passed, but as a general rule I do not think they are in a position to pay.

6469. They may quite not be able to pay an assessment which comes all in a lump, but might there not be many of them who would be in a position to pay if it were coming at frequent intervals?—Those who drank might, but there are plenty who do not drink, and have not the money. There is a certain proportion unquestionably that fall under that category, but I think that there is a very large proportion who do not fall under that category. The struggle is such that every 3d. or 6d. is needed to keep body and soul together.

6470. Of course, it cannot be denied that they are getting the benefits to produce which the rates are spent?—That is very true. I am afraid that if there were more exactions many of them would land in the poorhouse.

6471. These figures for 1903 and 1904 substantially represent each year?—Yes.

6472. And they were made up without any question of this sort in view?—Yes; it was to see if we should seek Parliamentary powers in our own Bill. We did not go any further, because we were so struck with the facts. I found, from members of the Town Council after that statement was made, that any proposal of the kind would not have passed.

6473. Of course, if the view put forward by the landlords and house-factors to the effect that Mr Cross's allowances are totally inadequate, and would need to be doubled, is correct, then the benefit to the town would disappear?—Entirely.

6474. To the extent to which the figures required to be increased?—Yes.

6475. It is said by the factors, I think pretty generally, that Mr Cross's allowances would require to be doubled. Now, suppose you doubled them, and took £1568, you would then have £3136?—Which table are you referring to?

6476. Table B. If you doubled the allowances, and deducted the result from the £4369 of irrecoverables, that would leave £1833; and if you took into account that the irrecoverables had included exemptions of £2975, of course still more it would be evident that the Corporation would gain nothing?—Yes.

6477. It would really then come back to what I have said, that the Corporation would only gain at the expense of the people who are now exempt?—I think that is undoubted. If I might be permitted, there is another way in which it occurred to me how it would affect the owners of property. I take an example of a house with a £6 rent, let weekly, remaining, as many of them do, unoccupied for a certain period. The amount of the occupier's rate for the year on a £6 rent would be 10s. 10½d. Assume the deduction to the owner in terms of the schedule was 10 per cent., that is 1s. 1d., the owner would pay 9s. 9½d. Assume, which is very often the case, that the owner recovers from the occupier the half year, that would be 5s. 5½d., and the house remains vacant for another half year, the owner would make a loss of 4s. 4d. on that house. Assume that it was only for a quarter—and there are very many cases such as that—the loss would be 1s. 7½d. on a £6 rent. On a £9 rent, applying the same principle, let monthly, remaining unoccupied for six months, the owner would lose 7s. 3¾d.; for a quarter he would lose 3s. 1d.; and for a month—and that is very very frequent—he would lose 4¼d. On the other hand, I think there is a danger that the owner gains in some cases, because the difficulty of putting the amount upon weekly rents and monthly rents is that you cannot put the exact sum—you cannot divide it, and therefore you take the nearest fraction that you can get. I will give one or two cases where I think it would be a great hardship on the poor people, because we must expect that the proprietor would undoubtedly take care that he recovered the whole of the amount, as far as he could, from the occupier for the time being. I have said that, in cases where the same tenant remains in one house during the whole of the assessment year, the owner might recover in lieu of assessments more than the amount of the occupier's proportion levied. For example, a tenant of an £8 house, let fortnightly, pays to the owner at the rate of 7d. per fortnight, or during the assessment year 15s. 2d. The amount of the assessment levied is 14s. 6d. Under that head the owner gains 8d. But there are worse cases. Take a tenant of a £5 house, let weekly. He pays the owner at the rate of 2½d. per week—I don't suppose you are going into farthings—and that would be 10s. 10d. during the assessment year, the amount of assessment levied would be 9s. 0¾d., and the owner there gains 1s. 9¼d.

6478. I see. Then it has been put another way; it has been said that Mr Cross's allowance would be a fair allowance for the cost of collection merely, and that in addition the landlords would be entitled to come to the town, and on an accounting claim a deduction for all rates which they have not been able to recover at all, and, secondly, for all cases of unlets. Now, if that were done and allowed, the benefit to the Corporation would pretty much disappear?—Yes; but, at the same time, I think there is a great deal to be said for it, if the thing was to be done.

6479. May I take it, if such arrangements as are proposed were to be made that strikes you as the most reasonable method, to give the factors an allowance to cover cost of collection merely, rather than to allow the factors to adjust with the town year by year for all losses, rates that they don't recover and should not pay, and, secondly, rates applicable to houses which it turned out were either totally or partially unlet?—I think it would be a fair and proper thing to do; but, at the same time, I personally—and I believe the Town Council, though I am not speaking for them—would prefer things to remain as they are.

6480. But in your view, if it were worked out, but in the way I have mentioned, the inducement to Town Councils to go in for compounding would disappear?—Yes.

6481. You have told us that in Edinburgh you have local Acts. What is your main local Act?—1879.

6482. Is that a Consolidating Act?—Yes, and there has not been a Consolidating Act since 1879. There is a talk at the moment of having a Consolidating Act.

6483. But it is under the 1879 Act that burgh assessments are not levied on the occupier?—No, that is an amending Act.

Mr W. S. Brown. 7 Jan. 1907.

6484. I would like to have that?—I think it is 1891.

6485. We will get that?—Yes.

6486. Is there any allowance in these cases?—No allowance. Shall I put in the copies of the Act and the amendments under it?

6487. You might do that. In addition to that case where owners pay, are there any other rates, water rates or stair gas lighting, or anything of that kind, where owners pay the whole rates? We have had them mentioned in Glasgow. How does Edinburgh stand?—The stair gas is levied on the occupiers.

6488. Who pays it?—It is collected from the occupier.

6489. Then the water rate?—It is upon the occupier.

6490. Collected direct?—Yes.

6491. Then the only case in Edinburgh where the owner pays the occupier's rates is on premises under £5?—And by the amended Act houses which owners let for a short period.

6492. Up to any rental?—Yes.

6493. There are these two cases?—Yes. I shall put in a state, showing the clauses of the Act of Parliament upon that.

With reference to questions No. 6483 to 6493, it is to be noted that the Act of 1879 provides that burgh assessments are not to be imposed on occupiers (not being owners) of subjects rented under £5. It should be clearly understood that in those cases no occupier's assessments are levied. See answer 6544. The amending Act of 1891 provides that in cases where premises have been re-let during the assessment year, the owner, as well as the actual occupier is responsible for the occupier's rates, and this, of course, only applies in cases of rentals of £5 and upwards (Edin. Act, 1879, §§ 67, 71, 73).

6494. Could you tell me, or find out, what amount of rate is applicable to that second class you have mentioned of lets under a year?—Yes, we have that.

6495. We have got the five-pounders already. That would apply to lets under a year with a rent above £5?—Yes.

6496. Have you got that?—Yes, I think I have. I think it is about £800. I have a table which shows that last year the sheriff officer recovered 388 such cases that you have been speaking of.

6497. Above £5?—Yes.

6498. Not for shorter periods than a year?—Yes. Representing nearly £400 direct from the owner, and it is estimated that a similar number were paid by owners to the collector before the end of February, so that you may take it at about £800. I hand in a table which I think really represents what you want, Table C. That is for 1905–1906.

6499. Under the Act have you power, in every case where the let is for less than twelve months, to insist on owners paying?—When they have sub-let it for a short period.

6500. What does this mean, "The owners notified that they would be responsible." They were responsible in any case. Are these not for short lets?—Yes, under twelve months, but some of them desire to pay it themselves. We have it against either owner or occupier; we can go against either of them.

6501. In point of fact, what do you do?—First of all, we go against the occupier; we exhaust him, except in those cases which I have just mentioned. I should say, perhaps, that under £9 you will notice they come to 1506.

6502. That is £9 and under?—Yes. 1506, and one-third of those may be taken as properties belonging to the Corporation themselves. The other two-thirds is other owners.

6503. What would be the reason that would induce the other half to make this notification?—Because they were collecting the assessment along with the rents, and it was to save trouble at the end.

6504. But what made them collect the assessment along with the rent?—I suppose they found it convenient with short lets.

6505. Would it be because they would expect that in many cases they would not be paid, and they would then be held responsible, and they thought they could get it better?—I cannot tell the reason.

6506. Would it not rather suggest that in these cases they thought frequent collection would enable them to recover it from the tenant, and thus save their own pockets in the end?—I don't know. It is the practice, I think, with the weekly and fortnightly lets—and those are largely weekly, fortnightly, and monthly lets—to let the houses at an additional rent to cover the rate.

6507. On that question, isn't it the fact that there would be convenience, looking to working men getting their wages at short intervals, and looking to the practice of their paying rent at short intervals—would it not be convenient for them to pay rates at short intervals too?—I

Mr W. S. Brown.

7 Jan. 1907.

agree that, with rentals under £10, it is desirable, but above that I do not think so. I think that the ordinary working man desires to pay his rates direct. I do not think he wants to pay his rates through the landlord or through the factor at all. In Edinburgh there are something like 35,000 members of the stores, and they draw their dividends twice a year, just for the paying of their rents. I have never heard it suggested that those people desired short lets.

6508. To recur to what you began with, that under £10 it would be desirable. Why?—Because that is a floating population. They are not remaining very long in one place; and so many of them have to be turned out of their houses, because they are not able to pay even their weekly and fortnightly rents, that you must provide some other place for them.

6509. Taking it under £10, do you not think it is desirable, in everybody's interest, that they should pay their rates frequently?—Yes.

6510. There is no magic in £10, but that is a kind of rough average, that you think would meet the case?—Yes. I think that under that rent all the figures that we deal with show that the trouble is in those under £10.

6511. Are the rents in Edinburgh—I don't know if you know—fairly comparable with those in Glasgow, or are they higher or lower?—I am afraid I cannot say.

6512. Then you have prepared a table in regard to the occupied and unoccupied houses in Edinburgh?—Yes, Table No. 1.

6513. At present are things in a normal or abnormal condition?—There never was, during the last nineteen years, such a number of habitable unoccupied houses as there is at present.

6514. Mostly old, or a considerable number of new?—Both.

6515. I notice that in 1906-07, while the occupied houses are 70,446, the unoccupied are 4424. That is more than a proportionate increase, looking to the increase of the total number apparently?—I worked it out, showing the total percentage of unoccupied houses for the last ten years. That is interesting. If you go back to 1896-97, the percentage of unoccupied houses there was 1·9; next year it was 1·9 also. Then on page 2 it got up to 2·4, that is in 1898-99; next year it was 3 per cent., the following year 3·7, and the following year there was a little drop to 3·4. The next year, 1902-03, it went up again to 3·9, the next year 4·2, 1904-05 it was 4·7, next year 5·4, and in 1906-07 it was 5·9.

6516. So this is the highest it has ever been during all those years?—Yes.

6517. What do you attribute that to?—Overbuilding; and a large number of the big jobs being finished, the people had to go elsewhere. I should say under that, that I looked over the table, I got a return of the houses in the various parts of the city, and those unoccupied houses are distributed pretty well over the whole city. I can give you the details, if they were wanted; but it is sufficient to say, that in the various wards of the city there are unoccupied houses of all rentals.

6518. You could not give us the proportion of the 4424 under £10?—I could give it you under £6. There were 360; and over £6 and under £10 there were 924; and £10 and under £20, 1677.

6519. That is 2961 altogether?—Yes. I should say that this is at November 1906. The figures may not absolutely tally with May, because this was taken in mid-term.

6520. Roughly, about 3000 out of 4500 would be under £20?—Yes.

6521. You also gave us Table 2, showing the grading of houses, "Number of houses at £4 and upwards classified under different heads"?—Yes.

6522. I see that total includes only dwelling-houses?—Yes. This was prepared specially, having regard to the terms of Mr Cross's Bill.

6523. I notice you show in the amended table you have just given me totals £4 up to £20 inclusive, 49,584?—Yes, of which so many are unoccupied,—3024, leaving 46,560 as occupied.

6524. Then you show that £21 and under £25 there are 4293, with 318 unoccupied; £25 and upwards, 17,120, with 1898 unoccupied?—That is so. We have not mixed it up with anything but dwelling-houses. In the other table you had houses and shops.

6525. In regard to the figure, the limit, in Mr Cross's Bill as applicable to ordinary working men's houses—what is your experience in Edinburgh as a fair limit for an ordinary working man's house, not a foreman, not with a large wage-earning family, but an ordinary case?—You can take it this way, that a one-room house is £5, a two-room house is £10, a three-room house is £15, and a four-room house is £20. I think, probably, the rent for a large proportion of working men, unless they take in lodgers, is something like £15.

6526. That is roughly?—Yes.

6527. So that £20 would certainly cover it?—Yes; but there are men above £20.

6528. £20 would certainly be a fair limit in the ordinary case?—I think it would be above the ordinary case.

6529. You have handed in a certain table,—B2. What is that?—That was simply the separate amounts, so that you might have before you the exact amount that was abated on the ground of poverty and what was irrecoverable on account of people disappearing and bankruptcies and so on. It is only an amplification of Table B. If you take the irrecoverables alone that amounted to £1657. The total allowed to owners under Mr Cross's Bill is only £1568, so that even under the irrecoverables there would be a small loss to the owners. For £4 and under, then, the loss was £535, and under Mr Cross's Bill the owner would only get £181. For £7 and under £10 the irrecoverable was £596, and under the Bill the amount would be £338. For £10 and not exceeding £20, the irrecoverable was £526, the amount allowed to the owner under Mr Cross's Bill would be £1049. It is under that largely that I say that probably you have 3000 of the owners who are also occupiers, and therefore under that head it requires some consideration if the Bill was to be passed.

6530. Has the other method—apart from owners collecting occupiers' rates—the other method of more frequent collection by the rating authorities ever been before the Town Council?—It has not.

6531. So far as you know is any rate collected by any rating authority anywhere more than once a year?—I don't know.

6532. In England or Scotland or anywhere?—I could not say.

6533. Does that point to anything?—That it is more frequent?

6534. That there are practical difficulties?—Yes, there are practical difficulties.

6535. Apart from statutory obligation, do you favour voluntary arrangements under which short lets and short collections of rates should be entered into?—I do. I think it is quite sufficient that there should be permission to make the arrangements that any tenant desires. For many years in Edinburgh there has always been such a large number of unoccupied houses that I do not think that anyone has any difficulty to make an arrangement to suit himself.

6536. If you have voluntary arrangements under which the landlord collects the rates, how would you propose that he should get any allowance?—I do not propose it. He is not compelled by law. He enters into it himself, and he knows that in Edinburgh at the present moment he is responsible for the rates, and therefore I have no doubt he takes care to make arrangements to recoup himself.

6537. You are now talking of under £5?—I would favour it up to £10.

6538. Have you any objection to extend the statutory limit from £5 to £10? Up to £5 the landlord collects and pays just now?—But the landlord is responsible above £5, if he enters into a short let.

6539. But in the case of a let for a year he is not responsible?—No; and therefore I would leave it alone, so far as I am concerned.

6540. Take it this way, do you think that the statute works well so far as it makes landlords responsible in all cases of rents under £5?—I think that is right.

6541. You think that was a fair statutory provision to make?—I think it was.

6542. Why should that not have been left to voluntary arrangements also?—It is only owners' rates, you know, that they pay.

6543. But the whole rate is paid?—No, it is only the owner's rate, not the occupier's rate. It is only where it is short periods of let.

6544. Under your local Act are not all rates of houses let under £5 paid by the owner?—Not the occupier's rate. There is no charge on the occupier under £5.

6545. Let us see how the statute puts it?—"Provided 'always that the burgh assessment shall not be imposed on 'the occupiers, not being owners of lands and heritages 'rented or valued under £5."

6546. But then, that does not mean that the occupier does not pay rates?—He does not pay rates.

6547. They are not imposed on him, and not exacted from him, but has he not to pay in one shape or another for the benefits he gets along with the others because his rent is under £5?—Unless you put it that the landlord charges a bigger rent because he is free, but he does not, in point of fact, pay an assessment himself direct. He may indirectly. The landlord having the great trouble with that class of property he may be getting a bigger rent in proportion to the accommodation which the tenant has. He may take into consideration the fact that he does not

Mr W. S. Brown.
7 Jan. 1907.

pay rates. I think that is a matter which house-factors will be better able to tell you about.

6548. If the statute has so provided up to £5, and if you have a shifting population up to £10, do you see any reason why that £5, especially looking to the fact that now, since these Acts were passed, rents are a good deal raised—why that £5 should not be heightened to a certain extent?—I say in my *précis* that I do not object to it; but I do not see any reason, so far as Edinburgh is concerned, because things are working, as I understand, perfectly satisfactorily, and I have taken a good deal of trouble to ascertain it.

6549. In short, there is no substantial grievance?—I think not, so far as Edinburgh is concerned. I hope that I have made it perfectly clear that we do not get occupier's rates under £5.

6550. That is your reading of the Act?—Yes, and it is the practice.

6551. You get only from the owner, so far as you get?—Yes, under £5, owners' rates only and not occupiers' rates.

6552. If there was to be an alteration of the limit, instead of being £20, your view is that it should be £10 in Edinburgh, at all events?—I think it would be unfortunate to go higher. I think it would be dragging the better-class working man down to a position that would be unfortunate. My experience of small house and short lets has shown me that those with short lets do not keep their houses in the same condition as those with long lets—twelve months. That is very marked. I think I went through almost every house that was pulled down during the improvement schemes operations for ten years, and that circumstance was most marked. I have repeatedly seen, over and over again, that where an old woman or an old man had a twelve months' let of his house it was a pretty clean and tidy house, but where you had three monthly or two monthly or weekly tenants, then, as a rule, the houses were deplorable.

6553. But do you think that proves anything? Is it not the fact that when a factor gets a good class of tenant he insists upon his being a yearly tenant?—You cannot insist, I am afraid. I think I would leave it that if a tenant wants it he should have the privilege of saying, "I am 'going to have a twelve months' lets. I am not going to 'live here on a monthly let. I want to have a twelve 'months' let."

6554. But do you think you can infer anything from the condition of the houses, if it be the fact that a factor will not give, as we have been told by different factors that they wont give, to a good class of tenant anything except a yearly let?—My answer to that is this, that they have only to go to another factor, and say they want a three monthly house, or a monthly, or a weekly house, and they will get it.

6555. Is that your experience?—There is no doubt about that, in small houses.

6556. We have been told by some factors that if the tenant came and said, "This has been a yearly tenure 'hitherto, I want this house on a monthly tenancy, he 'would not get it"?—That may be so with houses above £10. I was rather thinking of houses under £10.

6557. May I take it that if short lets were enacted by a Bill such as is now proposed with a limit, let us say, up to £10, do you think it follows that compounding up to that extent must ensue?—I think so.

6558. The one, in your view, involves the other?—Yes.

6559. Apart from the limit?—Yes.

6560. Even under the present system, whatever the rent may be, the owner is responsible if the let be for less than a period of twelve months?—Yes, after we have exhausted the occupier. There is a great danger from another point of view that a man, in the first month he is on the roll, may remove, and yet that is the man who would have a vote, and those who came later would have no vote at all. There are so many side issues.

6561. You think that all these side issues require to be considered in the main question?—Yes, it is very necessary.

6562. Now, is there a difficulty also owing to the fact that it would not be possible to know the exact rate that had to be paid, in May for instance, and indeed not till when?—September.

6563. It is fixed in the end of September?—At the present time the factors who are collecting rates and rents must assume that the rates are going to be a certain sum; and I suppose I am not doing the landlords and the factors an injustice when I say that they take very good care that the sum they put on will be sufficient to meet the likely rate, and the poorer the tenant the more he suffers if there is no increase of rates or if there is a decrease.

6564. You are now talking of short lets above £5?—Yes.

6565. It has been suggested that the difficulty might be got over by the rates being fixed on the previous year's rates?—That could be done. It would dislocate matters for the year, but only for the one year.

Mr W. S. Brown.
7 Jan. 1907.

6566. I think you have not considered what, if there were to be an allowance, would require to be the exact percentage?—No, I have prepared those figures, and I allow the Tribunal to judge of the effect from the figures I have prepared.

6567. Now, the only other table was Table No. 3, about the Corporation's houses. This was prepared by the City Chamberlain?—Yes.

6568. In reference to the houses which the Corporation owned. How do they come to own houses,—was it improvement schemes?—Partly improvement schemes, in the widening of Bristo and other places, and partly the clearing out of slum areas under the Housing of the Working Classes Act.

6569. Have they properties, both of the class of new houses that they have built and of old houses that they have improved?—Yes; and of the total number of 972 there are 841 of those let on weekly rents, there are 60 on monthly lets, and 71 yearly lets.

6570. Then take the rents: they are as follows:—

Rents up to £5	79
Rents between £5 and £10 . . .	802
" " £10 " £15 . . .	76
" " £15 " £20 . . .	6
" " £20 " £25 . . .	9

A total of 972?—Yes.

6571. 824 are let by house-factors under the supervision of the City Chamberlain and 148 are let direct by the City Chamberlain. All that he rents are on yearly tenure?—Yes.

6572. How long has this gone on? Since Provost Chambers' days?—This began, I think, in 1891. It began in the Lawnmarket. There have been various improvement schemes,—I think it began in 1891 or 1892.

6573. Are you going to retain them permanently?—I hope not. We want to sell them badly.

6574. We have been told about the Corporation property in Glasgow, where they select the tenants and have caretakers. Have you arrangements of that sort?—Yes, we have tried all ways. We have had caretakers and we have had the Social Union. I regret they gave up factoring. I think they were better managed by the Social Union than they were by caretakers or by factors.

6575. Why did they give it up?—I think largely because there was certain uncalled for criticism by some Town Councillors regarding what they termed the interference of ladies going into houses and asking if they were kept clean, and if their persons were clean, and so on.

6576. In the case of properties let by the City Chamberlain, is security taken?—Sometimes.

6577. What is the practice generally in Edinburgh on that?—As a rule, I think the practice is that there is security taken or fore-handed rents. I am taking it generally and not merely of short lets. There is security or fore-handed rents for the first twelve months. I think that after the first twelve months, if they have proved to be good tenants and paid their rents, they do not ask a cautioner's line for the second year, but they allow them to go on from year to year.

6578. What is the practice there with regard to short lets?—I will put in a book showing the actual conditions applicable to the city's properties and I think to others also. There are a large number of those I have referred to before that belong to the city, and they have to leave a deposit of four weeks' rent of the house.

6579. I notice, as an illustration, it is stated in regard to William Morrison and Hugh Munro, that all tenants must pay a sum equal to four weeks' rent. Is there not very often a requirement of cautioner?—Not for that class of house.

6580. For what class of house is it required?—For houses that are let by the year.

6581. I have noticed in some of the *précis* that we have, complaints by the working men of the requirement of a cautioner is often a difficulty, especially with strangers coming into the town who do not know anybody to apply to?—Yes; but I think if those strangers produced the receipts of their rents from the city where they have come from, I do not think there is any difficulty.

6582. In the Corporation property, can you say whether there has been any desire on the part of the tenants who are on weekly tenure to have any other tenure?—No; I think they wish to remain as they are, and I do not think we desire anything else ourselves. In regard to that I might mention as a great hardship the expense that the city is put to in turning out a bad tenant. I do not know whether you are dealing with that question?

6583. Yes, incidentally we are?—It is a very very serious inconvenience, because sometimes you do not get your four weeks' rent in advance; but supposing you do,

Mr W. S. Brown.
7 Jan. 1907.

and you have exhausted that, it will cost you about 15s. to turn out a bad tenant if he wants to be troublesome.

6584. That is to say, if you require to get a sheriff officer to do it?—Yes.

6585. When they see the game is up, don't they generally go?—I don't know that they do. The difficulty is to clear the house. The sheriff is sometimes very soft-hearted, and he gives them a fortnight to clear out. He comes back and says that he has not got a house, and so on. I think that for short term houses, if that is to become compulsory, you will have to deal with the question of expense and a simpler method of turning out.

6586. You refer to both expense and delay?—Yes.

6587. Is that matter dealt with in Edinburgh only in the Sheriff Court?—No, it sometimes goes before the Burgh Court.

6588. We have heard that in Glasgow, owing to the expense being less, most of the cases go to the Burgh Court, and what is complained of is the delay?—My impression is that the expense is the same, because you have to employ a sheriff officer.

6589. In Glasgow there was no suggestion that any of the sheriffs had soft hearts, but it was rather the burgh magistrates that were afflicted with that complaint?—I should think it is the reverse here. I think it is the sheriffs who are soft-hearted, and the magistrates are—well, the reverse.

6590. I suppose the sheriff does not grant delay, such as you refer to, unless there is some reason assigned?—A poor creature comes up crying, and saying that there is sickness in the house, or she cannot get another house, and I think that very frequently tells. I have seen that myself. I am not able, from my own personal experience, to say very much about it.

6591. You have done it yourself, I am afraid?—Yes, I have undoubtedly from time to time given time, when I thought it was a genuine case.

6592. Do you think any statute would interfere with that class of case effectually?—What are you to do, supposing, as it does happen, that you do not get fore-handed rent at all, and a person comes in, and the first week he is due 3s. for the room, and is not able to pay it or does not pay it? He is a bad tenant, and the worse the tenant the better they know about the law; and you cannot get these people turned out, although you have not fingered a penny of their money, without spending 12s. or 15s. I think there is something very far wrong, and I am afraid there is quite a number of cases.

6593. So you think, if short lets were enacted, that would require to be accompanied with some provision for speedier and cheaper ejections?—Yes. I know there is another side to it, but I do think it is a very hard thing.

6594. I suppose, if there was hardship resulting, it would not be on the good class of working men but on the improvident?—That is so.

6595. So you don't think that the decent working man would have anything to fear?—I don't think so.

6596. You can tell us about the changes. In the 824 houses under the charge of house-factors the changes were about 280 last year?—280, yes.

6597. That is an average of a change in every three houses?—Yes; the changes in the 824 houses were 280, being an average of one change in every three houses.

6598. Contrast that with the changes in the houses under the charge of the City Chamberlain—out of the 148 on yearly tenure there are not more than ten or twelve in each year?—That is so. Then there is this important statement, that of the 280 tenants who removed during the year about one half of them may be said to have been ejected in consequence of non-payment of rent.

6599. Just let us see. Of your total houses, 972, how many are on yearly tenure?—71.

6600. But then I thought you said that all that the City Chamberlain factored were on yearly tenure. He lets 148?—Then some of his must not be yearly. We made the abstract from his statement.

6601. You say the houses let by the City Chamberlain are all let on yearly tenure, and then you say he lets 148?—Some of what we term yearly tenants pay their rents quarterly, some monthly, and some half yearly.

6602. How many yearly tenants, apart from payment of rent, will there be out of your 972? There is evidently some little confusion somewhere. You can look into that, and let us know the exact number of yearly lets?—When I say a yearly let there are a certain number who pay their rents quarterly rather than give security. They will say, "Well, we will pay you a quarter's rent in advance." But still we call that a yearly let.

6603. We want to know whether the statement is correct that out of the total there are only 71 yearly lets, or whether the other statement is correct, that the City Chamberlain lets 148 houses, and they are all yearly lets?—I will see about it.

6604. Then I understand your view is that whatever the requirements may be in regard to the Glasgow and the Clyde district, the proposals contained in this Bill are not required in Edinburgh?—So far as I know myself, and so far as I know public opinion as expressed at ward meetings, etc., etc., I don't know that there is any desire for any change.

6605. There is one other matter, viz., the length of time between the taking of the house and the entry into the house. The view in Glasgow I may say was universal that there is room for an alteration there?—I agree.

6606. We heard that from all sides?—And as far back as 1895 the Town Council were approached by the house-factors themselves, as the result, I think, of some talk in the Trades Council. I am not sure how the matter arose, but they approached the Town Council, and asked them to recommend, and they recommended that, instead of it being February, it should be March.

6607. Quite. You have told us also about that having been gone back on. We have been told that the difficulty has arisen because certain people would not abide by that arrangement?—That is so.

6608. Does that not seem to point to the desirability of a statute making it obligatory?—I agree with you; and instead of it being February, it ought to be March.

6609. It has been said that the way to begin the matter is to alter the date of warning away. At present it is 4th April. It is suggested that that might be made substantially later. It is suggested that if that were so, then the date for taking houses would be substantially later. You agree with that?—Yes.

6610. In order to prevent people kicking over the traces and taking unfair advantage, it ought to be compulsory all over?—I agree with that.

6611. Of course, the detail as to what amount of difference should be made is a matter that we need not go into?—That is so. There is one other thing I should like very much, if it could be done, and that is, while I am strongly in favour of twelve monthly lets, I should like very much that strangers coming from England to Edinburgh, who having been accustomed to quarterly terms of removal, they should be able to take their houses at any of the quarters, instead of having to go out in May.

6612. At present there is really one term of removal?—Yes, 28th May.

6613. It has been said apparently all round, that that leads to practical inconvenience. What is your view on that?—I think that there is a pressure both on the part of tradesmen getting work done, and there is also a certain pressure with removals all happening on the one day.

6614. What you would like to see would be four terms?—Four terms, but in each case a yearly term.

6615. A yearly let?—Yes; but I think that if I take a house at Lammas, I should be entitled to take that on for a twelvemonth, and I think that would get over a good deal of the difficulty that there is at present.

6616. (*Mr Dobbie.*) In regard to the houses owned by the Corporation, I see that the ejections are something like 17½ per cent., through non-payment of rent?—Yes.

6617. Could you tell us what the recovery of the rate might be upon the total number of these houses—how much do you lose?—I will put it in. I am ashamed to say how much we do lose.

6618. What do you think it would come to? You say that the factors state that this arrangement is satisfactory to the tenants. We would like to know what the landlord loses through this object lesson in the collection of the rates?—I am afraid I cannot tell you just now. I will put in a state. They differ very much according to the factor who factors the property. I do not think you will find two factors alike as to the loss, but I will put in a table showing exactly what the loss has been.

6619. In your experience have you heard of tenants removing to avoid paying their rates?—No, I have never heard of it.

6620. That does not account for any part of the loss caused under the present system?—You mean to the Corporation?

6621. No, generally?—I don't think so. Nobody wants to pay more money than what they have to, but I suppose there is a certain satisfaction in paying their rates.

6622. You are satisfied that the making up of the assessment roll four times a year is practically impossible?—It would require a very much larger staff.

6623. We were told in Glasgow that it took about four months to make up the annual roll?—I can tell you the time it takes here, I think. The burgh assessor's annual survey of the city begins immediately after the 28th of May. He completes the valuation after the statutory meeting of the Appeals Court on the 10th of September, and, on the rate of assessment being announced, he begins the preparation of the assessment roll.

6624. So it is physically impossible to have four rolls in

the year?—I should say so. At the same time the collector starts the preparation of the demand notes, and he proceeds about the 11th of November to serve the same in the order of the wards.

6625. Do your Burgh Courts have many cases of ejectionment before them?—I am sorry I cannot tell.

6626. Can you suggest any practical remedy for the delay to which you referred? What would your remedy be?—I think I must leave that to the lawyers.

6627. Of course, as a public man, you might voice public opinion. In England a landlord, whose tenant is in arrear may put a man in possession, and at the expiry of some five days simply remove the furniture, without any warrant from any magistrate or judge. In your view would some such procedure as that be desirable?—I think it is too drastic. There might be justifiable reasons for a longer time than that.

6628. Between that procedure and the appeal to the tender-hearted sheriff——?—Or magistrate.

6629. What would be the course you would suggest?—I have not applied my mind to that. I could not say. I believe there is a clamant necessity for something being done, but I am not prepared to state what that something should be.

6630. Then you referred to the effect of any change on the franchisement of votes. Can you tell me the number of people who are disqualified in respect of failure to pay rates?—I can let you have that, because we have been applying our mind to that.

6631. (*Chairman.*) The Town Clerk can let us have that?—I can let you have it.

6632. (*Mr Dobbie.*) As the Bill stands at present, if the landlord paid the rates direct, the whole of those occupying houses under the limit would be enrolled as voters?—Yes; and a man might only pay a month or a week, and he might be a voter, although others were paying rates for many months and would not have a vote.

6633. The practical difficulty there is, assuming short lets, there is both trouble in regard to the franchise and also to the recovery of the tenant's rates from the proper party under any change of the law?—Yes.

6634. Was I right in gathering, from what you told the Chairman, that the owner pays no more rates per pound on houses under £5 than he does on houses above £5?—That is so.

6635. He is not assessed doubly?—No.

6636. I do not think you have clearly answered the question put by the Chairman. He asked you what you thought was a reasonable limit in Edinburgh for a working man's house?—I understood the average of the ordinary working man, what he would pay.

6637. What would you say was the average amount which a working man in Edinburgh pays for his house?—I should say something like what I said before, £15. From £5 and under £10 there are 18,000, from £10 to £15 there are 16,000, from £15 to £20 there are 13,000, and then it begins to drop.

6638. There are 28,000 houses in Edinburgh between £10 and £20, whereas below £10 there are 23,000 houses; so that if any change were made, and were confined to houses below £10, it would only affect 28 per cent. of the houses?—I take the figure from you.

6639. And it won't affect 28,000 houses under £20?—Yes, that is under the Bill.

6640. Under the Bill?—Yes; of course, there are a considerable number of houses beyond that attached to shops.

6641. May I take it that the 28,000 houses between £10 and £20 are largely occupied by the working class?—The learned Sheriff distinguished between the working classes, the difference between the foreman. Of course, in that later figure of which you now speak there are many foremen.

6642. May I take it that under £20 the occupants are of the working class?—With that explanation, yes.

6643. One clause in the Bill has not been dealt with. Assume that there is to be an Act, do you approve of that Act being optional?—No. We have had sufficient of that with the ten o'clock closing and other things. If it is going to become an Act, let Parliament decide themselves and not put it on the Town Council.

6644. Does that mean that if Glasgow, feeling very keenly upon this question, persuades Parliament that it has a grievance there to be redressed, it must follow that the same change should be made in Edinburgh?—I am afraid that to be consistent I must say yes, for this reason, that if this was to become law there would be a certain number who would want the change, and they would make themselves so conspicuous at the different ward meetings of the city that the poor Town Councillor would have a nasty time of it.

6645. That would rather suggest that the majority are in favour of the change?—No. I wish the majority went to the ward meetings. The noisy people go to the ward meetings.

Mr W. S. Brown. 7 Jan. 1907.

6646. The majority go to the polling booth?—I am sorry to say that a very large proportion do not go to the polling booth.

6647. Assuming that there was to be optional legislation, I would like to know this—under this Bill, Edinburgh and Leith are treated differently?—Yes.

6648. Do you think that, assuming there is to be a Bill, and there is to be an option in each area, Edinburgh and Leith should be permitted to have a separate option each, or would that result in disorganisation in the case of people removing from the one city to the other?—Well, I am afraid I cannot answer you. I do not know how many changes there are from Leith to Edinburgh and from Edinburgh to Leith. I am afraid I cannot tell you that.

6649. You do not profess to criticise the rates suggested in this Bill?—No.

6650. But looking to the loss at present caused to the Edinburgh Corporation by irrecoverables alone,—19 per cent. under £7 and 7 per cent. under £10, it is obvious that the proprietors will lose unless they get an allowance equivalent to the loss at present made by the different corporations?—Yes, that is the first answer. The amounts allowed to owners under Mr Cross's Bill are calculated in Table B^2 upon the actual recoveries under the present system, but were the owners to be made liable for all charges, except those abated on the ground of poverty, the commission allowed on the amount recovered would slightly exceed the amount at present found to be irrecoverable. But there is not only the difference betwixt what you propose to give under the Bill and the irrecoverables, but the certainty that in all those houses there is a large number of them stand empty for a certain time each year.

6651. They would require to get, in the first instance, something equivalent to what the Corporation cannot recover at present from existing tenants?—Yes.

6652. And they would require to get a refund or an allowance equal to a proportion of the rates on empty houses during the year?—Yes.

6653. Do you agree that something should be given for the trouble of collecting?—They are collecting their rents,—I don't know that there is very much difference when they are collecting their rents. Yes, they are entitled to something, because there is separate book-keeping.

6654. The town loses 15 per cent. on the ground of exemption for poverty, and that would require to continue, and that allowance also made in addition?—Yes; and I think it would be unfortunate, while it would be a gain to the city, if those poor people, many of whom are decent honest people, if they did not have the opportunity of appealing again to their assessment. I know many of them struggle to pay it, and like to pay it if they can.

6655. Assume the exemption provision exists, if an allowance is made in respect of failure to recover, and an allowance for trouble in collecting, it is obvious to you that the Corporation cannot possibly gain?—They cannot gain.

6656. (*Mr Cox.*) Did I understand rightly that in the case of short lets, and between the rental of £5 and £10, you think the owner is responsible for the occupier's rates?—Not only between £5 and £10, but between £5 and any rental, if he lets his property in short terms.

6657. Then, if that is so, how should you have the amount written off as loss. In Table A, rents of £5 and under you have written off 38 per cent. of the total rates, 33 next year, and so on?—This refers to all charges, as I explained before, and not merely the question of dwelling-houses, but all charges, bill-posting stations, cellars, shops,—everything.

6658. (*Chairman.*) They are almost all short lets. How do you account for that enormous jump of 14 per cent. to 38 per cent.?—The £131 is an appeal, and the Corporation have given it up. The irrecoverable, 19—these are bankruptcies and disappearances. I think that there are certain landlords who have a doubt—I did not want to go into that, but there are certain landlords who have a difficulty in agreeing with our collector that they are responsible. They rather take the view that if it is only let for three months they should only pay for three months, and it has been decided by the Sheriff that they are responsible for the twelve months. There is a difference of opinion, however, and I am afraid, in some cases, they are very lenient.

6659. (*Mr Cox.*) You gave us a graphic description of the difference in appearance between houses that were let on short lets and houses let on yearly lets, the ones let on short lets being very dilapidated?—Many of them. I hope I did not classify them all so.

6660. Would that not be accounted for in this way: We were told in Glasgow by an owner that he would not, on any condition, let new houses on anything but a yearly tenure; that it is only when houses begin to get dilapidated

Mr W. S. Brown. 7 Jan. 1907.

that he will let them in short lets?—I was describing what I saw with my own eyes when visiting slum areas about to be pulled down; and I described that, in some of those slum areas, some of the worst districts in the city, you did come across cases—I do not say many—where the house was all that could be desired, and you made inquiry about it, and found—I do not say it was always the fact—that it was because it was a yearly let. I remember perfectly well an instance of one of them when we asked the meaning of this delightful little house, and we found it was the result of going to the salvation army. But in some of the cases I referred to it was the yearly let that accounted for the house being in a cleaner and better condition.

6661. You spoke as an argument for long lets about people letting their dividends at the stores accumulate, taking them half-yearly to pay their rents?—There are some 35,000 members of the stores at present who very largely owned this class of houses, and they draw their dividends half-yearly.

6662. Do you suppose that the half-yearly dividend would be a substantial proportion of the half-yearly rent?—Yes, I think so.

6663. What do you think would be his dividend?—It is not an unusual thing for a working man to get £3 and £4 every half year towards his rental.

6665. (*Mr Binnie.*) If short lets were introduced, could you not arrange for frequent collection of rates?—We could do it, of course.

6666. You could do it?—Of course, you can do anything; but it would certainly mean an enormous increase of expenditure if you were to put that on the collector.

6667. How is the gas collected now?—Three times a year, I think.

6668. And why should the taxes not be collected also if you can collect the gas?—I say that there is nothing to prevent it being done, but it would cost the Corporation more.

6669. And you would put that trouble on the landlord?—I am wishing things to continue as they are.

6670. But if there was a change, if short lets were introduced as proposed in this Bill, then what would you propose?—I would put it upon the landlord.

6671. Because of the expense that it would save the Corporation?—Yes, the expense, and the difficulty of getting it carried through; but because of the expense largely.

6672. It is a question of expense?—Yes.

6673. And nothing else? You do not suggest anything else but the saving of expense, do you?—I would leave it at that, the saving of the expense.

6674. Will you explain the course of procedure at present in cases above £5, when you make the landlord responsible for the occupier's rates?—We do not make him responsible, except in cases where he himself chooses to have short lets.

6675. In cases where there are short lets, such as are proposed by the Bill, you first say you serve a notice on the tenant?—Yes, if we can get him.

6676. Where do you serve that notice?—Wherever we can get a hold of him; wherever he is.

6677. When do you serve it?—In the month of November.

6678. How long do you allow before you take any proceedings against the tenant?—Three months. It is now the month of March.

6679. That is four months. And then you intimate to the landlord that you have not recovered from the tenant and ask him to pay?—Yes.

6680. How does he recover it from the tenant?—I do not think he recovers it at all. The tenant has disappeared.

6681. Up to the month of March you have not given him a hint that you have not succeeded?—I would not like to say that. I am told by the collectors' assistant that you tell him simultaneously. Whenever the collector realises that there is to be a difficulty, he lets the landlord know.

6682. And when is that?—On the report by the sheriff officer.

6683. And when will that be?—In the month of April.

6684. So that eleven months of the year have elapsed and he has only a chance in one month to recover what you have failed to get in five?—Yes, that is so.

6685. We were told by a gentleman from Rothesay that, to impose upon the owners and occupiers in Rothesay and the other coast towns on the Clyde, the conditions of this Bill would be most disastrous, because they only get their rents during the summer months, and he pointed out difficulties. Would you, if this Bill passed, think that an option should be given to such places as Rothesay, Dunoon, Largs, and the other watering-places—and possibly there are some on the east coast in the same predicament? Would you think that they should get the power to contract out of the Bill?—I have never thought anything about it, and any answer I could give would be without due consideration.

Mr W. S. Brown. 7 Jan. 1907.

6686. But you have told us that you have thought about the question about different parts of the country being treated differently under the Bill, and you said that you thought that the Bill should apply to all parts?—I had not thought under that heading.

6687. What do you mean by "under that heading"?—I have never considered about Rothesay and these other places,—I do not know the circumstances.

6688. But if they are satisfied that their circumstances are so different from the circumstances of other towns, do you see any difficulty that would arise from giving them the right to contract out of the Bill?—I am afraid I cannot give you any assistance. I am afraid that that is a matter on which the Tribunal must make their own minds.

6689. (*Mr Howden.*) You have told us that the average rent which the artisan classes in Edinburgh have been paying is £15. Have the artisan class in Edinburgh security of employment?—I think that in Edinburgh they have very substantial security. Of course, I know that what may be in one's mind when you ask a question of that kind is that a man may be six or nine months in one shop and perhaps three months in another. I do not think there is a fluctuation in the various trades in Edinburgh. There will be among the labourers, but not among the artisans.

6690. Not among the skilled labourers?—I don't think so.

6691. Have you any idea of the proportion of unemployed in the skilled artisan class?—It is comparatively small at the present time. I saw the figure a few weeks ago, and it is comparatively small. It is less than last year and less than the year before. I think that the total unemployed at the present time in Edinburgh is something like 1000; and the skilled artisans—of course, I am speaking only from memory—I do not think were above 15 per cent. of the 1000. I can put that in if you like.

6692. My point is this, would you deprive those men of the right to look for a job elsewhere because they had a house standing in their hands?—I would not like to deprive him of that right. I have been a working man myself, and I know what I am talking about. Supposing a working man has been unfortunately thrown out of a job, and he cannot get another job in Edinburgh, suppose that man goes to Glasgow or Greenock or some other place, I think he would be a very foolish man if he were to throw up his house to-morrow. I think what he would do, and what he does in point of fact is, he will go to Greenock and go into lodgings for the time being.

6692*a*. Why?—Because he has got a family,—he has a boy or a girl or perhaps two boys in a situation in Edinburgh or at school, and there is no desire till the end of the session to interfere with those arrangements.

6693. And that entails on that working man that he has to pay a rent for lodgings in Glasgow and a rent for his house here?—But it would be a more grievous hardship on the man if he was at liberty to give up his house, take his children away from school and away from their work, would it not?

6694. Would it entail a hardship on him if he had the option of doing the one thing or the other?—I say that in Edinburgh, so far as I have heard and so far as I know, I have never heard of the matter being raised, and I do not think there can be many such cases. If there were many of them we would have heard of them at the ward meetings long before this.

6695. What method do you take for the collection of your water rates in Edinburgh?—We send round the collector.

6696. In Glasgow under £10 the water rate is collected by the owner; is that the case in Edinburgh?—Yes, it is the same here.

6697. Could you tell us what percentage is paid for collecting the water rate in Edinburgh? I understand you to say that the owner or the factor pays the water rate under £10 for the tenant?—Yes.

6698. What percentage do you allow him for collecting that?—I think it is only the public water rate; it is not the occupier's rate. When he pays his rent he takes that deduction off the landlord. I think I am right in saying so.

6699. Do you allow the landlord any percentage?—No.

6700. Mr Binnie put to you a question in connection with the unfair treatment that you deal out to the landlords in not making that compulsory on the owners paying their taxes until eleven months of the year had run, and I think you admitted that it was a substantial grievance?—No; I do not admit that, for this reason, he knows the law when he enters into this arrangement with his tenant. He is supposed to know it as well as we do.

6701. And he makes provisions and looks after himself, in fact?—Yes.

6702. And the town tries to get it out of the occupier, and leaves the landlord with what he has collected from the tenant?—If they fail to get the balance they will try and get it from the owner.

6703. Don't you think it would be a much fairer plan to make the owner responsible from the beginning of the year, and to come on him at the end of the year for the whole?—No, I cannot say that I do.

6704. You do not think that would be a fairer plan?—No. I would leave matters as they exist at the present time in so far as Edinburgh is concerned.

6705. You told us that the members of co-operative societies in Edinburgh, so far as you were aware, were not in favour of any change?—No, I did not say anything of the kind, with all deference. I did not make that statement.

6706. I thought you did?—No.

6707. I am sorry, if I misinterpreted you?—What I did say, when I referred to the stores, was that at the present moment I think I am right in saying that there are about 35,000 members of stores, and a very large number of those apply their dividends, which they get twice a year, to their rents—just in time for the rents, it is part of the arrangement that it is given for the rentals—because at one time they used to get it quarterly and now they get it half-yearly, and many of them apply that towards the payment of their rent. That is all I said about it.

6708. Did you not also add that, so far as you were aware, there was no agitation or feeling amongst these co-operators?—I have said half a dozen times that, so far as my own knowledge goes, so far as ward meetings are concerned, so far as I have seen in the press in regard to discussions in the Trades Council—I go the length of saying discussions of any kind in Edinburgh—I am not aware, with I think one exception—I think some eight or ten years ago there was a discussion in the Trades Council—I am not aware of anything else.

6709. You did not make that statement which I unfortunately took up?—No.

6710. (*Chairman.*) It was a general statement with regard to the Edinburgh working class, without any special reference to co-operators?—Yes.

6711. (*Mr Howden.*) Would it be news to you to know that the Leith Provident Co-operative Society have petitioned in favour of Mr Cross's Bill?—They may have done so. The Edinburgh co-operators may have done the same thing.

6712. There would be no difference between the Edinburgh and the Leith?—I have seen no public notice of it—there may have been, but I guarded myself by saying I had not observed it.

6713. You told us that there were 280 tenants who shifted during the year in your properties, and that about a half of them were ejected in consequence of non-payment of rent. Do you ever exercise your right of hypothec?—I do not suppose there is 5s. worth of stuff in many of those houses and it is of no use. I wish you would visit some of them yourself and see them. I think you would be of the same opinion.

6714. We may take it from you that you never exercise your right of hypothec?—Because it would not pay.

6715. In one of your statements here, dealing with your own properties, you tell us that, in most of the houses let by the factors, the tenants' taxes are collected by the factors along with the weekly rents. The factors state that this arrangement is considered satisfactory by the tenant?—Yes.

6716. Don't you think, if it is considered satisfactory by the monthly tenants, that it would be considered satisfactory by the bulk of the people in Edinburgh in the same station of life?—It may be.

6717. It would be a fair assumption to take?—I am afraid we have the worst of the tenants. When we are speaking of that number I think we have the worst of them.

6718. If the worst of the tenants, those who escape payment of taxes as a general rule——?—They do not escape; they have to pay.

6719. But if the worst class of tenant under your scheme have to pay their taxes, and they have no objection, we could certainly assume that the better class would not have any objection?—I do not know how you arrive at the assumption.

6720. (*Chairman.*) You referred to the objection to the optional clause? Suppose that Glasgow has a demand and a need for a measure that Edinburgh does not want and that other parts of the country do not want, would you see the same objection to Glasgow accomplishing its object as it has done in other cases by a local Act?—I think that is the proper method to adopt.

6721. Your objection would not apply at all events with the same force in that case?—No.

6722. (*Mr Esslemont.*) You referred in one of your statements to the large number of unoccupied houses last year as compared with what was the case a few years ago, and I think the percentage has risen from 1896–1897, when it was 1·9, to 5·9 in the last year?—That is so.

Mr W. S. Brown. 7 Jan. 1907

6723. And, in answer to the Chairman, you attributed that to over-building and removals?—Yes.

6724. Does that point to a decrease in the Edinburgh population?—No. There is alway a fluctuating population, and numbers coming in. There is no decrease, but the increase is not so marked this last year or two.

6725. We may take it that it is largely due to over-building, and not to the other reason that you gave, people leaving the district?—There are large numbers of people leaving the district, but there are others coming in.

6726. But that is a normal condition of things?—There were a great many big jobs going on for some years. These have been finished, and within the last two or three years quite a number of people have gone away.

6727. That would mean that the population was inflated for a short period in consequence of large works in the city?—Yes.

6728. I am sorry to trouble you again about a table which you have presented, Table A. Under your local Act you informed us to-day that you levied no burgh assessments on rentals of £5 and under on occupiers?—Yes, that is right.

6729. And that on the owners of these properties you do not assess them at any higher rate than on properties of a higher value?—That is quite true.

6730. I see that in Table A you give a statement here in regard to the number of charges and the assessable rental and the amount of the occupier's assessments and other headings on rentals from £1 to £5?—Yes.

6731. Now, if you do not assess them, how can you have any percentage irrecoverable?—Because there are other things besides dwelling-houses. There are hundreds of other things, boards for bill-posting, cellars, etc. The difference is not on houses, it is other properties, stores and so on.

6732. This table does not refer exclusively to dwelling-houses?—I said so. I explained that already.

6733. I am sorry I did not understand that. There is no doubt about it that, so far as rentals up to £5 are concerned, Table A does not refer in any single case to dwelling-houses?—That is so; but if the occupier of such property is also the owner, it does apply; and, secondly, where the aggregate rentals of the property amount to £5.

6734. Yes, I notice that qualification. Does the occupier of a house of rent from £1 to £5 have the same immunity from poor and school rates?—I do not think so.

6735. Can you tell me whether this mode of treating rentals under burgh assessments is exceptional so far as Edinburgh is concerned?—I do not know.

6736. I think you said you were strongly in favour of quarterly terms?—Did I say "strongly?"

6737. You said you thought it would be a great improvement, and that we should all be strongly in favour of great improvements?—I think I said I would prefer to leave things as they were.

6738. I certainly did not gather that?—I said so.

6739. Then why did you introduce the quarterly terms?—I did not introduce it—it was in answer to the Chairman. What did I say?

6740. (*Chairman.*) Generally, you would leave things as they are; but if there are to be changes, you indicated what you would prefer?—Yes.

6741. (*Mr Esslemont.*) You are not in favour of quarterly terms? You would prefer to leave things as they are? That is the situation?—Yes; I think there is in Edinburgh such a number of houses—such a variety of class of houses—and the willingness on the part of owners to meet tenants of all descriptions that I do not know of any need for any change.

6742. I certainly understood you to say that you were in favour of quarterly terms, but yearly tenures?—What I did say was—I beg your pardon—what I did say was that I would like to see—but this is outwith this property—I would prefer to see a person coming from England able to get a house on any of the quarterly terms, but to have a twelve monthly let.

6743. But you surely would not exclude that privilege from people not so well-to-do?—I would be delighted to have the same privilege, but I said a twelve-month tenure. I do not object to it being all over, but what was in my mind was the better class of tenants.

6744. If you are in favour of four removal terms in the course of the year, where does your objection lie to quarterly terms of let?—Because I think the people want fixity of tenure. They do not want quarterly lets. I do not think that the better class citizen of Edinburgh wants——

6745. But keep all classes in your mind?—I cannot. You must distinguish between the one and the other.

Mr W. S. Brown. 7 Jan. 1907.

What may be perfectly good for the poorer people—what they may want—is one thing, and what other people want in a different social position of life is a different thing. I must distinguish the one from the other.

6746. You advocate quarterly terms, four terms in the year, for a certain class of citizen, and the existing state of matters for the others?—No. I have no objection to have it for all, so long as you have it for a twelve months' let. I do not care whether it is £1, or £50, or £100.

6747. But you have many cases of weekly and monthly lets in Edinburgh?—Yes, that is true, by a voluntary arrangement.

6748. And you have other cases of yearly lets with monthly and quarterly payments of rent?—Yes, we try to meet the requirements of all people. A stranger comes to the town, or a person does not want to be under the obligation of getting security from his neighbour, and he says, "I will pay you quarterly rent in advance." Well, that is good enough, and it is taken. Some pay half-yearly in advance, and some pay a whole year in advance.

6749. But you think these arrangements must be of a voluntary character?—I do not see any reason why it should be otherwise.

6750. (*Mr Binnie.*) Mr Howden and I would like to know if you have thought of any way by which the very poor could be exempted if the rates are collected by the landlord?—Exempted?

6751. Yes. It is a difficult question. If you charge the landlord with the rates, and some of his tenants are very poor, and would in ordinary cases be exempted, have you thought of any way by which that exemption could be continued?—I suppose it would require to be put on the landlord, and he would probably raise the rent.

6752. But that would just be making the poor persons' neighbours pay in addition to what they already pay?—I do not know. I am afraid, from our own experience, and from the experience which one learns from time to time, there is not such a big return on that class of property, and I do not see how you are going to do otherwise than increase the rents if you are going to put the burden of the taxes or assessment upon the landlord.

6753. But how does that exempt the poor?—It does not, unless you raise it from £5 to £10, and relieve the whole up to a certain rent, and let the broad shoulders of the community at large pay the difference.

6754. But there are cases even above £10 of widows who are letting lodgings who are getting exemption just now, up to a considerable rental. Have you not thought of any way by which, the landlord being made responsible for the occupier's taxes, relief could still be given to the deserving poor?—He might, of course, make a representation instead of the tenant.

Mr W. S. Brown. 7 Jan. 1907.

6755. How could he?—I have not thought of it.

6756. (*Mr Howden.*) Could not the tenant make a representation on his own behalf, and get exemption from the Corporation, and show it to the landlord or to the factor?—I think, if you knew the number of tenants who disappear and so on in houses of that kind, you would see how difficult it is.

6757. These are not the tenants that disappear, the ones that get exemption. These are quite distinct. The persons you relieve are the only ones I refer to?—You mean that a man is in perhaps for three months, and you want to exempt him?

(*Chairman.*) No, a man for twelve months.

6758. (*Mr Howden.*) You see, you exempt all paupers. Take this as an example. Is there no way whereby he could apply at the rating office, and show his card, and be entitled to exemption by a receipt from the collector?—I don't think that would be a safe thing to put in the hands of any official. I think it must be through the rating authority themselves.

6759. (*Mr Dobbie.*) One of the Glasgow officials, following up Mr Howden's question, suggested that the present appeal courts should continue, that the tenant should get a certificate of exemption if he deserved it?—From whom?

6760. From the appeal court. And he should give that to the landlord or to the factor, and he would then get credit from the Corporation for those?—That is quite workable.

6761. Can you refer me to any figure showing the aggregate loss upon all rentals under £10?—£2769,—that is from £1 to £10.

6762. What percentage is that of the total amount assessed up to £10?—About 17 per cent. The figure is £16,011. (Table A.) Charge of the occupier's assessments from £1 to £10 amounts to £16,011.

6763. (*Chairman.*) Including £10?—Yes, and the amount written off is £2769, and that works out about 17 per cent.

6764. (*Mr Dobbie.*) What troubles me is this, that in this table B the percentage of loss between £4 and £7 is 34 per cent., and, between £7 and £10, 17 per cent., and I cannot see at the moment why the total should be less? You might put that in?—Yes. You will see that it is from £7 and under £10. We would require to work out a certain proportion of this £10 and not exceeding £20 in Table B, which I shall do and give it to you.

Mr A. A. A. Murray.

MR ALFRED ALEXANDER ARBUTHNOT MURRAY, called and examined.

Mr A. A. A. Murray.

6765. (*Chairman.*) You are a Writer to the Signet and a member of the Town Council of Edinburgh?—Yes.

6766. Like Mr Brown, you do not speak officially for the Town Council, who have not considered this matter as a body?—That is so.

6767. You have been a member of the Town Council for six years, and you have been on the Treasurer's committee and on the sub-committee on property?—Yes.

6768. You have special experience in connection with this matter, not only from your connection with the Town Council, but also in connection with your own property?—Yes; I manage a good many properties held by my family and myself to a fairly large extent in Edinburgh.

6769. I think you have 1048 houses?—Yes, of these 142 are let by the week, 44 are let by the month, and 862 are let by the year.

6770. Under £7 there are 142 let by the week?—All the weekly houses are under £7.

6771. Yes, that is the way to put it. Of the 44 houses let by the month, 12 are under £7, and the remaining 32 are under £10?—Yes.

6772. And of the 862 houses let by the year, 52 are under £7, 92 are under £10, 557 are under £15, 155 are under £20, and there is just a small balance of these above that?—Yes. While saying that 92 are under £10, I would point out that a considerable number of these are houses of two rooms, which are very very little under £10,—you may say £9, 10s. and so on.

6773. To what extent do you, as owner, pay occupiers' rates?—As owner I am liable for occupiers' rates upon all houses let for shorter periods than a year, whatever the rent may be. So far as the rest are concerned, the owner is not liable for them, because there is no liability upon the owner to pay occupiers' rates for any except those let for less than a year. I might explain that while it is true that the owner is liable for the occupiers' rates when he lets for a shorter period than a year, that does not apply to all cases in which he lets for a year, for this reason, knowing the liability I take care to provide against it by not taking a house off a tenant's hand. I want to be quite fair to the Committee, and to say what happens. When a tenant wants to sub-let, I say, "I will sub-let on your behalf, 'but not for myself; you must give me authority to sub-'let on your behalf"; and in the majority of the cases there is no difficulty about that. I have very little difficulty, but it still leaves the tenant with his liability for his rates.

6774. You agree that on houses under £7 there are no occupier's rates?—On houses under £5 there are no occupier's burgh rates, but there is liability for poor rates. In Edinburgh the landlord pays all the water rates up to £10. He does not pay any poor rates on any property except his owner's poor rates—that is apart from shorter lets. Then, with regard to the burgh rates, he only pays his owner's rates upon houses under £5 and his owner's rates on houses above £5.

6775. Does the owner pay the poor rates?—He pays his own poor rates and nothing else.

6776. In what case or cases in Edinburgh does the owner pay direct occupier's rates? Does he do so in any at all?—I am not aware of any, except the water rate. He pays the water rate, and he may or he may not collect it from his tenants. In point of fact, so far as my experience goes, and I have a fairly large number of these small houses, I do not collect the water rates from the tenants. As a rule you don't do it,—you treat that as part of the rent of the house.

6777. In the case of lets for less than a year, have you cases where you pay the occupier's rates?—Yes.

6778. Have you many?—No, not very many.

6779. Is that by arrangement with the town that you pay in the first instance?—No, it is simply a voluntary arrangement.

6780. Between you and the tenants?—Yes. I may say that the cases I refer to are mostly in Leith. In the other cases the town go against the occupier primarily, and they have a right to go against you if the occupier fails to pay. I heard ex-Treasurer Brown's evidence on that point, and also the evidence brought out by Mr Binnie, and I

must say that as owner I have felt very strongly the harshness of the town coming down on the owner at the eleventh month for rates he never knew to be exigible, or which he may not have realised were exigible. It is a distinct hardship on the owner to be called upon at the eleventh month to pay rates which he has no chance of getting repaid to him.

6781. What was the reason for those voluntary arrangements principally in Leith that you spoke of in the case of short lets?—Largely because the rents are small rents, up to £6, 10s., which is 2s. 6d., a week. In these cases the tenants are labouring men, and it is desirable to collect weekly. It is a matter which has arisen just by custom, and it has been found to work reasonably well.

6782. Does it work well in the interest of the landlord, because there are cases where there would be considerable risk, if that was not done, of the ultimate liability being on the landlord?—I must frankly confess that there is an advantage to the landlord in that.

6783. I now ask your view on what is called the missive question, the long period between the time of taking a house and the time of entry?—My view is that the missive system has risen largely as a matter of public convenience, largely from the custom and the habits of the people, and I am not aware of any great demand for its abolition. So far as my experience goes, there is no real necessity for doing away with it, nor has any such necessity come to my knowledge. I have tabulated the removals and tested them within the last two or three days, and I cannot find, in my experience of twenty-five years, that there have been any serious cases of hardship owing to a man having to take his house for the year.

6784. Do you differ from the view which has been hitherto expressed to us by all sections, that there is a certain amount of inconvenience through a tenant being forced to take his house so long before the period of entry?—There is a certain amount of inconvenience theoretically, but in my experience the thing works out the other way. My habit has been to send out the missives in the beginning of February, roughly, in the first fortnight of February, and to send the runner round to ask if the people are staying on, perhaps a fortnight after the missives have been sent out. He does not care very much whether he gets all the answers in or not; he takes as many as he can get and calls back again shortly after. During all that time, perhaps a month or six weeks or even more, the people in the houses are looking out if they can get better houses. If they say they are staying, then good and well; and if not, then we know that the houses are to let. If a tenant says that he is not sure, then I claim the same right as he has, viz., if I find a tenant I am free to let my house to him, and if he wishes to go he is free to go. I never let a house over the head of a tenant without telling him that I have another tenant for it.

6785. (*Mr Cox.*) About what date do you consider yourself free to re-let?—I consider that if a landlord gets a good proposal for a house in January or any other date, why should he be compelled to give it to the tenant that is in?

6786. (*Chairman.*) You have not joined with the others in their view that the letting should be made later?—No. I have always stuck to the same system, sending out in the beginning of February and taking my own time. I get to know that my houses are to let as soon as possible, and my tenants have plenty of time to look about; whereas, according to the other way, a pistol is put at their heads, and they are bound to say yes or no. They have no chance of knowing what houses are in the market, and for that reason I think the other system is preferable.

6787. How do you account for it that the opposite view seems to be universally taken, so far as we have heard yet, by factors and landlords?—I quite understand it in the case of the house-factors, because it means that they have a very much shorter time within which they must have an extra staff and be put to extra trouble. But I am speaking from the point of view of a generous landlord, who wants to let his houses to the best tenants and to do reasonably well by his tenants.

6788. Your view is, that while there may be inconvenience in particular cases both ways, there will be more inconvenience in the proposed new system than under the present system?—I have tested it during the past twenty-five years, and I have only had three cases of what one might call a quarrel or disagreement with the tenant on account of re-letting during the period from February to Whitsunday.

6789. But I suppose you have had cases of people finding, after having re-taken their house in February, that they require to leave and get employment elsewhere, actually before the date of entry in May?—Yes, and I have never had a single case of trouble with such a tenant. In some cases, nearly in every case, I may have to pay the factor 2s. 6d. for putting the house on his list or something of that kind, but it is a mere trifle. I have never had any trouble with re-letting in such cases, nor during the period of tenancy.

6790. If it happened at a time when there was a large number of houses standing vacant from over building, there might be trouble then?—It is quite conceivable that there might be trouble in certain circumstances.

Mr A. A. A Murray. 7 Jan. 1907.

6791. But you think on the balance the convenience is greater the way you suggest than the other way?—Yes; I am only speaking from my own experience.

6792. You assume that, whatever system is in existence, there may be individual cases of inconvenience?—Yes, and therefore I say that you should just let the loss lie where it falls.

6793. We now come to the question of the short let, the larger question. In the first place, apart from whether it is desirable or not, will you tell me your view as to whether it is wanted?—It is not wanted, to my mind. I have personally discussed that question with a considerable number of my tenants, many of whom have been in the same houses for the whole twenty-five years, and some of whom have grown up in the same houses since I succeeded my father in business. I found almost no desire for the Bill after its provisions were explained. There is naturally a desire to go away if they can get away at any period of the year; but when the provisions of the Bill are explained, I do not find that the feeling in favour of the Bill is so strong.

6794. If they could get security on their side, there is no doubt that they would all go in for an option to them only to terminate at a month's notice?—Yes; and that is what they think they are going to get.

6795. Do you find that they are assuming that the rents would not be raised if the tenure were shortened?—Yes.

6796. Do you agree with that?—I do not think so. I think that there will undoubtedly be more cost, which will have to be met somehow.

6797. Naturally, if a man thought he could get a certain advantage at the same rate, his view might be different if he were told that it involved the rent being raised?—Yes.

6798. Then you say next that you do not think they apprehend the effect of the compounding on the rates?—I do not think it has ever been explained in Edinburgh. I do not know if it has been thought over in other places, but I do not think it has been fully thought over in Edinburgh. We have certainly considered it both privately in committee and among the members of the Town Council, although it has not come officially before us. We have discussed the subject among ourselves.

6799. If it is realised that that is the necessary result of short lets, do you think it would commend short lets to the working class?—I do not think it would, if they thought it was to raise their rents.

6800. What about ward meetings as a means of testing the feeling of the people?—Have you been heckled on the question of short lets?—No, never in any way.

6801. Has it never been raised at all?—No, neither before I was elected nor after. I do not recollect of any question of that sort being raised.

6802. Have your elections been all contested?—I have run at least three contested elections,—I think four, but I am not quite sure.

6803. So far as you know, has the question been raised at the ward meetings of other councillors?—I have not heard of it.

6804. Have you seen it agitated in the correspondence columns of the Edinburgh and Leith newspapers?—I cannot recollect any great agitation.

6805. You have not seen the ordinary evidences of a grievance being ventilated?—I am aware that there has been discussion about it—at least, I have seen a discussion about it in the Glasgow papers—but I am not aware of any public discussion in Edinburgh except very incidentally.

6806. So, if it be the fact that it is wanted in Glasgow, you have not seen the usual evidence that you would expect to see of it in Edinburgh?—No.

6807. Are your houses all in Edinburgh, or in Leith, or Portobello?—They are mostly in Edinburgh, in the centre of Edinburgh, Gardner's Crescent and in the Abbeyhill district and out near Haymarket. There are a large number of them just at Easter Road.

6808. Is there anything in the conditions of Edinburgh that might make it natural as distinguished from Glasgow, that there might be a want felt in Glasgow that would not arise in Edinburgh?—I think rather the reverse, so far as I can judge. The staple trade of Edinburgh is, so far as I am aware, if anything the building trade and next to that there is the printing trade. I think the building trade of Edinburgh employs some 12,000 men—I really forget the figures—and it is a trade where a man usually settles down in a locality, and he goes to whatever part of the town in which he wishes to do his work. The printing trade is a very settled trade too, except as regards a certain floating number, as in every other trade, consisting largely of the younger men who shift about. I think

Mr A. A. A. Murray. 7 Jan. 1907.

that the shifting in trades is largely a matter for the younger men, and not for the family men.

6809. Such other works as the indiarubber works would come under the same designation?—Yes, but I have not so much familiarity with them.

6810. In your view, the shifting population comes largely under two heads, the young unmarried men who are lodgers and the more or less improvident class who are already provided for by short lets?—Yes. So far as the unemployed are concerned, I find that out of the 1000 which ex-Treasurer Brown spoke to this morning, 772 are heads of households and the number with no dependents, or who live in their homes, or in lodgings, is 253.

6811. (*Mr Howden.*) Are these the figures of the Burgh Distress Committee?—Yes. They may not represent the full number. It is only those who come to the knowledge of the Distress Committee.

6812. The terms that are offered are not such as to tempt many?—I quite agree.

6813. (*Chairman.*) You say that in your view the class who shift about are already provided for sufficiently with short lets?—Yes; out of some 20,000 houses of the smaller class in Edinburgh there are at least 900 under the Corporation, and, if you take the houses belonging to other proprietors, you will find that the vast majority of the houses under £6, 10s. are weekly lets.

6814. Is it the fact that at present in Edinburgh, as elsewhere, if people of a good class and willing to pay, say £15 a year of rent, wanted to get short lets, they could not get them?—That is so. I tested several properties with regard to that. In a property in Dalry Road there are thirty-two houses altogether; in thirteen years there have been only seventeen cases altogether of any changes of tenancy, and that means that there have been only 4 per cent. of changes in this property. In no case, so far as I am aware, did a tenant, in the case of a change for work, lose more than about £1 on his half year's rent or his quarter's rent. That means, probably, that the houses were in demand, and at a reasonable rent, and so on. In another property in Morrison Street, I find that the percentage of removals in the same period is only 2 per cent.—that is, multiplying the number of houses by the number of years; and in the Easter Road district I find in twelve years, that out of seventy-two houses there were only fourteen changes, which is $1\frac{3}{4}$ per cent. I find, on inquiry at my overseer there, that in no case was there any loss, so far as he knew. The demand for houses was so keen that there was always a tenant ready to take his house. Of course, this may or may not be a good guide for other places, but these are matters within my own experience.

6815. Are you talking of changes between terms?—Yes, between terms only.

6816. Suppose that there was a large demand for the better class of houses at short lets, would that not, on the ordinary footing of supply and demand, have been met if it existed?—I doubt it. I think the system of yearly lets is so much the custom and habit here that a landlord would be very chary of letting a house above £10 to a tenant who said that he wanted it for three months.

6817. The result of that is that in one sense there is no freedom of contract at the present moment?—That is true.

6818. Then you told us about whether you thought it was wanted. I think you further are of opinion that it is not desirable to encourage short lets for the better class of houses in the interests of the working men themselves?—That is so; because, after all, the ordinary family man that is settled in a place is a man who has a wife and family, and he has family connections in every way. If he goes in for a number of removals then he suffers socially; he loses the sense of settledness in his home life. I frankly discourage removals from that point of view where I can.

6819. The education of his children suffers, and there are other considerations of the same kind?—Yes.

6820. But there are cases where a man cannot help it?—And these are met at the very little loss which occurs. Of course, there are cases where there is hardship,—no one can deny that.

6821. You are again talking on a balance of considerations; you are admitting that there must be individual cases of hardship here and there?—Yes.

6822. Now, that leads us to the rates. Is it your view that if short lets are enacted for houses under £20, compounding for rates must follow, because the other system of more frequent collection by the rating authority is not reasonably practicable?—I don't think it is practicable; but I am aware that the Gas Commission do collect three times a year—I was a member of that Commission till lately—but there is no making up of a valuation roll, the thing is settled once for all by a mere reading of the meter. The runners are going round at any rate reading the meters, and there is no great expense incurred. It is a different thing when you are making up a valuation roll; and you have your appeals and so on. I think it is practically impossible to collect the rates unless you compound and take them from the one man.

Mr A. A. A. Murray. 7 Jan. 1907.

6823. If it was reasonably practicable, it would be quite a good system?—For houses under £6, 10s. I personally would not object. I think the limit of £10 is wrong; but I would not object to £6, 10s., which is 2s. 6d. a week, and means a house of one room, with a closet, here in Edinburgh and Leith. It would only be putting into effect a system which practically exists just now.

6824. Do you say that, because £6, 10s. is a fair limit of what you would call the most shifting part of the population?—And the labouring man who has a very small wage, under £1 a week. He cannot afford more than 2s. 6d. a week for rent.

6825. Why is it that the gas rate is collected three times a year?—That is for convenience.

6826. And in result it yields a good deal more than would be got if there was only one collection?—I cannot say, because I don't know.

6827. You have never looked into it?—No.

6828. Of course, if the men are there reading the meter anyway, there is no extra expense?—That is so. It is necessary to have the meters read frequently, so as to see what is going on.

6829. Putting aside the frequent collection by the rating authority as reasonably not practicable, why should there not be compounding? What is your objection to the landlord paying the rates?—In the first place, there would be a considerable loss, which would have to be met. That is to say, the landlord, to be fair with him, would have to get the same concession as the Corporation at the present moment is making directly in the way of relief to poor tenants. It would be only fair that the landlord should get the same right. If you don't do that, or institute some system whereby the poor people get off, then the landlord, if he is to pay, must take his pound of flesh out of the poor tenants, and that would be rather a hardship.

6830. Do you approve of the present system of relieving poor tenants?—Yes.

6831. You don't think it is abused?—No; I know from my own knowledge how carefully it is done; how we do our best for cases, not exactly of paupers, but say poor widows with lodgers, or some one whose husband has died, or cases of sickness, or out of work. They are all carefully looked into. There is a report given by the assessor's man, and one of us is sent to go over the cases with two assistants. I am in the position to say that every case is very carefully looked after, and we try to do justice, tempering it with mercy.

6832. You don't think it would be fair if the Corporation drew more money, that that money should be drawn at the cost of the poor tenants?—I am dead against it.

6833. Then, in addition, you talk of the loss that would take place to the poor tenant. What about the landlord's position?—I don't think the Corporation could save very much upon its book-keeping, but the landlord would practically have to do the same book-keeping a second time.

6834. Suppose the Corporation continued in one form or another the present relief that is given to poor people, and suppose they gave a sufficient allowance to the landlord to cover the cost of collection, losses, and unlets, complete and partial, do you think that in the net result they would make anything?—I doubt it. I have heard ex-Treasurer Brown's evidence on the point, and I doubt if they would make anything. It is conceivable that they might get more; but, if they did, it would be taken from the poor people who at present get off.

6835. But on the assumption that it is not taken out of the poor people, that they will still get relief, and the landlord gets an ample allowance to keep him safe?—The Corporation would not gain anything—it would be quite the reverse.

6836. From the landlord's point of view, what do you think about the relation that that would bring him into in regard to the tenant?—On the question of relief—a suggestion has been made that it could be made by giving them a ticket at some office, but I don't think that the meaning of that is quite realised. Suppose you had monthly lets and weekly lets, and so forth, and it is assumed that the Appeal Court will be always sitting—it is not at present—is a weekly tenant to go up there every week for his ticket, and present it to his landlord every week, or is the monthly tenant to go up every month?—It means a very large amount of trouble, both to the Appeal Court and to the tenant, if you are going to institute such a system of relief.

6837. (*Mr Dobbie.*) These people won't be assessed?—But the landlord is only going to relieve the tenant when he gets a certificate from the tenant that he is a fit subject for relief, and he gets that from the Appeal Court. You propose to assess the landlord on the full year's rent; you propose that he should get that from his tenant; you

propose that the tenant should be free of it on production of a voucher or certificate which will be available to the landlord in part payment of his rate. The result of that will be that, when the landlord comes to collect his few pence every week, he must get every week a voucher from his tenant, and his tenant may be a different one every week or every month. Therefore, under the unsumed system of the tenant going to the Court always for it, it will be necessary for the tenant to go every time for his certificate, or to get a permanent one so long as he continues to be tenant of that house.

6838. (*Chairman.*) Supposing, at the end of the year, he went to the Appeal Court and showed that he had not been in a position to pay during the previous year, and that he was resident all the year, then the difficulty might be overcome?—Yes, it might be overcome; but there are a considerable number of changes among weekly tenants, and I don't think the thing would work out practically.

6839. (*Mr Dobbie.*) How do you do just now?—I am assuming that the rate is to be put on under a certain rent.

6840. Take tenants between £5 and £15, weekly tenants, or short let tenants, do they pay just now?—The occupier pays.

6841. The hardship you indicate of the man paying every month exists under the present system?—Yes.

6842. (*Chairman.*) It would aggravate it?—Yes.

6842*a*. There are cases of relief above £20?—Yes, up to £50, I believe. There is a very great objection among the tenants to have the landlord mixed up with the rates at all. I have been speaking to some of them, and they think that they should be in direct touch with the municipality; they have the feeling that the landlord has nothing to do with the rates. That is the better class tenants

6843. Suppose it were enacted that the rate and the rent should be shown separately on the receipts, do you think that would introduce considerable risks of trouble between the factors and the tenants?—It would involve a great deal more book-keeping. I don't think there should be any disagreement about it; but there is this objection, that for a long period of the year, as our roll is at present made up, it would be necessary to estimate the rate, and you could not make it an accurate sum.

6844. Or you could take the valuation of the previous year?—Yes.

6845. If the system were to be gone into, what do you say as to the proposed allowances in Mr Cross's Bill?—So far as my experience goes they would be far too little.

6846. Are you talking from experience there?—No, I am talking theoretically—I admit that.

6847. You are assuming that the proposed allowance is meant to cover not merely trouble, but loss or unlets?—Yes.

6848. If it was merely to cover trouble, and if an arrangement was made whereby landlords should not in the end be liable either for losses or for empties, the allowance might be fair enough?—Yes. But there are two considerations there. In the first place, when you are collecting—take the small lets—your army of middlemen is an army based on a collection all on one day, for you cannot spread the collection over the whole week. You must collect on the Monday or on the Saturday, as the case may be, and therefore you must have a sufficient staff to do the whole collection in one day and you must pay these men their wages. Then, in the second place, there is the loss to the landlord, suppose he pays the rates and they are not paid to him. The landlord is in a different position from the factor, as the factor suffers no loss, but gets his commission if they are paid; and if they are not paid, he does not get his commission, but he does not lose anything. On the other hand, the landlord suffers the whole loss.

6849. Quite; and therefore, in taking the evidence of factors who are not landlords, we must keep in view that their interests are not necessarily the same as those of the landlords?—That is so.

6850. Do you agree with ex-Treasurer Brown that if any such proposal is to be passed it should be universal and not optional?—Yes; I have the same feeling of objection to permissive legislation; but at the same time I am not quite sure I agree exactly with what ex-Treasurer Brown said, in this sense that I think the rule should be made definite; I can conceive the legislature saying that it will be definite as regards one place, and it will be left alone as regards another place, but that once for all; I object to a place having permissive powers to adopt it as they choose. It is not a law which they should be free to adopt or not as they choose. Of course, I am aware, as a lawyer, that many bills have been passed on the permissive system, but it is objectionable in a measure of this kind.

6851. Did you indicate that you would not object to the £5 limit being raised to £6, 10s.?—That is my view; because I think the £6, 10s. limit would take in the whole of those citizens who require and use short lets as a matter of ordinary everyday business.

Mr A. A. A. Murray. 7 Jan. 1907.

6852. You were not talking merely about owners paying rates there?—No; I am speaking of the two things conjoined, the shorter lets and the compounding of the rates.

6853. At the present moment houses let at £5 are practically all short lets?—I think so.

6854. Between £5 and £6, 10s. you have a small number of yearly lets?—Yes, not very many.

6855. And an Act making the limit £7 or £6, 10s. would not involve the drawbacks that you have referred to?—I think not.

6856. Beyond that you think it would?—Yes.

6857. Do you agree with ex-Treasurer Brown as to the necessity for cheaper and speedier remedies against undesirable tenants at the instance of the landlord?—Yes.

6858. There are great difficulties there. The principle may be right enough, but can you say how the matter is to be remedied?—I have never considered that. I have had cases where a man was in for a very short time, and where there were great difficulties in getting him out of the house; and, of course, you not only lose your month's rent, but you might lose another fortnight's rent before you got him out.

6859. There are humanitarian elements in these cases, I suppose, that make it very difficult to lay down a hard and fast line?—Yes. And any landlord will find it a right thing to be reasonable in cases where reasonableness is required.

6860. You have a point in regard to the question of the value of houses for investment purposes. Have you the opinion that if short lets were substituted for yearly lets the houses so affected would not be so valuable in the market?—Yes, I have a very strong opinion to that effect. The fact is, that in Edinburgh the number of small houses has been steadily decreasing; probably that is due to the standard of comfort of the people rising. There is no doubt that that works largely in favour of it; but, on the other hand, if a man desires to do some of the work that the Corporation is doing in the way of building small houses for small tenants, he is discouraged whenever you put any restrictions upon his letting or any trouble or expense. Bankers and ordinary lenders have an aversion to lending on such property; and men who are building for investment naturally try to get a loan if possible, because thereby they make more money from what is left. I think the tendency of increasing the limit for short lets up to £10 would have a very serious effect on the building market.

6861. But making the limit £6, 10s.?—I don't think it would affect it.

6862. There is another point; you think that the Bill, if passed, would be an obstacle to the extension of burghs?—Yes; I think it would be unfortunate if Edinburgh and Leith were different. The line passes through working class property at Easter Road, and it would be rather objectionable to a large number of the people there if there was one law on one side of the line and another law on the other side. At present there are serious difficulties in regard to education, for instance, and this question between Edinburgh and Leith would, I think, accentuate the troubles that we at present have.

6863. Your view is that if it is proved to us that there are places which want this change, and where it is desirable they should have it, then these places should be defined in the Act?—Yes.

6864. Leaving the rest of the country outside?—Yes; either that or have a local Act of their own.

6865. (*Mr Binnie.*) I would like you to explain what you mean by saying that the provision of small houses is steadily falling off. Does it mean that the house itself is smaller, or simply that the houses let at a small rent are being reduced in number?—It means that in Edinburgh we have been clearing out large slum areas, and no houses have been put up in substitution of these. The Corporation have cleared out large areas of small houses, and have built slightly larger ones. The railways have done the same thing, viz., cleared out areas, and if they have put up houses they have put up slightly larger ones. I think that that alone, with the rise in the standard of the comfort of the people, has led to the single room house largely disappearing from the valuation roll.

6866. As a fact, are there fewer one-room houses in Edinburgh than there were formerly?—I think there are, but I do not have the return on that point. I can get it.

6867. I want you to make clear what you mean by saying that the supply of small houses is less than it formerly was?—There is a return showing the number of occupied and unoccupied houses which gives that. In 1906–1907 the occupied houses under £5 rent numbered 3217. You may take it that these are all one-room houses. If you go back to 1887, you will find that the number was 6687 or more than double.

Mr A. A. A. Murray. 7 Jan. 1907.

6868. I am perfectly at one with you that the number of small rented houses is diminishing in all large centres, but you say "small houses," and that is a different thing?—I take a small rented house as being synonymous with a small house, a one-room house. I am assuming—and I think in practice it is true—that a house under £5 is also at the same time a small house.

6869. And £6, 10s.?—When you come to £6, 10s. in Leith, then you can get a house there for that sum with two rooms.

6870. Are there not many one-room houses up to £7, 10s.?—I never heard of a one-room house at £7. That is a matter I do not have any knowledge of. There may be some one-room houses at that rent.

6871. I just wanted to know what you meant by small houses?—There may be a one-room house, with a bed closet, at £7. What I mean by a one-room house is a house with a single room and nothing else.

6872. You say that the tenants are strongly opposed to a change. During the course of this inquiry we have had a great many witnesses, but we have not had one tenant brought forward who was opposed to a change?—That may be so. The explanation is clear enough. There is a feeling that this Bill is being promoted by representatives of the working classes, and there is a reluctance on the part of tenants to dissociate themselves from their leaders even although they may have their own feelings on the subject.

6873. In regard to the frequent collection of rents, you differentiated between the gas rates and the other rates. You said that the man going round reading the meter had something to do with making it easy to collect. Is the man that goes round and reads the meter not in exactly the same position as the man that goes round for the lands valuation office to ask what the rent is. He returns to the office, and then in the office they work up his results?—Yes; the man is in the same position as the other man from the lands valuation office, except that he goes round oftener—three times a year.

6874. And why should the man from the lands valuation office not go round three times a year? What greater difficulty would there be for the one than for the other?—You would require more men.

6875. But you said it could not be done?—If I said that, then I spoke too freely.

6876. It could be done?—Yes; but it would cost more in the way of more men and greater expense.

6877. But it could be done as easily as the gas?—Not quite.

6878. Why?—I make no point of that. It might be done as easily.

6879. (*Mr Dobbie.*) Assuming that this Bill is become an Act of Parliament, would you, as a councillor, have any criticism to offer on this clause under which the Sheriff is to pass the resolution by which a burgh adopts the Act? Do you think the Sheriff should have a discretion, after hearing parties, to refuse to adopt? As the clause stands, he is bound to adopt, and therefore it is a dead letter?—I have great faith in the Sheriff's judgment in matters about which there is dispute; and not only would I like to see him have the power to apply his own judgment, but I should like to see some power to reverse the judgment if it was found that the adoption of the Act was a failure. The Bill says nothing about doing away with the Act, if you once adopt it.

6880. In view of what ex-Treasurer Brown told us as to the tactics of agitators upon any question, assuming the majority of the town council thought they were impelled to pass a resolution adopting this Act in any one burgh, the Sheriff should have a right to say whether or not this is reasonable and not to merely administer the Act by formally signing?—That would give some security that the question was dealt with judicially instead of being under pressure on the part of some electors.

6881. Have you any views on the question of hypothec?—It would have to extend to the rates as well as to the rent.

6882. Do you find hypothec any good in small houses?—It is not any good in small houses under £6, 10s. When you come above £6, 10s. it is of use.

6883. You make a point that in the absence of hypothec the tenant in arrear would be at the mercy of an ordinary creditor. Would you be in favour of a change in the law under which, say furniture and tools and clothing, up to perhaps £5, should be exempt from distraint at the instance of any creditor?—I don't object to that. I think every man is entitled to a living, and I think it is to the interest of the community that the man should have the means of making his living.

6884. Assuming arrangements were made otherwise to recoup the landlord for loss sustained through empties or through irrecoverables, you indicated to the Chairman that the allowances here attached to Mr Cross's Bill might be unreasonable. He proposes to give 2½ per cent. on rents between £10 and £20?—If you think what that means in actual pounds, shillings, and pence, you could hardly say that it was reasonable. Take a £7 rent; the rates would be about 12s. 6½d. in Edinburgh, and 5 per cent. is a very small sum.

6885. To cover what?—The cost of collection.

6886. And if you go above £10, and get 2½ per cent.?—It would be still less. My point is that a percentage is not a fair guide to a reasonable minded man for his cost of collection, because the cost of collection of £10 might be the same as the cost of collection of 10d., and therefore a percentage that would be fair for £10 would be very unfair for 10d.

6887. Take the ordinary practice of charging commission for rents. Assuming he is insured against loss through irrecoverables, do you even in that case think 2½ per cent. is an adequate commission to him for collecting the rates?—I think it is too little.

6888. I see most of your houses are under £20; all but six, I think?—Yes.

6889. Are they largely occupied by the working class?—All, you might say. By the working class I don't necessarily mean labouring men, but men whose income is under a certain amount. I think the working class, if you are dealing with them in a lump, must be held to include women and others employed whose income is under a certain amount. It is a far better criterion than simply saying that a man is an artisan.

6890. When do your tenants pay their rents?—Half yearly. I found them object to pay their rents quarterly over and over again. In Dalry Road I tried to make an arrangement with a number of tenants to pay their rents quarterly, thinking that I would have a better hold on them and get the money readier, and have less loss, but they appealed to me to get their rents made half-yearly. I attribute that to the fact largely that they are stores people, but I have nothing to do with that.

6891. Assume Mr Cross's Bill becomes law, if they pay their rents half yearly, they would not become tenants for any shorter period than six months?—That is so; but, of course, any lawyer will get round Mr Cross's Bill if he wants to.

6892. But it would substitute for a twelve months' let a six mouths' let?—Yes.

6893. A great deal of your criticism dealing with short lets and inferior tenements refers more to houses at present let by the month or by the week?—Yes.

6894. Assuming that the good class of tenants—say £15 as an average—take their houses not yearly as at present, but half-yearly, do you think that would increase the frequency of removals?—I think it would tend that way, but it might not have a very great effect. I got the number of removals in Edinburgh as a matter of curiosity, and I have found that the ordinary number has been roughly 10,000 a year for the last ten years. The curious thing is that it has not increased; while the number of unoccupied houses has gone up nearly four times, the removals for the past ten years have remained practically stationary at about 10,000 a year.

6895. Taking these tenants who have been growing up with you, do you think, if the missive they had signed to begin with was a six monthly one and not a yearly one, they would have been tempted to shift?—It would not matter.

6896. (*Chairman.*) There is a point in your precognition where you say that in regard to compounding for rates there is no provision for rents of £4 and under?—In the Bill it starts with £4.

6897. What do you suggest would be fair in regard to rents under £4?

6898. (*Mr Esslemont.*) They don't impose any in Edinburgh?—We don't impose; but the point is, I think, that the compounding would require to apply to all rates. If it is to apply at all it would require to apply to the burgh assessments and the water rates and the poor rates. Now, with the burgh rates, we don't impose under £5, but with the poor rates they impose upon all rentals. Of course, the collection of it is a different thing. The water rate is the same. So I think under £4 you would require to make an allowance, but I don't see that it should not be the same as anything up to £7.

6899. (*Chairman.*) If there is to be a compounding, you don't approve of a selection of certain rates, as in Mr Cross's Bill. If there is to be compounding it should include all rates?—My view is that the Bill was drafted from a knowledge of Glasgow.

6900. But in the Bill the only rates to be compounded are the burgh rates?—At present we pay the burgh rates one month, the poor rates another month, and the water rates another month. There are different periods for them. It would be very awkward if some things were to be paid in slump, and other things were to be compounded. At least, that is my impression.

Mr A. A. A. Murray.
7 Jan. 1907.

6901. Is there any allowance for collecting the water rates?—No.

6902. (*Mr Esslemont.*) Do you employ factors?—Yes, to some extent under my own supervision.

6903. What commission do you allow them?—It varies from 2½ per cent. up to 10 per cent.

6904. In the case of 2½ per cent., what class of property does it cover?—Above £20—first-class property.

6905. And in the case of 10 per cent.?—That is under £7.

6906. Weekly tenants?—Yes; I never pay 10 per cent. where the rents are above £7.

6907. The lowest commission you pay is 2½ per cent.?—Yes.

6908. What is it graded up to?—10 per cent.

6909. You go up to 10 per cent.?—Yes.

6910. Assuming that the hypothec were to cover both rate and rent, would not the same rate of commission be sufficient?—Yes, if you are only dealing with the question of collection pure and simple.

6911. But you consider more than the question of collection when you fix the commission that you pay to your factor?—I don't know what the factor would charge, but I would endeavour to make the best bargain possible, and I would be surprised if he charged me any more for the collection of the rate than of the rent if he got a fair amount of property to factor.

Mr A. A. A. Murray.
7 Jan. 1907.

6912. He has no responsibility for any kind of loss?—No.

6913. Not even to the extent of losing a percentage of his commission?—No; he only gets commission on the rent he collects.

6914. But suppose you have two factors dealing with the same class of property, and the one brings you in 100 per cent. and the other brings you in 80 per cent., would you treat these men both in the same way?—You mean 80 per cent. of gross rental?

6915. Yes?—In point of fact, they are treated in the same way. The only remedy is that if the one man makes a good job of it and the other man makes a bad job, you will consider whether you should not employ the good man altogether. I am not aware of any difference in commission.

6916. You are not aware of any difference being made?—No. You would require to get that from the factors themselves. I am only speaking of my own properties, where I look after the management myself, seeing to repairs and so on, so it is not quite a fair criterion.

Mr William Stevenson.

Mr William Stevenson, called and examined.

Mr William Stevenson.

6917. (*Chairman.*) You live at Burntisland, and till about seven years ago you were a house-factor in Leith?—Yes.

6918. You collected rents and managed property both in Edinburgh and Leith?—Yes.

6919. How long were you a house-factor?—18 years.

6920. During the same period did you own property in Edinburgh and Leith?—Yes, and before that. I have a little interest in Leith still.

6921. Were your tenants mostly or nearly all of the working class?—Yes.

6922. And the greatest proportion of rents ranged from £10 to £15?—Yes.

6923. You had a fair proportion of weekly tenants?—Yes.

6924. And you had yearly tenants also who generally paid quarterly?—Yes, as far as I could arrange with them.

6925. The others paying half-yearly?—Yes.

6926. I suppose I may take it that, as in other parts, there are no cases of working men tenants who pay yearly. You never heard of such a case?—No, it is quarterly or half-yearly.

6927. Half-yearly is the longest time?—Yes.

6928. I understand that you have given careful consideration to the questions that we are dealing with here?—Yes, I have considered them for a long time.

6929. Do you agree with the opinion that we have generally heard expressed that so far as regards the missive question, namely, the long period between the taking of a house and the entry, an alteration should be made in the way of shortening the period?—Yes.

6930. You would require to alter the date of warning away to start with. What time do you think would be reasonable to fix?—At present it is before the 4th April for warning away.

6931. But what would you say was a reasonable time?—For yearly lets?

6932. Yes?—It depends a good deal on the class of property.

6933. But if it is to be fixed by statute, it would need to be fixed for one day. At present it is 4th April. Would you propose to alter that and make it later?—I think it would be an advantage if it was a little later.

6934. It has been suggested that if it was twenty-one days before 28th May, that would give sufficient time?—Yes, I think it would.

6935. Before the warning away day, how many days would you need to elapse?—That is rather a difficult question. The better-class tenants like to have their houses taken much earlier than that.

6936. But I am taking houses under £20, how many days would be sufficient?—From 15th March to twenty-one days before 28th May (see Question 6934) would give a very good time. That is giving about six weeks.

6937. You would require as long as that? At the present moment it is the 15th March, and it is suggested that that is too early, and it might be made later. How much later do you think would be reasonable?—If it is a case of yearly lets, then I think they require all that time to make the necessary inquiries as to the tenants they are letting their houses to.

6938. So you do not propose any alteration there?—No.

6939. You think the present system is right?—Yes. The Edinburgh people are going back to the 2nd February.

6940. And you don't approve of it?—It is a long time between 2nd February and 28th May.

6941. Do you think that the Edinburgh system of 15th March should be made compulsory?—Yes; but how could you do that?

6942. By statute?—How would you do with the unlet houses before that time?

6943. I want to know your view; if you have no view then say so, and we will pass to something else?—I cannot say that I am satisfied in my own mind.

6944. What is your view about the proposal to have short lets, under Mr Cross's Bill?—I am of opinion it would be an advantage to both parties.

6945. Both to the landlord and to the tenant?—Yes.

6946. You have seen what Mr Cross proposes, that the term of the let should be the same as the period of payment?—Yes.

6947. So, if the payment was half-yearly, the let would be half-yearly?—Yes.

6948. If the payment was quarterly, the let would be quarterly; and monthly, monthly?—Yes.

6949. Have you found a considerable number of yearly tenants to whom it would have been an advantage to be able to move within the year?—I have no opportunities of finding out, unless the case came up between terms, as the factor does not get any information from the tenant, as a rule.

6950. What do you do when a case comes up between the terms?—If they had a reasonable excuse then I tried to relet the house for them.

6951. Did you usually succeed in re-letting?—Yes, I think so. There was a small commission to pay.

6952. Except in so far as there was that small commission to pay, was there any hardship on the tenant so removing?—I don't know that there would be.

6953. Then where was the grievance? You told us that you approved of a change in the present system, and you said it would be in the interest of the tenant?—Yes.

6954. Where is his interest, if when he wants to remove he can get the house taken off his hands, and he only requires to pay a small commission?—He could leave the house at the quarter without asking permission at all.

6955. And without having to pay this commission?—Yes.

6956. That would be the difference?—Yes.

6957. What commission did you charge him?—It was usually half the commission for collecting the same rent.

6958. Take a £7 house, for instance, how much would it be?—Perhaps 3s. to 3s. 6d.

[*Note.*—This would be the charge if the house was to be let for a whole year. If the house was to be relet for only half a year the charge would be only half this sum.]

6959. If yearly lets were to be abolished, and there was to be nothing longer than half a year, do you think that would be any advantage to the landlord?—He would be able to get quit of an undesirable tenant much more easily than now. He would not be bound to allow him to remain a whole year in the property.

6960. Any other advantage?—I do not think so.

6961. Do you think it would be an advantage if there were more removal terms than one? At the present time there is just one removal term?—Yes.

6962. Does that produce any drawback to the tenants?—There is the hurry-scurry through all the removals being

on the 28th May. Some have got removed before that; but on that day there is a great crowd wanting to move, and every one wants conveyances, and they have therefore to pay higher for them,

6963. Would the effect of Mr Cross's Bill be to produce more removal terms than at present—if you had half-yearly lets and no yearly lets—how would that affect the removal term?—There would be fewer removing at each term.

6964. And you think there would be more removal terms?—I don't think, on the average, there would be more during the year than there are at present.

6965. But they would be more spread over the year?—Yes.

6966. If half-yearly lets were substituted for yearly lets, do you think that would do anything more than make two terms in the year instead of one?—That is not a point that I have considered, to give two terms in the year.

6967. Do you think the desirable thing would be to have the removals spread over the whole year?—Quarterly.

6968. Four times a year?—Yes.

6969. Suppose that the result was that the landlords were forced to collect the rates,—what do you say to that? Do you think that would be a right thing or a wrong thing?—I hold the opinion that it would be an advantage for the landlord to collect the rates; it would save trouble, expense, and labour.

6970. Would it be an advantage to the landlords, or to the tenants, or to whom would it be an advantage?—It would be an advantage to all parties, I think.

6971. How would it be an advantage to the landlords to collect the rates?—It would save labour and expense.

6972. Who to?—To the landlord or factor.

6973. It would be more labour on the factor?—Very little.

[*Note.*—Tenants are called to pay property tax by the Inland Revenue and deduct same from rent. It saved me much trouble and labour to collect the notices from the tenants and pay the whole rates in one sum myself. And it saved expense to the tenant going to pay to the collector. Sheets are now sent by Inland Revenue to factors to fill in names of those they wish to pay for.]

6974. It would be an advantage to the factor, because he would be paid for his extra labour?—He is paid at the present time, and he would be paid for the extra collection.

6975. So it is a clear advantage to him?—Yes.

6976. How would it be an advantage to the landlord if he had to pay his factor for the extra labour?—He pays him for what he collects at present.

6977. For the rent?—Yes, and the taxes.

6978. In what cases in Leith does the landlord collect the occupier's rates?—He collects all the weekly tenants' rates. He collects the water rate under £10, he collects the stair gas, and he collects his own rates from the tenant.

6979. Did you ever find any friction or trouble resulting because the landlord was collecting the tenant's rates?—No.

6980. It is said that friction would result. Now, you have never found that?—No. There was great friction in collecting small sums for the stair gas when it was first made compulsory.

6981. What caused that friction?—Running about and collecting small sums of a few shillings and a few pence.

6982. Would there not be the same difficulty with the other rates?—These rates I added to the rent where I could, and I got them collected with the rent, and the friction ceased. It would be the same with the other rates.

6983. You did not show on the receipt how much was stair gas and how much was rent?—No; the rent asked included stair gas and water rate for yearly houses, and it included all taxes for weekly houses.

6984. It is suggested by some people that if the landlords collected the rates then the receipts should show separately how much was rate and how much was rent?—That could very easily be done.

6985. Would it not cause some friction, as you found with the stair gas, when it was separately?—My idea is to show it in one sum yearly.

6986. In one slump sum?—Yes; and that would allow the tenant to see the amount of tax that was on his house.

6987. At the end of the year?—Yes.

6988. But not periodically?—No; or after the tax was paid.

6989. And you don't see why, if the system is carried on with the water rate for instance, it should not be with the other rates too?—The landlord has to pay a certain amount of water rate, and the occupier has to pay a certain amount of water rate. I never could see any reason why it should be separated, because the tenant pays the whole thing in the end.

6990. Would you limit the operation of the Bill to dwelling-houses merely, or do you think business premises should be included?—I think it should be extended to everything, except land and houses connected with land for market gardens.

Mr William Stevenson. 7 Jan. 1907.

6991. Do you think the result of short lets would be to raise the rent?—No, I don't think that would be the result. Houses are a marketable article, subject to the law of supply and demand, and I don't see why the rents should be raised.

6992. If you had short lets, would that not involve more repairs as compared with long lets?—I don't think so.

6993. You don't think there would be in the end more frequent removals?—I don't think there would be. There might be a little more frequent removals to begin with the first year or two, but they would settle down.

6994. The best class of tenants don't want to remove if they can help it, and the landlord does not want to get rid of a good tenant?—That is so. Every landlord wants to get a good tenant.

6995. And to keep him?—Yes; and not to put him away if he is willing to stay.

6996. You said you did not think it would lead in the end to more frequent removals. Do you find in the present system that there is a kind of house-hunting fever every year?—Every year, when missives are sent out to be signed, there is a regular fever.

6997. I suppose the sending of the missives puts it into their heads?—Yes.

6998. Do you think, if the English system were adopted, they would just remain on, and think nothing about it?—I don't know about the English system; but I think that if they simply took a house for a quarter, and it was continued from quarter to quarter by tacit relocation, they would never think of moving except for some particular reason.

6999. What have you to say with regard to the percentage in the Bill?—I am not quite sure whether that allowance is to be given to the landlord or the factor.

7000. Suppose it is meant to cover the cost of collection and the loss, irrecoverables and unlets, what do you say to it?—If the Bill becomes universal, if it is to be the same all over, where is this percentage to come from? It just comes out of the landlord's pocket.

7001. You think there should be no allowance at all in the Bill, and the matter should just be adjusted between the landlord and tenant?—Yes.

[*Note.*—So far as water rate under £10, it has adjusted itself, and so far as I was concerned, it did adjust itself.]

7002. And it would adjust itself in the course of time?—Yes. When a landlord had a property to let, he would agree with the factor what he would let it for.

7003. He would just have to charge a rent accordingly to cover everything?—Yes. The rent charged would be what it would bring in the market.

7004. Is it your view that any statutory enactment should be one all over the country, and not one confined to dwelling-houses or to burghs?—That is my view.

7005. You are against having different methods in different parts of the country?—Yes.

7006. You think that would introduce great confusion?—I think it would. Take between Edinburgh and Leith, for example, and between Glasgow and some of the neighbouring burghs, and between Ayr and the neighbouring burgh of Prestwick. You will allow me to say that I make a suggestion to the effect that permission should be given in the Bill to give a lease of not less than two years.

7007. In the case of property at any rent?—Yes, I think that would overcome any difficulty that might arise as to people who wished to have business premises, or a tenant of a house that wished to have it for a longer term.

7008. But not under two years?—No. If a new property is ready to let at Martinmas, perhaps a year and a half might be taken.

7009. (*Mr Howden.*) Did you ever, in the exercise of your factor's duties, use the right of hypothec?—Very seldom.

7010. Why was that?—It is a very dangerous weapon for the landlord to take into his hands.

7011. Why is that?—I do not know that there is much made of it. I do not think it pays anybody but the lawyers.

7012. Take a house rented at about £15; what would you say was the average value of the furniture in it?—I could scarcely say. You will find them having furniture of all values. If it is a shady tenant, then the value won't be very much; if it is a good tenant, the value may be twice or three times the rent.

7013. Assuming the tenant was six months behind with his rent, and you had to sell off his goods, how much would you have to sell before you could recoup yourself for the outlay?—Up to the half year's rent and the expense.

7014. How would you arrive at the value of the goods prior to the sale?—The auctioneer stops when he finds the amount covers what is wanted.

7015. You never get the value of the goods at an auction sale?—Not very well.

7016. Suppose you wanted about £4 of rent, how much goods—I mean the value to the tenant—would you have to sell before you got that?—Till it amounted to £4, and the expenses in addition.

7017. But what amount of goods—I mean the value to the tenant?—That is a difficult question, and I do not know if anyone could answer it.

7018. Could you not put an approximation on it?—I doubt it.

7019. Would it be fair to say that you never get more than one-third of the value?—I do not think you will get more, because there is seldom anyone at these sales but brokers.

7020. If you wanted £4, you would have to sell about £12 worth of goods, plus the expense of the sale?—Yes, if there was that in the house.

[*Note to Mr Howden's questions.*—I was very cautious in sequestrating a tenant's effects for rent, as the practice was dangerous and might lead to a law case, and the profit thus not worth the risk. I preferred to serve a small debt summons and work out the collection of the debt in this way. I do not remember following up a tenant and selling his effects for unpaid rent.]

7021. (*Mr Cox.*) You have a good many houses on yearly lets just now?—I am out of business now.

7022. But when you were in business, you had a good many let by the year?—Yes, all but a few weekly houses that we had.

7023. You would have been willing to let them for shorter periods?—If the other factors in the town had so arranged I would have been willing to go into that.

7024. You would not have been afraid of deterioration if you let your houses on quarterly or monthly tenure?—No; but I did not let them monthly. I let them weekly or quarterly, unless I had monthly tenants coming in with a property that I had got.

7025. If you have a tenant on yearly tenure who has been in the habit of keeping his place in good order, his nature would not change if he got a monthly let?—That is so.

7026. We have been told that houses on monthly lets were generally very inferior and dilapidated and not kept so well?—You must understand this, that at present the houses that are let on weekly or monthly tenancies are the oldest of the property in the place. There is no new property being built for that purpose, and the houses let on weekly or monthly tenancies are bigger houses that have been divided up, and they are in localities that have come down in popularity.

7027. If the landlord were paying the rates, you do not think he should get any commission for his trouble?—Of course, I do not quite understand whether you mean both the landlord and the factor. Do you put them together?

7028. Yes?—The factor is being paid at present for the collecting of what he does collect.

7029. As regards the landlord, suppose there was a loss on the collection of the rates—if he only collected 90 per cent. then he would make a loss of 10 per cent.?—There is that in the weekly houses at present, but I have never heard it being taken notice of in any way.

7030. You would be quite willing to bear that loss?—Yes.

7031. (*Mr Dobbie.*) Is it your view that these proposals would not raise the rents?—I do not think they would. I have said already that houses are a marketable article, and they are therefore subject to supply and demand. If there is a better demand, then the rents will rise a little; but you have the speculative builder coming in and rushing up property in six or twelve months, and that keeps the marketable value very fluctuating.

7032. If the landlord had to pay the whole rates, and did not recover more than 10 per cent., there would be less return from the property?—I do not think that would ever take place.

7033. Even take it that he lost 10 per cent.?—I do not think he could lose that.

7034. Might he not lose 10 per cent.?—No, I do not think so. I do not see how he could lose 5 per cent.

7035. To the extent of 5 per cent. there would be less return on the property?—Yes, but it would be the same all over the town.

7036. On all proprietors?—Yes.

7037. If the property was partially empty, and the landlords paid the rates for the whole of it, there would be less return from the property?—That is a more difficult question. The question of unlet property is a very wide one.

[*Note.*—Houses suitable to the locality, moderately rented, and kept in decent habitable condition, always let well and are very seldom unlet.]

7038. But assume the landlord is being assessed on property partially empty during the year, and that he paid these rates, then there would be a less return on the property?—Yes, but why is the property empty?

7039. If the factor was to collect the rates and the rents, he would be entitled to more commission?—He would be entitled to commission on what he collected.

Mr William Stevenson 7 Jan. 1907.

7040. He would get extra commission on the collection of the rates; he would have to collect a larger sum from the tenants to recoup the proprietor for what the proprietor had paid in the way of rates?—The rents would be fixed before, and the unlet houses would be a loss to the proprietor alone.

7041. But there would be a bigger collection if the factor had to collect both the rent and the rate?—Not for that year.

7042. But for every year?—I do not see why the houses should be empty.

7043. I am not talking of empty property. In addition to losses from empty houses, if the factor had to collect a sum sufficient to meet the present rent and to recoup the landlord for the present rates, he would get a bigger sum on his collections, which would include both rates and rents?—No, the commission would be the same.

7044. There would be a bigger sum on which to estimate the commission?—If the factor collected the extra rate, then he would get a bigger commission. I quite see what you are at now.

7045. In the end every burden upon the property ultimately comes out of the pocket of the tenant?—There is no doubt about that.

7046. And yet, after all that loss of burdens on the property that I have given you, you still think that rents would not rise?—If it was made the law that the landlord was to pay the taxes from Whitsunday onwards, then he would require to put on an addition to the rent.

7047. The rent would rise?—Yes, certainly; but it would be simply paying for what the tenant went and paid himself. He would now pay it in small sums through the year to the factor.

7048. And in addition to the loss through empties and the extra cost of collecting, and in addition to the exemption on the ground of poverty?—Possibly; but there is another thing which we forget, namely, that the tenants have to go just now and pay the rates at the collector's office at a cost which does not come in.

7049. Namely, the car fare?—Yes.

7050. That does not touch the point. Is it your view that, while the landlord would require to pay extra commission to his factor, he would require to pay extra rates for empty property and he would require to pay the rates of those at present exempt on the ground of poverty, still the rents would not rise?—The rents would not rise from what they are now. It all comes out of the pocket of the tenant.

7051. (*Mr Esslemont.*) Take a house at £10 and the occupier's rates at 2s. in the £, that would be £1 per annum that the tenant would have to pay. The factor at present collects the £10. You propose he should now collect the £11?—Yes.

7052. The factor gets 5 per cent. commission on his collections, that would be 11s. that he gets in the case of collecting £11?—Yes.

7053. But the owner of the property would have to pay the whole £1 to the municipal authorities, and he would only get 19s. from the factor?—Yes.

7054. That would not be fair?—There would have to be a trifle put on to meet that, and that would save the tenant's expense in going and paying his rates.

7055. Do you not think it would be quite fair, as the owner only gets 19s. in the £1 on the amount of occupiers' rate which is assessed, he should only pay the 19s.?—Quite so; if he is only to pay 19s., they would have to assess for an extra 1s. all over the town.

7056. No; because there is a considerable shrinkage in the collection of the rates, and according to your *précis* a great deal of that would be saved by more frequent collection of the rates?—Is it your meaning that this is to go into the pocket of the factor or to go to the landlord?

7057. The landlord pays it to the factor for services rendered, and the municipality would pay it to the owner for services rendered in the same way, because he took the trouble to collect the rates along with his rent at a cost of 5 per cent. One other question about the shrinkage and loss in the collection of rates: if the rates were added to the rent, and collected at frequent intervals by the factor or the owner, I suppose you agree it would be easier for the smaller class of tenants to pay their rates?—There is no doubt about it.

[*Note.*—I recommend that all property come under the Bill. If the Bill is to be restricted to £20, then there is reason that these landlords should have some relief because of their additional liability.]

7058. You do not assume that there would be any greater shrinkage in the payment of rates than there would be in the payment of rents?—No.

7059. Where he failed to collect the rate, he would fail to collect the rent?—Exactly.

Mr William Stevenson. 7 Jan. 1907.

7060. So if this system were established, it could not very materially affect the return from the property?—I do not think it could. I think the landlord would get the same average return, taking one year with another.

7061. Or, at all events, the additional loss that he must sustain would be very small?—Very small indeed.

7062. (*Mr Binnie.*) You said you thought the best way would be for the landlord not to get any allowance from the rates, but that he should add it to the rent and collect it just as rent?—Yes.

7063. There is always some loss of rent?—I think there is always some little loss of rent.

7064. And there would be the same proportionate loss of taxes?—Yes.

7065. In order to keep up the annual return to the landlord at the old amount, he would require to get from the tenants who do pay up the taxes what he did not recover from the tenants who do not pay?—That is so.

7066. So that your proposal amounts to this, that the man's neighbours in a particular property would just require to make up the taxes of their neighbour who did not pay?—That is the case at present.

Mr William Stevenson. 7 Jan. 1907.

7067. And it would continue to be the case?—Yes.

7068. And to a greater extent, if there are more taxes,—if the taxes are increased, the increase of burden laid on the paying tenants would be greater?—There is no doubt about that.

7069. Whereas, if the town were to give an allowance to cover the loss to the landlord, it would not be the poor neighbours who would require to bear the loss, but it would be the ratepayers at large, including those able to bear such a burden?—That is true; but does not that apply in the other way?

7070. In what way?—That the good payers of rents and taxes have to make up for the bad payers?

7071. Certainly; but in the one case it falls on the whole community at large, including those best able to bear the burden, and in your way it would just fall on the poor neighbours of the person who failed to pay?—I do not think so.

Mr C. E. Price.

Mr Charles E. Price, called and examined.

Mr C. E. Price.

7072. (*Chairman.*) You are Member of Parliament for the Central Division of Edinburgh?—Yes.

7073. When did you go into Parliament?—In February of last year.

7074. At the last election?—Yes.

7075. Was the question that we are now considering brought before you at all in your candidature in Edinburgh?—Yes, I was frequently heckled about it.

7076. At meetings?—Yes.

7077. What was the question, as you understood it, that was brought under your notice?—The reduction of the present term. Whether it was to be weekly or monthly was not entered into. It was an alteration in the missive system,—that was the broad term used.

7078. We have heard the missive system defined in two ways; we have heard it defined merely as a proposal to reduce the period between the time of taking a house and the time of entering, and we have also heard it defined as a proposal to substitute short lets for the present yearly tenure. In which way did you understand it?—In the latter sense.

7079. You know, as regards the first sense, there apparently is a very strong feeling, pretty universally expressed, that the present system of taking houses in February, which are not to be entered into until 28th May, is a grievance?—Yes.

7080. Did you understand that there was also a grievance in the shape of the yearly tenure for working men's houses?—Yes; before I had any thought of entering into Parliament this question came before me as an employer of labour, and it was from that point of view, rather than through any pressure being brought to bear on me at election time, that I thought I could give evidence. Very frequently workmen who may desire to change their employment feel a restriction in making a change, because they are tied to a house for such a long period.

7081. How long back are you speaking in the way of experience?—Eighteen years.

7082. Have you been in Edinburgh all that time?—Yes.

7083. What class of working men did you find that difficulty to arise with? Was it the respectable class, or the shifting and improvident class?—The respectable class. Often a man desiring to make a change from Glasgow to Edinburgh would be unknown in Edinburgh, and the factor would not let him a house unless he got a cautioner for a year. The result was that he often asked his employer to help him. Now, where a large number of workmen are employed it meant a considerable liability if the employer undertook it for every case,—he could not undertake it for one without laying himself open to give it to others; he could not make any preference.

7084. Have you found that such workmen were not able to get houses that they desired, except on a yearly tenure?—That is so.

7085. What is your practice?—We never entered into such an obligation.

7086. If you did it for one you would have to do it for the others?—Yes.

7087. How many employees were you concerned with?—When I myself retired we had some 900 or 1000. I retired from the business in November 1901.

7088. Of these 900, how many were heads of families?—That is a thing I could not tell.

7089. Have you a knowledge of the English system?—I knew it thirty years ago.

7090. And you knew that the two systems were different?—Yes; that in a place like Birmingham the workmen's houses generally were of a much better class than they are here. The reason was, of course, that they were brick houses and much cheaper. It was a very great convenience to the workmen being compelled to pay either weekly or monthly. Then I knew Liverpool very well. It is a very great convenience there to collect the rents either weekly or monthly. Perhaps I may be allowed to say that, in addition to the objection from the employer's point of view, it was also a great restriction on a workman. He often could not take employment in a given district because he was bound to the house in the district in which he then was living. That is to say, he had not freedom to enter into a vacancy that might arise, because of the obligations in the district in which he was then working.

7091. How did you know that?—By applications that we received from men. A man would frequently say that he would be willing to make a change for the same wage, because it might be a better class of work; but he did not make the change, because if he did so, he would have to take lodgings, and also pay his rent in another town. He therefore had not the freedom to make the change which he would otherwise have done if this long term system had not been in existence.

7092. That is a question of the long term of tenure, and not a question of payment of rents. You said it was a great convenience in England, the paying of the rent weekly or monthly. That is not the question so much as that the man is bound in Scotland to remain on?—It is a great convenience to workmen to pay only a small amount at a time. I was going to refer to that in another aspect of the question. My point was that this obligation that he had entered into with his landlord destroyed the freedom, which I think he should have had, to make any change he desired.

7093. On the other hand, have you not found, as is alleged by some people, that, while that is so, working men value the security of tenure that the yearly let gives them?—I don't think that that enters into the question. If the tenant is a good tenant, he knows perfectly well that he will never be disturbed; if he is a bad tenant, he must just run the risk of being a bad tenant. I think a man would prefer the freedom to be able to leave his house at any time he desired than to be under this heavy obligation. Then, as to making application to the employers to become cautioners,—where the employers make it a rule not to become cautioners, as was the practice in our firm, the men would frequently ask a foreman to become cautioner. As every one knows, workmen are exceedingly anxious to help each other, and they sometimes became cautioners. Two foremen of public works in Edinburgh pressed me very strongly on this point, hoping that I would bring it forward, that they were frequently asked to become cautioners for men entering their departments. One of these foremen had paid £7, 10s. of an obligation he had entered into.

7094. That all flows from yearly tenancies, and is not involved in the short lets?—That is so. There is another aspect I should like to bring out, and that is the very serious disturbance to business for a month, practically, before the term. I know that our travellers used to complain that business was exceedingly quiet for a month before the term, because men were saving up for their rents. The result is, that in large cities, such as Glasgow and Dundee, and in the industrial parts of our city of Edinburgh, there is a great feeling of depression in business, and it is a serious matter to many shopkeepers. If an alteration were made in the system, they would be greatly relieved; they could work with much greater regularity,

Mr C. E. Price.
7 Jan. 1907.

and you would not have this long period of depression that you have at the present time.

7095. If an alteration were made, would you expect the result to be that men would remove throughout the year instead of practically at one term?—Yes.

7096. The work would be distributed in that way over the year, removal, and preparation for finishing houses, and so on?—That is not the point I had in my mind. It was rather the disturbance to the shopkeeper as regards what he has to sell. As I have had very long experience of business in that connection, I may say that it is a most important thing to shopkeepers in industrial districts that for a month practically before the term the working people are saving up, naturally, for their rents, with the result that many of them are living on practically the bare necessities of life until their rent is paid.

7097. I do not quite understand that. We have not heard much complaint about the payment of rents being too infrequent. The payment of rent, even with yearly tenancies, is monthly or quarterly, and in some cases half-yearly, and there does not seem to be much complaint that the factors won't take the payment of rent more often. The complaint rather is that they are bound hard-and-fast to too long a period?—I am speaking of the complaints made through travellers, complaints from shopkeepers as to quietness of their trade, and how it is that this quietness of trade is brought about. I therefore think it would give steadier employment to workmen, because in many cases during that month some firms relieve themselves, as far as possible, from excess of people in their employment.

7098. Have you ever considered this question, that it seems to be agreed that if short lets are enacted, compounding of rates will also necessarily follow?—Yes. Of course, that is a subject on which I have not the experience that many other witnesses will have. If I may be allowed to say so, that is a question about which you will get better evidence from others than from me.

7099. We know that in Glasgow, at ward meetings as well as at parliamentary meetings, this question was continually being brought up, and has been for a series of years. We are told that in Edinburgh it has not been brought up at any ward meetings. If that is so, have you any explanation to offer?—I think that it has been a more pressing question in Glasgow than in Edinburgh, for the simple reason that Glasgow is a more industrial city than Edinburgh, but it is a pressing question in the industrial parts of Edinburgh.

7100. Is your own constituency industrial?—Partly.

7100*a*. Have you any manufactures in the central divisions?—Yes; there are printing works, breweries, and a brass foundry.

Mr C. E. Price.
7 Jan. 1907.

7101. Is there any other aspect of the question that you would like to speak to?—These are the main points that I wanted to bring out. The only thing I would like to emphasise is this, I made up my mind to agitate for this long before I went into Parliament, because I felt, from personal experience, that it was a very great grievance to working men.

7102. You have no opinion as to whether, if there is to be a measure, it should be optional?—You mean for each town?

7103. Yes, leaving each town council to settle for itself. You have not considered that specially?—No; but, personally, I think it would be better to make it a general law, if possible. It seems to me that this question is so very general that one cannot see the objection to making the Bill applicable to the whole country.

7104. (*Mr Howden.*) Have you ever heard of the grievance in England as regards short lets, namely, that the tenants have a very insecure tenure?—No.

7105. It has been suggested to us that while the tenant might have the right to shift, if his rent was monthly, at a month's notice, a good tenant who pays his rent and does not destroy his property should be given security of tenure?—That is to say, the tenant himself should have that security.

7106. Yes, that the landlord should not have the power to turn him out at a month's notice?—If you are to give the right to the tenant to claim it, then the landlord might say that he wanted equal privileges.

7107. Assume that the tenant pays his rent, and does not destroy the property, or annoy the neighbours—he is presumably a good tenant—it may work out that for a political reason, or some grievance which is not a substantial grievance, the factor might turn that man out. Do you not think that that man should have security of tenure?—I understand your point. I scarcely like to give to one side a privilege that I am not prepared to give to another.

7108. Take the case of miners that was brought to our notice in Glasgow. Many of these men live in houses belonging to their employers, and they hold their houses practically according to the term of their employment. In the case of an industrial dispute, the owners put these men on to the roadside. Would you favour a Bill or some legislation that would prevent their having that right?—At the time of dispute, such as that, certainly.

M. J. F. Wallace.

Mr J. F. Wallace, called and examined.

Mr J. F. Wallace.

7109. (*Chairman.*) You are the Secretary of the Falkirk and District Landlords Association?—Yes.

7110. You yourself are a heritable proprietor in Falkirk?—Yes.

7111. You have held your post of Secretary for eleven years?—Yes.

7112. You are authorised to express the views of that Association here?—Yes.

7113. Your Association was instituted in 1896, and it is representative of all classes of proprietors in Falkirk?—Yes.

7114. What are the industries in Falkirk?—Principally iron foundries.

7115. What is your experience as to the demand (if any) in Falkirk for short lets?—I have not been asked for a shorter let than one year during my experience.

7116. What kind of property do you have yourself? Is it working class property?—Yes; houses let at £14 or £15.

7117. What is the minimum rental?—About £9.

7118. And what does it go up to?—£14, 10s.

7119. Do you factor your own property?—Yes.

7120. What are your tenures?—One year all through.

7121. Have you any except yearly tenants?—No; I have not been asked for anything else than yearly lets.

7122. In Falkirk, what do the rents of those who have short lets go up to?—We have a few monthly lets, but very few.

7123. About what rent will they go up to?—I don't think they will go beyond £8.

7124. Have you had any cases where people have come to you and said that they would take your house if you would give it to them on a monthly let?—Not one.

7125. Have you known of any such cases?—I know that there are monthly lets, but there are not many in the town.

7126. But these are for the small lets, you see?—I don't know of any cases.

7127. Do you think, if there had been a large demand for the better class of working men's houses at short lets, you would have had such requests made to you?—Yes.

7128. Is it not the fact that there are cases where a man wants to change his employment in the middle of a term?—Yes.

7129. Does he not find it very inconvenient to be tied for months to a house which he cannot get rid of?—In general his employment is not far off. The foundries are mostly within the burgh.

7130. And is there steady employment in these foundries?—Yes.

7131. The men in Falkirk are not of a specially shifting class?—No, I don't find that.

7132. In these foundries is it steady work as compared with ship-building, where there may be a contract to build a man-of-war employing for a comparatively short time a great army of men. You have nothing of that kind?—No, it is pretty steady work.

7133. Suppose a man does need to change his employment, is it not very inconvenient in his case that he is tied, and has to pay possibly for two houses?—I don't know of such cases.

7134. I suppose you have had applications for sublets?—Yes; I have had two cases, one between May and November, and one since November, where I was asked to relieve a party of his house, because of his work being shifted to another town.

7135. What did you do?—I relieved him at once.

7136. Have you any number of unlet houses in Falkirk?—A good many, principally on the outskirts of the burgh.

7137. But there is no unusual number. It is just the ordinary number?—There are perhaps more than usual in the meantime; dulness of trade accounts for that.

7138. Do you think, if there was a big demand for short lets by the better class of working men, the market would have supplied it?—Yes, I think so, if there was a demand.

7139. But you have not known of it?—No.

7140. Suppose a man gets relieved of his house, what do you charge?—In our Association we have an agreement that in the case of houses from £9 to £15 we relieve the tenant on payment of 10s. of an indemnity fee.

7141. That is to say, if a sublet is got? It is not total

Mr J. F. Wallace.
7 Jan. 1907.

relief of responsibility?—It is total relief on payment of rent and taxes.

7142. You hold him liable for the rent, and you charge him 9s. or 10s. besides?—We take the house off his hand.

7143. The rent being paid up to date?—Yes.

7144. Take the case of a man that has a £15 house, and his entry is 28th May; in the middle of June he comes to you and wants relief. Do you relieve him on a payment of 9s.?—10s.

7145. Although you have no sublet in prospect?—Yes. I had one case last June.

7146. Is that rule a written rule?—Yes, by resolution.

7147. Will you send us a copy of it?—Yes.

7148. Have you a form of missive that you enter into?—Yes.

7149. Will you send us a copy of that also?—Yes, with pleasure.

7150. So far as there is a demand for short lets, do you think that demand is supplied already?—Yes, I think so. I have heard no grievance.

7151. Whatever may be the case in Glasgow, you are now speaking for the wants of Falkirk?—Yes.

7152. Have you known any agitation as regards this question at any of the ward meetings in Falkirk?—No, not at the ward meetings. We had a deputation from the Trades Council asking us to alter the date of letting; to put it further back.

7153. When was that?—About three years ago.

7154. Was anything said in addition about short lets?—No.

7155. It was the missive question?—Yes.

7156. What did you do?—We were quite agreeable on condition that the warning away day was also changed. That would have to be done first, as it is fixed by law.

7157. You wished it removed from 4th April till when?—There was no date mentioned at that time, but I think 4th May would do.

7158. And what about the date of letting?—4th April.

7159. Giving a month?—Yes.

7160. In addition to what you said about there being no demand for the short lets, do you think that if short lets involved the landlord collecting all the rates, it would be a good thing or a bad thing?—I do not think it would be very suitable.

7161. Why not?—It imposes a duty upon him and also a responsibility which he wants to keep clear of.

7162. You have never found any landlords who desired to be rate collectors more than they could help?—No.

7163. Nor factors either?—No.

7164. Even although the factors would, of course, be paid for their trouble?—Of course.

7165. But they don't like it?—They don't want it.

7166. If it is necessary to have more frequent collection of rates, how do you think it should be done?—By the municipality.

7167. Collecting more frequently?—Yes.

7168. Do you think that the present system of yearly lets is to some extent connected with the present system of yearly collection of the rates?—Yes, I think so.

7169. If there was more frequent collection of rates, you think it would lead, without any more legislation, to quarterly lets being more common?—Yes, it would lead that way.

7170. Has the Town Council of Falkirk taken any action in this matter?—Not that I know of.

7171. Suppose there was to be compounding, you have seen the rates proposed in the schedule to Mr Cross's Bill. What do you say about these on behalf of your Association?—We think them quite inadequate.

7172. Do you think if burghs are themselves not able to collect their rates, the landlords will be able to do so?—No.

7173. Do you think that they would incur more loss?—They are bound to have more loss, because the municipalities have summary powers which the landlords have not. The landlord would have to cite and sue separately.

7174. In any case, if the landlords were made to collect the rates, they would require to obtain powers against tenants that corporations at present have?—Yes.

7175. And they would require a sufficient allowance to cover the loss?—Yes, and to cover the responsibility.

7176. You are clear that these rates would not fairly do so?—That is so.

7177. In Falkirk do you relieve the poor tenants?—Yes.

7178. Has that system been fairly carried out so far as you have heard?—Yes.

7179. It is not abused?—Not that I am aware of.

7180. Is it your view that in any case that should be continued?—It would be a hardship to deprive them of it. It is only needy tenants who get it, and it would be a hardship to them to lose it.

7181. It would be an objection to any scheme which necessarily involved the stopping of that system?—Yes' certainly it would.

Mr J. F. Wallace.
7 Jan. 1907.

7182. We have been told that the present system of ejecting bad tenants is not satisfactory,—that it is too slow and too dear?—Yes, both.

7183. Have you any experience about that in Falkirk?—I have not had much experience of it, but I have heard a good deal about it.

7184. Is it the Burgh Court or the Sheriff Court that is applied to in Falkirk?—The Sheriff Court, I think.

7185. Are the members of your Association unanimous in the view that it would be a useful change if the warning-away day were changed to 4th May, and the letting to 4th April?—Yes; they are unanimous in that, and the tenants are clamouring for it.

7186. But it would require to be done universally in order to be fair?—Yes.

7187. Otherwise, some persons might not be loyal to the arrangement, and would have an unfair advantage?—Yes.

7188. What is the view of your Association in reference to the proposal that the change should be optional, thus involving different systems in different parts of the country?—We think that that would lead to confusion. Such was the case some years ago, when it was the 15th in the county and the 28th in the burgh, and that was found to be very confusing.

7189. You found that by experience?—Yes.

7190. You have noticed, of course, that the proposal under Section 10 is that the Town Council should be the authority to adopt the Act and not the people?—Yes.

7191. What do you say to that?—If it is to be permissive it ought to be permissive in the broad sense, perhaps a two-thirds vote of the people calling on the Town Council to adopt the Act, otherwise we must call it an authorities' Act.

7192. Do you agree that if there is to be liberty to adopt it, there should also be a provision that if it is found not to work successfully it ought to be gone back on?—Yes.

7193. It is proposed to limit it to burghs, so that houses immediately outside burghs would be exempt?—Yes, and that would be very confusing in some cases where houses just over the line were to let and others were not to let.

7194. The title of your Association is the Falkirk and District Landlords Association. What is included in the "district,"—are there any other communities?—I do not think we go beyond the burgh. The burgh has been extended since our Association was formed, and before its extension we had some members in the county.

7195. (*Mr Howden.*) Do you embrace any factors in your Association?—Not except as landlords. It is a landlords' association.

7196. Does the practice of your Association in connection with sublets differ materially from the practice of others who are not in your Association?—I do not know their practice generally, but I know that some of them do the same as we do.

7197. That is to say, they let them off when they want away?—I do not know how they do.

7198. You are simply stating what you do in your own case?—I am speaking for my Association.

7199. Are there many landlords in the Falkirk district who factor their own property?—A good many.

7200. And they all adopt the same system as you say you adopt?—So far as I know.

7201. Do you really speak for the Association on this particular point? I ask that, because I may say it is rather unusual that you do not charge anything to a tenant except the expense of subletting his house, and you let him away. This is the first time that we have had that evidence submitted to us?—That is how we do.

7202. Is that general in Falkirk?—It is pretty general. I cannot speak for factors outside our Association. I know that some of them do follow suit, but I could not say that they all do it.

7203. (*Chairman.*) Can you tell us the proportion of property in Falkirk that is factored by your Association as compared with what is factored outside?—No.

7204. Will your Association factor one-fourth of the property?—Yes, fully.

7205. (*Mr Howden.*) Does the removal term of 28th May not cause unusual briskness?—It is a busy day, but it has always been managed.

7206. And it causes a corresponding amount of slackness immediately thereafter?—Yes.

7207. And some men are put out of work?—Yes, those removing lose their day in order to carry out the removal. That seems to be unavoidable.

7208. Unless you had some other system of letting, which would spread it over the year?—They might get a house standing waiting them, but that is not usual.

7209. If the letting season was spread over the year, it would do away with this undue briskness?—Yes.

Mr J. F. Wallace.

Jan. 1907.

7210. Do you exercise your right of hypothec?—If necessary, but it is very very seldom.

7211. Can you tell about what proportion you usually realise of the actual value of the tenant's goods on a forced sale?—I would require to be a valuator to value those things, in order to answer your question. That is ordinarily the sheriff officer's work.

7212. Do you usually get anything like the value?—I do not attend the sales, and I do not know.

7213. You keep clear of the sales?—When I am not wanted there.

7214. (*Mr Binnie.*) Have a number of men been leaving Falkirk recently for England?—Yes; the Diamond Foundry removed, and took away fifty families. One of the tenants I was referring to was one of the fifty.

7215. Do you suggest any of those men are requiring to pay rent in Falkirk for the houses they have there?—I do not think so.

7216. They are all being relieved?—I am satisfied they would be all relieved before they went. I am quite clear on that.

Mr J. F. Wallace.

7 Jan. 1907.

7217. (*Mr Dobbie.*) The limit in Mr Cross's Bill for Falkirk is £16. Do you think that is a suitable maximum, seeing that £20 is to be the limit in Glasgow and in Edinburgh?—If short lets were in demand, that would be quite a high enough sum.

7218. Is it too high?—Less would do.

7219. The test is rather this, what do you think a fair working man's rent in Falkirk will be?—£9 or £10 for a room-and-kitchen house. A house of three apartments comes up to about £14 or £15. Unless the family require more, a room-and-kitchen house is the common thing.

7220. At about £10?—Yes.

7221. When are rents payable usually in Falkirk?—Half-yearly. There are some payable quarterly by arrangement, but half-yearly is the general thing.

r J. Allison, Mr G. M. Brotherston, r J. Goalen, and Mr J. Hall.

Mr James Allison, Mr George M. Brotherston, Mr James Goalen, and Mr James Hall, called and examined.

Mr J. Allison, Mr G. M. Brotherston, Mr J. Goalen and Mr J. Hall.

7222. (*Chairman to Mr Brotherston.*) You are President of the Edinburgh and Leith House Factors Association?—Yes.

7223. (*To Mr Allison.*) You are the Honorary Secretary of the Association?—Yes.

7224. (*To Mr Goalen.*) You are a member of the Association?—Yes.

7225. And Mr James Hall was a former President, and is now a member of the Association?—Yes.

7226. (*To Mr Brotherston.*) How many members do you have in this Association?—We have now fifty-five members.

7227. Your Association embraces all the principal house factors in Edinburgh, Leith, and Portobello?—Yes.

7228. And one in Musselburgh?—Yes.

7229. It was instituted for the ordinary purposes of such an Association?—Yes.

7230. It began with fifteen members, and it has grown in the way you have mentioned?—Yes.

7231. Did you, in February 1894, consider Mr Cross's Bill of that year?—Yes, we considered it. That was the first time it was mentioned in our minutes.

7232. And you agreed unanimously to petition against the Bill on the ground that there was no public necessity or desire for it, and that it was contrary to the interests of property owners?—Yes.

7233. Have you continued since to maintain the same attitude?—Yes.

7234. And have you seen any reason to alter the opinions you then formed?—No.

7235. In regard to the first question of whether there is a demand for it, the Town Council in Edinburgh has not petitioned in favour of the Bill?—It never has petitioned to my knowledge.

7236. What about the Town Council of Leith; have they taken any action in the matter?—I could not say.

7237. (*Mr Goalen.*) They have appointed two of their number to come and give evidence, Bailie MacNab and Bailie Stewart.

7238. (*To Mr Brotherston.*) Has the matter been agitated at ward meetings in the way we have heard it has been done in Glasgow?—I have never heard of it any more than one question being asked, and it was asked in a very intermittent way.

7239. If there was a large public demand, you would have expected symptoms of it that you have not seen?—Yes.

7240. In regard to the first question, viz., the letting day, we have been told that that was up before your Association, and you came to a resolution on it?—Yes.

7241. When was that?—It was in 1894.

7242. At whose instance was that matter brought up?—I think at that time there was some public talk, but I do not recollect about it. Mr Allison brought up a motion on the question.

7243. And the result was to alter the letting day from Candlemas to 15th March?—Yes.

7244. That was agreed to unanimously?—Yes.

7245. Until recently it has been found to work well?—Yes. We advertised in the *Scotsman* eight or nine times, twice a week, asking private owners, lawyers, and accountants interested in property, to join with us in adopting this date, and it was pretty generally adopted.

7246. And you asked the Town Council to recommend 15th March as the letting day?—Yes, and they did so.

7247. Was that the Town Council of Edinburgh only?—Yes, we did not go to Leith.

7248. Once that was done, did you find any other agitation, or did things just take their ordinary course?—There was no agitation to our knowledge.

7249. Was there an agitation for short lets at all?—I do not think so; there was none to my knowledge.

7250. Did you find, as a result of the change, that there was less trouble in letting, that tenants re-took their houses readily and did not hold back?—Yes. The difficulty with the old letting date was that people said, "You want us to 'bind ourselves five months before we want our house. 'What is the hurry?" And we had to go to the tenants again and again. We had only about a week of a busy period at first, and then it dragged on until about 4th April again.

7251. Recently there has been some going back on that resolution of yours?—Yes. One large owner would not adopt this date at all, and he hurt the others in his district who were sticking loyally to 15th March. Several lawyer firms also stuck to 15th March.

7252. What has been the result?—The Association have recommended to the members no action, but I think the date will go back to the old date.

7253. Viz., Candlemas?—Yes.

7254. Do you see any objection to making a later date statutory?—Not at all; I think it would be much better.

7255. It has been suggested that the first thing to do is to alter the warning-away date?—Yes.

7256. At present it is 4th April, fifty-three days before 28th May. How far forward would you put it?—To 28th April.

7257. How long would you require before that?—The first week in April.

7258. So as to give something like a month between the entry and the warning away?—Yes.

7259. Take the other suggestion, that twenty-one days before 28th May should be the warning-away day, do you see any objection to that?—That might conflict with the collecting term. As it is just now, the collecting term is 15th May. Now, that brings it very close on to the collecting term.

7260. What difference would that make?—It brings the one very close on to the other, but I daresay it could be worked.

7261. Suppose it was 7th May, how long time do you think the date of entry must be before the warning away? It has been suggested that it should be ten days?—I think that is too short. You mean 7th May as the warning time?

7262. Yes. How long before that, do you think?—Three weeks, perhaps.

7263. Do you see any reason why a provision of that kind should not apply all over Scotland?—I think it would be far better to bind everybody compulsorily.

7264. That is the first point. Come now to the short lets. You object, I understand, to any change on that system?—Yes.

7265. First of all keep out of sight the rates altogether. Do you agree that the present system of having only one removal term in Scotland is unfortunate?—We have not found it so.

7266. Have you not found a good deal of over-pressure at that time, and slackness of work later on, due to there being only one term?—I cannot say that I have found it so in my experience.

7267. At all events, it would be no drawback if the practice were to have two removal terms as against one or even four removal terms?—Of course, if the letting season was changed entirely, there would be no harm.

7268. Practically, it is the case that, although there are supposed to be two terms, so far as letting is concerned, there is just one?—Yes.

7269. How does that arise in your view? Why should

that be so?—Because there is only one letting season in the year.

7270. Why should there be only one letting season in the year?—I cannot say. It is use and wont.

7271. And it has been all your time?—Yes.

7272. Have yearly lets increased, or have they remained the same in proportion to the others, just as you knew them first?—I think so. I think there are more monthly houses in Edinburgh than there used to be.

7273. Has the fact that rates are collected only once a year had something to do with the number of yearly lets?—I really could not say. It is simply the custom.

7274. (*Mr Goalen.*) I may say in support that I have a paper here, signed by the whole of the tenants in a tenement, protesting against a shorter period than a year.

7275. (*Chairman to Mr Goalen.*) We have never had anything of that kind before. You produce a paper, which is headed "Letting of Houses," and which says, "We, the 'undersigned tenants of houses at 37 Buchanan Street, 'Leith, understanding that there is a Bill before Parliament 'to alter the system of letting houses in Scotland, hereby 'declare that we are quite satisfied with the present 'arrangement of letting them by the year, and we object 'strongly against any shorter period of let." There then follow fifteen names, with the rents opposite each, varying from £8, 15s. to £9, 10s. When was this signed?—Just this last week.

7276. Are these all the tenants of the houses at 37 Buchanan Street?—One of them was from home, and we could not get him.

7277. Why were they asked at this particular place, 37 Buchanan Street?—We just fixed on one place where the houses would be under £10 of rent. I have no doubt, if I had gone to a number of others, I would have got the same.

7278. (*Chairman to Mr Allison.*) You also produce a similar document?—Yes. "Edinburgh, 5th January, 1907. 'With reference to your inquiry as to how we would like 'in future to rent our houses, we much prefer that it 'should be done yearly, and payable either quarterly or 'half-yearly as arranged. We certainly would not wish to 'change to weekly, monthly, or quarterly periods." There then follow twelve signatures of tenants, all being either at 7 or 17 Rossie Place. Then there is this, "Only one 'dissentient in both stairs. All seen who were at home. 'Others at work when call made."

7279. What was the total number of tenants?—Fourteen in each tenement, that is twenty-eight altogether.

7280. And there are twelve signatures here?—Yes.

7281. There was one dissentient. That made fifteen whose views were not ascertained?—They were not in at the time.

7282. (*To Mr Goalen.*) Was there any particular reason in connection with that stair which would make the views of those tenants different from the views of other men in a similar position?—None whatsoever. They are a very respectable class of working people.

7283. What are they working at generally?—Different things. They are engineers and porters and so on.

7284. They are working at employments that are pretty steady?—Yes.

7285. (*To Mr Allison.*) What do you say to the same question?—They are workmen of all kinds, working at foundries, in shops, and so on.

7286. Any of them working about the docks in Leith?—No.

7287. Where is Rossie Place?—At Abbeyhill Railway Station.

7288. (*To Mr Goalen.*) And where is Buchanan Street, Leith?—Just at Pilrig.

7289. A bit off Leith Walk?—Yes. I have half a dozen in that street, and I know they would have signed the same.

7290. (*Mr Brotherston.*) Mr Hall is going to put in a similar document.

7291. (*Chairman to Mr Brotherston.*) Do you find that there are some working men who attach importance to the security of tenure?—Yes, I have been told such a thing from time to time.

7292. Do you find any other ground for their preferring a long tenure?—As I have said in my *précis*, the tenant takes an interest in his house. In many cases they recognise the fact that at a small rent the proprietor cannot do all the cleaning that is necessary. They ask if you will help them, and you do so, and in some cases you give them paper or paint. Now if the houses were let half-yearly or quarterly we would not do that—we could not—and we would say, "Do the repairs yourself." We give the help on the assumption that the people are to stay on for a year or two.

7293. They would be afraid if the tenancy was to be converted into a short let they would not get that help?—We would not do it.

7294. Is there also the feeling in addition that there is a social difference between a yearly tenant and a short let tenant?—That is my feeling. The weekly tenants are as a rule confined to one property, and the yearly or half-yearly are confined to another.

7295. Are they not mixed up?—No, not as a rule. There may be some cases where they are, but in 95 per cent. of cases they are confined to one property.

7296. You find they are either of the one class or of the other?—Yes, and if we let in tenants on these short lets they don't conduct themselves as the others do at all.

7297. Have you had English people coming to Leith and getting employment there?—Yes. I have had them occasionally coming to Edinburgh.

7298. Have you had them applying to get houses on a similar term to what they have in England?—They have asked us to do it, and in some cases what we do is this, we tell them that our usual terms are to find a cautioner or security, and we ask them if they can pay a quarter's rent or something like that.

7299. Suppose an Englishman came and wanted a house on quarterly tenure, what would you do?—I am afraid that if it was the usual rule that we let the house by the year we could not give it to them.

7300. So I suppose it is the case that if people wanted yearly houses at a shorter let they would not get them?—Not as a rule. They might get them in a year such as this, when there is such an immense number of empty houses.

7301. To what extent is the system of cautioners observed in your experience with yearly lets?—It is very generally observed for new tenants, but not for older tenants.

7302. Is not that an unfortunate incident of the yearly system, that cautioners should be needed?—Of course it is a legal obligation on the factor as well.

7303. It may be quite a proper thing, but is it not a drawback to yearly lets that that should be necessary?—It might have to apply the same way in a quarterly or half-yearly let.

7304. Have you found that strangers coming to Edinburgh or Leith have been put to practical difficulty by that?—In some cases they have, but, as I have said, it can be met by their giving their rent forehand. We give them that alternative.

7305. In your yearly lets, what are the usual periods of payment?—Quarterly and half-yearly.

7306. Would you say that there was a majority for any one system?—I would say that the majority would pay half-yearly.

7307. And the rest quarterly or monthly?—Yes.

7308. What proportion of the balance would be quarterly, and what proportion would be monthly?—I have a table of my own here which shows that. I have charge of 1349 houses and business premises, with a total rental of £11,690. The one-apartment houses are let at rents up to £6; the two-apartment houses from £6 to £11; the three-apartment houses from £11 to £16; and the four-apartment houses from £18 to £27. 1106 are let by the year, the rent being payable half-yearly, quarterly, or monthly; 27 are let by the month; and 216 are let by the week.

7309. You don't give the proportion of half-yearly and quarterly and monthly?—About one-sixth of our houses are let by the month and weekly.

7310. Owing to the large number of empty houses in Edinburgh this year, more monthly lets have been entered?—Yes.

7311. What does that point to? Does not that rather suggest that tenants, owing to the landlords not being in a favourable position, can get monthly lets if they want to?—That is so.

7312. That rather seems to suggest that there is a demand for monthly lets, which, when landlords are in a prosperous condition, owing to their houses being let, cannot be got?—A tenant is like everyone else who makes a bargain; he tries to make as good terms as he can. If he can get from you a house on monthly let, that is to say, that he can clear out at the end of the month and give you no notice, then he will take that house a great deal quicker than he will take a house for a year and give you a cautioner.

7313. So if he could get it, he would prefer to get his house by the month?—Yes, but we would not be able to give it to him.

7314. Why would he prefer it? Would it be because he could move more easily?—He can go when he chooses. If we give him a house for a year, and he has a cautioner, then we have some means of pressing him, and some means of recovering the money, while in other cases we have very little.

7315. Are there not many contingencies when it is desirable that he should be able to leave at short notice?—The matter can be arranged. I know that several times we have had tenants coming and saying that their wife has died, and so on. We consider every case on its own merits,

Mr J. Allison, Mr G. M. Brotherston, Mr J. Goalen, and Mr J. Hall.

7 Jan. 1907.

and we say, "If you pay up to the time you move, then we will let you away."

7316. If there are a great many houses unlet, as at present, it may not be possible?—No.

7317. You have no general rule, such as they have in Falkirk, that, so far as the houses are factored by the landlords themselves, they quit the man of all his responsibility on payment of 10s.?—No.

7318. Did you ever hear of that before?—No.

7319. (*Mr Cox.*) Is it a generous arrangement?—I think so.

(*Mr Goalen.*) In my agency there were 30 houses given up out of 1309, the rental not being above £15, and I relet the whole of them.

7320. (*Chairman to Mr Goalen.*) When was that?—This last year. Of course some of them don't want to go away immediately; they come and say, "We have not got a house in the other town yet." We ask them when they think they will go out, and then they fix the date, and I do my best to let the house.

7321. (*Mr Howden.*) Assume you did not let the house, what would you do then?—I could not help myself.

7322. (*Charman.*) If they were responsible, you would hold them responsible for the rent?—Yes, I could not help myself.

(*Mr Brotherstone.*) The sublets, in my experience, are about 2 per cent. per annum.

7323. (*Chairman to Mr Brotherstone.*) Is that over a series of years?—Yes.

7324. And your view as to these is that while there are some individual cases which may involve some hardship, they are not numerous enough to warrant upsetting the present system of house letting?—That is so.

7325. Is it your view that, if there were shorter lets, the rents would remain the same?—No, they would have to be raised to cover the loss—there would be empty houses, and loss from non-payment of rents as well.

7326. That is apart altogether from the question of rates. Suppose there was no liability for rates put on the landlords at all, do you still think that the rents would require to be raised?—Yes.

7327. Would that be because you would require more repairs?—Yes, and losses as well. Just now you have them on a yearly let and you have more security.

7328. Through your cautioner?—The tenant is fixed for a year and your rents are secure, whereas, if you have half-yearly or quarterly or monthly lets, you do not have the same; we have more loss.

7329. From the point of view of the tenant—although that is not your direct concern—do you think he would be exposed to the landlord, having once got him, raising his rent on him, thinking he would just have to stay?—Yes.

7330. (*Chairman to Mr Hall.*) Have you had a statement made by any of your tenants?—No, but I spoke to a number of tenants. They refused to sign any statement, because they thought they might be pulled up by some of those Trades Unions. Every one I spoke to assured me that they did not desire monthly rents, because the majority of them were in the Co-operative Stores; they got their dividends half-yearly, and they preferred to pay their rents quarterly or half-yearly. They did not desire monthly rents.

7331. What rents were these?—The rents of the tenants I spoke to were £8.

7332. But they belong to the respectable class of decent working men with pretty fixed employment?—Yes, tenants that I have had in the same houses for years.

7333. Engaged at what kind of work?—Some of them are in Miller & Richard's place, the type-founders; some of them are plumbers, and others are masons.

7334. Where do they live?—In Forbes Street and Beaumont Place, down at the end of East Crosscauseway, near the Pleasance.

7335. (*To Mr Brotherstone.*) Do you think that if short lets were introduced, there would require to be some better power given to the landlord to eject unsatisfactory tenants than he has at present?—Yes.

7336. Do you complain both of the slowness and of the cost of ejections?—That is one point that none of Mr Cross's Bills has ever given effect to. No attention has been given to this circumlocutory process of getting rid of a bad tenant.

7337. You could not take away all power of discretion from the judge to consider particular cases; you could not enact a single rule that in every case the person should be put out?—No, I think there should be some discretion still left.

7338. So you would always be exposed to appear before a soft-hearted man who would be apt to abuse his discretion?—The sheriffs as a rule carry out the Act. The magistrates are rather of a sentimental nature.

(*Mr Allison.*) It is more the expense that we are against.

7339. (*Chairman to Mr Allison.*) That is where ejection is actually required?—Yes.

7340. But in the great majority of cases you don't require actual ejection?

(*Mr Brotherstone.*) There are many of the cases that have been through the mill so often that they know the law as well as you, and they sit to the very last minute. I have been told of one case where the tenant said, "I was always accustomed to get a summons when I was put out of my house."

7341. (*Chairman to Mr Brotherstone.*) Have you an instance of the cost in one case?—Yes, I have the account, and I will put it in.

7342. That is a case where a tenant was seven weeks in arrear, and the outlay was 10s. 10d.?—Yes. I hand a copy of the account.

7343. What was the rent?—£4 per annum, I think. It was a small single room.

7344. Now, in regard to the rating, does your Association object to being made rate collectors beyond what they are at present?—Yes.

7345. Why?—We think that it is not part of our duty.

7346. Suppose you got such an allowance as would cover the cost of collection, the loss, and the unlets, you would still object?—Yes. A great number of people object to pay rates and they pay rents. We have quite enough to bear collecting rents, and we don't want any more odium.

7347. If you are to collect the rates, you don't think that any loss should fall upon the landlord or the factor?—That is so.

7348. In your view, looking to the allowances that are proposed to be made, would it necessarily result in a loss?—Yes. What Mr Cross proposes in his Bill is quite inadequate.

7349. If these rates are substantially below the actual loss at present incurred by the Corporation in collecting their rates, do you think you would be able to do it at less loss, or greater loss?—I think if it was allowed to be collected with the rent, it would not be so very much. It is proposed in the Bill that the different sums should be detailed. My Association is strongly against that, because immediately you ask a tenant to pay certain items, then there is friction. The tenant would pay the rent, and would say, "I will pay the rates afterwards," and the sum would be so small that there would be continual friction. The simpler you make it the better.

7350. If it was collected by the landlord in one sum without detail, and at frequent intervals, you do not think there would be the same difficulty?—I don't think there would be.

7351. There is no doubt there would be less loss if you had monthly collections than the Corporation suffer at present with one annual collection?—I think so, but my feeling is to keep the rates out altogether.

7352. If more frequent collecting is desirable, you think that should be done by the authorities themselves?—Yes, I think so.

7353. (*Chairman to Mr Allison.*) We know that your experience is a large one. You have been forty-five years in business as a house agent and factor, and you have had experience of small rented properties, as well as higher rented properties, half of your property being houses under £20, and the other half being over that amount?—Yes.

7354. Are your houses of that kind almost wholly let on yearly tenure?—Yes.

7355. And the lets are payable either quarterly or half-yearly?—Yes.

7356. Do you concur with the views that Mr Brotherstone has expressed on behalf of your Association?—Yes.

7357. Have you any view on the question of the application of English experience to Scotland?—I think that each country has adopted the system most suited to its wants voluntarily, and there should be no statutory change of that. Each country adopts what it finds beneficial, and to show that, the experience of the whole of the Association throughout Edinburgh is that there are only 2 per cent. of sublets required. That shows that it is not an urgent matter in Edinburgh.

7358. If it becomes an urgent matter, then voluntary arrangements will be made according to the law of supply and demand to meet it?—Yes. The two classes are entirely different. We have good tenants; they take their houses by the year; the others are a thriftless lot, quarterly and monthly. The good tenants would never take a house beside these others. They are in different classes. The weekly and monthly houses are at present of the character of slum houses. The other houses, the yearly lets, are inhabited by working men: decent working men, who don't desire any change.

7359. You think that, so far as there is a class who do desire short lets, these are sufficiently met by the existing short lets?—I think so. There are a great number of

houses of that nature at present to let, either weekly or monthly.

7360. Mr Murray indicated that he would not object if the £5 limit up to which the occupiers pay no rates were extended to £6, 10s., and if there were no yearly lets up to £6, 10s. What do you say to that?—I don't think that would be a drawback, because the majority of lets, monthly and weekly, are under £6, 10s.

7361. You have a valuable piece of statistics where you say that the extra cost of collection by weekly payments may be taken at 5 per cent., and the extra cost of repairs by more frequent removals, vacancies, etc., at 16 per cent., which must be all paid for by the tenants. Of course, if short lets for the better class of houses did not produce more frequent removals, then there would be no increase in that way; there would be no increase in the way of cost of repair?—If the quarterly lets had the same effect as the yearly tenure, there would be none, but our experience of the quarterly and monthly lets is that there is a continual shifting.

7362. I quite see that, but is that not subject to this, that you have had no experience of quarterly or monthly lets in the higher class of houses and with the better class of tenants?—Yes, that may be so.

7363. What do you think would be the effect on the owning and lending market if yearly lets were abolished?—I think, and I am told by two or three of my proprietors, that if this Act comes into operation, they will at once sell out of their property, because they won't have their property occupied by the class who are known to be weekly or monthly tenants at present in Edinburgh.

7364. Is that not a fallacy? Is that not because they think that short lets are necessarily associated with improvident tenants? If short lets are introduced for the best class of tenants, then that objection would disappear?—We are afraid it would bring the higher class down to the lower. If you let one of these weekly or monthly tenants into a yearly tenement, you at once bring down the character of the place.

7365. Would the same thing apply to investors?—I think so. I don't think they would invest in property if this came about.

7366. You all agree with the views of Mr Brotherstone about the alteration of the term of entry and the warning away?—Yes.

7367. The members of your Association are unanimous on that?—Yes.

7368. It has not been from any disloyalty on the part of your members that this trouble has arisen?—No, it is entirely on the part of persons outside.

7369. You produce an extract from a Memorial to the Lord Provost, Magistrates, and Town Council of Edinburgh, 1895, which resulted in the recommendation being made that was asked for?—Yes. (*Hands in.*)

7370. You adhere to the facts as there stated as correct?—Yes. I would also wish to say that the working men in Edinburgh (to show their desire for security of tenure) have an Association which has built a large number of houses, and these houses are bought by the members of the Association. There are sixteen different investment societies in Edinburgh for the purpose of working men purchasing their houses, showing infallibly that they desire even a greater security of tenure than yearly lets.

7371. You also produce an extract from the report of your Association submitted at your annual meeting on 14th January 1896, in which you congratulate the members for the loyal way in which they have acted in favour of the change, and adding that it had been an undoubted success?—Yes. (*Hands in*). With reference to the property under the charge of the Association, I see that in 1896 there were 35 members in the Association, with a rental of £250,000, representing 1800 proprietors and 12,000 tenants. I should think that that has increased by one half more up to this date.

7372. (*Chairman to Mr Hall.*) You have been in business for thirty-five years?—Yes, I have been at West Nicolson Street for thirty-five years.

7373. Are the properties that you manage all in Edinburgh?—Yes, they are all in Edinburgh and Leith.

7374. We have heard from you and the other gentlemen about the views of tenants. How do you account for the fact that the Trades Unions all seem to be going in for short lets?—I can quite see the force of it in a business town such as Glasgow or Dundee, where they may have to remove from one side of the town to another for their work, but in a place like Edinburgh, where people remain in an employment for years, they generally look out at the ordinary letting time for a house near their work, and it is not desirable for them to leave their house until they are leaving their work, because it is not easy to get into employment in a place like Edinburgh. It is different altogether from Glasgow or Dundee.

7375. Do you find that, in addition to the use made of Co-operative Stores dividends for the payment of rents, the good class of working men also use the Savings Bank for the same purpose?—Yes.

Mr J. Allison, Mr G. M. Brotherston, Mr J. Goalen, and Mr J. Hall.

7 Jan. 1907.

7376. Both for rents and rates?—Yes.

7377. Of course the improvident working man must often be in very great difficulty as regards the payment of his rates, if he has laid nothing by to meet it?—There are a great number of tenants in Edinburgh who, through illness in the family, or through idleness or other causes, are not able to pay their rents when they come due. Their tenure is secure, and I generally advance for the working class some £300 or £400 myself to the proprietors, and then I take payment of the rents as the tenants can give it to me. If it was not for that, then of course they would require to leave, but having the security of the year, I give it before the next rent is due.

7378. Does the existence of hypothec make it easier to do that?—Yes. With lets of £10 and under we pay the water rates. When we take action against a tenant, we take action for the amount against him, including rent and water.

7379. You have a right to do that?—Yes, if we had the same right with the other rates, then that would do away with our objections to a certain extent.

7380. I supposed if you continued to have the right of hypothec for lets, and if the legislature laid on you the duty of collecting rates, it would also be reasonable that you should have the right of hypothec for the rates also?—Yes, the same as for the water rates.

7381. Do you think it would be a benefit to tenants—at least to many of them—if the rate were collected, not in one sum, but in several sums?—I would distinctly say that if you collect it four times a year, then you give the proprietor and factors an opportunity of collecting it along with the quarter's rent.

7382. And it would be more easily done?—Yes, for the smaller class of tenants.

7383. Particularly those who are neither interested in Co-operative Institutions nor in Savings Bank?—That is so.

7384. You say in your *précis* that the average yearly removals from 4000 houses managed by you of £20 and under, 33 per cent. being £10 and under, is 12 per cent.?—Yes.

7385. Is that a high proportion?—No. It is less than it is from the other properties in the town.

7386. From those let monthly or weekly you find it necessary to eject 10 per cent.?—Yes. I distinguish between the weekly and monthly and the ordinary tenants.

7387. (*Mr Dobbie to Mr Hall.*) What was the reason for approaching the Town Council in 1895 with the view of getting this change approved of?—It was because of a desire on the part of the tenants principally, as it was too early, 1st February or middle of January, for taking on their houses for the year.

7388. I suppose that would be because the smaller class of tenants were more changeable in their habits?—It was a mutual arrangement in this way, that we found it a benefit with the smaller class of tenants, because we found by the middle of March, whether it was necessary that they should take their houses on for the next year, in fact, should be allowed to remain on or not. When the February rent came due it clashed with the ordinary letting, and we put it back so as to have an opportunity of collecting the rents at the Candlemas term, and they would be in a position to know whether they were to remain on or not.

7389. I see in this memorial to the Lord Provost, you state that with the tenants of the smaller class the inconvenience is greater, having to fix so long in advance, their circumstances being so changeable?—At that time we had very few weekly and monthly houses in Edinburgh. The lets were generally yearly lets.

7390. Is it not quite a good argument to say that while sixteen months is too long for the smaller tenants, it is no remedy to shorten it to twelve or thirteen months—the same changeable habits may be a good reason for tenants wanting shorter lets?—Yes.

7391. Will you tell me this—at present in houses rented yearly, and with the rent payable half-yearly, you collect your rents on 15th May and 11th November?—Yes.

7392. Assume that these terms are abolished, and that lets are to take place throughout the year, how would you as a practical man propose that the payment of rents should be fixed?—I would say 15th August, 15th November, 15th February, and 15th May.

7393. That is assuming quarterly lets?—Yes, or quarterly payments.

7394. What is your reason for suggesting that?—Because in Mr Cross's Bill it says that if houses are let quarterly, monthly, or otherwise, the period of payment constitutes the let. It stands to reason that with a factor with 2000 or 3000 houses, it is impossible to go and demand the

Mr J. Allison, Mr G. M. Brotherston, Mr J. Goalen, and Mr J. Hall.

7 Jan. 1907.

rent on the day the man is leaving the property. It would never do to allow those people to keep the rent in their possession until they were removing at 12 o'clock on that day. As Mr Cross's Bill stands, it means that the rent is due the moment the tenant is leaving the house, either that or paid in advance. You can take a quarter's rent in advance, but if you don't, then it is due the moment the tenant leaves the property, according to this Bill.

7395. That would make it impossible for you to make use of your hypothec?—Yes.

7396. So, assuming there were to be changes made in regard to the terms of payments, and in the way of abolishing the annual let, provision would require to be made for a date of payment sufficient to keep the landlord's right of hypothec available?—Yes, I agree with that; I would say the 15th—that would give them thirteen days.

7397. Apart from the question of hypothec, would it be practical for the house factors to collect the rents at the moment the tenure ceased?—It would be impossible to do that.

7398. With regard to the allowances suggested in the Bill, have you applied your mind to the question of what the allowance might be, assuming that the present law in regard to exemption still applies?—I think you should give power to the parties to deduct from their rates to be paid a sum equal to what you lose on the rent. That is to say, if you let a house just now one month at a Whitsunday term, it is entered for a year. If you have it standing empty for five months, then, instead of paying twelve months' taxes to the authority, you ought to get an abatement of five months.

7399. Does it come to this, that you would suggest, in the event of compounding, a sum sufficient to cover the collection and the risk of non-recovery from tenants, and you should get a refund in the event of any property standing empty for any part of the year?—Yes, over and above.

7400. You should get commission fixed for the collection and the risk of non-recovery, and then get a refund of the actual amount which is applicable to any period of non-occupancy?—Yes, that is my view on the matter.

7401. I would like to know if you can suggest any change on the present law of ejection. We have been told by most witnesses that if this change in the law is to be made, it must be accompanied by a more drastic method of ejection. What improvement would you suggest in regard to that?—The proprietor issues a notice giving the tenant notice that he is to leave on a certain day, generally one-third of the period of the let. If the sheriff gave forty-eight hours' notice instead of a week, I think that in many cases would certainly do away with a certain amount of grievance at the present moment, because forty-eight hours is ample to bring the tenant before the sheriff. The ejections are always tried at a certain period of the Court day. After the case is before the sheriff, he ought to give them a certain time to remove out of the house, forty-eight hours if the case is very bad, but if it is an exceptional case, then he should give them a little longer. Every case, however, should be taken on its own merits.

7402. What Court do you go to as a rule?—The Sheriff Court is the principal Court, for the simple reason that the magistrates' officers don't pursue the ejections further than a certain state—they don't go all the way with them.

7403. When the Sheriff Court is in vacation, what do you do?—We do nothing.

7404. With a series of short lets that grievance would be aggravated?—Yes.

7405. Could you not suggest some means of remedying the objection to the Burgh Court so as to make it a more available Court for ejection?—If you give power to the magistrates sitting to clear them out the same as the sheriff does, that might do away with a certain amount of it.

7406. What do you do in connection with the water rates just now? You have heard our Chairman ask with regard to the policy of separating the rate from the rent. Is that done at present?—No, we let a house at £10 or £8, as the case may be, and the water rate is included in that rent. If we have to raise an action against a tenant, we raise an action for £5 or £4, as the case may be. The assessor takes off so much, 4s. for £8, or 5s. for £10, and the tenants are only taxed on the rent less that amount. When we raise an action, we take no notice of the water rate, because it is included in the amount we fix with the tenant to pay.

7407. It is merely a condition of the let?—Yes.

7408. (*Mr Dobbie to Mr Allison.*) You raise a very interesting point in the last paragraph of your statement, indicating a desire to have the stamp duty on missives reduced?—Yes, that has been a thorn for the last twenty years, both with the house factors in Edinburgh and in Glasgow, and so much has it become so in Glasgow, that I understand almost all the smaller class of houses are let on the old Scotch arles system. Two clerks go to the houses with their factors' rent book, and they mark down on it "flitting" or "removing," and pass a halfpenny or a penny. You can understand how great difficulties might arise with a transaction of that kind. Under the present system, all houses let under £10 are on a penny stamp; above that you have the *ad valorem* stamp, which comes up very high. I believe it was instituted chiefly for the system of leases, say a lease of from three to five years, but when you come to yearly lets, as we do almost invariably in Edinburgh, you have to put this *ad valorem* stamp on. For an £11 house the stamp is 1s. 6d., and we have the greatest difficulty in recovering it from the tenants. I would suggest that there should be a uniform stamp of 6d. on agreements up to £100, and if that were done, the revenue would benefit, and in Glasgow that verbal system would be departed from.

7409. We are dealing here only with the smaller class of dwelling house. The stamp for a £15 house is 1s. 6d., and for a £20 house it is 2s.?—Yes.

7410. The rents are paid half-yearly?—Yes.

7411. Under Mr Cross's Bill it is proposed that those houses would be let for the six months—that is a let of £10 for the six months?—Yes.

7412. The stamp upon that would be 1d.?—It is a question for consideration whether it would be liable to the twelve months' rent, or the six months' rent.

7413. It would be a six months' let of £10 under Mr Cross's Bill?—But the question would be whether it was liable to a stamp at £20 or £10, because £20 is the annual let, and the stamp duty is exigible on the annual rent.

7414. No, it is exigible on periods of not exceeding one year. What I am coming to is this: you have discovered an unseen virtue in Mr Cross's Bill. You have a stamp duty of just 2d. on a £20 house, which is not even the 6d. which you desire. On half-yearly lets 1d. would cover all those up to £20?—Yes, if that was held to be right. But the question is whether it would not be held to be a yearly rent of £20 instead of £10.

7415. I think you mentioned that people would not retain their houses if the tenure was changed to short lets. Would that apply to any extent if the tenure was changed merely from twelve-monthly to six-monthly? Was your objection not more to the inferior class of property, slum property? I think it is quite an open and fair criticism that if the practice was universal the six-monthly let would not demoralise the whole community, as you are inclined to indicate it would, comparing the present social condition of the occupants of monthly houses at present. The one can hardly apply to the other?—The factor would have to go to the tenant every half year to ascertain whether he was going to remove or remain. I find it quite enough to have to go to him once a year, instead of twice, or three times, or four times a year.

7416. But that would not demoralise the whole class of tenants under £20?—Not to such an extent as the weekly or monthly would.

7417. Have you any views in reference to contracting out. Mr Cross's Bill, as you see, would be operative only in so far as the landlord and tenant did not make a special contract. Would you have the same objection to the Bill if it passed as it stood?—I would have no objection if there was contracting out, but it would lead to friction. You could not get working men to understand it—half of them would be under the Bill, and the others would not be under it, and they would say that you took advantage of them. You are better to have some easily understood, uniform rule, because tenants come and sign things without thinking very much about it. You may read it to them, but they forget all about it. It would be very much better if you had some absolute uniform rule.

7418. Assuming that there is to be a change in the law, and you are to have more frequent short lets, what, in your view, would be the reasonable time for warning out—I mean the number of days—assuming there were to be lets monthly, quarterly, and half-yearly?—I would not remove the present one-third of the time.

7419. In each case?—Yes, I think it is an admirable system, and the less you alter the recognised custom the better. You would give eleven days in the case of a month, three or four days in the case of a week, and two months in the case of a half-yearly let.

7420. That is longer than it is at present?—It is forty days at present.

(*Mr Brotherstone.*) Perhaps a month would be enough.

(*Mr Hall.*) And the warning away on 28th April.

7421. (*Mr Dobbie to Mr Goalen.*) Can you tell me whether there is much moving between Edinburgh and Leith?—I am not aware of there being much. I have a number of houses on the boundary, and the tenants find it very suitable, whether their work is in Edinburgh or Leith. There is a great demand for houses near Pilrig.

7422. Assume this Bill is to pass with the local option

Mr J. Allison, Mr G. M. Brotherston, Mr J. Goalen, and Mr J. Hall.

7 Jan. 1907.

clause in it, do you think that the option should be exercised by Edinburgh, leaving Leith to follow its own course, or should an attempt be made to ensure that both of these cities would either adopt the Act or leave it alone?—Both must adopt it, or leave it alone.

7423. Supposing Glasgow and the west of Glasgow insist on some such Bill as this, and the Committee or Parliament thinks that the east of Scotland have shown no desire for it, would you, gentlemen, be of the same view as at present, that if there is to be a Bill for Glasgow, it must apply to Edinburgh? If Parliament thinks proper to take the view that there is to be a Bill to remedy a grievance which exists in Glasgow and the west of Scotland, do your objections to permissive legislation go so far as to make you agree that in that event the Bill should apply to Edinburgh?

(*Mr Allison.*) I don't think it would affect us in any way if the removal days were kept the same.

7424. (*Mr Dobbie.*) But they would be abolished.

(*Mr Allison.*) 28th May and November.

7425. (*Mr Dobbie.*) I follow that, but my first query was rather whether you would then take up the position that it should not apply to Edinburgh.

(*Mr Allison.*) Certainly.

(*Mr Goalen.*) I think so. We are dead against it coming to Edinburgh.

(*Mr Brotherstone.*) I am afraid if Glasgow got it, Edinburgh would have to follow suit.

7426. (*Mr Dobbie.*) There is a provision in the Bill making it optional. You have all agreed that you object to any permissive legislation, and I am wanting you to reconsider that, to consider whether you really adhere to it or not. Would you prefer the Bill with the clause or without the clause?

(*Mr Allison.*) I think we would prefer excluding Edinburgh.

(*Mr Brotherstone.*) It is a matter for some consideration.

7427. (*Mr Dobbie.*) The evidence in Glasgow was almost wholly one-sided, and as between no Bill and a Bill with an option is what I think the Committee should have your opinions upon.

(*Mr Brotherstone.*) I think I would take the premissive clause, because there are so many yearly tenants here. Their employment is fixed, and they do not shift about as in Glasgow and in Dundee.

7428. (*Mr Binnie to Mr Brotherstone.*) In your *précis* you say that if the houses presently let yearly were let half-yearly, quarterly, or monthly, and the rates included in the rent, the rents would if possible require to be raised to cover the outlay for rates and the loss caused by empty houses. How would there be more empty houses?—The tenants would be able to shift much easier, and you would have a house standing a month, or perhaps two or three months, empty between the lets.

7429. There would be the same number of occupied houses, for the same number of tenants have to get houses. But if a tenant can shift at the end of a quarter he must go to another house?—Yes, but perhaps he won't come to my house.

7430. But we are not talking of you?—I am simply judging by my experience of the monthly houses. We have often months when a house stands empty. In weekly houses we have perhaps four different tenants in each year and weeks between each let.

7431. Your idea is this, at present yearly tenants all make up their minds to remove on a certain day, and therefore you don't have spaces between the incoming of one tenant and the outgoing of the other tenant?—That is so. You have more continuity of let, and your houses are more regularly let.

7432. I think you say there are only 2 per cent. of removals between the terms just now?—Yes, sublets.

7433. And you bring that forward as a proof that there is no demand for this Bill?—But it is a different thing when it is permissive. You cannot remove just now, but afterwards you are to be able to remove at any time by giving a month's notice.

7434. I thought you brought that forward as showing that there was no demand for this Bill?—We can only judge by the sublets that we have that there is no demand.

7435. I don't understand your position. You show us that there are very few removals, and you argue that there is no demand for the Bill in consequence of that. Then you say that the effect would be a very great increase in the cost of repairs, and empty houses, and different things, and rents would require to go up?—If a tenant can remove he will remove.

7436. Do you think that tenants are at all likely to remove for the love of it?—I don't say that, but I think there will be far more removals.

(*Mr Allison.*) I think Mr Brotherstone referred in the one case to the yearly tenure and in the other case to the monthly and weekly tenure. In the case of the monthly and weekly tenants there were vacancies between the respective lets, while with the yearly tenure there were only two changes during the year.

Mr J. Allison, Mr G. M. Brotherston, Mr J. Goalen, and Mr J. Hall.

7 Jan. 1907.

7437. (*Mr Binnie to Mr Allison.*) You tell us that you think that the increased cost of repairs would be 16 per cent.?—Yes, that is so.

7438. How do you arrive at that?—If there are frequent removals, then there are more repairs necessary. There is broken glass, keys go amissing, plaster is broken; and, judging from my experience of yearly lets, with a very small experience of monthly lets, I consider it would take 16 per cent. additional to keep the property in proper order. When tenants come to me I am quite prepared to let them a £5 house on a yearly tenure. But if they want it monthly the rent is £6, and I consider I am only giving the landlord an equivalent for the two classes of tenants.

7439. What is your annual percentage of repairs on yearly lets?—I could not tell you. That would be misleading.

7440. What is your annual percentage of repairs on monthly lets?—I have not got that.

7441. So this 16 per cent. that you have fixed on proceeds on no facts?—It is my experience in general, passing my accounts through my books.

7442. But your experience must be founded on facts, and you tell us you cannot give us what the facts are?—I don't have them in detail. Perhaps Mr Goalen can give that.

(*Mr Goalen.*) In a tenement where the houses are let weekly, the rent for the last half year that I should have received was £128, 6s. 6d.

7443. (*Mr Binnie to Mr Goalen.*) But we are talking of repairs?—I am going into that. Out of that I collected only £112, 4s. 5d., being a loss of £16. That is the reason why we say that houses let at short periods won't be so remunerative as those let yearly. For that period the half-year's rates were £15 and the repairs £18.

7444. Was that an ordinary fair half year?—Yes, with weekly tenants.

7445. Was it you who told us that the monthly and weekly lets were usually in old properties?—They are made old by the tenants.

7446. Are they not old to begin with?—This one is only between thirty and forty years old, but it was letting the houses weekly that brought down the standard.

7447. Your evidence, we may take it, proceeds on the assumption that the simple fact of letting houses monthly to tenants who are now yearly tenants reduces them to the same character as those who are monthly tenants now?—There is a strong tendency to do so.

(*Mr Allison.*) There would be a tendency to do so.

7448. (*Mr Howden to Mr Brotherstone.*) What rents do working men usually pay in Edinburgh?—That is a wide question. A man earning 25s. a week will pay up to about £10 perhaps for a room and kitchen.

7449. The artisan class will surely live in better houses?—It is rather a difficult question to answer. Perhaps from £10 to £15 for a three-roomed house if he has a family. In some cases they pay £13, and in other cases they pay £14.

7450. For a three-roomed house?—Yes.

7451. You have none as high as £20?—Yes, but that is the better class of working men, perhaps men who are foremen.

7452. I think you told us that you would not do repairs for monthly tenants?—I don't say that, but I say that if a tenant is coming to you and taking a yearly house, you treat him in a much better fashion. You listen to what he says and you are inclined to give in, and to do something, or to furnish him with material.

7453. If the tenant had been the same length of time in the house, and was a monthly tenant, you would do the same?—That is doubtful. We would require to see how it worked for a year or two.

7454. What do you charge for subletting?—From 2s. 6d. to 5s., and in some cases we don't get anything.

7455. Do you not have a percentage that you put on the rental, the same as they do in Glasgow?—No. In some cases we let the tenant off if he pays his proportion of the rates and rent. If it is a property that we can let readily, then we quit them.

7456. But you hold them responsible unless you get a sublet?—It is a question of circumstances. In a year like this we might be harder, but in ordinary times I think we will quit them on payment of a small fee, if we can let the house again. We quit them on paying the rent, and their proportion of rates to date and a small fee.

7457. You don't charge them for the time that they will not occupy the house?—No, not in an ordinary letting season.

7458. What do you mean by an ordinary letting season?—Such as we had two years ago, when we had not so

Mr J. Allison, Mr G. M. Brotherston, Mr J. Goalen, and Mr J. Hall.

7 Jan. 1907.

many empty houses. If we can let the houses readily, then we will do so.

7459. As a matter of fact, when you cannot let the house readily you hold the tenant to his agreement?—We would do so when business is dull, as it is this year.

7460. You told us these were only 2 per cent.?—Yes, sublets.

7461. You did not give us the figures?—I said about twenty-six per annum.

7462. (*Mr Howden to Mr Goalen.*) You have given your figures, making about 3 per cent.?—Yes.

7463. There were thirty-nine tenants, and they had some just cause in your opinion to remove?—They got the missive back at once, and were relieved from any further responsibility for the year.

7464. But they had a just cause to remove?—If they wished to remove, I would let the house for them.

7465. You asked no questions?—I would not ask them why they were removing.

7466. (*To Mr Allison.*) Of what service is the hypothec to you in the case of small houses?—It has an influence in this way, that if people know that their effects can be taken away they will make an effort to pay. As an actual mode of recovery it is very ineffectual, but it is of great use in this way, that they know that we possess the power.

7467. On larger rented houses it will work differently; it is of some use to you then?—Yes.

7468. Can you tell us the approximate amount that you would draw from a sale such as that?—It is impossible to say. The officer who goes has experience in valuing furniture sold at the Cross, but I try to get friends to give what it would fetch at the Cross. I don't think I have had to carry out one sale each year during all my experience of house agency. The officer's expenses come to about £1, and then the sale brings about one-third of the value of the furniture. I endeavour to get some of the friends to come forward.

7469. You don't carry it out to its full extent?—As a matter of fact I don't. I have only carried out about one sale in each year.

7470. When you have had occasion to carry it out, you have found the effect to be that you have only got one-third of the value?—Yes, I admit that.

Mr J. Allison, Mr G. M. Brotherston, Mr J. Goalen, and Mr J. Hall.

7 Jan. 1907.

Mr F. Hamilton and Mr R. Allan.

Mr Frederick Hamilton and Mr Robert Allan, called and examined.

Mr F. Hamilton and Mr R. Allan.

7471. (*Chairman to Mr Hamilton.*) You are Secretary of the Edinburgh and District United Trades and Labour Council?—Yes.

7472. (*To Mr Allan.*) You are a representative of the same Council?—Quite so.

7473. (*To Mr Hamilton.*) When did this Council come into existence first?—About thirty-three years ago.

7474. And at present it is composed of 115 Delegates from 53 Trades Unions or Branches, and it represents a membership of nearly 9000 members in the City of Edinburgh and District?—Yes.

7475. What does "District" mean?—There is no definite line to it, but we have included in the membership of the Council the Broxburn shale miners and the carpet weavers of Lasswade, any Union within a radius of that description.

7476. That is quite accurately called a district. You represent workers of all different trades?—Every sort of worker, skilled and unskilled.

7477. To what extent do you suppose you include all the workers; what proportion are outside, will it be half?—No, I don't think it, nor a third of the general body of workers in the trades represented on the Council.

7478. In the same district, I mean?—There are many workers who have no Trade Union connected with their employment at all.

7479. But take the trades that have Trades Unions connected with them?—We represent fully more than one half.

7480. And I suppose the views of their members on a question of this kind won't differ from the views of the men within that district?—No, there is no reason why they should; they enjoy the same conditions of life.

7481. I suppose you have men who are weekly tenants, monthly tenants, and yearly tenants?—Yes.

7482. What will the rent run from, among your members? What will be the lowest, do you suppose, that any of your members pay?—The lowest practically for an ordinary labourer is the habitable house, perhaps £3 or £6.

7483. Running up to what?—£20 or over. There are very few instances over £20.

7484. Do you agree that for an ordinary working man's house, apart from the foreman, £20 is a fair limit?—I think it will embrace practically the whole.

7485. Now, in regard to what is called the missive question, apart from short lets, you know, the length of time between taking the house and entering it: what is the view of your Council on that?—We consider that the time we are asked is a long time prior to the actual term. We are afraid that it is rather too long, especially bearing in mind the precarious tenure of our employment. We are never sure for a week or fortnight how long the work we are engaged in will continue.

7486. You consider the time is too long. Well, now, suppose that is put right by the legislature, would that remove your whole grievance in this house-letting question?—In what respect?

7487. If adequately shortened, would that remove your grievance or not?—That is only a grievance applicable to houses let by the year. There is a still further grievance, that we object to being compelled to take a house for a whole year.

7488. That is to say, you have the further grievance of the long lets?—Yes.

7489. Have these questions been considered by the Council as a whole?—During the whole period that I have been on the Council, it has been a sort of a hardy annual. It usually came up in Council business in the shape of remits from Glasgow, Aberdeen, or Dundee Trades Councils. Any business of that kind is usually sent in a circular letter, and if any particular Trades Council takes up a question the others follow suit, and consider it. The result is that at certain periods of the year the question has always been before the Council.

7490. And in the conclusions you have come to, have you been unanimous, or has there been difference of opinion?—I have not heard a difference of opinion raised to the position laid down in the evidence lodged.

7491. What number of persons do you ever get at a Council meeting?—Our Council consists of about 115 members or so, and our average attendance within the last year was somewhere about 60.

7492. Have you petitioned any bodies in favour of shorter lets?—The Council have, but it was previous to the time I became Secretary. I have only been Secretary for one year.

7493. What body did they petition?—They have sent letters to the Government in connection with the matter. I am not sure about the Town Council, but I think they have communicated with the Town Council. They have always recognised that the Town Council had no real power in the matter of solving the difficulty.

7494. When we talk of short lets, what is the period your Council point to as desirable?—We consider that a month is quite long enough. Of course, while we say a month, we don't intend to give up our house every month, any more than giving it up every year. I may have a house for twenty years, but we consider it would meet the conditions of life and employment if the lets were monthly.

7495 And of course, if you don't get a month, anything else within the year would be to the good?—We will take what we can get, but we ask what we consider is necessary.

7496. Your opinion is that, out of 75,000 habitable houses in Edinburgh or so, nearly 50,000 are under £20 rent, and therefore that number will be affected by any alteration in the law of house letting?—Yes, that is the estimate we have arrived at by information we have supplied in Dr Littlejohn's report. We have not access to the Assessor's books, and had to take it second-hand from Dr Littlejohn's report.

7497. Of course a certain number of these, viz., the cheapest houses of all, are already on short let, so that it will be the difference between the 50,000 and the number already on short lets which would be affected by the Bill?—Yes.

7498. It has been said that while it is quite proper to have a certain number of short lets, there is already a sufficient number of these to satisfy all reasonable demands. What do you say to that?—A sufficient number of short lets to satisfy the demand of those who want short lets?

7499. Yes, that is said against you?—It is not correct. We know from our discussions in the Council with various Unions that we have not heard an objection to the shorter let. They have been unanimous in the opinion that they would have taken work elsewhere, but for the fact that they were bound to keep on the houses for a whole year.

7500. Of course these are men who are in a better class of houses, and therefore not of the improvident order?—Men who are thrown out of work through no fault of their own, through want of employment, dull trade, or periodic depression which takes place during each year. These all tend to throw men out of work, and very often they have an opportunity of taking a job in the country for three or six

Mr F. Hamilton and Mr R. Allan.
7 Jan. 1907.

months, as the case may be. I can give you an illustration in my own case. In the country, the wages are usually smaller than in the city. Three years ago I was offered work in Kirkcaldy. The wages in Edinburgh are 32s.

7501. What is your business?—I am a compositor.

7502. (*To Mr Allan.*) What are you?—The same.

(*Mr Hamilton.*) The wages in Edinburgh are 32s., and in the country districts, or outside of Edinburgh, they are always less. In Kirkcaldy at that time they were 27s. I was sent over there from our Society to fill a job, and I found when I reached there that I had to take board and lodging for 12s. a week; another shilling was laid out in a variety of ways. It cost me 13s. to keep me there a week, so that I had only 13s. or 14s. to send home to keep my family and pay rent and taxes.

7503. What was your rent here?—£14.

7504. (*To Mr Allan.*) What is your rent here?—£10.

(*Mr Hamilton.*) I found it was impossible to continue in the job, and to carry on the house here, as I was bound to keep the house for a whole year, and after four weeks' trial I had to give it up, although I was to have got work in Kirkcaldy for six months, or perhaps longer. From my point of view, we may say that not only are the workmen injured, but the employers in these smaller districts, when anything abnormal happens in the way of work.

7505. In that case you never had occasion to go near the factor at all?—To go near my factor in Edinburgh with regard to giving up the house?

7506. Yes?—No, we knew there was no use going.

7507. You see it is said that the factors are able to give evidence on the whole question of removal. Now is it the case, as you have illustrated by your own, that there are a good many cases where the factors never hear of the thing because the man does not go near him?—No, he knows from past experience that the factor won't protect him. If he does, you have to pay a penalty for breaking the contract with him, and in addition to that guarantee him a suitable tenant.

7508. Now, do you think there is a considerable number of cases in that way that the factors never hear of, cases which involve hardship and a grievance?—Yes, there are ten to one.

7509. So that we cannot merely take the statistics of actual sublets, for instance, as showing the extent of the grievance?—No, these are only the parties who find themselves so hard pressed with their affairs that they are obliged to plead with the factors or else who are ignorant of the law.

7510. If it be the fact that what we call the improvident are generally housed in the cheaper class of houses already on short lets, of course the grievance is not in their case, but in the case of the better class working men who are in the yearly houses?—The grievance also would apply to what you might term the improvident—that is to say, those who are not earning very high wages, forcing them to live in a house with a small rent. Drunkenness, what you refer to as improvidence, is more common among people who live in the cheaper houses, but we also find that the wages they receive are more in accordance with the rent they pay.

7511. But those who are in cheaper houses are already, are they not, in houses that are on the short let?—Some of them only. There are houses from this point upwards that are yearly lets, and there are many of what you might term the improvident who live in £6, £7, £8, £9, and even £10 houses.

7512. If there were feeling of grievance, and no real feeling of demand for a change, I suppose you would not expect on the part of the better class of working men that they would be very much concerned merely for the improvident and shifting class. It is the feeling of grievance on their own part?—They do find it a grievance on their own part, but, even if it were not, if the man who is improvident found that it interfered with his moving about and obtaining employment, or following his employment, the Trade Union element would certainly support his case also.

7513. Do you think there is a real grievance on the part of the better class?—All sections of the workers; and by the working classes, which of course is an indefinite phrase, I mean the men who live upon weekly wages.

7514. Does the extent of a grievance to a certain extent depend on whether the nature of the employment is shifting or not?—Well, in an average of cases I am not sure; but the joiners, masons, etc., have certain times when they are bound to be thrown out of employment, and if they possibly can get work elsewhere they do get it, and there is always a certainty that in some trade or another there is a depression takes place that is unusual, and cannot be foreseen, and of necessity they are forced, when they cannot get work in the city, to try elsewhere.

7515. But your trade, I suppose, as compared with some others, is a steady and non-shifting employment?—No, we have our periods of depression also.

Mr F. Hamilton and Mr R. Allan.
7 Jan. 1907.

7516. Take it apart from the periods of depression, your business is of a steady nature as compared with the ship-building, for instance, and trades of that kind?—Yes.

7517. So that you would expect, I suppose, that there might be other trades that would feel the grievance even more than yours?—A great deal more.

7518. I quite understand that in cases of depression it will affect any trade?—Any trade.

7519. And even occur periodically?—Yes. It is almost certain at a given time of the year that depression will take place, but in the printing trade at the present time, as far as the compositors are concerned, it is to-day in a very depressed condition. We paid out-of-work money last week to 105 members of the Union who were eligible. There is a large number not eligible, and, in addition to that, a number outside of the Union whom we have no knowledge of. I reckon at the present time that there are fully 300 compositors who are unemployed in Edinburgh. They may have their names down in a workshop as being employed there, but there is no work for them.

7520. Do men in your trade, when they shift, do so generally for a permanent shift, or might they go for temporary work elsewhere?—The majority of cases when they do leave the city they leave it altogether, but in many many instances they take work for three, four, or six months. Perhaps a job may last a year outside.

7521. What kind of place would they go to, Glasgow?—Well, Glasgow: they will go to Broxburn or Tranent, or some of the towns in Fife, such as Kirkcaldy or Dunfermline.

7522. As compositors?—Yes.

7523. Do they go to England at all?—Yes, but when they do go there they have got a long preparation.

7524. And that is a permanent job?—Yes, it is not forced upon them all at once.

7525. They know what is coming?—Yes.

7526. Suppose that a man in Edinburgh gets a job in a different part of the town, he does not want to move his house then?—It is sometimes for his benefit if he could shift it.

7527. But are not the facilities for travelling such that he would rather remain and travel?—Not if his work is likely to continue for a good length of time. He may have been for four or five years in some employment, and have to leave it, and the next job he gets may be in some other part of the city, and he is bound down to keep the house.

7528. Suppose a man was working in R. & R. Clark's, and got employment at Nelson's, what would he do then?—If his house was suitable for Clark's, he would of necessity have to carry his dinner or pay for car fares.

7529. What would the car fare be from Canonmills to St Leonards?—2d. each way,—about 1s. 10d. a week.

(*Mr Allan.*) We are certain it would be profitable for a man to shift his house, for after all, in addition to the car fares, it is more expensive for a man to carry his dinner.

7530. (*Chairman to Mr Allan.*) Why?—If he were at home his wife would make the dinner for the family much cheaper than she can make it for the man to carry, and even if he gets dinner at a restaurant it is much dearer, so that, even all round in a city like Edinburgh, and the case you cite is common enough, it would be very profitable to shift your house rather than pay your extra car fare and dine out, or carry your meals, which after all is unsatisfactory.

7531. (*To Mr Hamilton.*) Are these about the extreme distances between any printing works in Edinburgh?—Edinburgh and Leith are so closely connected that it is quite common for a man to reside in Edinburgh and get work in Leith.

(*Mr Allan.*) And the city extends further the other way, west to east.

7532. (*To Mr Hamilton.*) Have you known cases of men being offered better employment elsewhere in the country or town who have had to refuse employment?—We can only speak of our own particular trade in that respect, but there are a variety of instances where men have refused work simply because it was too far from where they were staying.

7533. And in cases employers on their side might suffer from not being able to get the men they wanted?—They certainly do.

(*Mr Allan.*) Hardly in the city of Edinburgh, but in the towns near Edinburgh it has repeatedly been the case that they could not get the men to come to the smaller towns, and were forced to pay overtime, which involves greater work and outlay of money.

7534. (*To Mr Hamilton.*) You have spoken of the drawbacks: are there any counter-balancing advantages, especially in the way of the man being secured for a whole year?—He is not secured, any more than he would be if it

were a month. He may take a house for a year, but it does not follow that the landlord turns him out at the end of the year. If he is a suitable tenant he may be there for twenty years, and even if the letting term was a month or three months, if he is a suitable tenant it does not follow that he is going to shift for three months. As long as he is a suitable tenant he may be there for years.

7535. He has sufficient security, in short, without that?—In his own good character and ability to pay his way.

7536. (*To Mr Allan.*) It is suggested that he has an advantage, let us say in the case of a strike, that he cannot be put out, and has a house over his head whatever happens. What do you say to that argument?—If his quarterly let is not paid, of course he cannot be put out, so I do not see where the security comes in.

7537. But I suppose you take the view that other working men take, that, so far as working men are living in their employer's house, the employer ought not to be able during a dispute to put them out?—No, provided of course the rent is paid. Of course there are cases where the employer has power to turn him out. They are practically living in the employer's house, as it were, in the mining districts.

(*Mr Hamilton.*) But it does not apply to Edinburgh.

7538. (*Chairman to Mr Hamilton.*) Are there any cases in Edinburgh?—None within the city of Edinburgh that I am aware of.

7539. Of any trade?—Of any trade, unless of course it be gate-keepers and others.

7540. You say something here, on page 3, about the system of yearly lets, resulting in removals being timed for one day of the year, being objected to because, first, of the necessity of having to vacate a house by 12 o'clock in the day, and only being able to obtain entry to the new house at the same hour costs much anxiety, inconvenience, and expense. You mean you would like to see more than one removal term spread over the year?—Yes, so that we might not be so much pressed for time. There is a great deal of competition on the removal day—28th May—in order to obtain the means of removal. I have known, in my own case again, that I have had a lorry ordered for 11 o'clock forenoon, and we had to vacate the house by 12. We had the lorry ordered for 11 o'clock, in order to have everything out of the house ready for the new tenant coming in. We put the furniture on the street—that is the usual custom—and owing to the pressure of work, and number of engagements the contractor had taken on, and some of them taking longer than he expected, it was 4 o'clock in the afternoon before he turned up. That occurred when I went into my present house three years ago. My furniture was lying in the street. Fortunately, it was a dry day; if it had been a wet day there would have been serious damage.

7541. That was not due to the man's own fault, but to over-pressure?—To unforeseen circumstances in connection with the removals, and, in addition to that, the scarcity of the vehicles used in removals was such that it was exceedingly difficult to get a man to engage who had no other engagements on that particular day. They were all required at the same time.

7542. In addition to that inconvenience, does it increase the expense of removal?—Undoubtedly.

7543. Why should that be?—You will get a lorry for about 1s. 6d. or so at an ordinary time, and the same class of vehicle on term day will cost you about 3s. an hour. It is an increase of 100 per cent.

7544. Suppose you are removing in Edinburgh from one part of the town to another. Roughly speaking, what would the removal cost you?—Taking into account not only the cost of the vehicle but the men and other matters, it would cost me from 12s. to 15s.

7545. The other point is the question of the rates. What is the view of working men and of your Council in particular in reference to the proposal that the landlords should collect the occupier's rates?—There are a variety of ideas in connection with it. We believe, for instance, that there are many people who escape payment of rates by removing prior to the time the rates are due, and others who obtain relief from the rates on the score that they are unable to pay the rates owing to the large sum demanded of them. We believe if those people were called upon at various periods of the year to pay a proportion of the rates, on the whole a larger total sum of rates would be paid by the same individuals, and also by the general body, to the local authority. For instance, if a man is in a £12 house, and the rates run perhaps from £1, 1s. or so, if that is spread over four periods, or even over twelve, it is much easier for him to pay the small sum than the large sum. Of course, if he were very steady—the majority of them are—but if he looks forward he can easily put by a sum every week. But they are not all built that way, and the result is that, even with the most careful, it is always a burden to look forward to keeping that sum intact and ready for the annual disbursement of it.

Mr F. Hamilton and Mr R. Allan.
7 Jan. 1907.

7546. So you think a larger amount would be got if the collection was at frequent periods?—Yes, even in the case of those who get relief owing to poverty, and that a large proportion of what they get relieved of would be paid, because in the winter time, when they plead poverty, or immediately after it, they are less able to pay the rates than at other periods of the year, and if it were taken in proportion, as they paid rent during the year, they would at any rate get that proportion during the time they paid the rent, and at other periods when trade was dull, when they usually do pay rent at the present time, they might get an abatement. But on the whole I consider the total sum contributed to the local authority would be much larger.

7547. If a system of frequent collections were made, would it matter to the working man if the collection was by the rating authority direct or by the landlords?—I do not see that it matters much to them. Personally, I have no objection. It does not matter who draws the taxes, as long as I have to pay them.

7548. And as long as they are collected at convenient intervals?—Undoubtedly.

7549. Suppose the system of collection by the authorities were found impracticable at frequent intervals, would it induce, do you think, any friction between the landlords and the tenants if the landlords were to collect the rates?—If the local authority found it impracticable?

7550. Yes, if it were found impracticable for the local authority to collect frequently, and the system of the landlords collecting were resorted to, would that induce friction?—I think through time it would come to be recognised as part of the rent of the house. If the landlord had to make a demand for rent, say monthly or quarterly, and stipulated that a certain proportion of rates was due by you, you would always look forward to say 5s. of rate and 25s. of rent, or whatever it is, as 30s. to pay as rent. It would come to be looked upon in that light.

7551. It is suggested that if the landlords collected, the tenants ought to know what rates they are paying, and there should be a separation in that respect. Do you approve of that?—Yes, it is necessary not only for that, but to induce the tenants to take an interest in public affairs. If they had no knowledge of what it had cost them for the administration of public affairs, they might be inclined to be rather lax in their attitude towards public questions and go in for heavy expenditure if they were not aware of how much it cost them.

7552. Some of the factors, while quite admitting that, say that it would introduce a practical difficulty. They could get in a slump sum, as rent, the total money well enough; if it were divided up, some of the tenants would object to the landlord collecting rates, which he has nothing to do with. Do you think that would only be at first, before the system settled down?—I don't think there would be any such objection at all, if it were recognised as being the law, and the landlord's right and duty. The people would fall in with it.

7553. You know that in England there is no separation, where the system is said to work well. It is all charged as rent, and you never know what you are doing?—Yes, that is what I am saying would be the difficulty of the alteration. It would gradually come to be recognised as rent, but by giving separate receipts the tenant would always be aware of what is rent and what is taxes.

7554. You think for the reasons that you have alleged that would be desirable?—Yes.

7555. Is it your view that the present system of relief on the ground of poverty should be continued and works well?—Yes, I think it ought. I think any one who is unable to pay ought to have an opportunity of not paying, if they can prove that they are not able to pay.

7556. Subject to what you have said, that you think the frequent collection would enable people to pay who now get off?—It would gradually reduce their number at the period of the year when they have anything to pay.

(*Mr Allan.*) There is no question in our minds about the ability to pay rates at shorter intervals. In Edinburgh it has always been felt as a very great grievance among the working classes that all your rates and taxes come in at the worst time of the year. In putting forward candidates for Parish Council and Town Council, they have always advocated as part of their programme that the two authorities should combine for collecting purposes, and they could easily institute a system of taking the rates before in instalments.

7557. The two instalments being the part of the Parish Council?—Yes, they could combine to collect the rates, and they could easily, it was put forward, have a system of coupons introduced, so that they could pay up rates quarterly, and the tenant could get a receipt.

The rates and taxes just come in in November and

December, to be paid in January, which is the worst period of the year for employment and everything else, because the working class expenses are very heavy. We are quite convinced that if it is spread over a year by a system of monthly or quarterly lets, the rating authorities will undoubtedly get more in the shape of rates than they do just now, because the poorer class find it very difficult to save. The smaller wage, the more easy the payment should be made.

7558. (*Chairman to Mr Allan.*) Is it your view that, if it is found to be practicable, it would be better that the rating authority should make frequent collections, say quarterly, direct, rather than go in for compounding with the landlords?—No, I would not say that; I would rather pay my rates along with my rent, as proposed in the Bill; but, failing that, the payment by instalments on the part of the rating authorities would still be a good thing.

7559. (*To Mr Hamilton.*) If a system of short lets and the compounding of rates has been proved successful in England, and the difficulties which it is alleged will arise in Scotland if these things are enacted have not been found there: suppose that is so, do you see any risk in the conditions of Scotland to apprehend a different result in Scotland?—No, I consider the conditions of life are similar amongst those of my own trade or any other; joiners, masons, or any other trade that I know anything about. The conditions of life in England are much the same as they are in Scotland.

7560. If that is so, and it has come about in England without a statute, why should we need a statute in Scotland?—Because it has not come about without one.

7561. But does not that rather point to there being something different in the conditions of life here that has prevented the same system operating in the two countries?—No, it was originally due perhaps to the existence of some statute that has ceased to exist. I don't know. It is not that the conditions of life are different.

7562. We have been hearing to-day much about the question of cautioners' lines in yearly lets. Of course, if you had yearly lets abolished, that difficulty would disappear?—I consider it would disappear, because the landlord at the present time has his right of hypothec for the recovery of arrears of rent. In Edinburgh, he insists in addition upon having the additional security in the shape of a guarantee by another individual that he will pay or see paid the whole year's rent, and they have often been known—as a rule, in fact, they refuse the money in advance, and insist upon a cautioner's line.

7563. Is that found to be a practical grievance in certain cases?—It is a great grievance, and a very important one.

7564. In what class of cases? Would these be strangers coming from other towns?—Not only strangers, but any ordinary artisan who has any respect for himself does not care about asking his friends to go security for him if he has the money himself.

7565. And his friends are put in an awkward position, not liking to refuse?—In addition to that, if he comes down they come along with him.

7566. The working man does not like to ask it, of course?—No, it goes against the grain somewhat. There are those who will ask more than they will get, but on the average I think they object to getting obligements from their fellow citizens, when they can meet their obligations themselves.

7567. You say that the abolition of the yearly let would cure that. You notice that, under Mr Cross's Bill, you may still have half-yearly lets, because there are payments half-yearly. Do you think the cautioner's line would not be asked in the case of half-yearly lets?—No, I did not say it is the exact reason for the introduction, but the cautioner's line is introduced, in my opinion, because, while you may be quite able to pay the first quarter, if your house rent is payable quarterly, in advance, all is right, but that is no guarantee that you will be able to pay the second, third, and fourth quarters. In order to safeguard himself, in addition to his right of hypothec, this system of cautioner's line has been introduced by the landlord. I can easily understand if the term of let coincides with the payment of the rent that there would be no necessity for the cautioner. The landlord would simply demand the money in advance. He would take what he refuses now, and that would result in the abolition of the system of caution.

7568. Apparently this grievance of the system of cautioners is more in Edinburgh than in Glasgow. We heard very little about it at Glasgow?—I know of strangers coming from England and other parts of Scotland who have always been shocked.

(*Mr Allan.*) I understand, in speaking with people coming from different parts of Scotland, that the system more obtains in Edinburgh than in any other part of Scotland, especially Glasgow. In Glasgow it is quite common to accept a receipt for your last rent as caution, but here the factors insist most strongly on a cautioner. I know of people who have come to town and have simply been bluntly refused, even though they pleaded that they had no friends, and it is quite the custom of factors to demand the cautioner for one year. They demand it every year. I believe that is one of the best things in the Bill, because it would abolish this cautioner's line, which is a vexation.

Mr F. Hamilton and Mr R. Allan.

7 Jan. 1907.

7569. (*Chairman to Mr Allan.*) I know it has been a grievance for long in Edinburgh.—For instance, when you put in your caution they consider it on their part a right and proper thing to go themselves, or send to the cautioner and size up the man's furniture to see if he has enough in his house, and if they think his furniture would not cover it, they won't accept him as cautioner. You see, the working classes keenly resent that, and in a score of different ways the cautioner system is bad.

7570. So that would be a direct benefit which would result from such a measure?—Yes.

7571. And an important one?—Yes.

7572. Do you agree, gentlemen, in what we have heard a great deal of evidence about, its being desirable to get rid of the extreme pressure of work in the building trades usually experienced near the May term?

(*Mr Allan.*) Yes, we would rather see it spread over a year.

7572*a*. That does not affect your own business, but it is the experience you have?

(*Mr Hamilton.*) The joiners had a strike in Edinburgh on account of this extraordinary state of affairs. They wished to have their agreement entered upon about this period of the year, when work was brisk, and the employers had not them at their mercy. The employers knew this difficulty, and knew that the workers had the best part of the making of the bargain, and resented the agreement being made about the term time. The result was a strike. Unfortunately the men did not win, but that strike was a direct outcome of the system of yearly lets, and trying to get houses ready for the May term.

7573. (*Chairman to Mr Hamilton.*) The only other point is, Mr Hamilton, what do your Council think about the proposal in the Bill to make the adoption of the proposed Act optional?—We think it would be a benefit to Edinburgh if it were optional if Edinburgh adopted it, but there are a variety of reasons why we think it should be compulsory all over. The instance I gave you in regard to Kirkcaldy shows that. We might give up our house here, but not be able to get a house in the place we go to, and, in addition to that, the compulsory aspect of it is this, that in Edinburgh at any rate—this is rather a one-sided view of the case I am going to state—most of the people who have the arriving at decisions in regard to whether these laws shall be adopted or not, that is the members of the Town Council themselves, are property owners and many of them house factors, and if they are opposed to this Bill, and it is optional, it will need a lot of pressure on the part of the citizens to make the Town Council of Edinburgh adopt a Bill which they would find against their own interests.

7574. If Leith, for instance, adopted it, and Edinburgh did not, that would be rather an awkward state of matters?—You could not remove to Leith. If there is an urgent demand for it on the part of the working classes, why was there not more heard of it at Town Council election times at the ward meetings?—It is always heard.

7575. We were told by Town Councillors that it was not brought up to them. Have you had any experience of that?—Yes, I was a candidate at the last November election.

7576. Where for?—Canongate Ward.

7577. Have you heard it brought forward?—At every meeting held by me in a hall, this question of the missive and letting system was bronght forward.

7578. In the short let side of it as well as the other?—The whole question in regard to missives and short lets in view of this Bill.

7579. Was it brought forward by working men?—By members of the Trades Council who happened to be residing in the ward. It was raised at all the hall meetings. I heard a statement made with regard to Mr Brown, but the ward he was engaged in was a ward of a different character, where the same grievance does not exist to the same extent.

7580. What do you say to this question? Assume that there is a grievance both in Glasgow and Edinburgh, would you agree that it would be more likely to be felt in Glasgow than in Edinburgh?—Well, from what I know of Glasgow and Edinburgh, I consider that amongst the working classes it wonld be more felt in Glasgow.

(*Mr Allan.*) On the other hand, the community of Glasgow being so largely industrial, it might be more voiced there, though it remained here the same among the working classes, the population not being so large relatively among the working classes, and the control of the city being so largely in the hands of the professional and shop-keeping classes.

7581. (*Mr Howden to Mr Hamilton.*) Has your Council ever used any coercion on members of Trades Union to prevent them doing anything in the way of petitioning against this Bill?—No, there is no system of coercion I know that we could use.

7582. The reason I ask is that one member in the House Factors' Association came here to-day, and said he was unable to obtain signatures because they were afraid of the Trades Unions?—We have never heard a single objection, either public or private, from members of the working class, Trade Unionists or otherwise, against this proposal.

7583. I suppose you could easily get up signatures yourselves, if you cared, for the abolition of this?—You can get up signatures for anything.

7584. What percentage of skilled artisans are out of employment in Edinburgh?—I could not tell you the percentage, but I know, with regard to my own trade, I was speaking to the keeper of our call-house, who said that last week we paid out-of-work money to 105 men. That out-of-work money is only payable for six weeks out of every thirteen. After having drawn the six weeks they may be out of work, but we have no record of any money being disbursed, they not being entitled to it, and he stated the number who actually drew last week at 105. There were as many more who were idle, Trade Unionists who were not entitled to draw. In addition there are a large number outside of the Trades Unions also idle, and I may safely say that, with regard to my own trade, there are fully 300 unemployed at the present time.

7585. These figures Mr Brown gave us about the great number of unemployed in the city could not have been correct, when he said there was slightly over a thousand men unemployed at the present time. My point is this, that a considerable section of skilled artisans are out of a job at the present time?—A considerable section, and if you are taking the Distress Committee record, the ordinary artisan does not sign the Distress Committee's record at all.

(*Mr Allan.*) The Distress Committee's record cannot be taken as a record at all of the unemployed in the city, because there is no inducement for the unemployed to sign there. All hope entertained by the unemployed has faded away there. It is only people who are claiming relief who go there. It is absolutely preposterous to take that as a record of the unemployed in the city of Edinburgh.

7586. (*Mr Howden to Mr Hamilton.*) What attitude does your Council adopt towards hypothec?—We are in favour of its abolition. We see no reason why the landlord should have a prior right over other people to take possession of your furniture. We think he ought to be on exactly the same footing, because there is a great deal of ignorance amongst the working classes as to the method that has to be adopted and put into operation with regard to this hypothec. Practically what I can understand all over the town, once the landlord finds the rent is in arrears the tenant has it in his mind that all the landlord has to do is simply to serve him with a summons or warrant notice that he is going to poind on a certain day. The tenant stands by and lets it be done. We consider if it were abolished in so far as dwelling houses are concerned, the landlord would be compelled to summon the tenant to the Court, and the sheriff or the magistrate, as the case may be, would hear the whole circumstances. I do not know if that is the actual state of the law at present or not, but that is the general impression among the workers. It is necessary to have him put on the same footing as an ordinary individual to whom money was due. He would have to summons, and in all likelihood the circumstances in which he is placed would be placed before the sheriff or magistrate, and he would get either time to pay or an agreement to pay up arrears by instalments. At present he allows himself to be made a victim of the house factor, because of his ignorance on this house matter.

7587. Can you tell us how much they realise for these forced sales of furniture. Anything like the value of the furniture?—I don't know; I have not had any experience. I know that in many cases they refrain from poinding because there is not furniture of sufficient value to make up the rent.

7588. It has been suggested to this Committee that there should be an Act on the lines of the Homestead Act in America, which would make the tenants' goods exempt from poinding by any creditor up to a certain specified sum.

7589. Do you agree with that?—Undoubtedly.

7590. (*To Mr Allan.*) Do you, Mr Allan?—Yes.

7591. Can you suggest any sum?—I should fancy about £15 or so.

7592. (*To Mr Hamilton.*) And you, Mr Hamilton?—I have no thought of it.

7593. It has been suggested to us that while tenants should have the right to leave their houses on a month's notice as long as he pays their rent, and does not disturb the neighbourhood or damage the property, he should have a security of tenure with the right of leaving at a month's notice if he cared?—He has that.

Mr F. Hamilton and Mr R. Allan.

7 Jan. 1907.

7594. That he should have the right. Do you understand this claim for security of tenure; so long as he pays rent, and does not destroy the property, it does not give the landlord the right to turn him out?—I don't understand the point. If you mean that some outside influence was brought to bear on the landlord, such as a strike, political prejudice, or anything of that kind, and not to have the right to eject the tenant so long as he fulfils the other requirements. These extraneous questions ought not to be allowed to make an excuse for depriving him of his house.

7595. You think there would be nothing unreasonable in a proposal like that?—No, no more than dismissing from his employment because of something of the same kind.

7596. (*Mr Cox to Mr Hamilton.*) I would like your opinion on this point. Landlords say to us—there are two sides to every question—"We have spent our money in 'building houses, and we should not be compelled to let 'them in a way which is distinctly to our disadvantage. 'If we are to be compelled to let these houses on very 'short lets they will deteriorate very rapidly, and our 'property will be spoiled." I wish you to tell the Court what you think about that?—I don't think the fact that a man pays his rent by the month, by the quarter, or even by the week, is an inducement to destroy the property.

7597. They know, however, and they say that the object of the Bill is to let the tenants change more frequently, and that the result of that would be damage to the property?—I see no necessity for them changing any more frequently than they do, with the exception of change of employment necessitating change of residence.

7598. Do you think this change in the law would not lead to more frequent changes?—It would lead to more frequent changes for the benefit of the tenant, but which he is unable to take advantage of at the present time, but not to such an extent as would seriously damage the property. If you had a house by the month or the quarter it would be folly if you were going to leave every three months.

7599. The changes were stated to us to be 2 to 3 per cent. just now?—Of the total number of tenants?

7600. Yes, yearly or half-yearly tenants?—Well, many of those who do change within a year or a half year would undoubtedly change at the quarter, but that would not damage property that I am aware of. We have the interests of the tenant to consider as well as the interests of the landlord, and it is on the score of the interests of the tenant that we are advising this change, not altogether in the interests of the landlord.

7601. (*Mr Dobbie.*) In regard to fixity of tenure, the difficulty of course is no doubt apparent to you. If the fixity of tenure requires some machinery for dealing with rent, have you the view that the rent once fixed for a dwelling house should be the same sum in perpetuity?—That is a big question; I don't think it comes under it. I think we ought to have a fixity of rent; that the rent ought to remain the same. On the other hand, we meet with the difficulty that if that is so, the landlords would of necessity be forced to reduce rents in localities where they find for some reason or other there is no demand for the houses. That is the result of the operation of the law of supply and demand, so that I hardly think it is capable of being put into operation on one side without any regard to the other side. You cannot compel the tenant to stay in a certain district and pay what is recognised as a fair rent. If the landlord finds there is difficulty in letting his houses, he is thereby induced to let them for less rent. The idea is whether there should be a court to fix a sum beyond which the rent should not go.

7602. Mr Smillie was suggesting this, very truly I think, that it involved the institution of a Land Court to fix rents?—But that is fixing the maximum. I understand exactly the point, and I agree that when the law of supply and demand operates to such an extent where there is a great demand for houses in a given district, with a limited supply of them, the house agent and proprietor take advantage of that demand to increase the rent.

7603. You wish fixity of tenure, with a tribunal to whom you could go and say, "I want my rent re-arranged"?—Yes.

7604. Short of that, I suppose that if the suggestion of another witness was given effect to, that the present yearly lets might continue, but that the tenants might have the option to leave on say a month's notice or quarterly or six-monthly, in fact that there might be a compromise between the present system and this suggested fixity of tenure, giving the tenants the option of giving a month's notice to leave at any time during the year?—Yes, that is what we want; it would not be a yearly let.

Mr F. Hamilton and Mr R. Allan.

7 Jan. 1907.

7605. It would as against the landlord?—In so far as the tenant was concerned, he would demand leave to occupy for a year; but in so far as the tenant's obligation to the landlord was concerned, it would be granting the demand of the tenant to be able to leave at a month's notice to suit his convenience.

7606. That was the evident suggestion of a well-known authority for the Police Government, Provost Keith of Hamilton. Another point, are there any improvements effected in burghal subjects by a tenant. I suppose in no cases in Edinburgh?—Yes, but they are more of an ornamental character than a vegetable garden.

7607. Are there cases of tenants who have spent money in the improvement of their houses having got notice to quit?—I have heard repeatedly instances given of where working men had so improved the inside appearance of their houses that it presented a better appearance. They had perhaps improved the appearance of the entrance door and painted the walls and carried out various improvements here and there, decorating it up and making it a grander-looking house compared with the other houses, and in this case the landlord has actually demanded a higher rent on the score that the house was more valuable.

7608. From the successor of this tenant who did the work?—Yes, but instances of that kind are not very common.

7609. To go back to hypothec for a moment. English practice, we are told, is that there must be effects left to the value of £5, and that wearing apparel and tools cannot be attached. I suppose, assuming we don't get the ideal reform you indicate, that the putting of the law of hypothec upon the same footing as the English law in regard to these matters, namely, that the tools and clothing are exempted from attachment, and that there must be at least £5 of furniture left, would be in your view a step in the right direction?—If they give us up to £5 of furniture, I think it is a fair proposal, and I agree with it. I see no reason why they should have the right to seize clothing and tools.

7610. We have been told repeatedly that hypothec is of no practical value to landlords, but that it is to protect the tenant's effects from attachment by ordinary creditors, and that it exists in the interests of the tenants?—So far as I understand, it cannot prevent ordinary creditors from taking advantage of the possessions of the tenants, unless there is also an order made for arrears of rent on behalf of the landlord himself.

7611. The law is shortly this, that if an ordinary creditor, say a grocer or butcher, having decree against the debtor, attaches the furniture of this debtor, although he only gets a few shillings, he thereby becomes liable, according to one view of the law, for the whole of the rent of the current year, at all events that is acted upon, and creditors are debarred from attaching the furniture, and give the debtor time during the expiry of six months to quit or pay the rent, and the future rent again comes under protection against new action on the part of any other creditor. Do you think there is anything substantial, that it is in the interests of the tenant?—No, I cannot see what benefit the tenant gets from it at all.

7612. You would rather have it that he should be sold up, subject to your view in favour of a limit, sold up equally by the landlord or by the ordinary creditor?—They ought to place both on the same footing, because if the ordinary creditor is unable to seize the furniture for a debt, the only other course is to take the possession of his wages, which is sometimes a far more serious thing than seizing the furniture.

7613. Above 20s.?—Yes.

7614. Your view and the view of the Council is that this proposed measure should apply all over Scotland and country districts as well as burghs?—Not to country districts where agricultural pursuits are carried on. I can easily see it would not work very well in connection with the dwelling houses where an agricultural servant was employed, or where you had a garden ground which had to be prepared and sowed at a specific period of the year.

7615. Exempt gardens, would you limit the Bill to what is called populous places?—It might apply all over.

(*Mr Allan.*) Our view of the matter was that it should apply all over, and in particular that it should not be optional.

7616. (*To Mr Allan.*) If it was not applied all over, you would have on the fringe of each town a great part of a country parish with tenement property next to the town property, and you would have the same condition of things as you were speaking of?—Just the same difficulty would crop up in leaving one place for another if the thing was optional.

7617. (*To Mr Hamilton.*) From your knowledge of your members and of the working class in Edinburgh, do you think houses of £20 may be fairly described as smaller dwellings occupied by the working classes?—Yes, I think in the vast majority. There are very very few exceptions to the rule that all the houses under £20 are working class dwellings. When I say working class dwellings, I mean houses of those who receive weekly incomes as contrasted with monthly or quarterly salaries.

Mr F. Hamilton and Mr R. Allan

7 Jan. 1907.

7618. We were told to-day that there are 28,000 houses in Edinburgh with rents between £10 and £20. If these houses were excluded from the benefit of any new Act, would that, in your view, be unsatisfactory?—It would be an unnecessary Act.

7619. Unless it applied above £10?—Yes, because at the present time there are many many houses—in fact all the houses that are let for less periods than a year are the houses under £10. I do not say they are all let for periods less than a year under £10, but under £10, at the present time, you can have them for less than yearly lets, but you would be excluding the vast majority of the working classes from the benefits of the Bill by limiting it to £10.

7620. With reference to what you told the Chairman in regard to the distinguishing of rates and rents, one practical difficulty indicated by the factors was this, that in making a let at the beginning of the year, it is impossible to know precisely what the amount of rates for the current year is to be, because usually they are not fixed until September or October. One remedy suggested is that the rates of the previous year might be taken?—That would have to be done, otherwise the Town Council in fixing their assessments could fix them at a different period of the year.

7621. But wouldn't it be material whether the payment made by the tenant was referable to the current year or the previous year?—No, it is only a question of a few coppers or a few shillings at the most, and any surplus could be refunded.

7622. The factors told us it would practically be impossible to collect two sums monthly, that what would happen, as you indicate, is that there would be one payment got from the tenant every month, and every quarter, and that it would be hopeless to distinguish how much of that was rate and how much rent. Would it meet your objection if annually every voter or occupier in a burgh received a statement from the Corporation of the current amount of each assessment levied by the Corporation—that is, if he paid a slump sum for rent and rates, but annually got a statement from the Treasurer of the town showing what, for that year, the respective rates per £ came to?—You are taking it for granted that he has occupied the same house for the whole year.

7623. I am taking it for granted that his name is on the Assessment Roll as occupier. It is made up once a year.—I consider that if a receipt for the proportion of the taxes is given along with the receipt for rent that he pays, those could be used as guarantees that he has paid taxes for a particular period.

7624. The factors say they cannot do that?—I see no difficulty.

7625. Taking the case of the water rate at present paid they say that they get a fixed sum monthly or quarterly, and if that sum may be £6, say about 6s. is water rate and £5, 14s. rent. They simply get £6 spread over twelve monthly payments, and they say that they could not distinguish how much precisely in each 10s. there was of rate and rent. At least they never do, and the difficulty would be aggravated. Would it not be the duty of every man to know? Would it not meet your difficulty if by some means each occupier had it brought home to him what the annual assessment came to, leaving him to make one payment of rents and rates to his landlord?

(*Mr Allan.*) That, to me, would be quite satisfactory. The tenant would receive from the Treasurer of the town a receipt for the monies paid by his landlord during the year, which would be to him a receipt of the sum.

(*Mr Hamilton.*) If he had already paid his proportion.

7626. (*Mr Dobbie to Mr Hamilton.*) As I take it, your one object is that there must be in some way brought home to the ratepayers what the expenses are for the government of the burgh. So long as he knows what the rates are, you will leave it to the others to determine how that is to be collected along with the rent?—Yes, it is necessary that should be done for the benefit of the general public.

7627. (*Mr Binnie.*) The house factors have told us that they are very much afraid that if the practice of letting monthly became common, the character of their properties would be deteriorated. Now, I suppose it is a fact that many of the monthly tenants in Edinburgh are very undesirable?—Very undesirable, many of them.

7628. That is all that I say, many of them are undesirable?—Not because they pay the rent by the month.

7629. I am not saying that at all, but the undesirable tenants gravitate into becoming monthly tenants as a rule?—Yes, they cannot afford to save up the money to pay by the quarter.

7630. What I think was present to the minds of the factors was this, that they would not be able to exclude by

Mr F. Hamilton and Mr R. Allan.
7 Jan. 1907.

careful watching these undesirable tenants from getting in among the better class of tenants who at present are safe because they pay their rents quarterly or half-yearly. Do you think there is any fear of that? It is a tenant's question as well as a factor's question.—I don't think there is any fear of it, for the reason that, though you pay your rent quarterly or half-yearly, if your character is not good—you may be improvident and still pay it half-yearly—if the factor is aware that you are drunken or rowdy, even though you pay quarterly or half-yearly, he refuses to let you continue the house, and the same could prevail if you had a house by the month.

7631. But the factor cannot spend the same amount of time in inquiry about a tenant who is only taking the house for a month as he would if the tenant were taking it for a year, and evidently some of them are afraid that in that way undesirable tenants would get in among the desirable tenants and disturb them and spoil his property. Do you think there is any fear of that?—It is possible, but I don't think there is much probability of it.

7632. Then you said you thought a desirable thing would be to fix rents?—The maximum.

7633. That they should not go up beyond a certain rent?—No.

7634. Of course landlords only put up houses when they believe that the return from them would give them a certain interest on the amount they have cost?—No, they only put up a rent when they think they can get it.

7635. I mean they only erect houses when they believe that the rents will yield them a certain return on the money they cost?—Yes, undoubtedly.

7636. And if they found that in any way the return being got from property was less than a fair return, they would cease building and then there would be a scarcity of houses?—Yes.

7637. And there is no saying what might happen?—Yes.

7638. Landlords' taxes are always going up, you know that?—The landlords'?

7639. Landlords' taxes?—I am not aware of that. I know the tenants' go up in much the same proportion.

7640. In the same proportion, that is what I mean. Then the cost of repairs is constantly going up?—Yes, some of them.

7641. And then the requirements of the sanitary authorities are increasing?—Yes.

7642. So that there is an increased outlay on the property that grows year by year?—Yes.

Mr F. Hamilton and Mr R. Allan.
7 Jan. 1907.

7643. Do you not think that a landlord is entitled to some consideration with this additional outlay put upon him?—Yes, if he can, but he gets up the rent whether that outlay comes or not It is not this outlay, this expense of the property, that induces him or enables him to get a higher rent for it; it is obtained regardless of these considerations.

7644. It is the increased demand?—Yes.

7645. And the increased demand always comes when building has been slack for some time and the population is growing?—If there was not a very great surplus prior to that.

7646. Yes, and that would be aggravated if landlords were afraid to build, because, by any law, they were prevented from raising their rents when they had a chance, don't you think?—Oh no, that would not prevent them so long as they could get a reasonable profit on the building. They have been building in Edinburgh, with no possibility of getting their houses let.

7647. I know that, but do you think any man would begin to erect a house if he did not expect to let it?—He expects the increase.

7648. He expects it to let?—Yes.

7649. He does not put it up for it to stand empty?—No, not for the benefit of the public.

7650. Well, do you not just think that would stop building if they found infrequency of lets?—No, I don't think so. The only question is, we are preventing him from taking undue advantage of the interests of the public. From his point of view as a commercial man he may be entitled to get as much as he possibly can, but there is the interest of those who have to make use of the house to be considered, and it is from their standpoint that I say we ought to fix a limit beyond which you are not to be allowed to raise a rent.

7651. Whatever the increase of taxes should be, or the increase of repairs or sanitary requirements?—That would all be taken into account in calculating the rent. If the annual expenditure and taxes amounted to a total sum, the Court might simply point out that there would be a certain rate of profit on that.

(*Chairman to Mr Binnie.*) It has been assumed all along that if you have fixity of tenure you must have a Land Court.

Mr W. Queen.

Mr William Queen, called and examined.

Mr W. Queen.

7652. (*Chairman.*) You are a member of the Council of the Leith United Trades and Labour Council?—Yes.

7653. What is your relation to the Council that we have just had before us, the Edinburgh and District United Trades and Labour Council, are they not separate?—Quite separate; we were formed slightly over two years ago, in September 1904.

7654. Do you just include Leith itself?—Leith alone.

7655. What is your total membership?—About 2700.

7656. Have you representatives of all the different trades, some on monthly tenures, some on yearly tenures?—We have.

7657. Living in houses from the very small rent up to what?—Up to perhaps £15 or £20.

7658. You have heard, generally speaking, the evidence given by Mr Hamilton and Mr Allan?—Yes.

7659. Do you concur in the views they have expressed?—Mostly so.

7660. Does anything occur to you at the moment that you would like to express?—No, I don't think there is.

7661. Do you concur with them in thinking that the mere shortening of the period between the taking of the house and entering it would not remove the most substantial grievance that exists?—That is the signing of the missives. I think that along with that a shorter period of let is required.

7662. I understand that if you take working men who have already got short lets they have no grievance at all, have they, except in there being only one removal term, and everybody having to remove at once. That is the only grievance they have?—Quite.

7663. It is the people that are in the yearly lets that have the grievance?—Quite so.

7664. And it divides into two heads, the long time before entry and the length of tenure once they are in?—That is so.

7665. Have you found any difference of opinion among your 2700 members on this matter, or do they all hold with you?—Well, of course we don't come into touch with the 2700 members. Our council is composed of delegates sent from different Trades Union Associations, but from various discussions which have taken place at our Trades Council meetings from time to time, I feel that the opinion is quite unanimous.

7666. Your delegates have never reported any difference of opinion?—Not a single difference.

7667. Do you think, as far as Leith is concerned, you fairly represent on this matter all the working men of Leith, whether they belong to your Council or not?—Well, I believe we do.

7668. Then, in regard to the system of rates, do you agree in the view that it would be easier in a great many cases to pay the rate if it were collected more than once a year?—I think it would.

7669. And there is, in point of fact, just now a hardship under the present system, especially when you consider that the collection takes place at the worst time of the year?—That is so. People have to pay the whole rates at once.

7670. Is it your view that, if your 2700 members were polled, and they were asked their individual opinions, that practically the whole of them would go in for shorter lets?—I am of that opinion.

7671. Is it the general belief that shorter lets would not raise the rents?—I have never heard that opinion expressed.

7672. I suppose that might make a difference in the view that would be taken?—If that bogle was dangled it might possibly.

7673. You are prepared to take the risk of that?—I think so. As far as payment of the rates is concerned, have your people any opinion as to paying frequently to the Rating Authority, and frequently through the landlord, as to which they would prefer?—I am not aware that there is any pronounced opinion expressed regarding that and the point as to who the rates are to be paid to.

7674. But it is frequent payments that are wanted Quite.

7675. Do you think there is anything in the idea that payments to the landlord would introduce a great element of friction between the landlords and the factors and the tenants?—I think not.

7676. What is your own business?—I am Secretary of the Carters' Union.

Mr W. Queen. 7 Jan. 1907.

7677. And what is Mr Petrie, who was to have come here?—He is a ship-yard worker.

7678. You have all the other trades as well?—Yes.

7679. Have you yourself had occasion to observe the effect of the one removal term on the business of builders and others of that kind?—Yes.

7680. The high pressure at the time and the depression at the other?—That is so.

7681. Have any of your members, in your knowledge, had to refuse better jobs in other parts of the country owing to the fact of their being tied to a house in Leith?—I cannot say that I can recollect any specific instance, but there are many cases, if one had time to think them over.

7682. On the other hand, do you agree with Mr Hamilton and Mr Allan that while there are these drawbacks, there are no counter-balancing advantages in the present system?—I don't think so.

7683. None to you?—None, unless to the landlord.

7684. I see you say here that your Trades Council and the Leith Town Council and Mr Munro-Ferguson, M.P., are all in favour of an alteration on the lines you have just indicated. How have the Leith Town Council shown that?—By a motion passed at the Town Council meeting. I have the Town Council Minute here.

7685. Just read it, please?—It is rather long.

7686. Read the import of it?—It is dated July 3rd, 1906.

7687. Take the bit that sums it up. Do they refer to Mr Cross's Bill?—Yes, it is the Bill particularly.

7688. What do they say about that Bill?—The Committee resolved not to appoint representatives to attend the Deputation to wait on the Secretary of Scotland, but passed a Resolution in favour of the principle of the Bill, with amendments to the following effect: first, so as to embrace poor and school rates in the same manner as the burgh rates under Section 9 of the Bill; second, giving power to the Council to grant relief from assessment in cases of poverty, as at present; and, third, a cheaper method of eviction of the tenants. The Committee instructed a copy to be sent to Mr Munro-Ferguson. This is a letter also from the Town Clerk on the same matter.

7689. To your Council?—Yes. This is a letter in which the Town Clerk says, writing to Mr Petrie for the Leith United Trades Council: "In reply I have to inform you that the Town Council did support the Bill."

7690. I suppose you base your statement about Mr Munro-Ferguson's position from the fact that he backed the Bill?—Quite so.

7691. And you have heard from himself that he supported the Bill. Of course that is the Bill in general, apart from details?—Yes.

7692. I notice one new matter in this. You say, among the disadvantages of the present system, that it is prolific cause of farmed-out house and the attendant evils resulting therefrom. What exactly are farmed-out houses in your Leith sense?—Well, a man for instance who may be the owner of say a dozen houses gives them over to another one for the matter of a year or two, or ten years, at so much per cent., and the man who gets the house is the house farmer. He in turn exacts in every instance an exorbitant rent from the poor tenants to whom he rents the houses.

7693. These are very small rents?—Yes.

7694. For a very short tenure?—The rents are not small that the tenants have to pay.

7695. But how would the shortening of the tenure affect these farmed-out houses?—For this reason: there is a real desire on the part of many working people to be able to secure a house by the month or the week. They are compelled to go into these slum districts where farmed-out houses exist, because they can get weekly houses there, and these same people, if they were able to get a house in a better locality, would not require to go to farmed-out houses. Many of them pay 6s. a week in rent for a single house, and they would get a house in a respectable neighbourhood in Leith, for say £15 or £16, with two rooms and a kitchen, for the same rent as they pay to the house farmer.

Mr W. Queen. 7 Jan. 1907.

7696. But why don't these people take the yearly houses?—Because they are not able to pay. They have not the money to commence with. Two obstacles may be in their way. In the first place, they are unable to get a cautioner, and not having forehanded rent they have to go under and pay at the mercy of these house farmers.

7697. But wouldn't you expect that if there are short lets for a good class of houses, there will be forehanded rent asked?—Yes, for short lets, but he may be able to give a week in advance, although not able to give a quarter's.

7698. You also say that among the disadvantages of the present system are the perpetuation of old slums and the creation of new slums. Is that for the same reason?—Yes. There is one property in Leith where the yearly rent paid by the house farmer is £190, and he draws £550, 4s. 6d.

7699. (*Mr Dobbie.*) That is a good return; does he let it furnished?—I suppose they may get an orange box or something of that kind.

7700. But he claims that they are furnished?—Most likely.

7701. On the same point, in regard to farmed-out houses, that is another disadvantage under which even monthly tenants at present labour, that they cannot get an adequate selection of houses when they do want to leave their present monthly houses?—Quite.

7702. Do you think the custom of paying in advance, say a month's rent, which we are told would become habitual, assuming short lets, would be a serious grievance against the working class?—Well, I think not. There is the possibility that in the course of time that even might be dispensed with. People would get the houses without any forehanded rent.

7703. That is an indication from all the factors of what will happen if this Bill becomes law. They will insist on rent being paid in advance?—I cannot say for that. Of course they will have to decide their own future line of action in that respect.

7704. Even if they did that, and the let was for a month, do you think the great majority of the working people would have no difficulty in finding a month's rent in advance?—I think not.

7705. In regard to Edinburgh and Leith, can you tell us whether workmen in these two centres pass from one to the other, either for work or sleeping?—Of course I could not give you anything like even an approximate estimate, but I should fancy there are a good number passing between the two towns.

7706. If the Bill passed, and Edinburgh adopted it and Leith did not, there would be a practical hardship on the class who had to come and go between the two centres?—That is so. It would be a second "Pilrig Muddle," I should fancy.

7707. Your idea is that the Act should not be optional?—That is my idea.

7708. And should extend to the whole of Scotland?—Quite; well, the industrial parts particularly. I do not think it would be quite necessary in the rural parts of Scotland.

7709. To all populous places?—Yes.

7710. (*Mr Howden.*) If there was a feeling among your members against this alteration, it would have got free expression against the attitude your Council take?—Oh, perfectly so.

7711. If there had been any desire in that line?—Quite.

7712. You heard my question to Mr Hamilton and Mr Allan as to hypothec?—Yes, my reply is the very same.

Mr T. Wilson.

Mr Thomas Wilson, called and examined.

Mr T. Wilson

7713. (*Chairman.*) You are an Inspector of the Edinburgh Labour Exchange under the Edinburgh Distress Committee?—Yes.

7714. And you were at one time Secretary of the Edinburgh United Trades Council?—For five years.

7715. What is the Distress Committee?—The local authority brought it into existence under the Working Men's Employment Act of 1905.

7716. Who constitute the Committee?—There are in Edinburgh sixteen members of the Town Council, one from each ward; twelve members from the Parish Council, appointed by the Council out of their own number, and seven co-opted members who are added, the stipulation being that these members be individuals having some knowledge of distress and relief of distress.

7717. Who is the Chairman?—The Lord Provost.

7718. How long have you been an Inspector?—Since the Exchange came into existence a year ago.

7719. What was your business originally?—Baker.

7720. Have you had occasion to consider the question which is before us now?—Yes, I have given it a good deal of consideration for years. It was prior to my being Secretary of the Trades Council, but I was Convener of a special Committee of that Council some nine years ago, that took this matter in hand. There was a remit to this Committee, to which I was convener, and with the view of getting at the opinion of people outside we convened a Conference of Representatives, I think, of all the working class organisations in Edinburgh and Leith. They would cover all the Trades Unions, the Independent Labour Party, the Co-operative Societies were also invited to send delegates. The bulk of them, I think, did send

delegates, and there was unanimity on two points: first, that the time between the taking and the entry of a house was too long; second, that the yearly let of itself was a hardship. With the view of strengthening our position a public meeting was convened in Edinburgh, and another in Leith. The public meeting in Edinburgh was held in the Oddfellows Hall, which is, I think, seated for something like 700. It was well filled; at least between 500 to 600 persons would be there. The resolutions submitted were in favour of the two points I have mentioned, and at it, and also at the Leith meeting, there was unanimity.

7721. Is it the fact that in your view the establishment of public works in the outskirts has aggravated the hardship?—Most decidedly.

7722. Also the growth of the city has done the same?—Yes.

7723. Do you think work is as certain and as permanent as it used to be?—It is most decidedly not so.

7724. That also would aggravate the hardship?—Yes.

7725. You have heard it suggested that while in Glasgow there may be real difficulties, these don't exist in Edinburgh. What do you say to that?—I find the difficulties do exist in Edinburgh.

7726. Perhaps not to the same extent, but still to a very substantial extent?—Comparatively, if you take the industrial section of Edinburgh, the hardship is as great as it is in Glasgow.

7727. But then the industrial section is not so large?—No.

7728. During what period is it specially that the hardship acts. Is it when trade is brisk or when it is depressed?—Particularly when trade is depressed.

7729. When people have a real necessity apart from mere caprice or whim to remove?—Yes.

7730. Do you find a better class of working men really do remove unless for good causes?—No.

7731. Of course it is not a pleasant thing to remove, and not a cheap thing?—No.

7732. So that if you find a decent working man removing it is for a good cause?—Yes.

7733. There are the improvident class removing for other causes that are not often the best?—Yes, but these are exceptional.

7734. Then is it in the interest of the good class of working men that you think this measure, or something like it, should be passed?—It would only be the better class, the more provident of the working classes, those that are in yearly let houses at the present time, that would be affected by it.

7735. Substantially?—Yes.

7736. As against a yearly let, we have heard of half-yearly, quarterly, and monthly. What do you say should be the ordinary limit for a working man's tenure?—My opinion is that a month is quite long enough. That is in the same way as a weekly servant is engaged. I was engaged for years as a weekly servant at my trade as a baker. I went to a man, but although I was engaged for and by the week, I had no idea of leaving it at the end of any particular week. I was in some situations for four or five years, but when either the employer or myself thought it well that we should part company, a week's notice was what was required on either side. I think a month's notice in the same way between factor and tenant is all that could reasonably be expected.

7737. You would not anticipate that there would be any very large number of additional removals. The extra removals would be due to such causes as you mentioned?—I don't think the number would be increased at all; they would be spread over.

7738. (*Mr Howden.*) You spoke about a Conference being held at which you were unanimous on two points?—Yes.

7739. Did the report of that Conference get into the press?—Yes, there were reports in the press at the time. I think the Edinburgh papers gave the meeting something like three-quarters of a column.

7740. That also applied to the Oddfellows Hall, did it?—Oh, I beg your pardon; I thought it was the Oddfellows Hall Meeting you referred to. The Conference was private; there was a report supplied which appeared in the press.

7741. But the Oddfellows Hall Meeting was a meeting duly reported in the press?—Yes.

7742. So that the men who have not been paying particular attention to the affairs of Edinburgh don't know that there was such a meeting held?—No, the resolutions were forwarded to the Town Council and the local members of Parliament.

7743. A system has been suggested to us that tenants should have security of tenure, with the liberty of leaving, provided that they pay their rent and don't disturb the neighbours or destroy the property?—My opinion is that such security of tenure is practically guaranteed, although I was once in the unfortunate position of being evicted at the end of a year out of my house because I refused to sign a petition. The landlord was a grocer and wanted a licence, and I objected to being coerced into signing the petition. Otherwise I don't think I had any reason for complaint. That was an exceptional circumstance.

7744. You think you had no right to be put out on that occasion?—I felt very ill about it. I think I had a grievance.

7745. You heard my question to Mr Hamilton and Mr Allan in connection with hypothec?—I quite agree with their answers.

7746. Have you any experience of this law of hypothec?—Personally I have had no experience, but certain instances have come to my knowledge, and I am inclined to think that after all it is an Act that bears very heavily upon the tenant without being of very much actual service to the landlord.

7747. Do you believe in the exemption of the tenant's goods up to a certain amount?—Certainly so.

7748. (*Mr Dobbie.*) I suppose you would protect the goods against both the trade creditors and the landlord?—All creditors in the same way as wages are protected at the present time up to a pound a week.

7749. Akin to the American Homestead Act?—Yes.

7750. Have you ever heard of tenants removing with a view of avoiding payment of yearly rates?—Well, I have heard of such cases, but none of them have come personally under my notice.

7751. Your view is that tenants would find it much more convenient to pay the whole of their rates by periodic instalments?—Decidedly so; they have a distinct hardship at the present time in meeting them all at the worst season of the year.

[Adjourned.]

EIGHTH DAY.

MONDAY, 14TH JANUARY 1907.

At the Town Hall, Dundee.

Present:

LORD GUTHRIE, *Chairman.*

MR THOMAS BINNIE.
MR EDWARD COX.
MR JOSEPH DOBBIE, S.S.C.
MR GEORGE B. ESSLEMONT.
MR JOHN T. HOWDEN.

MR STAIR AGNEW GILLON, *Secretary.*

Mr G. A. Johnston and Mr J. Robertson. 14 Jan. 1907.

Mr G. A. JOHNSTON and Mr JOHN ROBERTSON, called and examined.

7752. (*Chairman to Mr Johnston.*) You are one of the Town Councillors of Dundee?—Yes.

7753. What is your business?—I am a grocer in Dundee.

7754. How long have you been in the Town Council?—A year past November.

7755. (*To Mr Robertson.*) You are a Justice of the Peace, a Town Councillor, and an ex-Magistrate of the City of Dundee?—Yes.

7756. (*To Mr Johnston.*) Have you adopted the General Police Acts in Dundee, or have you any local Acts of your own?—We have local Acts, but I am not very certain about them.

7757. The Town Clerk will be able to tell us their terms?—Yes.

7758. Has the question that this Commission is dealing with been before your Town Council?—Yes, it has been before the Town Council back and forward.

7759. Do you know if it was before the Council before you entered it?—Not very much. The only way it was before the Town Council before was in regard to the period of letting houses. That was some seven or eight years ago.

7760. You mean what is called the missive question?—Yes, the time for putting out these missives.

7761. The long interval between the time of taking and the time of entry?—Yes. In 1899 the Town Council, in conjunction with the house factors and proprietors, tried to arrange to put back the letting time, making the time for getting the missives 15th March instead of February, but that fell through.

7762. So far as you know, that was the first time the question had been raised?—Yes, I think so, in the Town Council.

7763. As to the present attitude of the Town Council, may we take it that the report of the discussion contained in the *Dundee Advertiser* on 11th January correctly represents what took place?—Yes, not fully, but it is fairly correct.

7764. It is correct so far as it goes?—Yes.

7765. What is the practice at present in Dundee as regards the period of taking of a house in comparison with the actual term of entry?—The position just now is that the missives are sent out to the sitting tenants in the beginning of February, and they are returnable within a week.

7766. Suppose a tenant does not return his missive within a week, what is understood?—It is understood that they are not going to take their house, but we generally make inquiry, at least that is my practice, and if they wish a week longer to make up their mind or anything like that, then it is allowed.

7767. We may take it that by the middle of February the matter is settled one way or another?—Yes, unless there is any particular reason for waiting for the tenant's decision.

7768. Are you yourself a house proprietor?—Yes.

7769. What number of tenants do you have?—About fifty.

7770. What class of property are they in?—Just what you would call a good working man's house.

7771. Ranging from what minimum to what maximum of rent?—From £9, 10s. to £10, 10s. for a two-room house, and from £12 to £15, 10s. for a three-room house.

7772. How often in the year do you collect your rents?—Quarterly. I may say that that is the exception in Dundee.

7773. Does that apply to all your houses?—Yes, I have quarterly collection of rents.

7774. You say it is the exception; what is the rule?—Six-monthly.

7775. Down to what rent does the six-monthly arrangement prevail?—I do not know; perhaps as low as £8, but I am not certain.

7776. Under that there is more frequent collection?—I would fancy so, although I have no personal experience.

7777. (*Mr Cox.*) Where do you have property?—Strathmartin Road, at the north end, and then at Park Avenue, at the east end.

7778. Is your property all new?—Yes, it has been put up within the last five or six years. The tenants belong to the artisan class,—they are average working people.

7779. (*Chairman.*) You mean the artisan as distinguished from the mere unskilled labourer?—I mean the mason, joiner, or moulder, or some such workman.

7780. The greatest industry in Dundee is the jute business?—Yes.

7781. What comes next?—I could not say.

7782. Shipbuilding?—Shipbuilding and engineering, I should say.

7783. And then there is a great variety of occupations, such as the marmalade works?—Yes, and confections.

7784. Could you say which of these would probably involve the most shifting population? Would it be the shipbuilding, perhaps?—I do not know.

7785. We have been told that in Glasgow the shipbuilding industry involves a greater amount of shifting than many other occupations?—I daresay that that may be so, because it fluctuates considerably.

7786. You referred to what took place in 1899 when the house proprietors and factors approached the Corporation. So far as you know, was the feeling universal among the house factors and proprietors that there might profitably be a change made?—Yes, practically. I think it would be pretty universal, with perhaps some exceptions, and I suppose that was the reason why the arrangement fell through.

7787. It would just be because that they felt that unless the thing was done by all there would be unfairness?—Yes, simply because there was no Act to make it compulsory.

7788. What did the Council do?—I am not sure, but they at any rate united with the house factors.

7789. They agreed in the view that was put forward?—Yes. I produce a hand-bill which is headed, "Change of letting day." (*Hands in.*) That Bill runs as follows:—"In terms of the unanimous recommendation by the 'Lord Provost, Magistrates and Council, and the resolution 'of the Dundee Landlords and Factors Association, this 'letting day for houses, shops and premises is now changed 'from 2nd February to 15th March. Tenants are requested 'in their own interest to assist in the general adoption and 'carrying out of this desirable arrangement. Missives 'will be delivered on the 8th, and must be returned not 'later than the 15th March."

7790. That Bill is not dated. May we take it as 1899?—Yes.

7791. Why was it that that fell through?—I expect a number of the sitting tenants were anxious to take their houses even before that date. Then there were some of the proprietors that did not fall in with the arrangement,

and they let their houses when they had the opportunity. If that date were made compulsory, it would be satisfactory to both parties.

7792. Was that recommendation given effect to for a time?—For one year only, and then they went back to the old arrangement.

7793. What is the reason of the objection to the present system? What is it founded on?—Simply taking their houses so long before the term begins.

7794. And I suppose in the period between, a man may want to change?—Yes.

7795. Do you see any advantage in the present system being kept up?—No.

7796. Neither in the interest of the landlord nor in the interest of the tenant?—No. It is practically agreed by the proprietors that 15th March would be suitable.

7797. So long as it was universal?—Yes.

7798. Suppose that were agreed to, what effect in your view would that have in removing the alleged grievance against the present system? Would that be enough, or would it require to be supplemented by something more?—No, I consider that is the principal grievance that we have in Dundee, namely, having to take houses so early.

7799. In addition, it is said that although that would be a step in the right direction, the long lets would still remain for a year, and that, particularly in the cheaper class of workmen's houses, which are occupied perhaps by the most shifting portion of the population, there is a grievance in a man being tied to a house for twelve months?—Yes. In my resolution I suggested to the Town Council that for rents of £7 and under the maximum period should be a let of three months. That is to meet the difficulty of the shifting portion of the population. I consider that above that the let should be a yearly let with quarterly payment of rents. I fixed on the £7 limit from figures that I got from our City Treasurer, and I concluded that that covered the people that were shifting most often. From the figures I got from the Treasurer I found that, roughly, the rental in Dundee represented by rents under £5 was £30,000, and the rental of houses between £5 and £7 came out at £62,000, making £92,000 in all.

7800. Out of what total?—I do not have the whole rental, but I have the rental up to £15, and it is £236,000. I find that the total rental in Dundee is £ .

7801. You took £92,000 up to £7 as fairly representing the most shifting part of the population?—Yes.

7802. I notice from the report in the newspaper that what you propose is this: that for houses not exceeding £7 of rental, the period of let do not exceed three months: that the present system of rating houses under £5, whereby the landlord pays the rates with a 20 per cent. reduction, should be extended to include houses of £7 and under; that the date for the return of missives be fixed at 15th March, and the present system be condemned, and in the case of yearly periods of let for houses over £7, quarterly payments would be in the interest, both of tenant and proprietor. In the latter sentence, you are distinguishing quarterly payment from quarterly let?—Yes, it is yearly lets with quarterly payments.

7803. Then, along with that proposal as regards the £7 houses, making the let not exceed three months, you couple the proprietor as being responsible for the tenants' rates up to that rental, with an abatement of 20 per cent. off the rates?—Yes.

7804. At the present time, what is the proprietor responsible for?—Up to, but not including, £5.

7805. And you propose to extend that to £7?—Yes, inclusive.

7806. Why do you take an abatement of 20 per cent. off the rates?—Just now it is 20 per cent. for the smaller sum, and I consider that the responsibility or the chance of not getting the rate is as great up to £7 as it is up to £5, and then, further, as far as I can make out by calculation, under £7 rental the Corporation lose pretty nearly 25 per cent. through irrecoverable rates and so on. So, supposing he gets 20 per cent. to cover that, the town is benefiting not only by what they are gaining extra, but there is a saving in collectors' wages and salaries.

7807. Do you factor your own properties?—Yes, practically. I have sub-collectors to collect the rents.

7808. Would the 20 per cent. allowance that you proposed cover the cost of collection in the first place, loss through non-payment in the second place, and empties, partial or total, in the third place?—It would cover the first two, viz. cost of collection and loss.

7809. And what about the third, empty houses?—I do not know that it would cover that. I am not very sure on that point.

7810. We have had two proposals put before us, one being that the allowance should cover all three, and another being that the allowance should cover the cost of collection, leaving the landlord to arrange with the town, in the event of losses and empties, to get a corresponding reduction. Now which system do you think would be the best?—I think it ought to cover the first two, at any rate.

Mr G. A. Johnston and Mr J. Robertson.
14 Jan. 1907.

7811. But not the third?—No. In the proposed Dundee Provisional Order they are taking powers to assess all proprietors even on empty houses, so they would have to pay the rates in any case.

7812. Is that a Provisional Order that you are now promoting?—Yes, it is now before Parliament, and it is proposed there that empty houses shall be rated for police rates. The reason I suggest the 20 per cent. as being necessary is that it is as much in the interest of the tenant, because there are a lot of people who are allowed exemption on the ground of poverty. Now, unless you make a pretty generous allowance to house proprietors to meet this, they will press tenants for recovery, and the tenants will be more harshly dealt with than they are at present. It will press very hardly indeed on some of the poorer classes.

7813. At present, is there a court in Dundee which deals with applications for relief on the ground of poverty?—There is no court; it is simply submitted to a Committee of the Town Council, I think.

7814. And is that regularly done once a year?—Yes. A schedule is given out for people to fill up in making an application. They fill this schedule up and send it in, giving all the details and particulars, their circumstances, and why they are asking for this relief, and then the applications are considered.

7815. We would like to know the extent to which remission is granted. The Town Clerk will be able to give that?—The Treasurer will give that.

7816. Perhaps the Treasurer will give us, first, the total amount of rate: then, in the second place, how much is actually collected and what is lost; and, in the third place, he might distinguish between loss proper and remissions on the ground of poverty. He will be able to give that?—Yes.

7817. Do you not propose that that system of relief being granted by the rating authority to the poor tenant should continue?—Of course if it is put into the hands of the proprietor, then they would have to deal with the proprietor.

7818. The other proposal is that the tenant should still be entitled to come forward, and then, having got a certificate from the rating authority, he should be entitled to get a refund from the proprietor of rates that he may have antecedently paid?—I see.

(*Mr Robertson.*) It would be almost impossible to give effect to that.

7819. (*Chairman to Mr Johnston.*) I know there is a practical difficulty, but, in one form or another, do you think that the practice of recognising the poverty of the tenant should be continued?—Certainly, and that is why I suggest that a reasonable allowance should be made.

7820. It would put it entirely into the hands of the proprietor, and it would depend on whether he was a reasonable or philanthropic person, or whether he was not?—Undoubtedly.

7821. Trustees might not be entitled to do that kind of thing, you see, in accordance with the terms of their trust?—Quite so.

(*Mr Robertson.*) I don't think it would be wise to leave it in the proprietor's hands at all.

7822. (*To Mr Robertson.*) Then how would it work out?—I would make the landlord responsible.

7823. Would that come to this, that the poor tenant who is now relieved would not be relieved?—I don't think the landlord would make any deduction. You see, they have to make that application yearly. Now, the same tenant might not be in the house next year. It would be a complicated matter, and the landlord would just have to take the risk.

7824. Take the simple case of a tenant being in the house all the year; he comes forward in January, let us say, and shows poverty. Would it not be possible that in that case the rating authority should refund to the tenant what the tenant had paid to the landlord, and then the rating authority would get it back from the landlord?—I am afraid the rating authority would not readily give it back, and it would be a constant re-fixing of the rent.

7825. You think the practical difficulties are too great?—Yes.

7826. (*To Mr Johnston.*) You have instanced 20 per cent., because that was the allowance given just now for rents under £5. Would there not be less loss the higher you went up?—Yes, after you pass a certain minimum, but not until you pass £7. I think the risk is equally great up to that.

7827. Is it your view that if the landlord, as it were, collected the rate at frequent intervals, more rates would be got in the result than is got now, when there is only one application for a big sum once a year?—I don't think there would be very much more collected on that score.

7828. It has been said to us by many witnesses that

rates are often lost, because it is one thing for a man to pay a small sum monthly, and it is another thing when he has to pay a big sum all at once, once a year, and especially at the worst season of the year, namely, in winter. Is there anything in that?—There might be a little, but I don't think it would amount to much.

7829. (*Mr Cox.*) What do the rates come to on a £7 house in Dundee?—17s. 6d. for the tenant.

(*Mr Robertson.*) There is much more loss under the £5 to the landlord than there is above it. I hold property both under and above, and I lose a great deal more under £5 in the shape of irrecoverable rents.

7830. (*Chairman to Mr Robertson.*) Do you agree with Mr Johnston that while that is true, there is pretty much the same loss up to £7 as there is at and under £5?—No, I think the loss is greater below the £5.

7831. Appreciably greater?—Yes. I lose very little above £5, but I find there is very great difficulty in collecting the rents under £5.

7832. The higher you go above £5 the less you lose?—Yes.

7833. What class of house property do you have?—The class you are dealing with here; I have houses under £5 and up to £20.

7834. Where you collect the rates along with your rents, which do you lose?—With irrecoverable rents I lose both the rate and the rent.

7835. When you lose the one you lose the other?—Yes. Indeed you have to fix the rent on the footing that you will lose a certain amount. I have twenty tenants below £5, and there is not a single one but what is in arrears; irrecoverable arrears.

7836. I suppose that depends on the state of trade?—Yes, a good deal.

7837. How are things in Dundee just now?—The manufacturing trade is fairly well just now, but in holiday times you never get anything in the way of rent.

7838. (*To Mr Johnston.*) You know that in Mr Cross's Bill it is proposed to go up to £16 in Dundee. Why is it that you draw the line at £7?—In regard to the short periods of letting?

7839. Yes?—Simply because I don't think it is demanded at all in Dundee in the class of house over £7, and I have given evidence to prove that more frequent changes are really not wished.

7840. And not being wished by the higher rented people, do you think they attach value to the security of the long let?—Yes, certainly.

7841. What makes you think that?—I think it because of conversation that I have had with people who are not my own tenants. I have been asking whether they preferred a shorter period of let without security, or the present system with the security, and in every case I was told that they preferred the present system.

7842. If a landlord has a good tenant, has not the tenant ample security even if his tenure is only for a quarter or even a month?—No, I don't think he has sufficient.

7843. If you yourself have a good tenant you just keep him on, whether he has a yearly let or a quarterly let?—There may be cases where perhaps someone else is anxious for the house, and it is always in the option of the proprietor on giving a short notice to put the tenant out. Now, if you make the periods of letting shorter, as suggested in the Bill, the proprietor has no interest—or rather he has less interest—in keeping his property in good repair and keeping things nice, and the same thing applies to the tenant.

7844. The first view is that they would lose the security of the tenure. Do you think it also weighs with them that the landlord would not have the same inducement to do work for the house?—Yes, it encourages more frequent changes, and the property gets deteriorated more quickly. On the other hand, the tenant will say, "I am not going to 'do this little thing I was thinking of, because I have no 'security." They tell me distinctly that they prefer the present system. Of course I am referring to the more respectable working people.

7845. Skilled people rather than unskilled people?—Yes.

7846. What have you yourself found in regard to the number of removals in connection with your houses?—I think I have mentioned that in my evidence.

7847. You state that during the past years there has been an average of six removals per annum in your property, all at the term of Whitsunday, and that the average sublets between the terms are two out of your fifty separate dwellings?—Yes.

7848. (*To Mr Robertson.*) Do you have any statistics on that point?—No, but from general knowledge of the community I should say that the Dundee population are not so shifting as they are in Glasgow. I have lived in Glasgow, and I know from experience that they are not so shifting here. Many people here occupy the houses where their fathers were before them.

7849. You are talking of ordinary working men?—Yes. They continue to work longer in one district with one firm and in one place.

Mr G. A. Johnston and Mr J. Robertson.

14 Jan. 1907.

7850. (*To Mr Johnston.*) We have heard it said, just as you have told us, that the people with the somewhat higher rents don't want a change, but prefer the present system. On the other hand, the direct evidence that we have had from the class occupying these houses is substantially all the other way. Representatives of the Trades Unions, for instance—who of course embrace men in such cases—have all told us that the desire is for greater freedom, so as to make it possible to change from one town to another, and from one part of a town to another. How do you account for that?—I think it is reasonably accounted for in this way, that there is a certain class who are always desiring changes. I don't require to define that class. Then beyond that there are a great number of men, especially those of a socialistic tendency, who want to be relieved of all responsibility. If they get rid of that responsibility and get greater freedom, surely they cannot expect to retain all the rights of citizenship. I hold that if you wish the rights and privileges of a citizen you must at the same time have some responsibility.

7851. How would the responsibility be lessened by a man who is at present on a yearly tenure getting three months' tenure, for instance?—Because he has the idea that he can shift about at any time, and then there is the difficulty of collecting the poor rates.

7852. I know, but stick to the view of the man. He remains a citizen of the Crown, why should he not have the right to shift about at any time if his employment makes it desirable?—If he does that often just now, then, according to the present law, he will lose his right to vote. It comes in as a practical difficulty there.

7853. Suppose he is willing to take any risk of that?—That is his outlook, but I don't think it is in the interests of the general community—it is not as regards the conditions of Dundee. My idea is that there are a number of them want to get a greater amount of freedom and to get rid of responsibility, and yet they wish to retain all these rights and privileges.

7854. A man generally knows his own interests fairly well. He sometimes wants to enforce them at the expense of other people's interests, but he knows his own interests fairly well. If these people value the security so much, why is it that their representatives should come forward and say that they, as against that, think that they have plenty of security already, and that they want the freedom?—I do not think that that class is in the majority in Dundee; it is in the very small minority.

7855. The class who really need it are the men occupying the cheaper houses, but perhaps naturally enough the men who are occupying the better houses, even though they do not need it, champion the case of the men in the cheaper houses?—I believe that is the case.

7856. But you think that the substantial case would be met by extending the limit?—Yes, and that is why I suggested the £7.

7857. Of course the mere amount would be a matter of opinion. Other people might think that it should be £8?—Yes.

7858. Mr Henry put very strongly before us the view that in Glasgow it should be £10. I suppose a Glasgow house of £10 would be represented by a Dundee house of perhaps what?—£7 or £8.

7859. So Mr Henry's view and your view would be substantially the same?—Yes, practically the same.

(*Mr Robertson.*) The cases of Glasgow and Dundee stand very much separately. In the case of Glasgow they have all round about the town where they may go for employment, while in the case of Dundee a man must make a long shift if he is changing his employment.

7860. (*To Mr Robertson.*) What places are there round about Dundee that you could compare with the places round about Glasgow?—There are absolutely none.

7861. Newport is residential?—Yes. Tayport has a small factory, but it is abundantly supplied by the residents.

7862. Is there any coming and going between Dundee and Perth?—No.

(*Mr Johnston.*) With the facilities given by the tram-cars now, there is no necessity for frequent changing of houses.

7863. (*To Mr Johnston.*) Are there cases of workmen travelling by the tram-cars here?—Yes, there are workmen's cars every morning.

7864. Where from?—From the outskirts on all the different routes.

7865. How far may a man have to travel from his house to his work in Dundee?—From Lochee to the centre of the city will be about a couple of miles. There is a special fare—a penny return for workmen. They come in with the car in the morning and go back at night.

7866. There are no workmen travelling by trains as there are in Glasgow?—No.

(*Mr Robertson.*) They run special cars in the morning to suit the workmen. We have Broughty Ferry and Monifieth workmen travelling a good deal between these places. For the most part it is Dundee tradesmen employed at shops that are travelling. There are a considerable amount of shop assistants and such like that live in Broughty Ferry and Monifieth and travel regularly to Dundee.

(*Mr Johnston.*) That is going beyond the burgh boundary.

7867. (*To Mr Johnston.*) You suggest that under £7 the period of let should not exceed three months. What do you say to one month?—That does not shut out the possibility of one month.

7868. You would not limit it to one month?—No, I would leave it in their option to make arrangements mutually.

7869. Are there half-yearly payments in Dundee in the case of houses let under £16?—Yes. The general system is half-yearly for a yearly let.

7870. (*To Mr Robertson.*) Do you agree in that, that the general system is half-yearly payments?—Yes.

7871. Rather than quarterly, as Mr Johnston himself adopts?—My experience is that the half-yearly payments are better made than the quarterly payments. The people make their arrangements to suit, and I think the present system works very well in Dundee.

7872. We have been told that the Co-operative Society dividends in other places, being paid half-yearly, conduces to make it easy?—Yes, and then we have yearly societies that break up every year. They lend money for six months.

7873. Is the Savings Bank also employed for the same purpose?—Yes.

(*Mr Johnston.*) It is exceptional to have it quarterly, but there are one or two that do it besides me.

7874. (*To Mr Johnston.*) Under Mr Cross's Bill, the period of let is to be the same as the period of payment, so that under his Bill yearly tenancies in Dundee would be just converted into half-yearly tenancies, the payments being usually half-yearly?—Yes.

7875. Would that be any great drawback?—Yes, I do not think that would be desirable at all. There are plenty of houses let on lease, perhaps three years or five years.

7876. But not under £16?—I think there may be, but I am not sure.

7877. (*To Mr Robertson.*) What do you say to that?—I have no knowledge of any houses under that being let on a lease. There are some proposals for a payment of rent in advance. That would be a good thing from the landlord's point of view, but I am afraid the tenants would not care for it.

7878. Are there in Dundee, to your knowledge, many cases of forehand payment of rent?—No. The landlord's hypothec keeps them right in that.

7879. Are there cases where cautioners are demanded?—No. In the case of weekly rents they pay a fortnightly deposit.

7880. But in the case of monthly lets or quarterly lets, the landlord trusts to the hypothec?—Yes. I think the destruction of the landlord's hypothec would be a serious matter for the tenant.

7881. (*To Mr Johnston.*) Do you think that payment four times a year instead of twice a year, in short, do you think that your own system is a better one for the tenant?—Yes, because they are mostly working people with weekly wages or monthly wages, and it is much easier for them to save up a quarter's rent, and there is less risk.

7882. Does it not go further and point to monthly payments being still easier?—Yes, but if you adopt monthly payments you increase the cost of management so much that you must increase the rent. I hold that three months is the minimum that could be done without increasing the rent. Then there is the payment of the rates being yearly. I have been asked by people sometimes to divide up the payment of the police rates into twice a year. If you adopt quarterly lets in Dundee, you get rid of that difficulty. They cannot collect the rates twice without increasing the cost.

7883. Who have made that request to you?—It has been advocated at election meetings.

7884. The request would come from tenants?—Yes. It is a hardship having to pay the police rate in one sum once a year; it is not very easy for them to pay it all at once. Now, if you adopt quarterly payments, that would do away with the difficulty.

7885. (*Mr Esslemont.*) How would it increase the cost of collection of rates if payment was taken in two instalments?—The Treasurer will be able to tell you about that.

(*Mr Robertson.*) They would have to issue two sets of papers in the year.

7886. (*Mr Esslemont to Mr Robertson.*) No, you would not require to do that. Suppose the rate is £1, and the tenant tenders 10s., that can be discharged on the demand note?—They do that if desired. The tenants want the payment to be made every six months, and to have a separate notice. We already accept part payments if the tenant wishes to pay that way.

7887. (*Chairman to Mr Johnston.*) You referred to questions being asked at Town Council elections. At the last election was the house-letting matter brought up at your meetings?—Not to my knowledge.

(*Mr Robertson.*) I had no experience of that. I was a candidate at the last election, and the question was never raised at any of my meetings.

7888. (*Chairman.*) In the case of both you gentlemen, were your elections contested?

(*Mr Johnston.*) Mine was uncontested, but I had meetings.

(*Mr Robertson.*) My election was contested.

(*Mr Johnston.*) Last November, I had a meeting of my constituents, but there was no mention made of the matter.

7889. (*Chairman to Mr Johnston.*) Was the question brought up at any other meetings to your knowledge?—Not to my knowledge.

7890. How many Councillors are there in Dundee?—Twenty-seven

(*Mr Robertson.*) I have no doubt in my own mind that, as a whole, the tenants would prefer the collection of the rates twice a year.

7891. (*Chairman to Mr Johnston.*) Before we come to the rates, we will take the question of hypothec. What is your view, Mr Johnston, on the question of hypothec, the retention of it, or the restriction of it, or the abolition of it?—I have not given the matter any consideration.

7892. Have you had occasion to enforce your right?—No, not so far as my experience goes.

7893. Have you had experience of giving time to tenants, for instance, because you knew that the hypothec that you had made it safe?—Yes, I have had that only in two cases in all my six years' experience.

7894. It is said that the hypothec is not merely in the interests of the landlord, but it is a benefit to the tenant in cases where, but for the landlord's security, he would be turned out?—No doubt that is perfectly true, and there have been some cases of that in my own experience.

(*Mr Robertson.*) I concur in that. It is a great help to the tenants, and it prevents the necessity, in the first place, for the tenant having to find security for the rent; in the second place, it is a protection to the tenants in many instances, where, through sickness or otherwise, they may not be able to meet their grocer's bill or tailor's bill. These parties would pounce on them and put them out of the house, but the hypothec is a protection to them and enables them to tide over their difficulty.

7895. (*To Mr Robertson.*) We are told that the benefit of it is not in cases where the landlord has to enforce it, but it lies in this, that the knowledge that he has the power is a very useful one?—Yes.

7896. I suppose it is the case that a sale under a warrant does not yield anything like the real value of the furniture?—That is so. It is very seldom resorted to.

7897. Have you often had occasion to enforce it?—No, I have never had occasion to do so.

7898. It is a rare thing in Dundee?—Yes.

7899. (*To Mr Johnston.*) That leaves us with the question of rating. What is your view about the burgh rates being paid through the proprietor up to £16 for Dundee?—I object very strongly to that on principle. I have the greatest objection to it.

7900. Do you go the whole hog, or is it between £7 and £16 that you object to that?—The reason why I would allow it to be extended to £7 is simply this, that these are the tenants who remove often; but where they don't remove so frequently I don't think there is any necessity for putting it on the proprietor at all. As has been already pointed out, I object to taking this responsibility from the tenants, and thereby taking from them or tending to lessen the interest that they feel in the economical management of their affairs by the public boards. That has been proved in England, and it has been condemned by the Royal Commission on Local Taxation.

7901. I suppose the principle as a principle has gone, because it is already done under £5, and you are willing to extend it to £7. You think, however, there is no occasion to go further than £7?—I don't think there is any occasion at all for going beyond it. We find that if they are not making payment of their rates they cannot possibly have the same interest in looking after the conduct of their representatives on the public boards.

7902. In the case of the people paying rents up to £7—it is a big thing amounting to £92,000—should they not know what they are about? At the present moment, under £5 there is no separation between rates and rent?—No.

7903. In your view, even in the case of those paying

under £5 just now, or up to £7, should they not know what the rate is?—Certainly, and I suggest that it should be stated separately.

7904. On what?—It should be stated separately from the rent.

7905. On the receipt?—Yes.

7906. Do you see any reason why that should not be done all round down to the lowest rent?—I have not considered that. I have no personal knowledge of the lowest rent.

7907. You don't think it would be impracticable from the point of labour in making the separation?—Not at £5, but it might be under £5.

7908. There is a suggestion that the rating authorities should continue to send out notices to the tenants, although the landlord was made responsible. Would you see any reason why that should not be done? In that case the landlord would not need to separate?—I see. You would send the notice to the tenant and make the proprietor responsible for the payment?

7909. Yes. We were told by a factor in Glasgow that there were certain cases where, by voluntary arrangement with the rating authority, he paid direct; his practice was to go round the tenants and collect their rates, and then he paid in one slump sum. Would that not be the simplest way?—I don't know. I fancy that the best way would be to assess the proprietor direct, and then the proprietor to separate the amounts.

7910. In one way or another, your view is that the tenant's position as a ratepayer and the extent of the rate should be brought home to him?—Yes.

(*Mr Robertson.*) I would point out that there may be three or four tenants in one year in one house, and there is a difficulty in serving the notices.

7911. (*To Mr Robertson.*) That exists now?—Yes.

7912. And it would be aggravated a bit?—A large proportion of the houses at these rentals are occupied by widows and single women who interest themselves very little in municipal affairs. Then the thriftless class also occupy these houses, and they take very little interest in these matters.

7913. Suppose that short lets were inaugurated even up to £7 or £16, do you anticipate it would produce a larger number of removals in the course of the year?—I don't think it would.

7914. Once they settle down?—That is so. I know in Dundee, at all events in the cheaper class of properties, the houses are not always provided with grates, for instance, and many other things that are convenient in a house. There would be constant reconstruction of the property, and it would not be a good thing.

7915. I don't know that we are quite at one. I wanted your opinion on this: do you think, if short lets were made statutory, there would be in the end more removals than there are at present?—There might be a few, but not sufficient to justify a change.

(*Mr Johnston.*) I am inclined to think it would encourage more frequent removals.

7916. (*To Mr Johnston.*) On the other hand, this has been put to us, that, with the present system of one removal term, there is a kind of house-hunting fever that attacks the population, especially the ladies, and that would not exist if removals were going on all over the year. Is there any such house-hunting fever in Dundee to your knowledge?—I suppose there is, to a certain extent.

7917. Is it not unfortunate to have all the removals at one time of the year, instead of having them spread over the year?—I don't know that it is.

7918. Do you not find practical inconvenience from the difficulty in getting a hire, for instance, at a moderate rate, when everybody wants horses or men on the same day?—They are not wanted on the same day. In Dundee there are a great number of empty houses, and there are people removing a month before the term.

7919. Do you not find that there is a great over-pressure in the building trade at that particular time, with a resultant want of work later in the year?—Of course it may have some effect in that direction. There is greater pressure in the springtime, but I don't think it should be so very much; if houses are to be ready for Whitsunday, they should begin the previous year.

7920. We have been told that these matters were brought forward in Glasgow at ward meetings and otherwise. If they have not been brought forward here, do you think that that points to a difference of opinion as between Glasgow and Dundee?—Yes.

7921. What have you to say about the poor and school rates?—According to Mr Cross's Bill, it is provided that that be exempted, the poor rate.

7922. It only applies to the burgh rates?—Yes. If the removals are more frequent, they will have some difficulty in finding the tenant who is to be assessed for the rate for the year. The poor rate is assessed yearly.

7923. So is the burgh rate?—Yes, and they will have the same difficulty—that is what I say. That is the reason I object to the shorter lets.

7924. Suppose shorter lets with compounding were enacted, should it be confined to burgh rates, or would it be desirable to have one system for all rates? Would you contemplate that the landlord should pay the whole rates in the case of houses let under £7?—Including the poor rates?

7925. Yes?—Yes, I think so, if it were adopted, but I do not advocate adopting it. If it were adopted, then we must collect these rates quarterly to be able to get at the tenants.

7926. If shorter lets were enacted, limited to three months for houses up to £7, you do not think that between £5 and £7 the landlord should pay the rates?—I do not gather that.

7927. Under £5 he pays the rates now, and you contemplate that up to £7 he should pay the rates?—Yes, if stated separately.

7928. But then if, on the other hand, Parliament thought that the limit should not be £7, but should be £16, you would still apply the same principle that the landlord in that case should pay the rates also. If Parliament thought that the limit for the short lets should be £16 instead of £7, would it not follow that the rates would be paid also?—I would not say that the landlord should pay the rates in that case. I would say that the Treasurer's department of the Town Council would have to arrange to take their rates more frequently.

7929. Do you see any practical difficulty, or would you rather leave that to the Treasurer as to why the rates should not be collected more frequently?—I would rather leave it to the Treasurer. I am told it would increase the cost.

7930. (*To Mr Robertson.*) Have you anything to add to what has been said by yourself and by Mr Johnston?—No, I concur in his evidence.

7931. (*Mr Esslemont to Mr Johnston.*) You say that, in the main, houses are let yearly, and the rents are collected half-yearly?—Yes.

7932. Were you the first to start the system of yearly lets and quarterly collections?—There was one man before me. It was my opinion all along that that was the proper way, and I made inquiry to see if there was anyone else who did it, and I found that there was one.

7933. How did your tenants view it? Did they express any dislike to it?—No, practically as a whole they appreciate the change. Some of them mentioned the change, but they had really no argument against it.

7934. Was it a change so far as you were concerned?—In one of my properties it was. In the first property that I built I collected the rents half-yearly for the first year or eighteen months. I then built another property, and I began with the quarterly collection right away, and I altered the collection in the other property. Almost unanimously my tenants say that it is much preferable.

7935. You suggest that £7 should be fixed as the limit for shorter lets?—Yes.

7936. And that the percentage that is allowed for the collection of burgh rates under £5 should be extended to £7?—Yes.

7937. You thought that was necessary because from time to time the landlord would require to give relief to a poor tenant?—Yes.

7938. Do you not think that if the discretion were placed in the proprietor it would practically come to this, that no relief would be given?—No, because I think they would recognise the necessity for it; it would be impossible for them to collect the rates in cases of poverty.

7939. It would be only in cases where it was impossible to get it?—That is the only way you can do, unless you assess them directly.

7940. Would not this be the result, that wherever the proprietor could collect the rent he would collect the rates, and he would only grant relief in cases where he found it impossible even to collect rent?—Perhaps the factors will be able to give evidence on that point. I have no knowledge of that class of tenant. What I understand from them is that they do not wish this duty at all at any price; they would rather not have it even at 20 per cent. deduction.

7941. You said you had been in conversation with a good many tenants in regard to this proposal for shorter lets, and you found that there was a disinclination for a change?—Yes, without exception.

7942. Could we not have evidence direct from any of these? Would any of them come here?—I do not know if they would be prepared to come, but I can ask.

7943. Why could they not come?—They may be at their work, and then some of them do not want to have the publicity; but there are four men that I have spoken to within the last week, average working men.

7944. What I feel is this, and I believe it is shared by

the other members of the Commission—that it is for us to judge what weight we should place on an expression of opinion of that kind which is given to us by interested parties, proprietors and factors?—I have done the best I can by giving my own experience. There are only one or two sublets on an average out of fifty tenants, and I think that is pretty good evidence that the change is not necessary. In these cases I had no difficulty in subletting, and the people were not losers in any way.

7945. (*Mr Cox to Mr Robertson.*) Will you answer the question that Mr Esselmont put to Mr Johnston about the relieving of ratepayers? I suppose there is a considerable number of ratepayers getting relief from payment of rates at the present time?—Yes.

7946. If the collection of the rates is put on the landlord, he will see that he gets payment of them?—I have no doubt about that.

7947. It is only in the case where he fails to get the rents that he will not take payment of the rates?—Yes, he won't give any abatement if he can possibly help it.

7948. So there will be every endeavour to collect the rates from those poor people who at the present time get relief?—Yes.

7949. Have you thought at all whether any scheme would be possible for still allowing these poor people to get relief?—I do not think it would be possible. I think the landlord would just have to take his chance.

7950. So the poorest class of people would be worse off under the new arrangement?—Yes, it is quite natural that the landlord should collect as much as he can. You cannot blame him though he did his utmost to collect if he was to be held responsible. I do not think it is a possible or a practical thing for a landlord to come to the Commission and say, "This tenant was too poor and he cannot pay it." He would be a buffer between the Commission and the tenant.

(*Mr Johnston.*) The tenants under this arrangement would have a greater difficulty in getting relief than they have at present.

7951. (*Mr Cox to Mr Johnston.*) And no practical scheme can be devised for still giving them the relief that they get just now?—I do not think so.

7952. (*To Mr Robertson.*) You spoke about their dividends from Co-operative Societies. Are those dividends substantial in amount?—About 15 per cent.

7953. What do you think a working family might draw half-yearly from that? Would it be a substantial amount?—If their groceries and other purchases were to amount to £1 a week, then it would be 3s. a week. That would be about the minimum if there is any family at all.

7954. That comes to £7 in the year?—Yes.

7955. So it would pay half the rent?—Yes.

7956. Is it used for that purpose to any extent?—Yes, to a very large extent.

7957. Are these dividends paid half-yearly?—I am not sure about that.

(*Mr Johnston.*) I think they are paid quarterly, but I am not sure.

(*Mr Robertson.*) We have a good many Friendly Societies, where they pay in so much a week, say 1s. or 1s. 2d. That 2d. goes as a contribution to a sick fund and a funeral fund, from which they may draw if necessary, but the main sum lies and is drawn to meet the rent.

7958. (*Mr Binnie to Mr Robertson.*) On rents under £5 are the poor rates charged to the landlord as well as the burgh rates?—No, there are no burgh rates charged to the landlord; they are always paid by the tenant.

7959. But the municipal rates are charged to the landlord on £5 and under?—I do not know that the sum is limited; it is on weekly lets—I think that is the principle on which they are charged. It may be a larger sum than £5. It may be £6 or £7, but if the rent is paid weekly, the landlord is held responsible.

7960. (*Chairman.*) It is under three months, whatever the rent may be?—Yes. That is because of the difficulty of locating the tenant who ought to pay the rent. Great difficulty is experienced when there is a removal between terms.

7961. (*Mr Binnie.*) Putting it generally, the landlord pays the tenant's rates in the case of the smaller rents?—Yes, or he pays the rates on the shorter lets.

7962. And these are generally, I suppose, the smaller rents?—Yes.

7963. And the result is that the very poor in Dundee have to pay burgh rates, whereas a very large number of those in the class above them get relief?—Yes.

7964. Are there in Dundee, as I know there are in some other places, a good many applications to town councillors for lines of relief?—Yes.

7965. Particularly about election times?—Yes. Up till recently they brought their notices, which were signed on the back, probably by their grocer. We were flooded with these. They have now adopted a different system, whereby the parties making application for relief get a schedule in which they state all the particulars, their income, and the number of people living in their house, and that comes before a committee.

Mr G. A. Johnston and Mr J. Robertson.

14 Jan. 1907.

7966. Do they not get certificates from anyone at all now?—They sometimes come to councillors to get these schedules signed.

7967. Have you had the experience in Dundee that they have had in other places, viz. of a lady driving up to the collector's office in a cab, and going in with a certificate from a councillor that she was unable to pay her rates?—I do not know, but we believe that a great many people have been relieved who should not have been relieved, and a number who have not been relieved should have been relieved.

7968. So the very poor are made to pay, and a great many who should get relief do not get it under the present system?—That is so. It used to be the system with us, that if a councillor's name went in along with the schedule the application was invariably granted without much investigation, but now the matter is different. There is an investigation, and all the particulars are got, and in many cases they are relieved to the extent of one half, or they are relieved in instalments.

7969. (*Mr Howden to Mr Johnston.*) I think you told us that the tenants under £7 necessarily removed oftener?—Yes.

7970. Why do they remove oftener under £7? Is it because of insecurity of work?—I suppose it is simply on account of their work being more of a shifting nature. The poorer class of people change oftener.

(*Mr Robertson.*) Not infrequently they remove to evade payment of arrears. Many of them shift about from place to place to evade payment of rent.

7971. (*Mr Howden to Mr Johnston.*) It would be a hardship on these people to revert to a system where they could not leave on reasonable notice; it would be a hardship to go back to a yearly let?—Yes, I would not propose that for a small rent.

7972. What about joiners, masons, moulders, turners, or blacksmiths—are they not paid weekly wages and liable to be shifted on a week's notice?—Yes.

7973. And have they not frequently to shift from Dundee?—I have given my own experience, and that is that they do not shift frequently. There are only six on an average in three years out of fifty—that is the three years' average.

7974. (*Chairman.*) Is that six a year?—Yes.

7975. (*Mr Binnie.*) You said two before?—No, that was the sublets between the terms.

7976. (*Mr Howden.*) What do you charge in the case of subletting?—For what? Rent?

7977. Either rent or expenses in subletting the house?—Nothing. They pay for advertising the house, and they are charged the rental according to the time they are in it.

7978. In the event of a tenant coming to you and saying that they want to give up their house, what would you do?—Simply ask them to advertise the house, and I would try to get a sub-tenant.

7979. And if you did not get one?—I have never had that experience; I have always managed to get the house let.

7980. What would be the usual practice in Dundee in a case such as that?—I would expect that if a sub-tenant was not found, they would be held responsible for the rent.

7981. Would that not have a deterring effect on people applying to you to remove between terms, even although they needed to remove?—No, if they found it necessary or advisable to get their houses sublet, they would be at me at once.

7982. Do you not think it would be a deterrent if they had to pay the rent of the house?—No, that does not prevent their trying it.

7983. What principle do you adopt in fixing rents?—How do you mean?

7984. You told us that a system of shorter lets would raise the rents?—Yes.

7985. You have no doubt in your mind in connection with that?—No doubt at all.

7986. What method do you adopt in fixing rents?—A proprietor will naturally look for an ordinary return on the money invested, and then there is the expense involved,—if you have a monthly period for letting you increase the cost to a very great extent. You have twelve lettings in a year instead of one, and naturally the cost of men's time and other things must be increased to a very great extent. That must fall on the tenant through time, because the cost of administration must always be considered if a man considers what sort of return he is to get.

7987. Did you ever try to raise rents under your present system?—No, but I have reduced some of my rents.

7988. You have been a proprietor for only six years?—Yes.

7989. Has it come to your knowledge that rents have been raised even when the conditions remained the same as regards letting?—No, I have no knowledge of that.

7990. You have never heard of rents being raised?—Yes, but that was because of additions in the way of water closets and other things that they did not use to have.

7991. But where the property remained the same, you have never heard of any cases of the rents being raised?—not for a long time, because there are too many empty houses.

7992. It will be because you cannot extract more rent from your tenants that you allow your rents to remain as they are?—No, I do not admit that.

7993. If there is a demand for a certain class of house, a landlord or a factor usually tries to get as much rent as possible?—I do not know; I could not say. That has not been the line on which I have worked.

7994. (*Mr Dobbie to Mr Johnston.*) Do you let your own houses by the year?—Yes.

7995. And you merely collect the rents quarterly?—Yes.

7996. You have not thought of experimenting with quarterly lets?—No.

7997. Nor half-yearly lets?—No.

7998. What is the feeling of the Town Council on this question? The Chairman has given us an excerpt from the report of the meeting?—The Town Council passed its resolution that I moved by a very small majority certainly, but I do not know that they have any particular feeling.

7999. What was the majority?—Thirteen to twelve. I would like to say that, as regards the town councillors' point of view, they expect to get more rates in if the rates are collected through the landlord, and at the same time to be relieved of the responsibility and work of collecting these rates. Now I hold that it is the Corporation's duty to collect them.

8000. Is it customary to have missives in Dundee?—Yes, in regard to yearly lets, so far as my knowledge goes.

8001. And to have a cautioner?—Not as a rule. I have never had one.

8002. If shorter lets come into vogue, would that mean in your view that a cautioner or pre-payment might be demanded?—Quite naturally it would.

(*Mr Robertson.*) That is done at present. A deposit is demanded.

8003. (*To Mr Robertson.*) Pre-paid rents might take the place of missives, assuming shorter lets became more frequent?—I am not sure of that. I am afraid that a mere pre-payment of a month's rent would not be enough.

8004. The landlord would insist on the tenant making payment, as opposed to the present system of giving credit?—Yes.

8005. What do you do in Dundee, in reference to ejections? What Court do you go to?—The Burgh Court. That has begun quite recently.

8006. Do the magistrates sit there?—Yes.

8007. Is there any grievance on the part of proprietors with reference to dilatoriness or expense in connection with ejections?—Yes, I think so. In the case of undesirable tenants, or tenants that won't pay, I think the process of ejection is too expensive. It costs about 10s., and it takes about a fortnight to do it.

8008. Assuming this Bill is necessary, that may infer shorter lets and more frequent removals, and the suggestion has been made that if there is to be that change made in the law, there should be a corresponding change made with a view of giving more immediate remedy in the case of failure to pay rent. Can you suggest any improvement on the present system for evicting tenants?—No. I should be loth to put the tenant entirely at the mercy of the landlord in the way of selling his furniture, and so on.

8009. Do you go to the Sheriff Court at all for ejection warrants?—Not in the case of weekly lets.

8010. Can you tell us whether it takes an equally long time? Can the tenant get any more delay in the Burgh Court than in the Sheriff Court?—We have a very sympathetic sheriff, who is sometimes not very easily dealt with. The Burgh Court would not have been resorted to if the proprietors had thought they were getting the justice they were entitled to.

8011. It has been suggested that, with the view of giving more facilities, Burgh Courts should have more powers where they have not power to give warrants?—I think the Burgh Court an improvement. I think that, in the first place, because of the congestion of the business in the Sheriff Court, and, in the second place, because the Burgh Court gives greater facilities.

8012. There would be necessary delays?—Yes. As soon as a tenant comes to know that he is to be shifted, then there is no more rent paid, and the property is destroyed. I have known of water closets being completely destroyed by tenants who knew that they were to be ejected, and who therefore wanted to take revenge on the landlord.

8013. Is there any practice in Dundee of collecting gas or water rates direct from the landlord?—I am not aware of it.

8014. I mean stair gas?—Yes.

8015. Can you tell me what allowance is made to the landlord for the trouble in collecting the stair gas?—There is no allowance.

(*Mr Johnston.*) There is no allowance at all.

8016. (*To Mr Robertson.*) Is it the case in Dundee that owners of property under £5 pay both the tenants' and the landlords' burgh rates?—Yes.

8017. It is not merely a case of no burgh rate being charged?—No.

8018. We were told that in Edinburgh the proprietors did not pay any more burgh rates on houses under £5,—the Corporation simply did not charge any occupier's rate at all. In Dundee, however, they charge the proprietor twice?—Yes.

(*Mr Johnston.*) Yes, they charge both the tenant's rate and the proprietor's rate under £5.

(*Mr Dobbie.*) That is different from Edinburgh.

(*Mr Robertson.*) They are not so generous with us here.

8019. (*Mr Dobbie to Mr Robertson.*) Do you know if there are many subjects let as a house and shop in Dundee under £7?—Yes, widows and single women who live in the back and make a living by having their little shop in the front.

8020. Can you give us any figures showing what the number of these premises might be, say up to £7, and also up to £16?—I could not give it, but perhaps the Treasurer could. I anticipate that it will be somewhat difficult, because in one case it will be returned as a shop, and in another case it will be returned as a dwelling house.

8021. But there will be a considerable number?—Yes.

8022. Even under £7?—Yes.

8023. With reference to the proposal that the proprietor should pay the rates, assume that that is to be enacted, what do you think would be a reasonable allowance, say in respect of houses up to £7?—I think 20 per cent., in view of the amount that the landlord loses,—I think that that would be as little as would be reasonable.

8024. We have been told that the Corporation lose 25 per cent. between £5 and £7?—Yes, but I believe the landlord would be probably more successful in collecting in the case of these houses than the Corporation would be.

8025. Why do you think that?—He is in closer contact with them, and he is more frequently visiting them.

8026. You know that the Corporation can arrest wages?—I don't know that they can do so here. I have never known of its being done here. Our Corporation deal very generously with people in that way. In my experience they very seldom put their powers in operation. I have known them to wait for years.

8027. Assuming that 20 per cent. was sufficient, would that be to cover the chances of not getting the rate, would it cover the risk of loss?—I don't know that it would.

8028. But in your view would you think that that allowance ought to be given, the landlord taking the risk of recovering?—Yes.

8029. And also to cover the cost of collection?—Yes.

8030. And the risk of empty property between terms?—Yes.

8031. And also to take the place of the exemptions at present given on the ground of poverty?—Yes.

8032. You cannot tell us what is the total amount of taxes in respect of which exemptions are given?—About £4000, I should think.

8033. Do you think 20 per cent. ought to be sufficient to cover all these things?—Yes.

8034. Although in respect of irrecoverables alone the Corporation lose 25 per cent.?—Yes.

8035. (*Chairman to Mr Johnston.*) How late do you propose that missives should be returned instead of the middle of February?—15th March.

8036. What was the difference on that question between the two sides in the Town Council?—It was proposed in the minute I objected to that the date be 4th April.

8037. That was one difference. Was there the other difference that it was proposed to take a £10 limit instead of a £7 limit?—Yes.

8038. And in addition, instead of a three-monthly let, a monthly let?—Yes.

8039. So there are three differences?—Yes.

8040. First, 4th April instead of 15th March; second, £10 instead of £7; thirdly, a monthly let under £10 instead of three months under £7?—Yes. Houses of £7 and under to be let for any period not exceeding three months.

8041. Lastly, was there a difference as regards the other view proposed, that proprietors should pay rates on all subjects under £10, the abatement given being not 20 per

Mr G. A. Johnston and Mr J. Robertson.

14 Jan. 1907.

Mr G. A. Johnston and Mr J. Robertson.

14 Jan. 1907.

cent., as you propose, under £7, but 10 per cent. on houses of £5 and under, and 5 per cent. on houses between £5 and £10?—Yes.

8042. And the result was, as you have told us, that thirteen voted in favour of your view, and twelve in favour of the other view?—Yes. The objection, I think, to the small abatement is that the chances are that the proprietor won't recover the rates—10 per cent. won't cover the loss, and the consequence is that the rents will be advanced and greater pressure will be brought to bear on the tenants.

Mr G. A. Johnston and Mr J. Robertson.

14 Jan. 1907.

Mr Edwin Scrymgeour.

Mr Edwin Scrymgeour, called and examined.

Mr Edwin Scrymgeour.

8043. (*Chairman.*) You are one of the Councillors of the City of Dundee?—Yes.

8044. How long have you been in the Council?—This is my second year.

8045. What is your view in regard to the missive question and the date on which the missives might be returned in place of the present system?—I think that the beginning of April would be satisfactory.

8046. You think that the beginning of April would give ample time?—Yes.

8047. Do you concur in the limit of £7 that Mr Johnston and Mr Robertson have spoken to, or would you raise it a bit?—I thought that about £7, 10s. was a fair sum to cover the cases about which there was some difficulty.

8048. Suppose it was £7, 10s., you would say that the rates, whatever the limit was, should be paid by the proprietor?—Yes, up to that sum.

8049. Does that mean that you don't propose that there should be up to that limit no rate except an owner's rate? There should be two rates, an owner's rate and an occupier's rate, for both of which the owner is responsible?—Yes.

8050. Do you concur in the view that, there being an occupier's rate paid in that way by the owner, the occupier should know what the rate is that is being paid for him through the landlord?—Yes.

8051. On the grounds that we heard Mr Johnston and Mr Robertson advocate?—Yes. The tenant ought to know the rate and the rent exactly.

8052. What is your view about the continuance of the present system of relief on the ground of poverty?—I appreciate the system of relief that is at present adopted by the Corporation in the cases of people unable to meet the rates. There are a considerable number of such people in the city.

8053. Do you think that the system is abused, or is not abused?—I think that probably there will be cases that have not been quite satisfactory, but, on the whole, I think that the system is one which deals reasonably with the applications.

8054. Of course we know that there are no soft-hearted judges, but there are said to be soft-hearted councillors and magistrates. What is your experience in regard to people being got round in undeserving cases?—I have heard of such cases in connection with the Parish Council, of which I was a member for a terms of years, but my own experience has been that thoroughly good cases make application and get relief.

8055. Are there any cases when, at the time the application is made, the sum claimed being a lump sum and a large sum, the person is unable to pay it, but if the sums had been collected monthly or quarterly by the landlord, the person might have been quite able to pay?—Yes.

8056. There are such cases?—Yes, but at the same time I know that in such instances payment has been accepted from time to time to make it up.

8057. Is that the practice?—I don't know if it is the regular practice, but I know that it has been done.

8058. It has been pointed out by Mr Binnie that at present this relief is not given to the really poorest class, because under £5 the landlord pays the whole, and there is no relief given. What do you say to that?—I believe that that is a disadvantage to some people, but it is also to be recognised that there are many who, through their own negligence, fail to pay their rates, and it is necessary in some way to deal with such cases.

8059. In point of fact, the people paying the lowest rents are paying the highest rents proportionately?—Yes, that is my view.

8060. On the other hand, the landlord runs great risk in these cases, and he must make the better class pay for those who don't pay?—I think that on the whole he comes out fairly well.

8061. Do you think that in the end the landlord comes out better, looking to all the contingencies, in the less rented houses than in the higher rented houses?—Yes, I think he makes a great effort.

8062. And he succeeds if the factoring is sharp and prompt?—Yes.

8063. Was your election contested?—Yes.

8064. Do you know of any public demand for the adoption of monthly lets?—I never heard of anything of the kind.

8065. Do you think that monthly lets up to, say, £16 would have the effect of increasing the rents?—I have the view that if there is a system of that kind adopted it will be liable to incur extra expenditure for which the landlord will naturally expect to be recouped, and it will fall on the tenant in the end.

8066. If there is a feeling in favour of these monthly lets on the part of people who think that the rents would not be increased, do you think they are going on a false basis?—I have never heard any testimony in regard to it, beyond having the knowledge that there are some people who would like to have a shorter period, perhaps a half-yearly system, as is done in connection with the payment of insurance policies.

8067. Do you think that half-yearly payments would meet any demand that there is?—Yes, for the larger rents.

8068. Mr Cross does not exclude half-yearly lets, because he says where you pay half-yearly, then the let is to be half-yearly?—Yes.

8069. You think even in cases where there may be such a demand, it will be substantially met by Mr Cross's proposal?—Yes, I think so.

8070. Do you concur in thinking that it would be easier for the poorer class of tenants to pay their rates at periodic intervals rather than in one lump sum?—Yes.

8071. If the rating authority, for instance, could collect four times a year, if that were practicable, it would be in itself a better system?—Yes, it would be better for the individual tenants as a rule. I recognise the disadvantages from the Corporation's point of view.

8072. (*Mr Dobbie.*) I suppose there are a good number of empty houses in Dundee just now?—Yes.

8073. I think you said that any change in the direction of short lets would result in additional expense being put on the landlord?—Yes, I believe it would increase the rent.

8074. He would have more outlay?—Yes, to some extent.

8075. How do you think he will succeed in getting more rent?—They will make an alteration in their rental owing to the increased expense of management.

8076. But if there are so many empty houses at present, will the mere fact of the landlord being put to additional expense persuade the tenant to give him a higher rent?—The fact of empty houses does not altogether bring about the effect that the rent will be kept at a given sum, because there is a preference for certain localities, and people may wish to go to a certain house in a certain district, and so the landlord is able to sustain the same rental, although there may be a number of empty houses.

8077. Will he succeed in getting sufficient extra rental to recoup him for the losses you have indicated?—I am not in a position to be able to make up the appreciable cost, because I am not acquainted with the internal arrangements of a factor's office, but I think the tendency would be towards an increase.

8078. (*Mr Howden.*) What effect has the present system of yearly lets on the building trades? Does it cause periodic rushes, and then a depression in the building trade after the term?—There is a desire, in Dundee at any rate, to go after new buildings.

8079. What I want to get at is the effect on the building trade, not the effect on the tenant. Does it cause a rush in the building trade before the term, and a depression after the term?—I could not speak on that point.

8080. You have told us that there is no demand for shorter lets, so far as you know, in Dundee?—Not for the monthly system that was advocated in the Council, and especially not for monthly lets with the proviso that the rent be paid in advance. That was the further proviso, and I think it was an objectionable feature.

8081. That weighed with them in deciding that they would not have monthly lets?—Yes.

8082. Has the Trades Council taken any action in connection with this matter?—No, not so far as my knowledge goes.

8083. They have not petitioned in favour of Mr Cross's Bill?—They may have done that at an earlier stage, but I am not aware of its being done.

8084. In your precognition you talk about the necessity of indirect rating on tenants occupying the lower rented houses as due to social conditions?—The disadvantages under which these poor people live, surrounded for one thing by very severe temptations, by public houses which

Mr Edwin Scrymgeour. 14 Jan. 1907.

extract from these workers a very large proportion of their comparatively meagre wages, very largely tend to explain why they are not so well placed for meeting their obligations.

8085. You refer to the comparatively meagre wages. Are the wages in Dundee not up to the standard of other cities?—I think that we are not in so good a position as regards many of our women workers as they are in other parts of the country.

8086. It is to that class that you refer in your precognition?—I refer to the general body of the workers, but in regard to the special point of the wages I allude to the mill and factory workers.

8087. (*Mr Binnie.*) Have you had any experience in the management of property?—No.

8088. So any expression of opinion that you have given us regarding the profit from owning small houses and large houses is just the opinion of an outsider?—As I have indicated, I have no personal knowledge of the management of property.

8089. You proposed that the lets should be from 4th April?—Yes.

8090. Did you also take into consideration the necessity for altering the time for warning away?—I think that includes a sufficient time for any such notice.

8091. But at present you require to warn away on 4th April, and if you did not allow the letting to commence till 4th April, how would you do, when would you let?—The question at present is that of committing a tenant to the occupancy of premises for a year, involving about sixteen months.

8092. You propose to alter the term when houses are to be let to the 4th April?—Yes.

8093. How could a landlord warn away a tenant if he was not at liberty to commence letting till 4th April?—I think you have about six weeks.

8094. No. The law at present is that you must warn away a tenant on 4th April, and you are proposing to make that the time for beginning to let?—Yes.

8095. If a landlord did not come to terms with a tenant when he went to let him his house on 4th April, how could he warn away that tenant?—An intimation of retiral could be made; that is quite a different thing from asking a man to be committed for sixteen months.

Mr Edwin Scrymgeour. 14 Jan. 1907.

8096. Surely you don't see the difficulty at all. You propose that the landlord should not be at liberty to let his house till 4th April?—Yes.

8097. Very well; he goes to a tenant on 4th April, and says, "Will you take the house for next year," and if the tenant and he did not agree as to the terms on which the tenant is to sit, how can the landlord warn him away?—If a tenant is objectionable on any score at all, I should suppose it is quite reasonable for the landlord to give intimation that he will require to go before 4th April.

8098. But if they don't agree as to the terms of the let, what is the landlord to do?—If he is to be ordering a man from the tenancy, there is no question of agreement any further.

8099. No, if he has made up his mind that the tenant is an objectionable tenant, and is to be cleared out, but the tenant and he may quarrel as to the terms of the let for the next year?—Quite so.

8100. Then how is the landlord to get quit of that tenant?—It is time when he has to order him to move, and he is then in a position to fix up another tenant.

8101. (*Chairman.*) You would just make the date of warning later; if you are to alter the date for returning the missive, you would also alter the warning date and make it later?—Yes, there is no difficulty in that respect.

8102. Both would require to be altered?—Yes, but I don't see any difficulty even as it stands.

8103. (*Mr Binnie.*) Then when would you make the warning-away day?—A landlord is entitled to give an intimation at any time he chooses, if the tenant is an unsatisfactory one. I know, as a matter of fact, that where there is an objectionable tenant, there has been a desire to give an intimation long before the time.

Mr A. W. Stiven.

Mr Alexander W. Stiven, C.A., called and examined.

Mr A. W. Stiven.

8104. (*Chairman.*) Are you the Police Treasurer of Dundee?—Yes.

8105. How long have you been Treasurer?—About three years.

8106. Can you tell me whether the town of Dundee has got Local Acts?—Yes. The Principal Act is the Act of 1882, and then there are something like six or eight subsequent Acts.

8107. Are you under the General Police Act of 1892?—No.

8108. As to the statistics, we want a note of the total assessment to begin with; then we want to know how much of that is for houses under £16 (*i.e.*, the limit in Mr Cross's Bill), under £10 (*i.e.*, the one proposed in the Town Council), under £7 (that is the other proposal), and then under the existing system under £5. Then we next want to know the effect of the suggested changes in two particulars. You see we want to know how much of the rates are paid out of the total that you would give us; then we want to know how much of the non-payment results from failure to pay when demanded, and how much results from exemptions. Under the second head you might distinguish if you can between people who are exempted as paupers and people who get exemption on special grounds shown?—I am afraid we could not distinguish that. Perhaps if I confine that to police rates it would suit this Commission?

8109. Yes. It has a bearing on the franchise question, in the first place; if the landlord is to pay all the rates, then the rates will be paid and people who are now disfranchised because they are returned as not having paid their rates will then claim a vote. We want to see how many that would be. The other object is to ascertain what amount of rates would be got by the rating authorities through the landlord which at present are not got, and of course on the assumption that there is to be no relief of poor tenants that might be a considerable sum. We want, in short, to ascertain what the Corporation would gain on the footing that the present relief still continues, and also on the footing that it is brought to an end. You would be able out of these figures to give us the material?—You mean the present relief in respect of under £5?

8110. No, in respect of rents up to £16 if it can be done?—Yes.

8111. So we can see what would be the result to the Corporation if these reliefs came to an end. In addition, can you give us any information as to the number of houses on what are called long lets, viz., yearly lets, and the number of short lets? I am of course limiting myself to houses under £16. Is there any material for that?—I am afraid not.

8112. Either in your position or that of any other official?—Of course we have it if we were to analyse the whole roll, but that would be a very serious undertaking.

8113. It has been done for us in some other places?—We do it in periods of five years.

8114. It may be quite rough. We would like to know, roughly, the proportion of houses under £16 which are on long lets, and the proportion of short lets?—I will try and put a figure on it.

8115. In Glasgow, we were told that, suppose the limit were £10 instead of £20, as Mr Cross proposes, it would practically affect 50 per cent. of the whole householders of the town. It appeared in Edinburgh that the proportion would be quite different. Now we want to know what it would be in Dundee?—I will try and give the information.

8116. Then could you give us the number of empty houses in Dundee?—I think some of the house factors are prepared to give evidence on that subject.

8117. But could you not give us the total?—I think I could give a figure for that too. I will endeavour to do so. (See Appendix.)

8118. (*Mr Dobbie.*) Could you tell us just now what the owner's rates are?—The owner's rate just now, as regards police and other rates, is one-half only of what we call the minor rates, consisting of the rate for lunacy purposes, registration of births, registration of voters, and such small things as these. In other words, the owner just now does not pay any proportion of the police rates proper.

8119. They are all levied against the occupier?—Yes.

8120. So what the owner does pay now is the tenant's rate on property under £5?—Yes.

8121. That is practically everything?—Yes, that is so.

8122. With reference to property above £5 which is let on short lets, does the owner pay the police rates?—They are paid by the owner in place of by the tenant in the case of short lets up to three months.

8123. That is by your private Act?—Yes.

8124. How do you get the material for assessing the owners in these cases?—They are returned to us by the assessor as short lets.

8125. Will the proprietors in these cases return to the assessor these subjects as let for the short period?—Yes.

8126. I do not think we have had that method explained to us before. The difficulty we had in Glasgow was that the assessor only got a note of the tenant and had no information as to the duration of the occupation?—I think the proprietors do make a return, showing which of the lets are short lets.

8127. Under three months?—Yes.

Mr A. W. Stiven.
14 Jan. 1907.

8128. If that were extended to six months or nine months, the same information being given, then you as treasurer would be able to collect the rates from the proprietors just as you do now, in cases of under three months?—That is so. Perhaps I ought to have said that the proportion of rates presently payable by landlords is $1\frac{5}{16}$d. per £.

8129. That is the ones you have detailed?—Yes, one half of the small rates.

8130. Can you tell us as to what poor and school rates are payable in Dundee?—Taking it upon the gross rental, it works out about 1s. 1d. and 1s. $1\frac{3}{4}$d.

8131. That is on owner and tenant respectively?—Yes.

8132. Is there any limit of £4 or £5?—No.

8133. There is no exemption, so far as you know, in respect of short lets?—No.

8134. That is evidently a provision of your own private Act?—Yes, as regards police rates.

8135. You heard one of the witnesses deal with the proposal in view of charging the landlord with the rates, that the tenant might be told how much of the monthly or quarterly payment was rent and how much was rate. Do you think that is practicable in view of the usual date of letting property? Could a factor fix with a tenant how much the tenant was to pay monthly for rent and rates, say in May?—You would require to approximate in respect of the first quarter and perhaps the second quarter, because our rate is not fixed till September.

8136. Would that be obviated by going back a year and taking the previous year's assessments?—Or by going back a half year and being always half a year behind.

8137. After the first half year it would right itself?—Yes.

8138. We have been told that, assuming the proprietor was obliged to pay these rates, he would simply collect a slump sum either monthly or quarterly, as is the practice in England. Assuming you had the right to collect from the landlord, would there be any difficulty in giving the tenant as usual a notice showing what the rates came to while you collected from the proprietor?—I think the preferable way would be for the landlord to note on his receipt the amounts represented by the rate and the rent.

8139. In England it is one sum that is collected, and we have been told elsewhere that it would be practically impossible to collect two sums from, say, a monthly tenant?—There would be no difficulty in putting on the notice and receipt as well the rate per £ represented by the rates.

8140. Thus bringing it to the tenant's notice?—Yes, every time he pays his rent.

8141. Is there under your private Act a right to exempt on the ground of poverty?—Yes, that is a provision under a local Act. It is copied as a matter of fact from the general Police Act.

8142. In some private Acts burghs do not have the power to exempt from police rates, but you have the power?—Yes.

8143. At present you assess only the tenant who is returned as tenant at the making up of the annual roll?—We go further than that; we get a supplementary roll from the assessor in the early spring, which contains subjects that have come into occupancy during the year.

8144. Assuming that a tenant is returned when the roll is made up and leaves between terms, he is still liable for the whole year's rates?—No, our Act provides for remission being made in the case of premises being unoccupied for a period of three months.

8145. Remission in favour of the man returned in the roll?—Yes. If a house is occupied only for six months, then we only get the six months' rates.

8146. Do you have any claim on the successor?—Yes, we have a section which enables us to demand it at any time.

8147. And it gives you the whole power of recovery against the new tenant?—Yes, we have that power.

8148. So, even assuming under any legislation short lets became more prevalent, the powers you have would enable you to get the proper proportion from both the man whose name is on your roll and from his successor?—No, because it is impossible to recover towards the end of the year. If the time be too short, then we would lose the rates. That brings up the question of the collection of rates being more frequent than once a year. It would result in a large loss.

8149. (*Chairman.*) Will you kindly explain that?—In the first place, we cannot begin to collect any of our rates until December. If we are to make any interval at all between the first collection and the second collection, it brings us on very close to the end of our year before the second portion is payable. There is such a short period that it would be impossible to collect them.

8150. (*Mr Dobbie.*) Would there not be time after that to take payment in four instalments or so?—There would not be time to take payment in one instalment. We would lose thousands of pounds.

8151. In regard to the present system of exemption, the burgh of Paisley suggested that a clause might be put into any Bill, in terms of which the tenant would be entitled to appeal against rates on the ground of poverty, and in the event of his appeal being sustained, he would get a certificate from the burgh, and the landlord on receipt of this would be bound to credit the tenant with the amount of the rate and then get this as a refund from the Corporation. What do you think of that?—I am afraid that that would be impracticable. Our collection would never be final.

8152. But at present you have a great number of exemptions?—Yes, but they are dealt with then, and we have never handled the money.

8153. It is merely a case of one year righting itself with the next?—I am afraid it would be endless; it would never work.

8154. If you put the burden of the rates upon the landlord, then the tenants have no opportunity of continuing the present claim for exemption,—they cannot get exemption if they are not assessed?—That applies at present to rents under £5.

8155. Assume it is up to £7 or £16, that would aggravate the injustice which at present exists?—It really comes to be a question in many cases of their saving up a sufficient sum of money to pay a large sum. I have no doubt whatsoever that a large proportion of the occupiers who presently get relief could pay if it were taken in small sums.

8156. I will assume that poverty will always be with us. If there is to be a class of ratepayers too poor to pay rates, the question is whether that is to be borne by the landlords as a class or by the whole community. At present it is borne by the community. Is it not possible to devise some means by which, even with direct collection of rates, it will be possible for the tenant to get exemption on the ground of poverty and to get credit from his landlord in respect of the rate included in his rent? This is the Paisley proposal, that he should get a certificate and forthwith get credit, and then the landlord should get a refund from the Corporation?—It would not work.

8157. It must involve a much larger payment to proprietors than would be the case if tenants continued to get exemption?—Yes, it would be a larger payment.

8158. Would not the allowance require to be sufficient to cover the amount of the exemptions as well as the amount of the irrecoverables?—Something less than that would do, because they would make a better recovery than we would.

8159. And also the expense of collecting?—Yes.

8160. And also some allowance possibly in respect of more frequent entries?—Yes, that would all require to be taken into account.

8161. (*Mr Howden.*) Can you tell us whether the wording of the Act which allows them to grant exemption is "inability to pay" or "on the ground of poverty"? You see there is a distinct difference?—It is "on the ground of poverty."

8162. (*Mr Binnie.*) You said that you could not collect the rates quarterly?—It would be quite impossible.

8163. You suggested a little ago that a landlord should for the first six months of the year collect the rates at the rate at which they had been imposed the previous year?—Yes.

8164. If he could do that, why could not the town collect the rates at the same rate as the previous year for the first six months and then increase or diminish the rate for the next six months?—Perhaps I ought to state my views in full?

8165. Certainly.—The ideal way of paying the rates is that the rates ought to be paid within the year of assessment. Now that is quite impossible if you make the rate payable in more than one sum.

8166. But why is it necessary that the rates should be paid in the year of assessment? What is the peculiar merit of that?—All the disbursements are made in the year of assessment, and the revenue ought to come in to meet that.

8167. I know, and under the suggestion I have made to you, you would get a year's assessment within the year?—Does your suggestion involve that we would always be half a year behind in our collection?

8168. No, it does not. The first half year, that is up to the time that you have fixed on the assessments, usually somewhere about the half year, you should levy the rates at the same amount as was imposed the previous year?—I question whether that is practicable.

8169. In what way?—It means a radical alteration of the whole assessing system.

8170. We are asked to consider very considerable alterations?—We do not get our assessment roll finished until the middle of September, and it is upon that roll that we must assess.

8171. You could not know earlier even who the tenants were?—No, we do not get the roll till September.

8172. Could you not even get the names of the tenants?

Mr A. W. Stiven.
14 Jan. 1907.

—That would mean double work; it would mean our doing the same work as the assessor is doing. It would mean doing it twice a year instead of once a year.

8173. (*Mr Cox.*) Mr Dobbie went pretty fully into the question of relief while the landlord paid the rates. It would be very satisfactory if you would set your mind to work to see whether any scheme is advisable for giving relief in really necessitous cases under the condition of the landlord paying the rates. Of course I do not want an answer just now, but that is one of the difficulties of this question that we are inquiring into, and if you could help us towards a solution, it would be very satisfactory?—Does the question of abatement not help to solve the matter, if the landlord gets sufficient abatement to cover his loss?

8174. But he will press the poor tenant as far as he can?—The abatement falls on the whole ratepayers as a body.

8175. He will take as big an abatement as you will allow him, and he will also press the tenant to the very utmost to get the rates out of him. You will consider that?—Yes.

8176. (*Mr Esslemont.*) You have seen Mr Cross's latest Bill?—Yes.

8177. Have you considered the schedule attached to it?—Yes.

8178. What do you think of the rates of abatement there?—I think they are too small for us.

8179. The suggestion for Dundee is 7½ per cent. up to £7 of rental, 5 per cent. up to £10, and 2½ per cent. for £10 and not exceeding £16?—Yes. My own personal opinion is—I have no authority from the Town Council to give it—that in this matter we should not be niggardly in our abatements to the landlord. We ought to give a full abatement rather than a narrow one, and on the whole I think we ought to continue the 20 per cent. up to the present limit, and we ought to give a 10 per cent. abatement from £5 to £10.

8180. You say 10 per cent. between £5 and £10?—Yes, both inclusive.

8181. And between £10 and £16?—He would not require more than 5 per cent. in that case.

Mr A. W. Stiven.
14 Jan. 1907.

8182. That means that you suggest double the percentages suggested by Mr Cross?—Yes, something like that. 20 per cent. is our present rate up to £5.

8183. (*Chairman.*) Will you be good enough to hand in a note of the dates and sections *re* rating of Acts of Parliament referring to Dundee?—Yes. (*See Appendix.*)

8184. You referred to the short lets under three months. Can you tell me up to what rent any of these short lets go?—I do not know that many of them will exceed £10.

8185. They go as high as that?—Some of them reach £10.

8186. Under £5, do I understand that it is not the case of the annual rates being owner's rates, but that they are substantially occupier's rates paid by the landlord?—They are occupier's rates with the exception of about 1¼d.

8187. Is there not a similar rule as in other places in regard to the water rate?—Yes, 20 per cent. up to £5.

8188. Is there any similar rule about the stair gas?—No, there is no abatement there.

8189. How often is it collected?—Four times a year.

8190. Why, if you can do that four times a year, could you not collect the other rates more frequently than once a year?—We have a compulsitor with the gas that we do not have with the police rates. We can cut off the gas, a thing that we cannot do with the police rates.

8191. But still you have the work to do four times instead of once?—It is not a very large matter.

8192. The quarterly collection would merely involve increased expense to the town, or in your view is it really impracticable?—It is impracticable.

8193. You said you took five months before you could begin?—Seven months.

8194. Could that not be reduced by putting on a bigger staff to do the work?—Not appreciably.

8195. Why not?—It is the middle of September before the roll is available. It might be made a month earlier with some effort, but it could not be appreciably earlier.

8196. It would involve an alteration in the valuation statutes to make that roll earlier?—Yes.

Mr J. M. Barlas.

Mr James Miller Barlas, called and examined.

Mr J. M. Barlas.

8197. (*Chairman.*) You are a member of the Town Council of Perth?—Yes.

8198. And you hold the office of Lord Dean of Guild?—Yes.

8199. And you, yourself, are a house agent in Perth?—Yes.

8200. What are your main industries?—The dyeing industry and flax-spinning and railway works.

8201. In Perth, what is the practice as to the time for sending out missives?—It is only within recent years that the missive system has been introduced in Perth. Most of the proprietors send them out about the beginning of February.

8202. And ask them to be returned when?—From a week to ten days thereafter.

8203. Your lets are mostly yearly and half-yearly?—All yearly. The lets are all yearly, and the payments are half-yearly.

8204. Take the smallest class of houses and the lowest rents, what is the practice with them?—The practice there, too, is simply the yearly let.

8205. Suppose you have a house of £4, what is it?—Some prefer monthly payments, but a yearly let.

8206. Substantially you have no monthly or weekly lets?—That is so.

8207. In Perth, has the desirability of reducing the time between the taking of the house and the entering of it been agitated at all?—It has never been spoken of at all by the public, so far as I know.

8208. Apart from that, has the proposal to institute short lets instead of long been agitated at all?—No, never mentioned.

8209. When you say never mentioned, do you include municipal election meetings?—I do.

8210. And correspondence in the papers and so on?—Yes; it has never been raised, for instance, in the Trades Council itself.

8211. In your view, is there any substantial grievance either in the one matter or the other?—The only thing, I think, is that possibly the missives are issued too early.

8212. How much later, do you think, consistent with the reasonable accommodation of landlord and tenant, should they be issued?—I should say, possibly about the beginning of March, and returned about the 10th.

8213. Do you see any objection to the proposal that we have heard to-day from Dundee to make it even later and take it in April?—It would be rather late, I am afraid. You would have to give legal notice after that.

8214. Suppose, instead of the warning-away day being 4th April it were taken on to the end of April, in that case could not you have the missives sent out in the beginning of April?—It might do, but it is too short between the time of sending out the missives and the flitting term.

8215. If a system did in a place like Glasgow, would not it be still easier to work it in Perth?—I should think so.

8216. You see, factors in Glasgow have told us they require so much time, having enormous businesses; apparently, if it would do there, it ought to do in Perth?—I should think so.

8217. In Perth have you much of a shifting population as there is in Glasgow?—Not going out of Perth. There may be a little shifting in the city, but there is little from Perth to other cities.

8218. Can you give us any illustration, from your own experience, of the number of removals that you have?—I do not think I have had above half-a-dozen leaving the city who were tenants of my own.

8219. Where were they going to?—Well, Glasgow and Edinburgh.

8220. Was that from dull trade, or just from getting better situations?—Just getting better situations.

8221. How many houses do you factor yourself?—Over 600, I think.

8222. The rents will vary from what?—From about 30s. up to £38.

8223. Thirty shillings a what?—A year.

8224. You have experience of all classes?—Yes.

8225. Have you any information as to the number of houses in Perth under a £10 rental?—Not further than from the census return of 1901.

8226. Just give us now what your information is?—Of course, the rentals I give are only approximately average rentals,—one-roomed houses, 491, rented from £1, 10s. to £4; two-roomed houses, 2510, rented from £6 to £9, 10s.; three-roomed houses, 1727, rented from £11 to £13; four-roomed houses, 833, rented at from £14 to £16, 10s.

8227. Have you a statement of the total number, including all rents?—I have not.

8228. Could you conveniently get it?—I could get it.

8229. You might say what the total number of houses is, and you might send a note of that to Mr Gillon, and we will fill it up afterwards?—Yes.

8230. The Corporation of Perth have houses of their own?—Yes.

8231. Has that been through improvement schemes?—Yes; partly through opening up of new streets, and to provide houses before the streets were formed.

8232. Have they kept or disposed of them?—We have them still.

8233. 101 altogether?—Yes.

8234. Are there any of these new houses, or all old?—All new.

8235. In that case are the 101 houses with rents varying from £4, 10s. for one-roomed houses up to £12, 10s. for three-roomed houses. How often are the rents collected?—Every week.

8236. By the Social Union?—Yes.

8237. Is that found satisfactory?—Very; there are no arrears.

8238. Are the tenants selected?—Yes.

8239. Is there a caretaker?—Yes, in each block.

8240. Are the rates collected with the rents?—Yes.

8241. There is no loss either on rent or rates?—Except from empty houses.

8242. Are they fairly well filled?—They have been fairly well filled up to last year.

8243. Have you not got what number of empty houses there is in Perth at present?—No.

8244. You could get it?—Yes.

8245. Is the state of trade just now in Perth normal?—Yes.

8246. Have Perth Co-operative Society 170 tenants?—Yes. The rentals varying from 5 guineas up to 19 guineas for two-roomed houses.

8247. Is it the custom in Perth to have bathrooms in the better-class houses of working men?—They are in several of the working-class houses.

8248. How many of your 602 are new houses?—I should say possibly 200 of them.

8249. The Perth Co-operative houses are yearly lets, with half-yearly payments?—Yes.

8250. Have you not found a desire among tenants, apart from the length of let, to have more frequent payments than half-yearly?—Yes; they prefer more frequent payments, some of them, but they desire at the same time security of tenure.

8251. When you say more frequent payments, what do you mean, quarterly or monthly, or what?—Monthly, and quarterly in some cases.

8252. Why don't they get it if they want it?—We generally let them have it if they wish it.

8253. Out of your 602, are there any quarterly payments at all?—Very few; not more than 30.

8254. But if a man wants to pay quarterly, you allow him?—Yes.

8255. And if he wants to pay monthly, what do you do?—I will take it monthly if he wishes it.

8256. Although it would cost you more labour?—Yes, more trouble.

8257. Do you send round, or does he come to you often?—I send for it.

8258. Always?—Yes.

8259. You heard what we asked from Mr Steven, the Treasurer of Dundee. Do you think, if you got a copy of his evidence, it would be possible for you afterwards to make up a corresponding note for Perth?—Yes, I should think so.

8260. We will arrange that, if you would kindly do your best?—I will do so.

8261. As to the question of rates being collected along with the rents by the landlord and paid over, how do your people view that. Has it been discussed at all in the Council?—No.

8262. Do you know the general view of it. Yes.

8263. What is it?—The feeling is that we should not collect the rates under £10.

8264. At present is Perth under the general Police Act, or is it under a local Act?—It is under the general Police Act.

8265. Of 1892?—Yes.

8266. Under £4, you do collect the rates just now?—Yes; that is to say, the burgh rates.

8267. And the landlord pays them over?—Yes.

8268. Does he get any allowance?—No.

8269. Is there any complaint against that system?—No, not so far as I know.

8270. Would there be any objections to taking the limit a bit up, as was proposed by Mr Johnston to-day, to £7: he suggested that instead of £5, as it is in Dundee?—If there were no extra risk.

8271. To whom?—If it were a monthly let, of course, and we had to bear the risk of collecting the rates, and paying the rates for the whole year, we should require a bigger percentage.

8272. By "we" you mean the landlords?—Yes.

8273. That would be a question of getting a proper allowance?—That is so.

8274. Suppose that were done, what about empty houses?—We would suggest that we should be rated only for the time that the house was occupied.

8275. So that the allowance you would get would be for the cost of collection and the losses?—That is so.

8276. In your view, suppose the burgh rates were collected by the proprietor, should the other rates also be collected?—I think so, if there is to be any alteration at all; all the local rates ought to be collected by the proprietor.

8277. Why?—I think, if otherwise, it would lead to confusion.

8278. Have you any opinion on this? Suppose that short lets were brought in instead of long lets, do you think it would lead to a greater number of removals in the year, or merely spread them over a year?—It might at the beginning, until they get accustomed to the system; but when it was in operation I do not know that it would increase the number of removals.

8279. We have been told in other places that having only the same removal term in the year produces great inconvenience, overpressure, higher rates for hiring vehicles and horses and men. Do you find any complaint of that at Perth?—Yes, that is the case. There is overpressure at the flitting time in May.

8280. Do you think, if it could be done at more frequent removal terms, as in England, it would be better than one removal at Whitsunday?—I should think so.

8281. Substantially do people in Perth remove at any other time?—No; Whitsunday is the flitting term. There are very few removals at any other time.

8282. Have you any idea why that should be, as contrasted with England?—I have no idea.

8283. The Martinmas term is not a removal term practically?—It is in the country, but not in the burghs.

8284. In your view, at far as Perth is concerned, to take forward the time for making the contract about the house would cure any grievance that exists?—I think so. It would go a long way to remove it.

8285. In your view, if a Bill was passed into an Act, should it include the optional clause, leaving it to different places to take their own way according to their own interests?—No; I think if a Bill was to become an Act, it should be made imperative on all burghs.

8286. How would it affect you in Perth? Suppose in Glasgow they have real occasion for it, because the conditions are different, and suppose in Perth you have no occasion for it, would you not desire to be in a position to say that Perth should not be subject to it?—It might lead to confusion, with different practices in different burghs.

8287. You think the advantage of having one system would outweigh the hardship that localities might be under which did not want it?—I do.

8288. You attach such importance to having one uniform system?—Yes.

8289. (*Mr Esslemont.*) About the Corporation houses, I forget how many you said?—101.

8290. You said they were all new?—Yes.

8291. And weekly lets?—Yes.

8292. And until this year did you say, or last year, they had been well let?—Yes. Well let.

8293. What is the reason for their not being well let this year or last year?—Last year there was a considerable amount of dull trade in one way and another in the building trade, etc.

8294. I though you said the condition of trade was normal?—At present it is.

8295. But the houses have not filled up?—No.

8296. Is that due in any respect, do you think, to unpopularity on account of the weekly lets?—No, I would not say that.

8297. The tenants seem to like the short lets?—Yes. That is the experience of the Union, at any rate.

8298. I don't think you mentioned what the rents of these houses were?

8299. (*Chairman.*) Varying from £4, 10s. to £12, 10s., the higher rent being three-apartment houses?—Yes.

8300. (*Mr Howden.*) What do the factors charge in Perth for a sublet. How do they do in the case of tenants wanting to remove between terms?—The practice is that, if there is an intimation given that a sitting tenant is to remove, we ask them to bring the incoming tenant along with them. That is my own practice; and if we can arrange the matter agreebably, he just goes into the house.

8301. That means that the tenant has got to find a sub-tenant?—Of course, I make an effort to find a sub-tenant, but the burden of responsibility lies on the sitting tenant.

8302. You leave him responsible in the event of not getting a sub-tenant?—Yes.

8303. Do you charge anything for that or for putting out a board "To sublet"?—Nothing.

8304. You just charge him for the sublet?—That is all.

8305. (*Mr Dobbie.*) What would you call a typical rent for a working man's house in Perth?—From £10 to £12.

Mr J. M. Barlas.
14 Jan. 1907.

8306. The Bill proposed by Mr Cross states the Perth limit at £16. Would that cover every working-class house?—I should think it would.

8307. Do you think it would be any hardship if the limit was kept to £16 as against £8 or £9?—I should make the limit £12 for the burgh.

8308. I see the Perth Co-operative Society have built houses of four rooms at £13 rent: to whom do they let these?—Just workmen, generally.

8309. They will perhaps be less frequent rents; cases of working men with large families, perhaps?—Yes.

8310. We may take it that the normal rent of a working man's house is about £10?—Yes.

8311. In the Bill proposed by Mr Cross, dealing with Perth, he proposes to allow the proprietor an abatement of 7½ per cent. for rents under £10?—Yes.

8312. Five per cent. under £10, and 2½ per cent. under £16?—Yes.

8313. Under the Bill it is proposed to allow these sums to cover the loss through failure to get the money from the tenant, the loss from partial empties, and the loss through the present exemption on the ground of poverty being done away with. Have you any view as to whether or not these rates would be sufficient to cover the burden put upon the proprietor if he had to pay the rates?—In my view the percentage allowed is too small if you have to take all the risks.

Mr J. M. Barlas.
14 Jan. 1907.

8314. Assuming that the arrangement come to was that there was to be an allowance for the trouble of collecting, and possibly the risk of partial empties, and that otherwise the burgh should make good the amount lost through the exemption on the ground of poverty, do you think, in that view, 7½ per cent. might be sufficient?—Yes.

8315. Coming back to the landlord. What was your loss through exemptions or irrecoverables?

8316. (*Chairman.*) How long have you been in business as a house-factor?—For four years.

8317. In that time can you tell how much, in your knowledge, has been lost to tenants removing by having to continue to pay your rent and also to pay the rent of the house they went to. Have you had any case of that kind?—None whatever.

8318. In every case where a sublet was wanted it has been got, has it, without double rent being paid?—That is so.

8319. So far as you know, has your experience been singular, or may it be taken that you are representing the ordinary experience?—I think it is fairly representative.

Mr J. Mann, Mr J. Greig, and Mr Reid.

Mr James Mann, Mr James Greig, and Mr Reid, called and examined.

Mr J. Mann, Mr J. Greig, and Mr Reid.

8320. (*Chairman to Mr Mann.*) What is your occupation?—A blacksmith.

8321. (*To Mr Reid.*) What is your occupation?—insurance agent.

8322. (*To Mr Greig.*) What is your occupation?—Shop assistant.

8323. (*To Mr Mann.*) Are you and Mr Reid commissioned by the Dundee United Trades and Labour Council to express the views of your Council on the questions before us?—Yes.

8324. (*To Mr Greig.*) How do you stand?—I am authorised by the Representation Committee, composed of the principal Trades Unions in Dundee.

8325. To state their views?—Yes.

8326. (*To Mr Mann.*) How old is the Dundee and District Trades United Trades and Labour Council?—It has been in existence since 1884.

8327. Is it representative of all the different trades, skilled and unskilled?—Almost all trades; but there are thirty-eight Trades Unions represented—most of the skilled trades. The unskilled are not very largely organised. The mills and factories are organised. There are two bodies represented.

8328. Are the mills and factories represented on the Council?—Yes.

8329. How many men do you represent, if you take the total workmen?—About 13,500.

8330. All in Dundee, or some of them outside?—All in Dundee.

8331. What is the district?—The only body outside of Dundee will be the bleachers. They are practically located in the rural districts.

8332. Has this matter been considered by your Council or only by Committees?—Lately it has only been considered by Committees; but at different periods, when the Bill was before the House, previously it was discussed in the Council.

8333. How long ago?—About three years ago.

8334. (*To Mr Greig.*) How old is the Labour Representation Committee?—I think it will be four or five years since it was formed.

8335. Does the work representation apply to Parliamentary and Municipal Representation, or only to Parliament?—It applies to the running of local M.P.'s as well.

8336. Both municipal and parliamentary?—Yes.

8337. Has this matter been discussed in your Committee?—The question has been brought up and discussed at various times.

8338. How many does your Committee consist of?—There are, I think, at the present time, between twenty and thirty delegates.

8339. From the different Trades Unions?—Yes.

8340. We have been told that in Dundee, gentlemen, this matter has not been brought up before the municipal meetings. Do you agree with that?

(*Mr Reid.*) It is quite true, but it has never been made an issue at the present time. If it had been made an issue, I have not the slightest hesitation in saying, so far as the wage earners are concerned, about 100 per cent. would have been in favour of this measure; because in my occupation as an insurance agent, I move about among all classes of people, every hour of the day, and I have been particularly sounding all classes of people upon this Bill of Mr Cross's. I have yet to meet the man who is against it.

8341. Are you including both the early missive question and the question of short lets?—Yes.

8341*a*. The inference rather is suggested that if it has been brought up prominently at ward meetings, etc., in Glasgow and not in Dundee, it is a more pressing question in Glasgow than in Dundee?—I think it affects wage earners all over the country, no matter where they live.

8342. We were told in Edinburgh, by the working men, that, while they press for it there, they admitted it was more urgent in Glasgow, because there was a more shifting population. I suppose that is true about Dundee?—There is a fair percentage of the people in Dundee, for example, those who work in the boat yards, and who are engaged in the building trade, who are compelled to move. A man may be a joiner employed in a boat yard for three months; the ship is finished, and he is left idle for five or six months, and compelled to go to Newcastle or some other ship-building centre.

8343. There will be a fair percentage in Dundee, but the percentage will be larger in Glasgow?—Yes; it is a larger city.

8344. (*To Mr Mann.*) Taking the question of the shortening of the period between the time when you take your house and the time when you enter. Everybody is agreed, you see, that a change is desirable there. How far would you go? When would you make the latest time of taking a house down to, before the 28th of May?—For a yearly tenancy, I should say a month, at any rate, before the removal term would be sufficient. That would be about the end of April; 28th April would be early enough for the missive to be returned.

8345. It has been said in Glasgow that instead of the warning-away day being 4th April it might be twenty-one days before the 28th of May, that would be 7th May, and that they would require a fortnight or three weeks before that for looking about both for tenants and landlords. That would take you, let us say, a month to beginning of April. What do you say to that?—That would give you nearly what I was saying: mine was seven days more. That is for the missive to be returned and for the new house taken. The inquiry would not begin until that time, so that would be four weeks for the inquiries and taking the new house. The old tenants would have settled by that time.

8346. Suppose that alteration were made, do you think that would satisfy the whole grievance, or do you think the separate question of yearly let remains?—It would satisfy so far as the missive is concerned, but not so far as the whole yearly tenancy is concerned.

8346*a*. It is admitted that there are cases when men have to leave between terms. There is no doubt about that. It is said that there are so few that practically the matter is met by sublets. Have you any experience in regard to that?—It is difficult to get many cases, of course. I have one specific case that I was connected with.

8347. Give it as an illustration?—It is a matter in connection with what Mr Reid said. It was in the case of a young joiner working in a ship-building yard, who lost his employment through the job being finished. He was idle for a good many months, and eventually got a situation out of town, and his removal to the other town happened to be in the first six months of the year. In order to get his goods removed, two parties came to his assistance, he being short of money, and paid the first six months' rent

for him, and found a sublet; but until the proprietor had security, these two became security for the second six months' rent, before he would accept a sub-tenant, which they considered to be a hardship. If a yearly tenancy is continued, there is a great demand for a break at any rate at the six months.

8348. That was a case where there was anxiety connected with it, but there was no actual loss?—No.

8349. Can you say, from experience, that you have known of cases where a man has had to pay, as it were, two rents—the rent of the house he went to, and the rent of the one he left?—No; I could not give you an instance of that.

8350. (*To Mr Reid.*) Have you?—Yes, many. For example, here is one. A friend of my own, some years ago, took a house at Forest Park, rented at £14. After two months his wife took ill, and the doctor advised him to remove to the outskirts of the city. He took a house at Invergowrie, after being three months in Forest Road He advertised the house, and spent £1, 2s. in advertising, and endeavoured in many ways to get the house sublet, but failed. The total loss was the rent for nine months, £10, 10s.; taxes, £1, 14s.; advertising, £1, 2s.; total, £13, 6s.

8351. Had he gone to the factor, and tried to get the factor to sublet?—Yes; but he thought that the factor being financially interested did not worry over the matter. There was another case up my own stair—244 Clepington Road. I have been there for five years, and during that time there have been three cases where people were compelled to leave that part of the town and sublet their houses. In one case out of the three there was a loss of three months' rent and six months' taxes.

8352. How did the loss arise?—Through failing to get some one to take the house.

8353. Had every proper effort been made?—Yes.

8354. Were there at the time many empty houses in the town, making it more difficult to get a sublet?—The number was not unusually large. There was just the usual number; but it happened, of course, between the terms, and the only chance of getting a tenant was either in the case of a stranger coming to the city, or of some young married couple looking for a house. Eventually, it was a young married couple that did take the house. I have come across a large number of cases, having exceptional opportunities in that way.

8355. You see, we have great difficulty, Mr Reid, in getting at facts there; because we have factors who come and consult their books and tell us exactly how much in such cases has been lost in every case. They say they never knew of anything being lost. I quite understand that there will be exceptional cases, but you think they are really numerous?—It may be my exceptional opportunities. If I was living in an entry all my days, and not having an opportunity of moving about the city, I would not find out these cases. I know of a very large number.

8356. May I take it also that there will be cases of people who would desire to remove, and for very good reasons, and who don't do it just because they are afraid they might be burdened with a double rent?—Yes; well, do you mean people refusing good situations, cases where people had the offer of better situations and refused them?

8357. Or because they were afraid that they would not get the house taken off their hands?—I have never heard of a case of that kind, because, as a rule, if a man gets the offer of a better situation, he is prepared to make a sacrifice in order to secure it.

8358. Either by going into lodgings or travelling?—Yes. With reference to the sub-letting of houses, the most serious case I have come across, perhaps, in regard to the early missive, happened three years ago. A family came from Montrose. They were farming people, and left their family behind, taking a house in Arbroath Road, just large enough to suit themselves. After about four or five months' time they thought they would like the rest of the family here, so that they brought them to Dundee, and took a larger house to accommodate them all, and sublet the house they had previously taken. The May term came round, and the people to whom they had sublet the house had an engagement in the middle of the night, and found it necessary to leave quietly, and take their furniture with them. This farmer and his wife and family were left to pay the rent of both houses.

8359. What rent was that house?—£10 was the rent of the first house and about £13 was the rent of the second.

8360. Both within the limits of this proposed Bill?—Yes. The result was they found themselves unable to meet their liabilities, and were compelled to leave the city, also during the night-time. As a result, the father and mother became law-breakers, I suppose, and they had to go back to the country without leaving any address, and they left a young family behind, deprived of the benefits of home influences. It was due entirely to the early missive.

8361. (*To Mr Greig.*) What do you say on that question: Have you had any experience?—In regard to the danger of being left with a house on a party's hands? I have a case of that next door to me.

8362. What rent?—£14.

8363. What is your own rent?—£9, 10s. This party has shifted his situation from the very west end of the town to the extreme east of the town, and being a baker he has to go out very early in the morning, and he would very much like to remove, in order to be nearer his work, but is rather afraid of the risk. His house stood untenanted 18 months previous to his occupancy.

8364. Do you think there are other cases?—I have no doubt there are other cases similar, to which I am not aware.

8365. (*To Mr Mann.*) What do you gentlemen say. Suppose there is to be a limitation to a shorter let, what should it be? Mr Cross, you see, proposes to make it depend on the period of payment. If the payment is half-yearly, the let would be half-yearly; if monthly, it would be monthly?—A quarterly let, I believe, would be the right thing for a good working-man's house, or even monthly.

8366. Would you take his principle of making it depend on the period of payment, or would you prevent a let under a certain rent for more than a certain period. Which way would you do it?—I should have a fixed period.

8367. And what do you say a fixed period should be?—Monthly

8368. Under £16 in Dundee?—No matter what the rental was, as far as the working men's houses are concerned, fix the period at the same rate, I would say. It would affect them in this way: When younger they would require a small house, but as the family grew they would go to a larger house; and under the same conditions, of course, as the family spread again, they would go back to the smaller house. That would be always keeping them under the same law.

8369. But isn't £16 a fair enough limit for Dundee?—Yes.

8370. It covers the ordinary working man's house?—Yes.

8371. (*To Mr Reid.*) Do you agree with that?—I am quite agreeable to that too.

8372. You next come to the question of rates, and in the note I have you point out that, according to the City Treasurer, the rates paid in full would mean an increase of about £3000 to the city. I suppose you would agree that, whatever the allowance is to be to the landlord, he ought to get a fair allowance to prevent this new system involving him in loss. As a general principle you agree to that?—I had an interview with Mr Steven on that point, because we were not quite sure how it would affect the landlords. Mr Steven assured us the amount allowed to the landlords was far too little, and we bowed to his superior knowledge on the matter. He is impartial.

8373. On the other point, Mr Reid, what do you say to the convenience or non-convenience of the present system of giving relief on the ground of poverty?—People being exempted?

8374. Yes?—Those who are exempted are quite unable to pay.

8375. A lump sum as at present?—Yes.

8376. But wouldn't they be able to pay if it was monthly?—A large percentage would be able to pay their rates if allowed to pay them monthly.

8377. (*To Mr Mann.*) Do you agree in that?—To a certain extent only. I would like to be sure that the percentage comes off the general community, and not the individual. I think it would be better, so as to keep the tenant in touch with his rates as well as his rent, that a separate receipt should be given for the rates along with the rent.

8378. You attach importance to that view?—Yes.

It has been enunciated in England, apparently.

(*Mr Reid.*) Two separate receipts.

8379. (*Chairman to Mr Reid.*) Or one receipt, mentioning the amount?—Yes.

8380. (*To Mr Mann.*) What do you say to the question of poor relief. Do you agree with Mr Reid?—Yes; but when necessary, if they are unable to pay the poor rates, they ought to be relieved from them.

(*Mr Greig.*) I am agreed on that point, too.

8381. You agree also that the more frequent payment of rates would make it possible to pay them in some cases where now it is not?—It would make it much easier.

(*Mr Reid.*) For example, we have at this time of the year our police rates, poor rates, water rates, gas, and, as you know, there is a custom of feeding and drinking a great deal at this time. There is extra clothing, extra coal, and at this time of the year, why, the average housekeeper is very much worried: you have all these extra expenses coming at this time, and in addition to your taxes.

Mr J. Mann, Mr J. Greig, and Mr Reid.

14 Jan. 1907.

8382. Do you approve of Mr Cross's section limiting to burgh rates, or do you think the rates to be paid to the landlord should include all rates, Parish Council as well?—There is no reason why it should not. We have not discussed that.

8382*a*. (*Mr Mann.*) Personally, I think that would be easily enough done. I have had experience of weekly tenancy matters for six years, so that a short tenancy does not mean flitting often, and the rates are all collected on that.

8383. That was under a certain figure?—Yes.

8384. What is your rate now?—£9.

8385. (*Mr Dobbie to Mr Mann.*) With reference to the present exemptions, is your view that, as far as there are *bona fide* reasons on the ground of poverty, such ratepayers should be exempted under any new scheme?—Yes, under any new scheme if they were *bona fide*, unable to pay, and could show reasons why, it would be better to let them have that privilege still.

8386. Your comment is, that paying by instalments or spreading over twelve months might enable some to pay who cannot pay at present?—Yes, I believe it would; because they would know exactly then how their expenditure was going over the income more than they do in the meantime, and possibly by wanting some other little comforts. If they had not to pay the rates always at unless at a certain period, they could do it easier under that system than they do at present.

8387. But so far as there is an honest case of poverty the present exemption should continue?—Yes.

8388. Of course, in the cases where there is exemption at present you would not want the landlord to lose for the benefit of the Corporation. Would you agree with Mr Reid in this, that the landlord should get an adequate allowance to make up to him for any loss sustained from this change in the law?—If he had not collected, of course, from the party who was exempted, I do not see how he should get the cost of collection.

8389. If, through removals in the middle of the year, he found that he could not collect, do you think that element should be taken into account in giving a more ample allowance to the landlord?—If he was collecting his rates monthly, or whatever period he was collecting his rents, he would only collect a portion of the rates. If his house was empty during the rest of the year, he would not collect any rates under the present law; at least, under the law of rating, he would not be asked to pay, seeing they are not asked to pay anything for an empty house.

8390. If he was assessed at the beginning of the year, and through the change in the law the house was empty part of the year, you quite approve of the landlord getting an allowance in respect of the partially empty?—Yes, until the whole system of house rating was tackled, independent of the house letting system; and then, of course, I think unlet property should pay more taxes than at the present time.

8391. In the case of the ship joiner you mentioned, was his house let yearly?—Yearly; taken at the February period as in vogue just now.

8392. You think that if a change was made from yearly to half-yearly lets that might be quite satisfactory?—It would remove the grievance to a certain extent, allowing a break every six months. Or he would not have to pay the last half year if he could not find a tenant.

8393. (*Mr Howden to Mr Mann.*) How does the removal term affect the building terms in Dundee?—As far as the cost of work is concerned, it makes, to a certain extent, a seasonal trade. Immediately before the May term there is a great rush for building, more especially affecting joiners and plasterers, and often the tenants get into the houses before they are half finished, and then there is a rush and the houses are not properly finished.

8394. (*To Mr Reid.*) Is that your opinion?—Yes.

8395. (*To Mr Greig.*) Is that your opinion?—Yes.

8396. (*To Mr Mann.*) Have you any reason to believe the views given by you to-day are held by a considerable section of the community in Dundee?—Yes, that is the general view of our body when the matter was discussed.

8397. If there had been any other view it would have been easily voiced?—Practically, we have been uniform; the feeling was so strong on this matter.

8398. On the question of yearly lets?—Yes.

(*Mr Reid*) The matter was before the Trades Council, and the Council remitted it to the Executive, with full powers to support this Bill.

8399. (*Mr Howden to Mr Reid.*) Unanimously?—Yes.

8400. (*Mr Cox to Mr Mann.*) It has been to me in this way that while there is a distinct grievance in Glasgow, Glasgow being a very large place, and distances between the east and west end being so great, the grievance is probably not so acute in Dundee, where the distances are not so great. I understood from what I have gathered from some respresentative working men that possibly a six months' tenure would be looked upon as meeting the case. What do you think about that?—Well, it might meet the case as far as pretty highly paid artisans were concerned, but others in the labouring class it would not meet so well. They are a fluctuating class to a certain extent; men who work out of doors, possibly leaving one place and going to another when their job is finished, after lasting only a few months. It would not meet their case, because they have not the means of being able to stay for a period until the sixteen month's tenure would be up.

8401. Are the workmen's cars, morning and evening, much used?—Yes, a good deal.

8402. How many cars are there that run, and what are the points they run from?—They run from every quarter of the town. I think they run workmen's cars on every route generally in the morning.

8403. About half past five or when?—Half past five and about ten minutes to six, I think, in some places.

8404. Are they pretty well filled?—Generally all those that I have seen are filled.

8405. Showing that some people do live pretty far away from their work?—Yes.

8406. You told us about the Co-operative Society; what kind of a dividend might a working man get from a Co-operative Society that he deals with?—For his provisions?

8407. Yes; are they paid half-yearly?—Yes.

8408. Will they get provisions, clothes, boots, everything from the Co-operative Store?—Yes, everything.

8409. What would the amount of an ordinary working man's dividend come to in the course of a half-year?—In one Co-operative Store the dividend generally runs from 3s. to 3s. 1d. or 3s. 2d.; and in the other one, the City Co-operative, it is 2s. 8d. or 2s. 6d. per £1.

8410. Say 3s., what amount does he spend per week?—The average amount of his purchases, I think, runs from about 9s. to 12s.

8411. So that he might have about 1s. 6d. a week. That would be £4 or £5, and you are paid half-yearly. That would come in very conveniently for the half year's rent, and is used just now for that?—It is generally considered so. It has been put to Co-operators pretty strongly that the saving of this money for the rent is the reason why they are Co-operators.

8412. (*Mr Esslemont.*) Did you say you were a weekly tenant?—I was, in England.

8413. Not in Dundee?—Never in Scotland.

8414. Since you came to Scotland you have been in a yearly house?—Yes; before I went and after I came back.

8415. (*Chairman to Mr Mann.*) What would you say to the limit in the proposed Bill being £10 instead of £16? Wouldn't that meet the case of the people who most generally require to move?—I don't think so; because if you take the ship-building trades they are pretty highly paid, and some of them live in very respectable houses. It would affect them to some extent up to the limit of £16.

8416. (*To Mr Reid.*) What do you say to that?—I mentioned before that I had been five years in my present house, and there have been three sublets in our entry. The lowest rent is £10, 10s.

8417. (*Mr Binnie.*) And the highest?—£11.

8418. (*Chairman to Mr Greig.*) What do you think of that, to limit it to £10?—I think the higher amount would be more satisfactory. There was a case in the property I am in just now of a £14 house. The gentleman got a situation in the country. He came from the country and went back to the country.

8419. What was he?—He was driving a horse. I think he was in the coal business, but did not stay long. He lost his situation. I suppose he had not been up to the job he had got, and could not get another, and had to go back to the country.

8420. What was his rent?—£14.

(*Mr Reid.*) There is one important point. Working men are becoming more desirous of having larger houses and better accommodation for their families. The working man of thirty years ago was content with conditions that the working men of to-day would not be content with. The worker is anxious to provide proper housing accommodation, and he would struggle to pay £13 or £14 of rent.

8421. (*Mr Dobbie to Mr Mann.*) Can you tell me whether a £7, 10s. house in Dundee corresponds to a £7, 10s. house in Glasgow?—Something like that. They say Dundee rents are getting nearer the Glasgow rents than they used to be. The newer houses, with a little more accommodation and two rooms, are £10, 10s., or £11, more like what the Glasgow rent is. £7, 10s. would not in any way meet the requirements of the community here.

8422. Did you hear the evidence of some witnesses in the forenoon?

(*Mr Reid.*) We heard Mr Johnston, the landlord.

Mr J. Mann, Mr J. Greig, and Mr Reid.

14 Jan. 1907.

8423. You don't think any Bill limited to £7, 10s. would deal adequately with the problem.

(*Mr Reid.*) Absolutely no use at all.

(*Mr Mann.*) No use at all.

8424. (*Mr Binnie to Mr Mann.*) Could you tell me the size of any working men's tenements. We wish to compare the rent of different places and the size of the tenements,—the feet of length and the feet of width of a tenement?—I don't understand the question.

8425. The frontage and the depth of the tenements?—They vary in two-roomed houses, possibly from 6 feet one way to 12 feet the other.

8426. It is the tenement, that is the way by which we can compare rents in one place with another?—That will depend on the size of the room, and how many might be in a row.

8427. But you can tell us the size of a tenement. If not, don't trouble?—We might get it.

(*Mr Binnie.*) We will get it from some other body.

Mr J. Mann, Mr J. Greig, and Mr Reid.
14 Jan. 1907.

Mr William Patrick and Mr Alexander Forsyth, called and examined.

Mr W. Patrick and Mr A. Forsyth.

8428. (*Chairman to Mr Patrick.*) What do you do?—I am a warehouseman.

8429. (*To Mr Forsyth.*) What do you do?—I am a cloth-measurer.

8430. (*To Mr Patrick.*) Where do you reside?—6 Kinnaird Street.

8431. (*To Mr Forsyth.*) Where do you reside?—23 Stirling Street.

8432. (*To Mr Patrick.*) What is your rent?—£11, 10s.

8433. (*To Mr Forsyth.*) What is your rent?—£8.

8434. (*To Mr Patrick.*) What accommodation have you?—Three rooms.

8435. (*To Mr Forsyth.*) What accommodation have you?—Two rooms.

8436. (*To Mr Patrick.*) You know that we are here inquiring about a proposal among other things to have short lets, quarterly or monthly instead of yearly lets?—Yes, I understand that.

8437. Are you a yearly tenant?—Yes.

8438. (*To Mr Forsyth.*) Are you the same?—Yes.

8439. (*To Mr Patrick.*) Suppose you got your choice, and were offered either a yearly tenancy, as you are now, or a monthly tenancy, or a quarterly tenancy, which would you rather have?—I would prefer a yearly tenancy, for the simple reason that if you had a monthly or a quarterly, if you wanted to make any improvements on your house to suit yourself, immediately you had done that possibly you would get notice to remove. Then anything you had spent on your house would be thrown away. That would be my reason for having a yearly let.

8440. Have you had any experience yourself of any tenancy except a yearly?—Never.

8441. Is there any other reason that would make you prefer a yearly tenancy. Suppose you had illness in your family, for instance, would you prefer to be in a house that you could not be turned out of on short notice?—That is a different thing. I would prefer a yearly tenancy whatever the circumstances. I would not prefer a monthly tenancy, so that I could be turned out of my house in that time.

8442. And if you had not a yearly tenancy you would prefer half-yearly, for instance, to monthly?—Surely.

8443. And quarterly to monthly?—Surely.

8444. You are a warehouseman, did you say?—Yes.

8445. That is not a very shifting occupation—not like ship-building?—I have been almost twenty-one years in my present situation.

8446. And how long in 6 Kinnaird Street?—Thirteen years in the same house, and twenty-four years in the same proprietor's property.

8447. Has your rent been raised in that time?—Not since I went to this house.

8448. For how long?—Nearly thirteen years.

8449. Have you a family?—Yes.

8450. And are they working for themselves, any of them?—Yes, they are all working for themselves.

8451. How far do you go to your work?—About three-quarters of a mile.

8452. And how far do any of your children go?—One of them three-quarters of a mile, another half a mile, and another sometimes four miles to his work.

8453. What is he?—A joiner. He is sometimes working at one place and sometimes at another.

8454. And he takes a tram?—Sometimes, and sometimes rail, when he goes as far as Monifieth.

8455. But your house is a good central house for all your family.

8456. (*To Mr Forsyth.*) What did you say you were?—A cloth measurer.

8457. How far do you go to your work?—About 500 yards.

8458. Have you any children working?—No.

8459. Have you children?—One.

8460. What do you think about these short lets? Suppose you got your choice? You are a yearly tenant just now?—Yes.

8461. Suppose you got your choice to become a short let tenant?—I would prefer the yearly tenancy; and if it was to be altered, I would rather have it six months than the month.

8462. Why do you prefer a yearly?—They cannot shift you out when it suits themselves, if you do anything to the property. I have been fourteen years in my house.

8463. Have you been in the same work all the time?—Yes; sixteen years.

8464. But suppose you had behaved yourself well, as no doubt you do, would the landlord ever think of shifting you?—We don't know. I do not know the landlord's mind and he doesn't know mine.

8465. A man generally follows his own interest. When he gets a good tenant does he ever think of turning him out when he gets the rent paid regularly, and the family are all respectable?—I am never hard up.

8466. Would you be secure enough?—No; I could not do anything to suit myself for comfort. I might have to remove in any month; where is all my money gone in that case?

8467. What kind of things does a tenant do. Do you mean papering and painting?—Yes.

8468. Anything more?—You might put up something for your own convenience.

8469. Take your case, Mr Forsyth. You have been in your house fourteen years?—Yes.

8470. Has the landlord during that time done anything to your house in the way of improvement?—No.

8471. Has he ever papered or painted the house?—I have got paper from him.

8472. How often?—Twice.

8473. No painting?—Once; but I had to do the papering and painting myself. I got the materials.

8474. It has been suggested that the landlords would not be inclined to do so much for the house if the let were short, but your landlord doesn't seem to have done much for you?—It has never been required, for we are very careful with it, and don't destroy the property.

8475. (*To Mr Patrick.*) Has your landlord done anything for your house?—I have got paper from him to put it on myself, but as regards painting I have done a good deal of that to the house myself.

8476. What do you say about the other point, shortening the time between the taking of the house and the entering it. We are told that everybody thinks it is too long to be compelled to make up your mind so early in the year as February; that it would be time enough in April?—Yes; I think it ought to go back to the old time. When I took the house first—thirty-three or thirty-four years ago—six weeks and one day before the time was the regular time to take or give up your house.

8477. That was quite satisfactory, was it?—I think so.

8478. What has made the change?—The factors being anxious to get their houses let.

8479. And sometimes the tenants themselves?—Sometimes; but I think factors are a good deal to blame for it, more than the tenants.

8480. You, Mr Patrick, have been telling us your views. What do you think are the views of other working men on this matter?—I think the generality of them would appreciate what I have said.

8481. But take the ship-builders who are more fluctuating than warehousemen or cloth-measurers. You have no association with them, I suppose?—No.

8482 Do you belong to any Trades Union yourself?—No.

8483. (*To Mr Forsyth.*) Or you?—No.

8484. (*Mr Howden to Mr Forsyth.*) I think you told us the factor did improvements for you when you were on a yearly tenancy which he probably would not do for you were you on a monthly tenancy?—I have not said so.

8485. It was probably the other way. That you did the improvements yourself?—Yes.

8486. What interest would the landlord have in turning out a tenant who was improving his property?—I do not see that he would have any, if the tenant was paying his rent.

8487. That would apply equally to a monthly tenant as well as a yearly, wouldn't it?—Yes. The tenant on the

other hand would always have the fear of being turned out at the end of the month.

8488. But you told us there would be no interest on the landlord's part to have you turned out?—I never said so.

8489. Well, I fail to understand you, I am sorry. Did you not say to us the landlord could not have an interest in turning out the tenant if he paid the rent and improved his property?—Neither he would.

8490. Decidedly not? That would apply equally to monthly tenancy, or as to a yearly tenancy?—I daresay it would; but at the same time the tenant would not have the same interest in doing anything to his house, if he had always the fear that at the end of the month he might be turned out.

8491. You have told us this fear is largely imaginary?—Possibly it is imaginary, but still if it is there.

8492. (*To Mr Patrick.*) Have you any experience of men having to shift to suit their job?—I have not had to do it myself, and I cannot say much for any other body.

8493. You could only speak for yourself?—Surely; as far as that goes.

8494. (*To Mr Forsyth.*) Is that your opinion, too, that you can only speak for yourself in this matter?—I have never had to remove for work. It is a very rare occurrence.

8495. But when a man had to do that, he had to pay the landlord to get away, if it happened to be between terms, and don't you think it was a hardship on that man having to pay more than one rent, because that is what it amounts to?—No.

8496. You don't think so?—No; he was not paying two rents if he got another tenant to take his place. This party I speak of got his house sublet by consent of the factor, and he was nothing out of pocket.

8497. If he did not get that sublet?—That is that "if" that won't do.

8498. He would either have had to pay the rent or sit still?—Most decidedly.

8499. And the factor could have put him to considerable inconvenience, if he had not got that sublet?—I have walked a long distance, but never thought of removing. I was quite content with my house.

8500. Probably you were?—You see, I am only speaking for myself.

8501. You admit there could be a possible grievance here any way?—Not a grievance to warrant monthly lets.

8502. Is it the monthly rent you object to, or the monthly tenure?—I stand by the yearly taking of a house.

8503. Is it the payment of the rent by the month or the taking of the house by the month that you object to?—I object to them both.

8504. Do you pay quarterly meantime?—No, half-yearly.

8505. Do you prefer that system?—Yes.

8506. (*Mr Esslemont to Mr Patrick.*) Do you think that it would be convenient to working men generally, to wage earners throughout Scotland, to pay their rents more frequently than once every half year?—Yes, I would certainly say that; even quarterly. I have always paid my rent half-yearly, but I believe to a great many working men it would be a benefit to have to pay it once a quarter. It would be easily gathered together.

8507. Take the case of working men earning anything from 20s. to 25s. a week, don't you think it would be a convenience if they had to pay rent as frequently as possible, say even monthly?—It would be a convenience. For my own part, I would say that I would as readily pay my rent quarterly as half-yearly, which has always been the case in Scotland.

Mr W. Patrick and Mr A. Forsyth.
14 Jan. 1907.

8508. You said if you were in a monthly house you would always have the dread that you would be turned out?—Yes.

8509. You have had a long experience of your present property, twenty-one years, and the landlord never put you out at the end of any one year?—No, or I would not have been there.

8510. Why should he put you out at the end of any one month?—I don't say he would do it, but he could do it.

8511. And you have just a sentimental objection to that?—Surely.

8512. You prefer to have the sense of security that you can remain there for twelve months?—Yes.

8513. Do you think that is a feeling very largely shared?—By the average working man, I think it is. I don't think the average working man would prefer a monthly tenancy to a yearly. At the same time, I believe that to pay your rent even monthly, but have your yearly tenancy, would be a benefit. I would say quarterly instead of six monthly rents.

8514. It has been represented to us, you know, that the working classes have a far greater dread of having to pay two rents in the case of having to shift for employment. Also of the rent day at 15th May and 11th November than they have of the monthly tenancy which you feel. They would rather take it with all these risks than suffer the present inconvenience of paying rent twice a year and rates once a year?—I do not follow you exactly.

(*Mr Esslemont.*) It does not matter; you have already expressed your opinion.

8515. (*Chairman to Mr Patrick.*) Are you a member of a Co-operative Society?—No.

8516. (*To Mr Forsyth.*) Are you?—No.

8517. How do you work it. You have got to be keeping the money for a half-yearly rent. Do you put it into a Savings Bank, or keep it in the house, or what. People have told us that they did it by means of the Co-operative dividend. What do you do?—I put my money in a Savings Bank.

8518. Is that a common system?—I suppose with a great many working men it is, and the statement that was published in the press here one day last week showed that the Dundee Savings Bank seems to have been freely patronised during the last year.

8519. And there is a big withdrawal at the time of the rent paying?—Yes, there is always that.

8520. Is there the same for the rates?—Well, I don't suppose there is for the rates so much, because you know the working man's rates are not so very much. Of course, the police money is high; too high, I think.

8521. The Treasurer will take a note of that?—At the same time we have just got to grin and bear it.

Mr Alexander Tasker, called and examined.

Mr A. Tasker.

8522. (*Chairman.*) What are you, Mr Tasker?—I have done many a thing in my lifetime, but I have done nothing for the last two or three years.

8523. What were you immediately before?—I was driving a horse.

8524. Where do you live?—34 Lawson Place.

8525. What is your rent?—The rent is £8.

8526. Have you been there for some time?—Three years.

8527. You heard part of what Mr Patrick and Mr Forsyth said, that they preferred the long let for a year rather than a shorter let. Have you a yearly let yourself?—I would not take a house for less than a year, because when I remove I clean my house and put it in order, and if I was under an obstreperous landlord, he could throw me out at the end of three or six months.

8528. Have you ever had anything except a yearly let?—Never.

8529. How often do you pay your rent?—Six monthly.

8530. Have you any other reason for preferring the yearly let? Is the security that it gives you an encouragement to improve the house?—It is an encouragement to improve the house, and that is why I am inclined for the twelve months' tenure.

8531. What would you say to a six monthly tenure. Would that not be just about as good?—No; because if I put my house in proper order an obstreperous landlord may put me out at the end of six months.

8532. But if you paid your rent regularly, and kept the house in good order, as I have no doubt you do, what motive would he have?—Perhaps to oblige a friend, or to suit one of his workmen. Many a thing might cause him to put me out.

8533. What do you think other working men think about it?—As far as I am acquainted with working men—the respectable working men—they are all inclined to twelve months.

8534. Have you any acquaintance among the ship-builders?—None.

8535. The trouble is, you three gentlemen all belong to the class of working men who have not much occasion to shift. Now we are told that it is rather those engaged in other occupations, like ship-builders, that often need to shift in the middle of a term. You cannot tell us about them?—No.

8536. In your land, Mr Tasker, what are the kinds of occupations of the men there?—They are working men. Some of them drive bakers' vans, some are lorry men, and so on. Of course, the lorry men go down to the station, and the bakers' vans perhaps go to a remote part of the town.

8537. (*To Mr Forsyth.*) What class of men are there in your stair?—They are mostly all in the jute line.

8538. (*To Mr Patrick.*) What class of men are they in your stair?—One is a sailor on board of a Newcastle boat,

who has to walk from the docks once a week. Another is a mason, who works sometimes in one part, sometimes in another. He finds his place very central. Another is a mechanic, who works down in the Pleasance; he has a mile and a quarter to walk, and walks always to his meals.

8539. (*Mr Cox to Mr Tasker.*) Has the question been much spoken about in Dundee of late?—I have not much experience of what is inside, but from what I have heard and read in the papers, these monthly tenants are not much worth to any man, and if you can oblige respectable working men they should be left over. The monthly tenants and weekly tenants perhaps have a bundle of bags in the corner to sleep on, and an old soap box or that, and when the house gets dirty, he would far rather remove and try to get a cleaner one, than clean the old one.

Mr A. Tasker. 14 Jan. 1907.

Mr Robert Lickley, Mr Islay B. Murray, and Mr Edward Shepherd, called and examined.

Mr R. Lickley, Mr I. B. Murray, and Mr E. Shepherd.

8540. (*Chairman to Mr Lickley.*) You are President of the Dundee Landlords and House Factors Association?—Yes.

8541. (*To Mr Murray.*) You are Secretary of the same Association?—Yes.

8542 (*To Mr Shepherd.*) You are a house factor and property owner in Dundee, and a member of the Association?—Yes.

8543. (*To Mr Shepherd.*) You gentlemen are going to give us evidence on behalf of that Association?—Yes.

8544. How long ago is it since the Association came into existence?—Over twenty years.

(*Mr Murray.*) It was formed in 1881.

8545. (*To Mr Shepherd.*) Does the Association manage through its members about three-quarters of the property let in Dundee?—Yes.

8546. Some of these members, I suppose, are both proprietors and house factors?—That is so.

8547. Do these members manage any property outside Dundee?—Not much; they may of course individually.

8548. There is a reference in your precognition to Dundee and district. What does "district" include?—The suburbs, Broughty Ferry, Newport, Monifieth and Invergowrie.

8549. None of these are industrial, are they?—No, they are all residential.

8550. Have any of these got a working class population?—Not many. Broughty Ferry has a few working men's houses, but a very small proportion.

8551. And Newport?—A very small proportion also. Monifieth is nearly all villas.

8552. How long has your firm carried on business from first to last?—I have put down sixty years; it is certainly older than that.

8553. (*To Mr Lickley.*) How long have you had experience?—Twenty years.

8554. (*To Mr Murray.*) How long have you had experience?—Seventeen years.

8555. (*To Mr Shepherd.*) Has the Association considered the question raised by Mr Cross's Bill?—Yes.

8556. Also the other question of the missive system?—Yes.

8557. Take the missive system first. What is the view of your Association about the complaints against the long time between the taking of the house and entering it?—There is a complaint amongst the tenants about the early issuing of the missives.

8558. For how long has that been?—Several years, but the house factors and landlords were driven to it by the tenants making early application for houses.

8559. Take things as they are, what is the view of the Association as to any change?—That a change is desirable if it can be made binding on all concerned, but otherwise it cannot be carried out. We tried in 1899, and made a strong effort to put the letting season back, but it completely failed.

8560. Why did it fail here, if it succeeded in Edinburgh?—I don't know, but we found that the tenants would not wait. The first year we stood by, but the last a good many tenants complained that we had not houses in February when they wanted them. Next year we had to revert to the 1st of February.

8561. And although the arrangement worked that year, it has only broken down on account of some outsiders refusing to abide by it. Does that confirm your view as to the necessity for a uniform system?—Yes, outsiders here moved ahead of the Association.

8562. How long did that arrangement last?

(*Mr Murray.*) One year. We find the tenants are asking for houses now.

8563. (*Chairman to Mr Shepherd.*) How far would you go. We have heard even the 15th March or the beginning of April suggested?—Personally I would be prepared to go to the 4th of April, but the Association decided on the 15th of March.

8564. For sending out the missive?—Yes.

8565. And how long for returning them?—A week. I have had experience of forty days' notice, but there were no missives issued at all, and it worked quite well. If you wanted to give up your house you had to do it before the 4th of April.

8566. Why should not that have continued instead of worrying everybody about asking them if they are going to take their house?—It is far back, but it was possibly by putting up new houses and offering them earlier.

8567. (*To Mr Lickley.*) Do you agree with that?—Yes.

8568. (*To Mr Shepherd.*) And it became universal?—Yes. We had to do it to meet the demand.

8569. In your personal view, you would take it like the Association, that is 15th March?—Yes.

8570. How do your rents stand in Dundee generally compared with Glasgow?—We are £2 or £3 cheaper on the two-roomed houses.

8571. And on the one-roomed house?—We have very few except weekly.

8572. Are they different from Glasgow, or much the same?—I don't know the Glasgow weekly houses.

8573. Do you know, Mr Shepherd, yourself, of any demand unsatisfied for short lets in Dundee?—I never had an application for a house for less than a year from any working man.

8574. To what extent are there short lets in Dundee?—Of course Dundee is in a peculiar position. There is a very much larger proportion of the working men's houses let weekly in Dundee than in any other large city.

8575. You are speaking of tenure in payment?—They are the same thing, paid weekly and let weekly.

8576. How many are there in Dundee?

(*Mr Murray.*) There are 8000 weekly houses and about 2000 monthly houses over and above. You have 10,000 houses available for short lets.

8577. Any quarterly?

(*Mr Lickley.*) That includes quarterly.

8578. Any half-yearly lets?—Very few.

8579. Is it your view that, as far as people want short lets weekly or monthly, there are enough houses for them?—Ample.

8580. Have you ever had people coming and asking that their houses that have hitherto been yearly houses should be put on a monthly tenure?—We have had no application for monthly houses in Dundee at all.

(*Mr Murray.*) Very few monthly houses in Dundee.

8581. (*Chairman to Mr Shepherd.*) I am talking of applications for houses hitherto yearly proposed to be monthly?—I have had some wishing to pay monthly.

8582. I am talking of tenure?—No.

8583. (*To Mr Lickley.*) What do you say, Mr Lickley?—The same.

8584. (*Chairman to Mr Shepherd.*) If there were any serious demand for a change from the yearly lets to short lets, would you have expected that it would have shown itself in the way I have indicated?—Surely.

8585. By private and voluntary arrangement?—Yes.

8586. But, on the other hand, may it not be said there would be no use to ask it because it would be refused?—It would not be refused. There are so many empty houses that we would let them either in that way, either monthly or three monthly.

8587. Other factors said no, they would not let a house at a short let. You say that, looking to the number of empties that would be entertained?—For a broken period. Supposing a man wanted a let from now to May only, I would let.

8588. But supposing he came in May and said I want it monthly?—We should be very slow to do it, for this reason, that the class of people who live in these houses are very different from the class who live in yearly houses in Dundee.

8589. Suppose a man whom you knew to be thoroughly respectable said, "I am not certain about my employment 'next year; I may have to go to Belfast or to Glasgow, I 'want a house month by month," what would you do?—We would not let it to him at the letting season.

8590. (*To Mr Murray.*) Do you believe in that, Mr Murray?—Very largely.

8591. (*To Mr Lickley.*) Do you believe in that?—We would just offer him a house that we are in the habit

of letting in that way. They are generally of a lower class.

8592. (*Chairman to Mr Shepherd.*) Does it come to this, that there is scarcely freedom of contract at the present moment, because, if a man of a good class wants a short let, he really cannot get it?—That is so.

8593. But if there had been a big demand?—If there was a demand, I think there would be a supply.

8594. Why should a working man, looking to the chances of having to change his employment, not want a short let? They don't change much in Dundee.

8595. As compared with Glasgow?—In Dundee the working man is not the only support of the house. There are members of the family, who may be working in different parts of the town, residing in the same house. Dundee is not like Glasgow. The distances are very short. Men living in the outskirts can travel daily to their work.

8596. But there are trades, like the shipbuilding trade, where there will be a necessity to shift?—Those engaged in the shipbuilding trade to a great extent live in the east end of the town.

8597. You see, we were quite glad to hear these gentlemen, Mr Tasker and Mr Forsyth and Mr Patrick, but they rather represent the more permanent class who don't want to shift?—But I rather think there is a much smaller number of removals in Dundee than in Glasgow.

8598. Why?—We may be able to compare in figures.

8599. (*Mr Esslemont.*) Between terms?—No, altogether at the end of the year.

(*Mr Lickley.*) I think that class of steady occupants is greater in Dundee.

(*Mr Shepherd.*) Only about 15 per cent. of our yearly tenants move per annum. The experience of the members of our Association in reference to houses given up before the term after being re-taken, and sublets between terms, is that these do not exceed 3 per cent.

8600. The percentage of removals among the yearly tenants represented by the Association last Whitsunday was 15 per cent. Is that an average?—Yes.

8601. Your experience in reference to houses given up before the term after being re-taken, and sublet between terms, is that they don't exceed 3 per cent. Is that for a period of years or last year?—It is last year. Last year was a very good year to take in favour of those who want a short let. There have been more empty houses than for a long time.

8602. Is it your view that, whatever may be the interests of Glasgow, there is no interest in Dundee in the proposed change?—That is so.

8603. Suppose there were to be a change. It has been suggested that it might be limited not to £16, as in the Bill, but to £7 or £7, 10s., thereby covering the class which are shifting. What do you say to that?—It is very difficult to answer that question, because houses in one tenement vary from £7, 10s. to £15. If you make the one payment monthly, and the other yearly, it would be very far from desirable.

8604. We were told in Glasgow and other places that there is not much mixture?—They are a different class of people.

(*Mr Murray.*) But we have a considerable mixture of rents. We have rents in properties varying from £6 and £7 up to £15.

8605. But all yearly tenancies?—Yes.

(*Mr Shepherd.*) A respectable person who wants a good house at £6 can get it next door to people who pay £10.

8606. (*Chairman to Mr Shepherd.*) How many houses have you got?—2000 or 3000 dwelling houses.

8607. (*To Mr Murray.*) How many have you got?—About 1200.

8608. (*To Mr Lickley.*) How many have you got?—About 1500.

8609. (*To Mr Shepherd.*) Is there the social element in it?—Yes, strongly.

8610. I suppose that while at present there is, if they were all made short lets, that would disappear?—Oh, of course.

8611. Have you found that there is just one term of removal in Dundee, Whitsunday?—Yes.

8612. Is not that attended with inconvenience?—Not very much.

8613. What is the inconvenience?—The pressure on removal day. Of course there is also the difficulty of getting the houses cleaned.

(*Mr Murray.*) There is usually a month to come and go on.

(*Mr Shepherd.*) Removals begin about the beginning of May, and go on pretty generally to the 28th of May; sometimes after that.

8614. Are not the rates for removals higher than at other times, hires for instance.

(*Mr Lickley.*) They double the rates on the term day only.

8615. (*To Mr Shepherd.*) What about the building trades. Do they not put on pressure?—No. The painter is the only man to hurry up. He is the last.

8616. What is your view about the rating, and the proposal to make the landlords collect the rates?—I fail to see why the landlord should be made a tax collector.

8617. Why?—The Corporation has machinery for collecting rates that no private individual has.

8618. You think it would introduce a difficult relationship between the two?—We have very unpleasant relationships through collecting the Corporation's stair gas.

8619. Tell us about that. You do that just now three times a year?—No, we collect it once a year, but pay it four times to the Corporation.

8620. Once a year from the tenant only?—Yes, at Whitsunday. The bulk of the gas is burned in the winter quarter.

8621. Do you say expressly it is for that purpose you collect it?—Yes.

8622. Do you find great trouble in connection with it?—Yes, great trouble. One man's gas is 2s., and his neighbour's is only 1s., and the former thinks it is a grievance.

8623. Have you water rates to collect?—No.

8624. Under £5 you pay the rates?—That is included in the weekly rents.

8625. Without being shown?—Yes.

8626. Suppose it was shown separately as rate, do you think it would make some shindy?—You can hardly show it on a 2s. rent, it is so small.

8627. Suppose you pay the rates up to £16, and had to show them separately on your receipts, do you think that would make trouble?—Not where they were charged all alike. With gas they are charged according to the amount burned.

8628. You know that there is compounding in England, but without any provision for showing the rate?—That is so.

8629. Do you agree that it is desirable in the public interest that a tenant should know what rate he is paying?—Certainly. The compounding of the rates would be very much against the interests of the community.

8630. Why?—Because the expenditure would go up so fast. In some districts of London I understand the taxes are 10s. a £.

8631. But that is, isn't it, from the absence of any stipulation that the occupiers shall be informed of what rates they are paying?—It is said to be the want of interest on the part of the community, because they don't know what they are paying.

(*Mr Lickley.*) We think there would be a difficulty in showing the monthly and weekly tenants the proportion of taxes that has to be collected for that period.

8632. (*To Mr Shepherd.*) You can show the rate per £ well enough, but to bring out the particular figure applicable to the particular case you think would be difficult?—For the shorter collections.

8633. Would it involve a difficult calculation?—Not only that. There was the difficulty of showing it to the tenant.

8634. For instance, in our weekly books we show the amount due as arrears. We would need to show separate from that, according to Mr Cross's proposal, the amount due for rates.

8635. What would be the practical difficulty there.

(*Mr Lickley.*) Supposing some Saturday they paid their rent, and not the rates, and another Saturday *vice versa*, you would continually have to be putting down the arrears of rent and the arrears of rate.

8636. Suppose this system was to be entered on, you have looked at the proposed allowances, what do you say to them?—They are quite inadequate.

8637. What would you substitute?—More than double, even though you don't take in empties.

8638. Are you assuming the Bill covers empties or not?—Yes, at present we don't pay on empties in Dundee.

8639. In any case?—Only poor and school rates. No municipal rates. I think our Treasurer will be able to tell you his loss apart from rates is very much larger than any they are prepared to offer. I don't know what his loss is.

8640. If the town has a certain loss, would you expect your collection would involve as much, or more, or less?—Very likely more, plus the cost of collection.

8641. If you collect frequently as compared with one collection, would not that go to minimise the loss?—If rents were collected monthly, tenants would get into arrears, just as they do in weeklies, and it is just a question of calculation, whether he is paying the tax or the rent.

8642. You would get a larger amount of rate, whoever collected it, if it was more frequently collected?—Naturally.

8643. Do you say there ought to be more frequent collections by the rating authorities?—If they did, there would not be the same difficulty in getting the money.

8644. I do not know whether you profess to know whether that is practicable or not?—No. The same facts applying to the Treasurer would apply to the factor.

8645. Is the relief given to the poor just now well administered?—I think so.

8646. And ought it to be continued?—Yes.

8647. Do you see how it could be if the landlord paid?—No.

8648. Could it not be by the tenant coming forward and getting an abatement, getting re-payment either from the taxing authority or the landlord?—You might, but the likelihood is that once the tenant had paid the rate he would not ask the abatement.

8649. In many cases would not that be quite right? Would they not be able to pay rate well enough if collected frequently?—Some respectable poor people pinch themselves to pay when they have to do it.

8650. What is your view, Mr Lickley, as to the question of whether, suppose Mr Cross's Bill or some such proposal is become law, it should be optional? Should there be one universal system?—It would become very complicated if it were optional.

8651. If any such proposal did become law, have you something to say about the necessity for a quicker and less expensive method of removing tenants.

(*Mr Shepherd.*) Clearly. The loss of time, and the expenditure in removing a weekly tenant is a very serious matter to landlords at present. As a rule a weekly tenant is three or four weeks in arrears before we ask him to remove.

8652. That is your own fault?—Granted. Suppose we apply for a warrant, it takes ten days to get it.

8653. With or without answers?—I am assuming we have to take measures.

8654. Supposing he puts in no defences?—It takes eight days.

(*Mr Lickley.*) The summons may be served on him on a Friday, and he appears on the Tuesday, and gets three days to remove.

(*Mr Murray.*) Sometimes beyond that.

(*Mr Shepherd.*) Then, as to costs, it costs anything from 4s. 1d. to 15s. to eject a weekly tenant.

8655. That is only where actual ejection has to take place; 5s. of that is the sheriff officer's fee, isn't it?—But in the most cases a very objectionable tenant would give you as much trouble and expense as possible. It is not poor people; it is the other class.

8656. Those fellows know the law, and just walk out a few minutes before anybody appears?—We have experience of cases when they don't even walk out after somebody does appear.

8657. They have to be turned out?—Yes.

8658. They are of the class that no right-minded landlord would have there?—They are the objectionable class.

8659. You don't find it with the decent class?—I don't think any member of our Association would throw a decent tenant on the street.

8660. Suppose you get expediting and cheapening, what do you say of the right of the law of hypothec?—I think it is in the interests of both the landlord and the tenant.

8661. Is it often enforced?—Very seldom.

8662. In what class of cases is it ever enforced?—In the objectionable class.

8663. Is the game worth the candle?—That is why it is so seldom put into force.

8664. Still, you think its existence is of value?—Yes, it is of value.

8665. On both sides?—Yes, clearly.

(*Mr Murray.*) It is never enforced in regard to weeklies.

8666. (*To Mr Murray.*) Why?—It is not worth while.

8667. And not even in regard to any others?—No, it is very exceptional.

8668. (*To Mr Shepherd.*) How often had you to put it in force for short lets?—I could not answer that question.

8669. Would it be half a dozen or a score?—I would have more than that through the Court.

8670. It is hypothec I am speaking of?—None at all.

8671. With your 2000?—I did not say 2000 weekly.

8672. Take all your houses, how often have you enforced the hypothec?—I don't recollect one case during the last year.

8673. (*To Mr Murray.*) That is very interesting. Does that correspond with your experience?—Yes.

8674. (*To Mr Lickley.*) Does that correspond with your experience?—Yes.

(*Mr Shepherd.*) In the event of this proposal of Mr Cross's becoming law, it is very desirable to have a cheaper and more expeditious way of ejection. To have it even beyond a judge, because we have suffered a good deal in Dundee from the leniency of the Court.

8675. (*Chairman to Mr Shepherd.*) You mean that you should be entitled to eject them under the Bill without having to go to the Court?—Why should a landlord be bound to allow a tenant to sit in a house, two, three, or four weeks at a judge's discretion, when he is not paying rent?

8676. What would you recommend in place of the present system?—I am not prepared to say, but it would be desirable to have some more simple way of dealing, because it always means loss, and less property in the market for tenants, if there is not a sufficient return from them.

8677. Do you think if short lets were introduced it would affect the property market, either the selling market or the lending market?—I think both.

8678. To any substantial extent?—I think so. In Dundee weekly properties sell about 30 per cent less than yearly.

8679. Does that prove anything?—It proves that they are of less value.

8680. But suppose you had yearly tenancies made into monthly, they would remain the same class of tenants?—If it became general.

8681. It would right itself?—Through time. It would affect the value to begin with.

(*Mr Murray.*) The repairs would be considerably more.

8682. (*Mr Howden to Mr Shepherd.*) In regard to the law of hypothec, you told us you had very seldom to put this law into force?—Yes.

8683. In fact, we may assume that, with the lower class of property, it is hardly worth while putting it into force?—It is very seldom put into force.

8684. But when it came up to higher rents it undoubtedly became of some value to the landlord?—That is so.

8685. But we had some evidence that, in any case, whether the law of hypothec was still left in your hands or not, certain necessaries of life should be left to the tenants even in those circumstances, such as tools, wearing apparel, and bedding. Have you gentlemen any objection to such a clause as that?—No.

8686. Could you not even go further, and say that up to the extent it was essential for the comfort of the people, that they should be left with some of the furniture?—Most people that come under that category have not many comforts.

8687. But they should not be reduced altogether to starvation?—Quite so.

8688. You agree with that?—Oh, I think so.

8689. Do the other gentlemen agree?

(*Mr Murray.*) My experience as to administering the law of hypothec is that the fact of taking steps in that direction is sufficient to produce the rent, and in many cases it does not need to be put into force.

8690. But would it affect you if you went the length of Mr Shepherd?—In many cases it would not.

8691. You don't think Mr Shepherd's statement would damage your case at all?—No.

8692. Same, Mr Lickley?—I think Mr Shepherd is on the lenient side. I do not see why we should have so much consideration for these people when they have so little consideration for us.

8693. You would be more harsh?—I would be inclined to be so with that class of tenants. We never have to enforce hypothec in the case of decent tenants. It is always in the case of troublesome and objectionable tenants.

8694. It is never exercised through the fault of the principal tenant?—We never do it.

8695. (*Mr Binnie to Mr Murray.*) I think you said you had found that the threatening to use the law of hypothec generally made them pay the rent?—Yes. It had the desired effect.

8696. That showed they were able to pay the rent when they found it was urgently necessary?—Just so.

8697. In regard to those short lets, you told us that there are in Dundee 8000 weekly lets, and 2000 others that are monthly or quarterly?—Yes.

8698. What will the rents range from of the weekly tenants?—From 1s. 6d. to 3s. 6d. per week.

8699. Does that rent include the taxes?—It includes the police and water rates.

8700. You have 2000 monthly or quarterly?—Yes.

8701. What will the rents of those houses range from?—From 20s. to 35s. per month, including police and water rates, especially in regard to monthly at any rate. There is no hard and fast line; quarterlies might be somewhat different.

8702. I would like to get the rents of all these particular classes of short lets you have in Dundee. Do you limit these to monthly?—More largely in the case of monthly, I would say.

8703. What are the rents of the quarterly lets then?—The rents might be from £2 up to £4 or thereby per quarter.

8704. Then you say some of your monthly lets are much

Mr R. Lickley, Mr I. B. Murray, and Mr E. Shepherd.
14 Jan. 1907.

dearer than the houses let quarterly. 35s. a month is £21 a year. 80s. per quarter is only £16. Have you larger houses let monthly?—I have given the lowest and highest figures.

8705. The highest in the monthly you gave me was 35s. per month, £21 a year?—No, but I said the rents were from 20s. to 35s. a month, the taxes included, and then I made another remark, specially in regard to monthly, that the taxes were included. In the case of quarterly that would not happen perhaps so often, that the taxes were included.

8706. Then this 45s. to 80s. for the quarter is for rent alone, not including taxes?—Yes, largely so.

8707. That reconciles the statement?—I might say, in a general way, that we have a very strong feeling that if the missive question was dealt with simply by itself it would largely solve the difficulty and remove all cause of complaint in Dundee.

Mr R. Lickley, Mr I. B. Murray, and Mr E. Shepherd.
14 Jan. 1907.

[ADJOURNED.]

NINTH DAY.

MONDAY, 21ST JANUARY 1907.

In the New Court, Parliament House, Edinburgh.

Present:

LORD GUTHRIE, *Chairman.*

MR COX.
MR HOWDEN.
SIR J. STIRLING-MAXWELL.
MR BINNIE.
MR DOBBIE.

MR STAIR AGNEW GILLON, *Secretary.*

Mr J. Allison.
21 Jan. 1907.

MR JAMES ALLISON, re-called and further examined.

Mr J. Allison.
21 Jan. 1907.

8708. (*Mr Dobbie.*) When last before the Committee, you referred, in answer to a question, the number of which we will get later on, to a grievance you said exists in respect of the stamp duty on missives of let?—Precisely.

8709. I think your point was that while the stamp duty on lets not exceeding £10 was 1d., the duty on lets between £10 and £15 was 1s. 6d., and on £20, 2s.?—That was so.

8710. The duty is the same, isn't it, on any house above £10, whether for one year or thirty-five years?—That is so.

8711. Then it was suggested from the Committee that, if short lets prevailed, and if a house wherever say £20 a year was let by the half year for £10, the effect might be that each let being under £10, the stamp duty would only be 1d.?—That was the inference given, but I rebutted it by saying that it would require to come under the *ad valorem* stamp duty.

8712. You have since consulted the Inland Revenue authorities, and do they take the view that *ad valorem* duty would still apply as long as the total rent for each year exceeded the £10?—That is so. They gave me a distinctive assurance to that effect, and they say it is quite clear under the statute. I have an abstract here which bears that out.

8713. So that, in that view, the grievance you speak of would be aggravated by the system of short lets?—That is so; instead of having the let yearly, you would have the let half-yearly or quarterly, and, to get within legal limits, you would require each of these agreements to be stamped with a 1s. 6d. or a 2s. stamp.

8714. Which would mean that taking even a half-yearly agreement, you would pay 1s. 6d. on a £12 house?—That is so.

8715. Which would be a tax upon the landlord of about 3d. in the £?—Yes.

8716. Then I think your suggestion was that a uniform duty of 6d. might be imposed upon all missives of between £10 and £20?—Yes, or even up to £100. It is so difficult to get working men to understand the stamp duties. We generally try to collect half of it from them, but they don't understand. About twelve years ago, I brought out a system which is carried out in England, viz. to make continuous agreements. That is, that the agreement went on for an indefinite period, unless altered by either the one or the other on the 15th of March beforehand, but they could not understand that. They thought the house was taken for a year, and when you told them after the 15th of March that it had automatically, as it were, gone on for another year, they could not see it, and I got into trouble and I had to drop it. That is an argument against trying to let a quarterly or half-yearly house continuously. It shows the necessity for having these agreements stamped every time, either quarterly or half-yearly.

8717. So that, if the term of let were shortened, say to quarterly, the effect upon proprietor and tenant would be 6d a £, that is whether it is let by the quarter or six-monthly, and if that was thirty-five years the duty would be the same, and would thus, I make it, be one-third of ¼d. per £?—That is so. The time which the stamp covers is thirty-five years, and you have the stamp the same for three months as for that.

8718. So that, in your view, the grievance would be aggravated if short lets were made more common?—In that respect.

Mr A. Cross.

MR ALEXANDER CROSS, M.P., called and examined.

Mr A. Cross.

8719. (*Chairman.*) You were returned to Parliament first in 1892?—Yes.

8720. Then in 1895, 1900, and 1906?—Yes.

8721. Which division of Glasgow have you sat for?—The Camlachie Division.

8722. Right through?—Yes.

8723. In what year did you first bring in a Bill proposing to deal with this house-letting question?—Very early after my return to Parliament.

8724. I see in 1894 a Bill to amend the law relating to the letting of tenure of small dwellings in Scotland backed by you and Sir J. Carmichael and Mr Baird and Mr M'Gilligan. Was that the first year?—I think it was.

8725. Then I have got a Bill in 1905 backed by you and Sir James Carmichael and Mr M'Gilligan; another in 1897 backed by Sir John Stirling-Maxwell, Sir William Arrol, Mr John Wilson, Colonel Denny, Mr Faithful Begg, and Mr T. P. O'Connor; another in 1898 backed by the same members; and then another in 1900 backed by the same members; another in 1894 backed by you and Mr T. W. Russell and Sir John Leng; another in 1905 backed by Sir J. Stirling-Maxwell, Mr Hunter Craig, Colonel Denny, Mr T. W. Russell, and Mr John Wilson; and then the Bill of 1906. Are these the different years?—I believe so. In the years in which I did not bring forward the Bill, I was largely influenced in not doing so by the hope of an amicable settlement through Landlords Associations.

Mr A. Cross.
21 Jan. 1907.

8726. Although the first Bill you brought in was in 1894, had your attention been directed to the question before that?—Ever since I began to take an interest in public affairs. For twenty-five years the question has been a burning one, to my personal knowledge.

8727. What do you understand to be the question?—The system of letting by missives for yearly tacks.

8728. It is suggested that the true grievance is merely the length of time between the date of taking the house and the date of entry?—Persons who say that desire to evade the issue.

8729. I suppose, in your view, the grievance is aggravated by any addition to the period of a year?—To some extent, of course.

8730. As far as that goes, but you think that legislation for that alone would not remove the grievance?—Distinctly so.

8731. At the elections that you have told us about, did your election addresses deal with the question?—Yes, it was a prominent feature.

8732. And in all cases, have you dealt with what you think is the true question, viz. the large question of the yearly tack as distinguished from the subordinate question?—No public audience would permit the speaker to deal with this question under any other aspect.

8733. What about your constituency in the way of the number of working men it contains?—It consists almost entirely of working men.

8734. Of what classes?—Of all classes.

8735. Skilled and unskilled?—Skilled at high pay and mere labourers.

8736. Living in the poorest class of houses?—Some in an excellent class of houses, and some, on the other hand, in probably the worst class.

8737. And in your district you have men varying, I suppose, very much in the necessity to shift, some more and some less?—That is so.

8738. Has the feeling, in your experience, increased the desire for a change?—I think so.

8739. How have you seen that show itself?—I was for a long time almost alone in public life conducting an agitation on this subject; latterly there is no public man, whether he be a candidate for municipal or parliamentary position, who omits it from his platform, not only in Glasgow, but over the west and centre of Scotland.

8740. Take these election meetings, what do you say about them?—I say this, that when I wish to bring an audience to good temper, I incidentally introduce the question, and immediately I am on capital terms with them.

8741. Have you found at public meetings much difference of opinion on the subject?—I say with accuracy that I never met anyone in any rank of life, unless he were a factor or a landlord, who was in favour of a continuance of the present state of affairs.

8742. Of the long lease?—Of the long yearly tack.

8743. What have you found in your personal canvassing of your constituents?—Exactly what I have pleaded publicly for all these years. I spoke for every man who was my supporter, and for nearly all those who voted the other way.

8744. We have been told that there is a large section of working men who would desire the continuance of the present system, partly because it gives them the security of tenure they would not otherwise have, and also because it encourages them to improve their houses. Have you found at your public meetings and in your personal canvassing the existence of these people?—I have not.

8745. Do you know any reason why, if they exist, you should not have come across them?—I should certainly have expected so. I could imagine that under a misapprehension or a partial knowledge, certain persons might believe that short lets are a kind of badge of social inferiority, but such a state of opinion would immediately alter under a different *régime*.

8746. We have had produced to us in Dundee certain very respectable working men, who seem to belong to the more stationary employments, and they have told us that they prefer the present system of the long let. We have not, I may say, at least I think I am correct in this, seen any working men of the more shifting employment who have put forward that view. What do you say now to the view of these men, which was evidently given quite honestly and straightforwardly?—They have probably never seen any other system nor thought about it. These men will die some day, and their families will be tied, and compelled to pay a rental for a house they may not wish to occupy for periods beyond what they may find convenient or possible.

8747. Then, if it be the fact that these men associate short let with necessary insecurity of tenure, do you think that is a sound view?—My inquiries in England absolutely satisfied me that such a dread does not exist in the population of the burghs or cities there, where they live entirely under the system of short tenure, almost invariably weekly.

Mr A. Cross.
21 Jan. 1907.

8748. You think that if their opinion in favour of the present system arises from their dread of being turned out, they being quite satisfactory tenants, that is not well founded?—I think it is an entire mistake.

8749. You refer to the subject as affecting Parliament. Have the Scotch members taken any action in the matter?—A number of the Scotch members accompanied the two deputations which waited upon the Government last summer, and, shortly after, I was requested by a large number of them to convene a meeting for the purpose of further discussing the situation amongst members of Parliament. I issued a post-card, and, in response, a very large meeting assembled, and promptly appointed a Committee to draw up a memorial, resolved that this memorial should be pressed on the Government, and met again within one week to deal with the memorial which the small Committee had prepared. That memorial to the Government was printed in the public press with all the signatures to it, and it was signed by about three-fourths of the Scotch members of Parliament.

8750. What about the other members?—I made a calculation that of the remaining three-fourths, there are something like ten or eleven who are actually members of the Government and could not sign a memorial to themselves. Of those remaining, it was notorious that several who were not present at Westminster on the particular day when this course was resolved upon and adopted, would have signed the memorial had they been there.

8751. And there is a statement in the memorial addressed to the Secretary of State for Scotland, dated 5th July 1906, that it is widely representative of all parts of the country and all shades of political opinion, that is correct?—That is correct. In short, this question has nothing to do with party politics. Might I respectfully submit to this Committee that an expression of opinion has very seldom come before Parliament on any subject whatever, backed by such a unanimous support of the Parliamentary representatives of the Scotch people, or by such a strong sentiment amongst the people outside.

8752. It is a fact, is it not, that the grievance alleged to exist is more pressing in some parts of the country than others?—Yes.

8753. How do you define the distinction?—Wherever the industrial conditions of modern life have asserted themselves, the ancient conditions of tenure are unsuitable. Where there is less of the industrial elements things may remain longer in the old ways without the grievance becoming so obvious.

8754. Was it that consideration that led you to insert the optional clause?—It was that, and the advice of responsible members of Parliament.

8755. In addition to what you have told us about 1906, I think there were deputations, were there not, first, to Sir George Trevelyan, and then to Mr Graham Murray, when respectively Secretaries for Scotland?—You are correct, there were these two deputations amongst others.

8756. Have you ever contemplated the Government taking the matter up?—I have been eager that they should; being satisfied of the extreme difficulties attendant on the prosecution of such a measure by a private member, or, indeed, of any legislation by a private member.

8757. But you have not succeeded in your effort to have that done?—I have had the privilege of laying the case by special request before members of three or four Governments of recent years, or before some of them, which has led to frequent interviews and negotiations. Their difficulties at the moment, pressure of other business, and, if I may dare to add, the neglect of Scotch affairs, in my opinion, have led to the delay in dealing with it, as I have not found any one in authority willing to be otherwise than sympathetic as regards the principle I was pressing for to be dealt with by legislation.

8758. Have you always urged it as a great boon to the tenants without being any interference with the rights of the landlords?—Certainly.

8759. And also as a movement that would result in benefit to the rating authorities, and through them, of course, to the general body of ratepayers?—Yes.

8760. In addition to what you have told us about Parliament, is it the case that in municipal elections the matter has bulked?—Yes, frequently; in the west country nearly invariably.

8761. And have you noticed any such difference of opinion as is said to exist among working men in connection with municipal elections?—I will venture to say that no candidate has the remotest chance of being returned who will state on his platform that he is opposed to the principle of the Bill. I believe that at the last Parliamentary election, it turned the scale in several con-

Mr A. Cross. 21 Jan. 1907.

stituencies. It would be improper to mention names, but I am well informed when I say that it is the fact.

8762. You would introduce the word "industrial," wouldn't you?—I refer to industrial constituencies only.

8763. Take a place like Rothesay, what evidence we had here has been that the measure would not be suitable for such a place as that?—May I point out that it has happened in connection with places which have been represented here before you as opposed to the Bill that the witnesses have nearly always been house factors or house agents. Without implying improper motives I suggest, "If self the wavering balance holds, 'tis rarely right adjusted."

8764. You think a sufficient answer to any difficulty about Rothesay is that the optional clause would prevail?—The optional clause would prevail.

8765. Now, we have been told that while cases of hardship will undoubtedly occur under the present system, for instance, a man wanting to leave in the middle of his term and being unable to get a sublet, these cases are, in point of fact, not very numerous, and that it is more an apprehension than anything else that exists. What do you say from your own investigation of real personal hardship?—Probably people apply to me more readily than to other members of Parliament, but I have hundreds of cases of extreme and cruel hardship in my papers here; still I feel that this grievance is by no means confined to those persons. The dread of it is present in every man's mind; when he hears of a case, he feels that perhaps it may be his turn next, and he is in dread of the present system.

8766. Do you think there are any cases where, on account of that dread, a man may refuse an eligible place elsewhere?—I have known such cases again and again.

8767. What is your view about this? It has been suggested that a lower limit than what you fix, say a limit of £10 or £12, would include almost all these cases?—I have a strong opinion upon this point. All the advice I can get, and all the experience I have had, have driven me to the £20 limit. I began my endeavours on this question with an idea that £15 might suffice; but the reception that that proposal met with at public meetings, and the comments made upon it in the papers and by other public authorities, were such that I had to abandon it immediately. I have come to £20, and I fail to see how any limit under £20 will satisfy public demand or be productive of the results that we hope to arrive at.

8768. In regard to your first idea, I refer you to your Bill of 1894, where you had this clause, clause 4, "No 'dwelling-house of a less rental than £15 yearly rent, 'situated within a burgh, shall hereafter be let for a longer 'period than one month, unless a garden is let along with 'it, etc.; any law or custom or aggreement notwithstanding 'and the period of let of such dwelling-house shall expire 'at next 28th day of the month." That was your first idea?—Yes.

8769. You have departed from that in two particulars; you fix £20 instead of £15; and, second, you don't fix any absolute limit, but make the matter depend on the period of payment?—Yes.

8770. You told us what led you to depart from £15. What led you to depart from your first idea of taking a limit of a period? You see that was in the 1894 Bill; then in 1895 Bill, and then in 1897 Bill, and then in the 1898 Bill, you propose the tenancy to be terminable in May, August, November, and February, and so in the 1900 Bill; and then for the first time in 1904, you came to your present proposal, the term of let to be equal to the term of periodic payment. What led you to come to that conclusion on the latter matter?—I suppose it was the more extended discussion which the subject had received, the advice which I had received from people in high position as to the best means of obtaining what was desired, as well as the education which every man has to go through who desires to be of any use in framing legislation. You have to serve your apprenticeship. I approached the question from my point of view, and passed through the various stages, having considered carefully as I went on. The conclusion I have now come to is by far the most reasonable and equitable and easy means of obtaining the result desired.

8771. And it interferes to the least possible extent consistent with the achievement of the object with the freedom of contract?—Precisely; I should have said that.

8772. Then your first proposal would have prevented quarterly and half-yearly lets?—Yes.

8773. In your second proposal you would have allowed quarterly but not half-yearly lets?—Yes.

8774. But now you contemplate weekly, monthly, quarterly, and half-yearly?—I leave it perfectly free to the bargaining parties.

8775. But I suppose we may take it that you would destroy yearly lets?—That is the condition which any reform must absolutely and in the first place satisfy.

8776. And the practical result of your Bill would be to do so, because we know that in houses under £20 nobody pays once a year?—Exactly.

Mr A. Cross. 21 Jan. 1907.

8777. But you think it is fair that if people want quarterly lets or half-yearly lets, and pay at these periods, they should have them even under £20?—I think so.

8778. It has been suggested that this is a pretty large order, and that at all events, in the first instance, as Mr Henry suggested in Glasgow, you might have a limit of, say, £10, which would, as he pointed out, affect half of the householders in the town. What do you say to that experimental suggestion?—That the time is past for experiments in this matter, that the public opinion is ripe for a measure which would put it at rest, deal with it in a satisfactory way, and that, if there be any good reason for placing houses of, say, £9 or £10 under this new *regime*, there is equal reason for houses under £20.

8779. Would you say "equal"? Does not the number of cases tail off where the grievance exists the higher you go in the way of rent?—No; I think it is the other way. Under £10, since I have begun this agitation, the effect has been that nearly one-half, I believe nearly two-thirds, of all the houses are let under the weekly tenure. For this Committee to fix £10 as a limit would simply be to render their action effete and useless. We have already accomplished that change within the last fifteen or twenty years by the reasonableness of the case, which has recommended it alike to tenants and landlords; but when we get above that (since the agitation has become so great), we find the landlords banded together, insisting on missives; it is the tenants who pay the higher rentals who feel the grievance most acutely. It is upon these tenants, who are good tenants, that the landlords are most determined to fasten the grip of the missive. I despair of any redress for such tenants, except by legislative enactment.

8780. You think that if the legislature were to pass a measure altered to, say, £10 or £12, the agitation would still go on, and it would merely lead to another measure extending it?—I don't think the Government could carry a measure limiting the reform to £10. I don't think the Government could count on the support of the Scotch members for such a Bill. These members have to reckon with their constituents.

8781. May it not be said, suppose you limit it to £20, that the agitation would still go on to have it raised higher?—No; the number of houses between £20 and £30 is remarkably small. The numbers tail off over £20.

8782. For ordinary working men?—For any tenants. Although there are many working men inhabiting houses of £22, 10s. to £25, the number is small. A limit must be fixed somewhere, and I have come to the strong conviction, which is not shaken by anything I hear, but confirmed, that £20 is the lowest limit that could possibly be suggested as a settlement of this question.

8783. Have you a £20 limit in any other Act of Parliament? We know there is a £10 limit under Acts of Parliament. Does the £20 limit occur anywhere?—Well, I don't quite follow what you mean.

8784. There are £10 limits and £4 and £5 limits in many Acts of Parliament we have been hearing about. Is there any Act that selects that particular sum?—You refer to Scotch Acts?

8785. Yes?—No; but I may point out that the Acts in which £4 and £5 yearly rental are fixed are Acts which couple in the provisions enacted all houses let for periods less than a year. Government had in view to include in the enactments houses of a higher limit, provided they are let for periods less than a year.

8786. You say there is a £10 limit in the water rate. Then, as Mr Dobbie reminds me, there is £20 limit in the inhabited house duty. Under £20 you don't pay anything. I think that is a case where the limit you have taken has been selected by Parliament?—Yes.

8787. In regard to Town Councils, we have some which have taken action in this matter. What, in your experience, has induced them to do so?—Pressure of their electorates.

8788. It has been suggested that their action is not in the interest of the working classes, but simply to get more rates. What do you say to that?—They are representative men who reflect the opinion of those who elect them; and if they misrepresent that opinion, they will not be long in the position they hold.

8789. Then Trades Councils apparently take the view pretty generally?—They do universally.

8790. As far as you know, is there any reason to doubt that Trades Counils accurately reflect the opinion of working men in general?—I regard them as representatives of the opinion of the organised trades who form their members.

8791. And apparently of the more skilled people as distinguished from labourers, who we are told have a Union of their own?—More skilled people belong, in the great majority of cases, to Trades Unions.

8792. So that the best class of working men's opinions may be got at in that way?—The best class is got at most directly in that way.

8793. In your view, are you chiefly aiming at bettering that class of working men, or the improvident?—I am not here to speak for the improvident, but for the better class. The better a man is, and the more independent his spirit is, the more he resents the position in which these missives place him, and it is on behalf of the better class that I make an appeal strongly as I venture to do to-day.

8794. The improvidents are pretty well supplied with short lets?—They cannot get houses on any other terms.

8795. Tenants Associations, we know, have sprung up in different towns in Scotland. Is this really one of the main objects of their existence?—It is one of the main objects. I have the prospectuses of two coming into existence this week.

8796. What do they say?—They talk of the abolition of the missive system on the one hand and some provision with regard to painting on the other, as their main objects.

8797. It is a very misleading expression, "the missive system," which seems to be used in so many senses. You have no objection, I suppose, to a written as distinguished from a verbal bargain?—I prefer the written bargain.

8798. So that the mere existence of the missive has nothing objectionable in it?—That illustrates my objection to this whole system. The missive has ceased to mean anything except a bargain for one year, involving a tenure of at least fourteen or sixteen months in duration. That is the meaning every one has come to attach to the word "missive."

8799. In a secondary sense?—Yes. Missives hardly exist in any other sense.

8800. So far as the newspapers go, there has been correspondence we know on both sides. Have you any remark to make as to the quarter or quarters from which the correspondence, contrary to your view, generally emanates?—From the facile pens of one or two gentlemen who have been opposed to my reform. The complaints are from all and sundry, and are in all sorts of newspapers, and are continually appearing.

8801. Now, if the interest of the landlords would not be seriously affected by this proposal, why should they object to it?—I don't wish to do any injustice to any class. I would be no party to a Bill which would injure the landlord class, but I believe the present system confers upon the landlord classes undue advantages, and it is for that reason they press it.

8802. Do you think the new system would yield them in the end less rent than they are at present getting?—The economic rent which is to be obtained from investment in houses will have to be obtained under any system, or the system will cease in operation until economic circumstances prevail. I cannot, and do not wish to, interfere with free play of supply and demand, but I do say the system under which houses are let just now is such as to create an artificial market for houses. I come to that a little later on.

8803. Do you think that your proposal would result in an increase of rents to the working classes?—I am quite confident it would not.

8804. At all events, after things had adjusted themselves?—I mean, of course, after things had adjusted themselves.

8805. Now, as to public meetings, you have attended, I believe, apart from mere electoral meetings, a number in connection with this subject?—Yes.

8806. Where?—In the City Hall of Glasgow I have been at three or four very large meetings.

8807. Also at Paisley, Falkirk, Govan, etc.?—Yes.

8808. Were these open meetings?—Yes.

8809. Largely composed of the working classes?—Yes.

8810. Were they unanimous?—They passed resolutions of the strongest kind unanimously and cordially, with no amendment in any one case.

8811. You refer to the deputation to Lord Dunedin in 1904. I rather think, if I recollect rightly, Lord Dunedin seemed to think your Bill had this advantage that it would not involve interference with freedom of contract?—I did not bring my album through. I think I have his speech carefully preserved. My recollection is what you say.

8812. I suppose that would require to be taken along with what is apparently admitted that it would kill yearly lets, because nobody pays under £20 once a year?—Yes, that would be the effect on all houses under £20s.

8813. You refer also to the deputation to the present Lord Advocate on 20th May 1906. I think the Lord Advocate pointed out that there might be another side to it in the case of working men being turned out of their houses during a strike?—Yes; but he had not considered the optional clause which would prevent any Burgh containing such men from adopting the Act.

8814. What do you say on that point which has been brought before us, the present security of men in employer's houses in the event of a strike?—Such houses are never let upon the missive system.

8815. Have you any view on the larger question which, as a side issue here, has been brought before us, of what should be done by way of legislative provision in the case of a strike. It is not directly before us, but has been brought up?—No; I cannot offer the Committee any well thought-out suggestion on that point.

8816. You refer to efforts to procure reform apart from legislation. Have approaches been made to the associations of the landlords?—Repeatedly. I am not at all alone in this matter. I have had a great following. I have been induced, along with delegates who share my view, to request meetings with the Landlords' Associations in various parts of the country, notably in Glasgow, and we have met and discussed; in my opinion we did, on more than one occasion, arrive at a basis upon which an unopposed measure might have been allowed to pass. On these occasions I have not heard the least objection to £20. What was objected to was the whole thing; but having become convinced, I suppose, that some action was necessary, the points that were discussed between us, in privacy, on these occasions, were details of another kind. I have not heard even a landlord object to the limit,—they may object to the whole thing, but not to the limit.

8817. And was it the failure of these negotiations that led you to take your present action?—It was so. For some sessions I abstained from bringing in any Bill lest it should imperil a friendly and amicable arrangement.

8818. And does it appear to you that the only action that can be effectual is legislative?—I have become satisfied of that.

8819. We were told that even in regard to shortening the period between taking the house and entry an arrangement of that kind had been come to in Edinburgh, and worked well until some factors and landlords kicked over the traces and spoiled the whole thing. Do you think that is almost inevitable?—Absolutely inevitable. Besides, there are rating questions which have to be dealt with.

8820. And in your view would a Bill of any other kind, such as the alteration of the law of hypothec, for instance, or any other subsidiary measure, really deal effectually with the question?—I have been well advised in this matter, and I have given my own best consideration to it. I speak for myself and those who have backed this Bill, and for the present members who are supporting it. I am of opinion strongly that nothing short of some direct enactment of the kind I propose will meet the difficulty.

8821. And in saying that you have considered Mr Provand's Abolition Bill?—Oh yes.

8822. And also the Bill introduced in 1890, before you went into Parliament, backed by Mr Provand, Mr Baird, Mr Edward Robertson, Mr Caldwell, which ran thus: "From and after the passing of this Act, notwithstanding 'anything to the contrary in law or by custom or usage, 'no lease or agreement of letting for a yearly tenancy ter-'minating at Whitsunday or Martinmas of a dwelling-'house under a rental of £20 in any burgh of Scotland, 'shall be enforcible by law or in equity by either of the 'parties thereto if entered into at a date earlier than 52 'days before the commencement of the lease or agreement"?—We do not think anyone will introduce or back a Bill of that kind now, owing to public opinion being in advance of it.

8823. When the fact seems to be that everybody seems to be agreed that something is wanted, not optional but all over Scotland, why should not your Bill have a clause of that kind?—I am very unfond of interfering with the freedom of contract as far as it can be possibly avoided. If you get rid of the yearly tack, you will have no trouble about the dates at which arrangements are made.

8824. But take, for instance, the date of warning away. People seem to be agreed that that is too early, and ought to be made later; and if that was made later you could quite well have the date of taking a house made later, and that is a question affecting the whole of Scotland. Is there any reason why, taking your Bill as it is, there should not be a provision of that kind contained in it as well?—Well, I should be suspicious of such an enactment, as it would be difficult to limit it to the places where perhaps it might be said to be advisable.

8825. But it is said to be necessary all over?—But I am dealing with the industrial centres. If you introduce any clause complicating the issue, I should be jealous of its effects.

8826. Your Bill is a Bill for industrial centres?—Yes, chiefly.

8827. And if such a measure were thought desirable it would be a short Act for itself?—I have not thought of how it could be embodied in my Bill.

8828. Take the important section, apart from the rating section of your Bill, namely, section 4—"The term of let 'for any dwelling-house within a burgh shall be held to be

Mr A. Cross. 21 Jan. 1907.

'the term fixed for the periodic payment of the rent thereof, 'whether such term for payment be weekly, fortnightly, 'monthly, quarterly, or otherwise." There is no precedent, is there, in any other Bill for a clause of that kind?—I had none before me when I wrote that clause.

8829. Nor in any colonial Bill?—It was evolved entirely from the necessities of the position.

8830. Was your action at all influenced, and if so, to what extent by English experience?—Yes; my habit has been for twenty years to inquire into the house-letting condition of all the English cities and towns where I found myself, and I have been over a great number of them. I find the house owners and agents, on being told of the Scotch system, hold up their hands in astonishment at the impolicy, absurdity, and unfairness of it. They tell me how different the conditions are with them, how sure the tenure, how quickly and regularly rents are paid, and how the compounding system works extremely well. That is confirmed by my inquiries among persons who own the houses. In my whole experience I have not found a person objecting to the system in England, and no one except the landlord and the factor defending the system we have in Scotland.

8831. What about the landlords' practice in England? Do they long for the Scotch system?—They laugh at it. Such expressions are used as, "How do you tolerate that any longer?"

8832. You don't talk of working men?—I am talking of landlords and factors in Manchester, Leeds, Bradford, and other English towns of consequence, and I offered to bring to this Commission witnesses from any or all of the towns you may name. I have given the clerk the names of house agents and tenants from many towns, and he has been kind enough to summon some of them.

8833. How do you account for the difference between the two countries. There is no short-let legislation in England?—We have emerged in Scotland slowly from the more primitive conditions. The industrial system is of more recent growth than in England.

8834. Do you think the Scottish system of a continuous period for all houses with gardens should be retained?—It is what happens with agricultural land to this day, and as regards agricultural or gardening land it is quite proper, but it is absolutely unsuitable to the conditions of industrial life now.

8835. They must have had some system in England in regard to gardens attached to houses at one time?—They have it still in country places.

8836. What are the lets there?—They are upon similar conditions to those which prevail upon agricultural subjects here.

8837. Annual?—Annual or longer periods, but very often annual. Even in the matter of agricultural lands they prefer annual tenure; our farmers have found ruin by 19 years' leases. That is the history of the ruin of Midlothian and other highly cultivated Scottish counties: the tenants being involved in long tenure of agricultural lands. The farmers in England had not the same thing to face.

8838. Take the industrial centres in England as compared with such places as Glasgow. In your view are the conditions different or practically identical?—They have become identical.

8839. You do not have in Glasgow working men's houses with gardens attached?—I wish we had.

8840. Any more than in England?—I wish we had.

8841. There has been this difference suggested that in England the rents are much lower than in Scotland, the rates on the other hand being much higher. Would that difference in any way affect the principle of your Bill?—Not at all.

8842. How do wages in the two countries compare?—My inquiry has not been directed exactly to the point of wages, but I think they are smaller. My belief is that the more substantial structure, and more costly building of our Scottish buildings, have led to rather higher rentals for smaller accommodation.

8843. But you yourself do not know of any difference of conditions which would affect the question? If any information should reach you, you will be prepared to give us it?—I will try.

8844. As to the limit of £20, you told us that that was the result of long investigation and consideration. The optional clause is not a unique clause, but is to be found in such other Acts as the Burgh Police Act, the Housing of the Working Classes Act, and the Water Supply Act, and the Public Health Act?—Yes.

8845. In your view, does it necessarily follow, if there are to be short lets, that there must be compounding?—I think it is an advantage.

8846. It has been suggested that there is another way of doing it, viz. for the rating authorities to collect at more frequent intervals, say four times a year. What do you say to that?—After consideration of the question, on the advice of rate collectors in various places where I have had the privilege of consulting them, I think it is unworkable.

Mr A. Cross. 21 Jan. 1907

8847. Theoretically it is a good enough idea?—It may be.

8848. But practically you come to the conclusion that it is not workable. Do you know of any rate in this country or any other country that is collected more than once a year?—Well, these local taxes are collected in England twice a year, but then they are collected from landlords.

8849. Well, I should have put it, do you know of any rate collected from the tenants either in this country or any other country more than once a year?—No, not to any extent.

8850. And does that seem to point to practical difficulties?—It does.

8851. Because I suppose it is admitted that people who are paid their wages at frequent intervals should pay their rates more than once a year?—It would be an enormous advantage to the payer.

8852. You have not found any difference of opinion upon that point. How it is to be done is another question?—Quite so.

8853. Take it it is to be done by compounding. Do you have a view as to any objection to collecting small amounts direct from the tenants?—I think it is not a business-like proceeding for one thing.

8854. You would propose to retain the annual collection, but make it from the landlord?—I would prefer to make it biennial from the landlord.

8855. Why?—The money need not be taken from the landlord before it is required. The money requirements of local authorities go on all the year round. Their payments would better be served by having collections twice a year.

8856. Of course, if the landlord was to pay, and only once a year, he would have the benefit of the money, wouldn't he, of a large part of the money, for the rest of the year?—He would have the interest. But the authorities would have to borrow.

8857. And pay the interest?—Yes, they would then pay interest for advances to banks, etc.

8858. That is a detail you don't pin yourself to?—Quite.

8859. Do you think the result would be from the frequency of payment to give a larger amount in the end?—I think the authorities would collect all their assessments. They would certainly collect all their assessments if levied upon the landlord. They have the means of obtaining payment from landlords without loss.

8860. Always subject to what you are going to say immediately about allowances they would have to make to the landlords?—Certainly.

8861. Apart from allowances, do you think there is a great deal of taxation at the present moment that has not found its way into the public coffers through the system of collecting once a year from the tenant which would find its way if the tenant paid frequently through the landlord?—I have no wish to add to the burden of the poorer classes; but I am perfectly satisfied that if the money was taken from them weekly, in sixpences, or small sums, the money would be paid by them without effort, and the public exchequer would be better off, and that loose money would be used for this purpose which at present goes into less worthy channels.

8862. You don't limit that to weekly?—No; I only say the more frequent the better.

8863. But in the case of your monthly and quarterly lets, the payments there of rates would be monthly and quarterly?—They would be so.

8864. And you think that in that way a great part of the arrears which are not got in at all, or are now got in with great trouble, difficulty, expense, and pressure on taxpayers, would cease to be harassing?—I think this system of collection has a more demoralising effect than almost any other circumstance. Tenants are always in arrears. I went into the books of a great many factors in Glasgow by their kindness a few years ago, and as regards rents I found arrears was the rule, not the exception. This was before so many of the smaller houses under £10 were let on weekly terms. The habit was for those persons to be hunted by collectors from one year's end to the other. They never knew what it was to be out of debt to landlords or to the public authorities, for the same prevails with regard to the rates. This remark was made to me by the city collector of Glasgow. He said: "It would be 'impossible to collect oftener than once a year, because we 'have hardly finished the hunting for one year when the 'next year is due." The population of these industrial centres are the quarry, hunted from year's end to the other, either by the rate collector or the rent collector, a system which would be stopped if we had short lets and quick payments. It is a most demoralising system in every

Mr A. Cross. 21 Jan. 1907.

sense. Mr Henry, the City Assessor, tells me there are more moonlight flittings in Glasgow to evade payment of rates than to evade payment of rents.

8865. What do you say to the present system of allowing relief on the ground of poverty to a very large number of persons. Do you think there would be the same necessity, if the payments were frequent through the landlords, to grant such relief?—There would not be the same necessity.

8866. Many people who are not able to pay one big lump sum would be quite able to pay throughout the year in driblets to the landlord?—Yes. I beg leave, however, to point out that this system is also demoralising, the people who obtain that relief are not the class who most deserve it. Those who obtain it are those persons who, with the cry of poverty in their mouths, present themselves before the magistrate and obtain relief. The people who ought to be relieved are those who suffer in silence, and don't parade their poverty, as is too often the case. I can give instances by the half-dozen of most improper relief granted. I think the system is bad.

8867. Through the soft-heartedness of the magistrate?—The consideration and kindness of the Bench, who cannot refuse a tale of suffering presented to them.

8868. Apparently the system is not very consistent, because those people paying rents under £4 get no relief, the poorest of the poor?—I was going to point out that, if poverty is to be the qualification for relief, all the men under £4 ought to be relieved at once. Persons who are getting this relief are persons paying much bigger rents, sometimes very large rents, but they go to the magistrate and make an appeal. On some stairs you will have people relieved at one door, and paying at the next, under circumstances which are precisely parallel. I say this, with all deference, I may be under a wrong impression.

8869. Allowing all that, I suppose there are a certain number of cases which are deserving of consideration?—Oh yes.

8870. We are told, for instance, of a person who may keep lodgers?—Yes.

8871. A maiden lady may really have had nobody during the year, would you propose that there should still remain a means by which such cases could be considered?—Certainly. She should make application, I suppose, as now, and if the magistrates approved, relief would pass to her through her landlord instead of direct.

8872. Do you think that would be practicable?—I don't see much difficulty.

8873. If compounding is found to work well in English burghs there again do you think any reason to doubt its working in Scotland?—My contention is that we are working it just now.

8874. In certain cases?—In every case the landlords are compounding without knowing it.

8875. We will come to that immediately. But take the English burgh. There is no difference in condition, is there, to prevent the one experience being applicable to the other?—No, I have not been able to find any.

8876. What do you say of the view of the Royal Commission, which seems to be that in theory, at all events, although they say it is practically necessary, it is an objectionable system?—I quite agree. It is desirable that every man should feel the pressure of taxes, but practically that view does not come to much.

8877. Of course, they are speaking there of a system where the taxation of the tenant is not brought home to the tenant at all. Now you propose that the tenant should know what taxation he is paying?—I do.

8878. In England he does not?—Well, I do not find that is a charge that lies. I find there is a keen interest in public affairs in England.

8879. But take the receipts?—No, the receipts bear no distinction. The rental covers everything.

8880. The tenant would have to inquire and calculate for himself, if he was to find out?—Yes; but you might on the same principle found a theory that a working man does not take interest in Imperial affairs. He is not called upon to pay Imperial taxes. He finds out how much the Government put on as tea duty and whisky duty. According to this view there should be no interest except from those who pay direct taxes.

8881. You propose a note of amounts separately due for taxes and rent should be furnished?—I think that would be desirable.

8882. We have been told there would be great practical difficulty in that. Do you suggest that it should be done weekly or monthly, or that once a quarter would be enough?—I have suggested once a month. It is not desirable to get into fractions of pence weekly.

8883. It has been suggested that it might be enough, if without stating the actual amount, the rate per £ were stated and the tenant left to calculate it for himself?—That would be an excellent suggestion. That is what we all have to do. I have to study the tax papers in the city of Glasgow myself. The working man would get it in a single line, and he would be as well informed as I am myself after laborious study.

Mr A. Cross. 21 Jan. 1907.

8884. You said a little ago that in your view, practically speaking, there is compounding already. Just explain what you mean by that?—Apart from houses under £4 or anything of that kind, my view is that, examined economically, the present system is practically a system of compounding. We have in Scotland a curious method of pretending to call certain rates "landlord's rates" and other rates "tenant's rates," but they are really all paid in the end by the man who occupies the house. I have ventured to sketch an example. If I do not detain you too much, might I put it to the Committee?

8885. Yes, to show that the tenant in the end pays the whole taxes?—If I take a house at £20 annual rental, and assume taxes on that house are £10, payable by the tenant direct to the rating authority. The landlord is content with £20, and gets it; the tenant is content to pay £30, and pays it. He pays £20 of rent and £10 of taxes. Suppose it put the other way, that the landlord pays these taxes. The result then is, that the tenant will pay £30 rent, as he is willing to do; and the landlord, having to pay the £10 taxes, still receives only £20 as before. Suppose a middle course, which happens to be the present system in Scotland, and assume the taxes collected half from landlord and half from tenant, the result is the same: then the tenant pays £25 of rent and £5 of rates, making the £30 he is content to pay; and the landlord pays £5 of rates out of his £25 rental, and so only receives the £20 net rent, which he is content to get. The tenant is willing to pay and does pay £30 for the use of the house, and the landlord gets £20 of rental. Whichever way the taxes are collected, that makes no difference, in the end the tenant pays the taxes.

8886. Suppose you had compounding, would not the tenant in addition have to pay for the landlord's cost of collection?—Of course, some person must pay the cost. I do not enter upon the question of cost there at all, but there is a certain proportion of cost which it would be proper to pay to the man who collects.

8887. Would not that be an addition to what the tenant pays now?—Yes, if the authorities made no allowance.

8888. That throws you back on the question of allowance?—Yes; my point there is that at present the landlords are paying what are called landlord's taxes. They do not pay these "landlord's" taxes; they are really only collected through them and recovered by them from the tenant. In a house of £20 in Glasgow, what are called landlord's taxes amount to 3s. in the £, or thereby. The landlord pays those. He really receives, when he makes his rental, £20 —£17 of rental and £3 for taxes outpaid. It cannot be pretended that the landlord really pays these taxes. They are only one of the items of his outlay in providing and maintaining the house, just like his costs of painting, building, and fire insurance. The rental has to cover all these costs, including the cost of the taxes upon the premises, and it is only after all these outlays are satisfied that any rent return is obtained upon the capital sum invested in the building. He has to pay this £3 before he has a free rental. He collects this £3 from his tenant; he does it without any allowance at all.

8889. Fire insurance or factorage have all to be paid in the end?—Yes.

8890. So that when you go to the root of the matter you don't think it is really introducing any new principle. You have an analogy for it in the water rate and houses under £4. That is a direct analogy, and then you have got in the matter of principle the same thing carried out?—I ventured to state that in the House of Commons, when making a speech on the Agricultural Rates Act, and I received the compliment of a note from the front bench to say that I had pointed out a most important point of principle.

8891. And so in the end you don't think the landlord, if he gets a fair allowance, would have any cause to complain?—He would be better off than he is now.

8892. He does complain that it would introduce an element of friction between him, or at all events between the factor and the tenant. It is said that in England it is right enough, because it is just a payment of rent, and they so treat it; but if you make a distinction between rate and rent, there would immediately be friction?—That would speedily pass off. If one factor did it and another did not, there would be friction, but not when it becomes the universal plan.

8893. They say there is great trouble with stair gas?—The landlords, I am prepared to say, make a good thing out of it. The assessment for a stair paid to the city by landlords is probably 15s., and landlords charge 5s. to each tenant, and collect the money. The tenants are willing to pay for the gas, but they object to the large profits the landlords put on; and may I say that, under the present

dulness which is prevailing in Glasgow, a very favourite method of attracting tenants at the present moment is to offer the prospective tenant "No charge for stair gas."

8894. It is said that if collection of rates were made so frequently as the monthly payments, for instance, that the factor's charge would be very high. They say for a yearly collection, or half-yearly collection, of rent, it should be 2½ per cent., for monthly or weekly collections it would be 5 per cent.?—That is not my opinion. I think it would be collected far more easily. Persons who differ don't study this, that to get the quarter's rent factors have probably to call often and take instalments. Weekly collections would be paid at once.

8895. Suppose rents were collected once a month, if the rates were collected at the same time, should it involve any more trouble to the factor if it is the same call?—I don't think so. I think the facilitating of the business would be preferred at the same charge by all factors. The factors who are advising me, who are very numerous, have never suggested that their rates would be raised if my Bill passed into law.

8896. And do you think that after a time the tenants would come to recognise that the rates must be paid just as rents are paid, and that the present distinction, which is undoubtedly made between rents and rates, involving moonlight flittings, would in many cases cease to be?—Yes. I aim at stopping it.

8897. It has been said that your proposal is a very serious one, because it would increase the number of voters, and some of them, perhaps, not of a very desirable class, the very poorest and most improvident. Would it increase the number?—Yes.

8898. Largely?—I think it would; yes. To some extent it would certainly increase the number of voters.

8899. Is it the case that at the present moment you have the class that would be added actually in possession of the franchise in England?—Yes.

8900. If the same class is admitted in England, do you see any reason why they should not have it in Scotland?—There do not seem to be complaints of revolutionary sentiment in that class in England. The English Burghs are conservative.

8901. Are they the class that turn out very largely to elections or not?—I think they make up the percentage who don't come out to elections.

8902. You say that if the poor rates are paid the State has no business as to who pays them?—Neither the State nor your humble servant.

8903. It has been suggested that you would have people voting who had in point of fact not paid their poor rates. Do you anticipate any large number where rates have not been got by the landlord?—Oh no; the landlord would be no more anxious to give credit for rates than for rent. He would look after his rates.

8904. It has been suggested that there might be cases of great hardship to the voter, as the landlord might not have paid the rates to the rating authority?—The law is quite clear. There have been two cases.

8905. It has been held that even though he does not——?—In the first case the Act is perfectly plain. It is found in the Franchise Act of 1884. The clause I have first marked is section 9, sub-section 6. This bears on the question of rating as well. In the 1868 Act, section 3, sub-section 3, the provision is, "That no man shall under this section be 'entitled to be registered as a voter who at any time during 'the said period of twelve calendar months shall have been 'exempted from the payment of poor rates on the ground of 'inability to pay, or who shall have failed to pay, on or 'before the 20th day of June in any year, all poor rates *that* '*have become payable by him* in respect of said dwelling-'house." The cases that happened in Scotland I have a note of: the one is Neilson (1890), 18 Rettie, p. 338; the other is Wilkie *v.* Burns, December 1903, Fraser, vol. 6, p. 223. Lord Kinnear gives the leading opinion. He holds the tenant was never rated for those rates, that the rates are not payable by him, and that the default of another, namely, the landlord, is not to be held as disqualifying the tenant from exercising the right he was entitled to otherwise.

8906. The landlords and factors have said that if any change such as you propose was to be made, it ought to be accompanied by giving the landlord cheaper and speedier methods of ejectment of defaulting tenants. What do you say to that?—Certainly, if it can be done without injustice to the tenants.

8907. The simple and drastic way of doing it, of course, is to abolish the necessity for going to the magistrate, and to put the absolute power into the hands of the landlord in every case. Do you think that would be desirable?—Forcible ejectment can only be done by a warrant of a magistrate.

8908. You don't think Parliament would entertain that?—I would certainly never propose it.

8909. Do you think it involves considerations which necessarily require the discretion of somebody?—The tenant may have a legitimate defence. He must have an opportunity of being heard. If every man is to be a law unto himself, we shall have come to an unfortunate position.

Mr A. Cross. 21 Jan. 1907.

8910. But if it is the fact that in Glasgow Burgh Court, simply by paying a 6d. you can get delay, even though you have no defence, and no reasons whatever, as compared with the other man who does not appear at all, do you think that is reasonable?—No. I have made a suggestion about that. I would limit by statute the defence permissible in actions of ejectment.

8911. You see in Glasgow we are told that if you have no defence, and if you just lodge a sixpence, you get delay. You don't defend that?—Certainly not; but I may point out that the process in England is infinitely worse, and involves a longer time and greater expense.

8912. What do you suggest should be held relevant? I have marked down that the only defences permissible in actions of ejectment should be limited to, first, whether rent has been duly paid or not; second, whether legal notice has been duly served or not; and third, whether the terms of tenure have been implemented or otherwise.

8913. You would need some kind of discretion to cover cases of serious illness?—I think that would be reasonable; but I was dealing with the legal aspect, for that is a moral consideration. I don't know. The Committee must judge if effect can be given to that.

8914. In your view, looking to the nature of the contract, it is unavoidable that some time, more or less, must elapse before judgment can be carried out?—It could not be otherwise; because, until the tenant has refused in point of fact to go, and the term of notice has really expired, no action can lie for ejectment.

8915. But those tenants, I suppose, whose practice is to take advantage of mere forms of court, in order to sit on without rent, nobody defends?—Nobody; certainly not myself.

8916. In regard to the expense, do you think it is fair to take as an example of expense a single case, or must one consider that these cases are generally half a dozen taken at once?—That is the practice.

8917. Do you think it is fair to assume that in every case the thing is carried out to the bitter end by the employment of a sheriff officer?—That is rare. There are but few cases in which an extract has to be taken where an officer is employed, and the sheriff's officers tell me that it is practically the same people who are ejected continually.

8918. In regard to the objections to the enactment of your Bill, what is your view as to the effect on the total number of removals in the year as compared with spreading them all over the year?—I don't think the number of removals will be increased; I think the contrary.

8919. Why?—Many inducements that exist now for removal will be altered. For instance, new tenants generally get newly painted and papered houses, and people change houses to get a house newly papered. I think these removals will be spread over all the year in place of being carried into a short week; and removals, always so irksome and costly, will occur only when necessary.

8920. We are told that in Scotland, owing to this one removal term, there is a considerable amount of excitement and house-hunting goes on?—It is notorious that there is always a ferment during the ten days at missive time among the industrial population.

8921. You refer to the inconvenience of the present system. Do you mean everybody removing at once; all the removals taking place at one day, the increased cost, and also hardship in the way of the difficulty of getting into houses before they are properly cleaned?—It is a common practice for incoming tenants to pay to the outgoing tenant from 10s. to £1, in order to get in a day sooner, that some little painting or so forth may be done.

8922. That all leads to expense?—Yes, to greater cost in painting and to dirty houses.

8923. I see you quote the proverb that two removals are equal to one fire?—That is so: I believe the truth of it.

8924. There are, in addition, extra expenses incidental to the present system?—No doubt it aggravates expenses very much.

8925. Is the annoyance and cost incident to every removal such as to prevent people moving, generally speaking, except for good causes?—That is my opinion.

8926. And do you think if a man finds better employment elsewhere he ought to be in a position to move at short notice, and not have to travel backwards and forwards, or take lodgings in another place?—I think so, certainly.

8927. I suppose it is the case that the increased facilities for getting about by cars have minimised the hardship in these cases?—I don't think so; not to any appreciable extent.

Mr A. Cross. 21 Jan. 1907.

8928. In Glasgow they have, haven't they?—Well, a man may live further from his work than he did. That is true; but that is all that can be said.

8929. Aren't there a great many cases where a house is more a family centre than anything else, the children working in different parts?—That has reference to a higher class of family than what we are contemplating.

8930. Where there is a wage-earning family?—I think so, or better employment.

8931. We have been told of cases where working men live in houses a good deal higher than £20, if they have wage-earning sons and daughters, but that is not the class you are chiefly providing for?—No; these men are more independent, and can make terms for themselves.

8932. It has been said that the system would involve more cost to the landlord in the way of painting, etc. What do you say to that?—I don't think the case is so plain as it is pretended.

8933. Of course, that view is on the assumption that there would be in the end more frequent removals. If that presumption is not correct, as you think it is not, it would, to a large extent, if not entirely, disappear?—It would do so; but may I point out that a removal, when a man must remove, and is determined to remove, will take place inevitably in the end; and what is wanted is to allow of removals being less irksome and costly. If a man is going to get better pay, the landlord cannot prevent him ultimately.

8934. Unless in cases where—— ?—Where he loses the chance, by being tied to his house for a year.

8935. Would the short let result in forehanded rents in your view?—It might.

8936. It does in England, doesn't it?—To some extent.

8937. There has been complaint made to us in certain cases about the cautioner system as a very hard one, especially to working people coming to town for the first time without acquaintance?—Yes.

8938. The short let would abolish that?—Yes.

8939. Have you had any experience of that in your own investigation?—Oh, yes; it is most natural and reasonable that before a landlord permits a tenant to enter his house for a long period he wishes to know a little more about him, and it often is very difficult to satisfy landlords' demands.

8940. We have been told about the Glasgow Corporation houses being forehand. Do you place any value on the experience gathered from houses of that kind, where the tenants are selected and there are caretakers and a number of other peculiarities?—All the nice new properties in the city are in that position. I have half-a-dozen in my own division in Camlachie, where new properties have been got up recently. One I heard of recently belongs to Mr Anderson, late of the Polytechnic, with forehanded rents and weekly tenancies.

8941. What kind of rentals?—Small; all about from £8 to £12.

8942. And he finds it successful?—Yes; he asks me to visit the houses, and see an entertainment he is giving to the tenants one of these evenings, and judge of his tenants.

8943. You have some interesting details as to the English system. We are going to get that from English witnesses, so I do not think we need to go into that detail?—Except that I may be permitted to lay emphasis upon the difference of the valuation roll in England and the valuation roll here, the valuation roll here being based on rental, whereas in England it is upon rateable value. Now, what constitutes rateable value it is impossible to define. It consists in the judgment of the assessor or of a bench to whom it may be appealed; but all kinds of considerations are therein taken into account, and therefore, when you have the rental set forth as rental in England, it must be always remembered that that is rateable value, and to arrive at the rental you have to add from 30 to 50 per cent.

8944. In your view would your proposal involve any alteration on the Valuation Acts?—No.

8945. Unless the method, instead of compounding, were taken of making the rating authorities collect more than once a year. That might involve changes in the way of additional surveys, I suppose?—I think the Acts presently in force provide for that.

8946. But at all events your proposal for compounding in your view does not involve any alteration?—No. I think the powers of authorities are already in existence for tenements and properties let for periods of less than one year; but I would like to say I have had the opportunity of making exhaustive inquiry into the English system. I have been permitted to attend at the Local Government Board, and had the benefit of a conference with their authorities, and everything I have learned has gone to show me the advisability of such a system as is practised in England being adopted for Scotland.

8947. Have you not found in England serious questions arising over the amount of allowance that should be given and great difficulties in adjusting that?—Not great difficulties, but I think the allowances are too liberal in England. I formed that opinion, and it is corroborated by the officials of the Local Government Board.

8948. What is the allowance?—When compounding is compulsory the discounts are taken at not exceeding 15 per cent., and they frequently come very near it, sometimes 10, and sometimes 12, and sometimes 15, but in that case the landlord pays on the whole of his property, and takes his chance of its being unlet.

8949. So that the allowance covers, first, cost of collection; second, losses of rates; third, unlets, partial or complete?—Yes. He is treated as if his property were occupied for the whole year and entirely paid.

8950. Is that 15 per cent. allowed whatever the rent is, or is it graduated as you suggest?—If compounding be determined upon by compulsion, the discount is increased to a maximum of 25 per cent. The authorities in England have the privilege of determining whether the rates shall be compounded or whether they shall be collected from the tenants. All rates are assessed upon occupiers. The compounding system is a method by which, in place of collecting in detail from tenants, the right is taken to collect from landlords. By resolution, the local authorities have power, in the case of the burghs at all events and cities, to collect from landlords, in which case they do it either voluntarily or compulsorily. If compulsorily, they are permitted to go up to 15 per cent.

8951. A graduated scale?—That is the law. It is in the hands of the local authorities; and, in the case of its being done voluntarily, the authorities are authorised to allow discount up to 25 per cent., but I am not aware that that discount has been given.

8952. Can that be done in cases of rent up to any amount?—It is done in the case of even large houses by voluntary agreement. By compulsion it is chiefly small houses.

8953. Give us an illustration. In London compulsory compounding may apply to property entered in the valuation roll at £20 and under?—Of the rateable value of the £20 a year.

8954. In Liverpool £13 a year and in Manchester £10 a year, in Birmingham £10 a year and under, and elsewhere similar?—That is not rental; that is rateable value, but beyond these figures compounding is practised by agreement in very many cases.

8955. How do you account for it, if it is the fact, as we have been told, that the rates in England are much higher than the rates in Scotland?—I don't know upon what ground you come to the conclusion that rates are higher.

8956. We have merely been told it?—My inquiries have not shown me that.

8957. Take London?—London is exceptional.

8958. How much higher are they; double?—Well, now, it is exceedingly difficult. I believe the rates in London amount to about 8s. 6d. in the £, but in Glasgow the landlord's rates are about 3s. 6d. per £, and the tenant's on houses over £10 about 5s., so I get up to 8s. 6d.

8959. Put aside London. The rates in Scotland are lower than in most places in England?—I don't think so.

8960. That is a matter we will get from English witnesses?—Undoubtedly. The rates are collected in curious ways in England. We have no parallel to the system. The spending authority is not the collecting authority in England. The one authority collects in many cases, and then hands the assessments over to other bodies altogether to be administered. It is a source of confusion. These sums I have mentioned include imperial taxes as well. I take the whole taxes when I say 8s. 6d. in the £.

8961. It has been suggested that a better system regarding the allowance would be, suppose the allowance was merely to cover the cost of collection and losses, leaving to the landlord to adjust unlets with the rating authority, so that he should not pay for the property unlet. What do you say to that proposal?—I think it most desirable. The Landlords' Associations made one of the conditions of amicable settlement, perfectly informally and privately, that it should be a condition that a property unlet should not be rated. I applied to the authorities in various places, with the result that I think that an arrangement could have been carried out.

8962. Then the allowance would merely include the cost of collection and losses?—Yes; but, of course, if the tenure were short and payments frequent, I would put loss on one side as of little account.

8963. Now, in regard to amendments on the Bill, you have three suggestions to make, first, you would propose that all houses let by lease for periods of two years and upwards be excepted from the Bill. Are there many under £20 in Scotland?—No; I put in that condition in order that freedom of contract may prevail as far as possible. I think when a man desires to enter into a probative lease

Mr A. Cross. 21 Jan. 1907.

for a lengthened period of any subjects it would be desirable, as far as possible, to allow him to do so.

8964. At whatever rent?—Yes.

8965. Secondly, you propose that the system of compounding be extended to all rates and taxes leviable upon all houses rented at £20 and under. Of course, there are no imperial taxes on £20 or under, so it would be practically burgh rates and parish council rates?—You find it impossible to distinguish, and any argument with regard to compounding one rate applies with equal force to the other. Thirdly, you propose that £20 be made the limit of the Bill in all the burghs affected by it instead of differentiated rentals adopted in the last print. The graduation was inserted at a time when you had hopes of settlement by arrangement and to facilitate the passage of the Bill amicably, but the graduated scale was just as much objected to by opponents as the £20 all round limit. Besides, a uniformity of nominal sums is desirable?—That is my opinion.

8966. Your Bill has no clause against contracting out. Do you contemplate that people should be allowed to contract out?—No.

8967. You have not provided against it?—That it was possible under my Bill has not occurred to me before.

8968. It is not your view that people should be allowed to contract out of it?—No, they should not be allowed.

8969. There is a kind of side issue introduced by the law of hypothec. Perhaps you have nothing directly to do with it, but it has been brought before us, and it has been suggested either that it should be abolished or that if retained it should be applied in this way, that in addition to clothing and tools a moderate amount of furniture, say up to £20, should be exempted. What do you say to these suggestions?—That such an exemption would, in my opinion, deprive the right of hypothec of any little value that it possesses.

8970. What do you go for, then?—I would abolish hypothec entirely.

8971. Don't you think that there are cases where it is really in the interests of the tenant, because it enables the landlord to allow him to remain under circumstances where it is very desirable that tenants should be allowed to remain?—Any such protection ought not to be claimed by the landlord. The persons who really afford it are the other creditors who are taking all the risk. I know of no reason why the landlord, any more than any other man, should receive a special preference or have his operations protected by a special law. If he likes to give credit, let him do it at his own risk.

8972. It is said that the other creditor is in a different position, because he can stop his credit at a moment's notice; whereas a landlord cannot, the tenant remaining on at all events for a period. What do you say to that?—I don't think the situations are at all parallel. The trader, should a bad debt arise, not only loses the interest on his capital, but he loses his capital itself. The landlord never risks his capital at all; he only perils the interest of his capital.

8973. He gets back his house?—Yes; he only really perils the interest on his capital for a few days necessary to obtain ejectment. I do not think it is in the public interest that a man who is not paying his rent should be allowed to remain. Traders give credit to a man who may be greatly in arrears with the landlord. The landlord, safe under hypothec, maintains the man in a false position.

8974. In your view the arguments which went to abolish agricultural hypothec fully apply to the condition of the urban hypothec?—The question was debated and considered very carefully before a Committee of the Lords and Commons about 1868 or thereby, and as a unanimous report that Committee found that the law of agricultural hypothec had worked badly. It had raised rents, prevented agricultural progress, created an injustice to many classes. It was abolished by the Conservative administration of that time. I think the same may be said of urban hypothec. It creates a false market. If hypothec be of any value, the landlord may take any sort of man as a tenant, because he will have a certain amount of furniture to keep him not far wrong. The market is raised by fictitious competition. He says he is going to be kind to this tenant, and he does it at the expense of other people, because he does not risk anything. If hypothec is worth a straw, it keeps him right; it is the poor grocer or butcher who doesn't know the real position of this tenant, and thinks him worth trusting because he is in a respectable house, who really takes the risk and helps the tenant, not the landlord, who, under hypothec, escapes disaster. It makes a mock market for houses, and is an injustice to other classes.

8975. In your view both the arguments for and against agricultural hypothec would apply equally on both sides to urban?—Yes.

8976. There was the same argument urged in favour of agricultural as in favour of urban hypothec, viz., that it was in favour of tenant?—Yes. But even among the landlords of Scotland to-day I do not know personally of any, and I meet a great many, who is of opinion that the abolition of hypothec is otherwise than an advantage to tenant, landlord, and trader alike, although they made a tremendous noise before it was passed.

Mr A. Cross. 21 Jan. 1907.

8977. In the case of an undesirable tenant who pays his rent but is an annoyance to the neighbourhood, and cannot be got out, I suppose the landlord's interest would be to have a short let?—That is the true protection of a landlord.

8978. All round?—Yes.

8979. When a sale under hypothec does take place it realises nothing like the true value of the furniture?—Nothing like it.

8980. There would be nothing left in an ordinary case?—The effect of such a sale is to deprive the poor people of the very means of finding a living, let alone paying their debts.

8981. You think if a clause limiting hypothec to £20 were inserted, it would take away any motive landlords have to maintain hypothec?—I think so. My experience is that hypothec is very rarely fallen back upon.

8982. Why do you not just go direct for lets under £20 being limited to six months; it would be the same result?—I don't think so at all.

8983. Would it not?—Oh no; I think many of those houses would be let on monthly tenure.

8984. No; but limited to not more than six months?—That would be an interference with freedom of contract—quite unnecessary.

8985. That would only be apparent, wouldn't it?—I don't like the appearance of such an enactment on the face of it.

8986. But if the result is the same, wouldn't it be a more straightforward method to say downright you shall not let a house under £20 for more than six months?—I think that would be a proposal which would be open to great misrepresentation.

8987. Which your present one is not?—I think my present Bill is at least equitable, and plainly comprehensible.

8988. Is there anything you want to say in addition?—May I draw attention to this other point. The present system places a tenant at great disadvantage. When houses are scarce, he is forced to accept at once what the landlord offers under the missive. On the other hand, when houses are plentiful, and before a tenant can take advantage of the situation, he must refuse the missive and risk being turned out. He must refuse the missive without knowing what is in the market, or whether he can find a house to serve him better, or even as well. Because it will be clear that factors themselves cannot tell tenants what houses are available until the missive days are over, and it is ascertained what tenants are flitting. I wish also to place great stress upon the public sentiment in favour of my Bill, and the unprecedented preponderance of Parliamentary support which has been received.

8989. Then, in regard to the disturbance of industrial occupation under the present system of yearly tenancy, with only one flitting time in the year?—That is an exceedingly interesting phase of this subject, and it needs a little consideration to perceive the bearings of it. But they are very extraordinary. It means, for instance, that tradesmen, such as bricklayers, painters, or plasterers, have great difficulty in obtaining permanent employment. At some times of the year you can hardly get these men at all, at other times they are only about half employed. All the building must take place perforce at certain times of the year, because all the houses must be finished in May. Plasterers get nothing to do when the building is going on, and builders have nothing to do when the plastering is going on.

8990. We have had evidence from members of the trade on that subject, and they quite correspond with the result of your investigations?—Absolutely, many tradesmen have been in the habit, of recent years, of crossing to America in order to get summer empolyment, and steamers have offered them low fares in order to facilitate that.

8991. And does the present system lead to jerry buildings, some of which are occupied before they are fit for occupation?—Within my knowledge that is true. I even suggest this reform in the interests of factors and landlords themselves.

8992. In the interests in short of the three parties requiring to be considered, landlords and factors, tenants, and public authorities?—I should be supported by nearly every factor, if it were not that some of them were apprehensive that an expression of their views would cause dissatisfaction to their principals, the landlords. Any one who knows factor's work in Glasgow in January and February, when they and their staff work till 10 o'clock at night during pressure, and the arbitrary methods they are driven to in consequence of overwork, would agree with me that

Mr A. Cross. 21 Jan. 1907.

the factors are very anxious to have some system which would alter the present plan.

8993. In your view there are three people who require to be considered, landlords and factors on the one hand, tenants and the rating authorities on the other, and you think the proposal would be to the benefit of all three?

8994. (*Mr Dobbie.*) You refer solely to occupiers in your definition clause of your Bill. You refer, I assume, to all tenants, whether they occupy directly or not?—Yes.

8995. A tenant who does not occupy would still have the same right to get his rates paid by the landlord?—Yes.

8996. Occupier would mean the person in occupation. That is the definition that is put on page 2 of the Bill. There are many cases where the tenant is not occupier?—I desire to cover all persons in occupation.

8997. You have told us that you wish now poor, school, and parish rates to be included in your clause. What allowance do you suggest might be given in respect of these rates? Your scale deals, of course, with burgh rates at present. Would you apply the same scale to the parish rates you now propose to embrace?—Probably the scale might be a little increased to meet the parish assessment. I was looking for the statutory allowance, which is provided for in the Burgh Police Scotland Act, one-tenth of the amount. I take the Act of 1892, section 344—"But the 'Commissioners shall allow to such owners a deduction from 'such assessment equal to one-tenth of the amount thereof," 10 per cent.

8998. What in your view would you fix the 10 per cent. as applicable to—all houses up to £20?—Well, no; I think it might be necessary to have a differentiation. The rates on houses from £15 to £20 are much better paid than those on houses of £10 to £15, or those below £10, and therefore some little adjustment as between these values ought to be made, but 10 per cent. is what I find is provided for in the Burgh Police Act.

8999. Would you allow for houses under £4?—10 per cent. is the allowance at present.

9000. Would you apply the 10 per cent. up to £4 and £15?—Yes; I would be disposed to something of that kind. Certainly 10 per cent. up to £10, and perhaps 7½ per cent. from that to £20. The schedule of my Bill contains scales of allowances arrived at not arbitrarily, but after inquiry. It would probably be necessary to reconsider those.

9001. You have a reference in your Bill to an application to the Sheriff to confirm the resolutions of the Local Authorities?—Yes.

9002. Is it in your mind that the Sheriff should have any discretion or merely a formality?—Formality—making public.

9003. You would not give the Sheriff the discretion to say whether or not, after hearing parties——?—No; I think the Local Authority ought to have full discretion.

9004. Dealing with the English custom, can you tell us what notice, apart from agreement, is necessary under the law of England?—I am afraid I omitted to bring through the Blue Book in which there is a report on the Committee on Local Taxation.

9005. From the Blue Book you refer to, I find in yearly lets the notice required is six months?—Yes, I believe that is correct.

9006. And in quarterly lets three months?—Yes.

9007. Is it the case that these are almost in every case made subject to agreement?—Yes, because the statute is evidently unworkable; notice is too long. In all leases I have seen the period of notice is defined on the lease. These are referring to houses of a rather better character.

9008. Apparently a house taken for three months enforces occupancy for six months?—That would be so, as you put it. It was the confusion of such things in Scotland that led to the passing of the Terms' Removal Act in Scotland, which defined those things and brought them into a reasonable form for the first time, which forms a precedent of Parliamentary interference of house letting.

9009. Taking the terms of that Act, what notice to quit do you propose to substitute for the present law?—I propose to confirm the notice and other conditions of the Terms Removal Act.

9010. Have you thought out how that lies?—One-third of the period of tenure is the provision of that Act.

9011. Take a half-yearly let. As you know, for a half-yearly let just now the period is forty days?—Yes.

9012. You would be likely, in a majority of cases above £10, to make yearly lets six-monthly lets?—No, I think monthly lets.

9013. We have been told from all places the rents of £12 are usually paid half-yearly?—No; quarterly. It varies, of course; more often quarterly than half-yearly.

9014. In the east of Scotland?—Ah! in the east, perhaps.

9015. But in cases where the rent is paid half-yearly, the effect of your Bill would be to substitute half-yearly lets for yearly lets?—On that point I will not hazard an opinion. I think it will make them mostly monthly or quarterly.

Mr A. Cross. 21 Jan. 1907.

9016. But clause 4 defines this, that if the rent is payable half-yearly, that is to be the term of let?—Clearly.

9017. So that where under existing conditions rents are paid at the two half-yearly terms, that would mean six-monthly lets. Then in your clause, adopting the Removal Terms Act under six-monthly lets, you propose that the notice should be two months?—Yes.

9018. That is sixty days against forty days under the present law?—Yes. I don't think that is unreasonable.

9019. And in the yearly, assuming such a thing is possible, it would be four months?—No, it would be forty days. The Terms Removal Act makes that clear. I would seek to interfere with the existing statutes as little as possible. If I were recasting the whole system of Scottish house tenure, what you point out should be noticed, but I don't see any necessity for disturbing existing enactments any more than is absolutely necessary.

9020. You suggest under weekly lets that the notice should be seven days?—Yes. "Notice of removal from a 'dwelling-house may hereafter be, in the case of a dwelling-'house, for a shorter period than one calendar month, 'seven days before the day upon which it is desired the 'tenure shall terminate, such notice being given in terms 'of the Removal Terms Act of 1886, so far as applicable." It would follow from that that the notice for a weekly tenancy is a week.

9021. The present law is three days?—I think that is unreasonably short.

9022. With reference to the question of exemption, which the Chairman examined you upon, do I take it that you think the present system of exemption should be abolished or merely remedied?—I think remedy would suit the cases. I believe that under the new system there would be less necessity for it than at present happens.

9023. You would merely make more stringent conditions on which relief is to be given?—No; I would hope that, under weekly or monthly payments, the payments would be so much easier that they would be made by tenants without difficulty. But in cases where poverty undoubtedly exists, you would have the Local Authority endowed with the present powers of giving exemption. I would not disturb that at all.

9024. But you increase the powers, so as to make that applicable to tenancies under as well as above £4, altering the present law on that point?—I think that would be equitable.

9025. You have not thought out as to how in practice the present method of giving exemption is to work alongside of the system under which landlords pay the rates?—I have thought it out. I think the exemption form obtained by the applicant as now, would be presented to the landlord, and would entitle the tenant to have the deduction from the rental; in turn it would entitle the landlord to exemption from assessments from the amount upon the face thereof. If the exemption were for 5s., or 7s. 6d., or 10s.—the form would be granted to the applicant of exemption from assessment to that amount which would be recovered from the landlord, and he would recover from the authority. I am assuming, in the first place, that the landlord pays the assessment. There can be no question of abatement on the landlord's claim. The authority would assess on the landlord, and collect the full sum of the rates. Then comes the applicant for relief, who appears before the bench, obtains a granting of the prayer, and an order for recovery of the 7s. 6d., or 10s., or whatever the sum may be.

9026. That order, the person who gets it presents to his landlord, obtains the deduction in such form as may be arranged between them, is passed on by the landlord to the authority to pay back to the landlord the sum which was dealt with in this exemption form?—Yes.

9027. Are you assuming that the tenants in question pay the whole of the rent?—I am assuming that it would happen at various times of the year. I am entitling the tenant to exemption from assessments for the period set forth in the form.

9028. With reference to franchise, you agree that if the tenants do pay their rates even indirectly, they should be enfranchised?—I do.

9029. Would you include in that men whose names are on the valuation roll?—They cannot be on the roll. They cannot be entered under the Act. "No man is to be 'entitled to be registered as a voter who has, during the 'period of twelve calendar months, been exempted from 'payment of poor rates on the ground of inability to pay, 'or who shall have failed to pay his poor rates."

9030. That is the general clause?—Yes.

9031. But if a pauper is an outdoor pauper paying his rents, assuming that he will be paying to his landlord rent and rate like any other tenant, is he to be precluded from exercising his citizenship while somebody paying no more

does so?—I don't know; but the analogy of the English practice is that such persons would be improperly possessed of the franchise. That wording can be made to meet the case you put, I have no doubt.
